Mr. STEWART. I now take the message of 1886, because it is interesting to observe the workings of great minds, and how constantly they dwell upon a particular point. The President's message of 1886 contains nothing new. It simply reiterates the statements of the message of 1885.

[From his second annual message, December 6, 1886.]

During the fiscal year ended June 30, 1886, there were coined, under the compulsory silver-coinage act of 1878, 29,838,905 silver dollars, and the cost of the silver used in such coinage was $23,448,900.01. There had been coined up to the close of the previous fiscal year, under the provisions of the law, 203,882,554 silver dollars, and on the 1st day of December, 1886, the total amount of such coinage was $247,131,549.

The Director of the Mint reports that at the time of the passage of the law of 1878, directing this coinage, the intrinsic value of the dollars thus coined was 94½ cents each, that on the 31st day of July, 1886, the price of silver reached the lowest stage ever known, so that the intrinsic or bullion price of our standard silver dollar at that date was less than 72 cents. The price of silver on the 30th day of November last was such as to make these dollars intrinsically worth 78 cents extra.

These differences in value of the coins represent the fluctuations in the price of silver, and they certainly do not indicate that compulsory coinage by the Government enhances the price of that commodity or secures uniformity in its value.

Every fair and legal effort has been made by the Treasury Department to distribute this currency among the people. The withdrawal of the United States Treasury notes of small denominations and the issuing of small silver certificates have been resorted to in the endeavor to accomplish this result, in obedience to the will and sentiments of the representatives of the people in the Congress. On the 27th day of November, 1886, the people held of these coins, or certificates representing them, the nominal sum of $166,873,041, and we still had $79,464,345 in the Treasury, as against about $142,894,055 in the hands of the people, and $72,865,376 remaining in the Treasury one year ago. The Director of the Mint again urges the necessity of more vault room for the purpose of storing these silver dollars which are not needed for circulation by the people.

I have seen no reason to change the views expressed in my last annual message on the subject of this compulsory coinage; and I again urge its suspension on all the grounds contained in my former recommendation, reenforced by the significant increase of our gold exportations during the last year, as appears by the comparative statement herewith presented, and for the further reasons that the more this currency is distributed among the people the greater becomes our duty to protect it from disaster; that we now have abundance for all our needs; and that there seems but little propriety in building vaults to store such currency when the only pretense for its coinage is the necessity of its use by the people as a circulating medium.

Why have vaults been built for storing silver instead of putting it in circulation, as I said before? All the objections which I have urged against the President's former message apply to this. It is all on the idea that contraction makes prosperity and that the destruction of one of the precious metals is a good thing.

I now come to a more remarkable document, issued under very peculiar circumstances. It will be recollected that in the year 1891, during the month of January, there was a lively controversy here with regard to what was known as the force bill. The President at that time was a private citizen, practicing law in New York, with his office in the Mills Building. He was not mixing in public affairs, but he was in the manipulating center of the United States. His attention does not appear to have been called to the so-called force bill, but it so happened that pending the force bill, and for the purpose of side-tracking it, one of the means adopted was to pass through the Senate

A BILL FOR THE FREE COINAGE OF SILVER.

That bill went to the House of Representative, and was there pending. It was well known that President Harrison would veto it if it went to him, but a fellow-feeling makes all mankind wondrous kind. The Republicans were anxious that President Harrison should not be embarrassed by having presented to him a free coinage bill, and after the force bill had been gotten safely out of the way the Reform Club emerged forth in all its Orient splendor and called upon the ex-President of the United States for his profoundest views as to whether the free coinage bill ought to pass the House of Representatives and be presented to the President for his signature or veto. Everybody knew the President would veto the bill. The Reform Club was always ready to listen to the voice of Wall street, to the voice of Lombard street, whence cometh many good things at election times. They called a meeting and addressed a letter to Mr. Cleveland. Mr. Cleveland came forth with the following reply:

[Letter to the Reform Club meeting, February 10, 1891.]

DEAR SIR: I have this afternoon received your note inviting me to attend to-morrow evening the meeting called for the purpose of voicing the position of the business men of our city to "the free coinage of silver in the United States."

I shall not be able to attend and address the meeting as you request, but I am glad that the business interests of New York are at last to be heard on this subject. It surely can not be necessary for me to make a formal expression of my agreement with those who believe that the greatest peril would be invited by the adoption of the scheme embraced in the measure now pending in Congress for the unlimited coinage of silver at our mints.

If we have developed an unexpected capacity for the assimilation of a largely increased volume of this currency, and even if we have demonstrated the usefulness of such an increase, other conditions fall far short of insuring us against disaster if, in the present situation, we enter upon the dangerous and reckless experiment of free, unlimited, and independent silver coinage.

Yours, very truly,

GROVER CLEVELAND.

E. ELLERY ANDERSON, *Chairman.*

"The business interests of New York are at last to be heard!" They had not been heard I suppose in one continuous din ever since the crime of 1873 was committed; they had not praised and glorified and deified the single gold standard because it

ROBBED THE MASSES

and gave them a chance to corner gold. At last! Everybody knew that, because it was the principal thing during his Administration. He had been constantly predicting evil, which did not come. He had been very anxious during all this time that the people should have only gold, and to have a string on it, to take it away from them at pleasure.

All those people made those predictions, and they make them with the same earnestness to-day, and insist that if that legislation has not destroyed us yet, it is going to very soon. The fact that it has not done any harm in the past does not enter into consideration, but the fact that the people fear that it may is sufficient for the President to destroy it. If this is not real calamity howling, I should like to know whence it comes.

Mr. DOLPH. May I ask the Senator what is the date of the letter from which he reads?

Mr. STEWART. It is the President's letter of the 10th day of February, 1891.

Mr. DOLPH. Before the nomination of Mr. Cleveland the second time for the Presidency.

Mr. STEWART. Certainly.

Mr. DOLPH. Then that was indorsed by the Democratic national convention which nominated Mr. Cleveland and indorsed by the people in his election.

Mr. STEWART. Oh, no.

Mr. DOLPH. I can not see it otherwise.

Mr. STEWART. No. Let me tell the Senator what it was. Do not put the Democratic party in a false position. Because you are a young convert now and an enthusiastic supporter of the Administration, you should not want to put it in a false position. Let some of the older members of the Administration party speak for it.

Mr. PALMER. Will the Senator allow me to say a word?

Mr. STEWART. I had rather not yield unless the Senator wishes to ask me a question.

Mr. PALMER. I can not, with candor, say that I desire to ask the senator to yield for that purpose, but I shall be glad, with his permission, even to ask him a question.

Mr. STEWART. I decline to give way for a speech in this connection.

Mr. PALMER. I wish to express my obligation to the Senator from Oregon for his statement in reference to the Democratic platform and in defense of the President.

Mr. STEWART. The Democratic party did not go to the country on this letter of the President or what preceded it. The Democratic party and the Republican party made their platforms, and they voted for Mr. Cleveland and Mr. Harrison on their letters of acceptance. They did not go on the previous records of either of those gentlemen.

THEY BOTH HAD GOOD, CLEAN, GOLD-BUG RECORDS.

They were both gold-standard men, so far as their public acts were concerned, when nominated. The Republican platform I shall not now discuss, because Mr. Harrison was not elected; but the provision of the Democratic platform relating to the money question is a pretty good thing, and we can not have too many good things, even in this debate. We have a great many bad things, and when we get a good thing we ought to cherish it. The last national Democratic convention adopted as one of its planks the following:

GOLD AND SILVER.

SEC. 7. We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future which should make all of its supporters, as well as its author, anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver, without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals and the equal power of every dollar at all times in the markets, and in the payment of debts; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

They demand, then, the use of both these metals and their coinage without discrimination. That is old-fashioned Democracy, the Democracy of Jefferson and Jackson, and the Democracy of the Constitution. When they made this declaration it was in direct opposition to all President Cleveland ever said on the subject—entirely irreconcilable. He was nominated by the convention and given an opportunity to accept the nomination on its platform. When he accepted the nomination he pledged himself as an honorable man irrevocably to carry out the essential provisions of that platform, and not to destroy either metal. He was pledged to abandon his scheme of monometallism. I read from his letter of acceptance:

The people are entitled to sound and honest money, abundantly sufficient in volume to supply their business needs.

Does anybody believe that there is enough gold for that purpose? It is admitted by all political economists that there is not gold enough, and that there must be a continued fall in prices; it is admitted that the volume of gold is so small that prices must continue to fall. Of course the President is of the school which believes

IN DEPRESSING THE PRICE OF PROPERTY

and raising the price of bonds and credit.

If we only knew the untold millions of money collected in this country in the shape of interest in New York and Chicago we should discover that there are a great many men engaged in cutting coupons. I have heard it said that the amount of interest collected in those two cities reaches the enormous sum of $700,000,000 per annum.

Mr. President, the President in his letter of acceptance continues:

But whatever may be the form of the people's currency, national or State—whether gold, silver, or paper—it should be so regulated and guarded by governmental action, or by wise and careful laws, that no one can be deluded as to the certainty and stability of its value.

Everybody agrees to that. Those metals have always been stable through all the ages.

Every dollar put into the hands of the people should be of the same intrinsic value or purchasing power.

"Intrinsic value" is rather an indeterminate quality; still, I suppose the President used it as the equivalent of "purchasing power." It is the old way of using the term, but it is inaccurate. It is misleading, because there can be no such thing as intrinsic value. But the President, not having examined any economic question, may be excused for such absurdities.

With this condition absolutely guaranteed, both gold and silver can be safely utilized upon equal terms in the adjustment of our currency.

The Democratic platform said the two metals should have equal mint privileges, to which Mr. Cleveland assented, and his assent made him President.

In dealing with this subject no selfish scheme should be allowed to intervene, and no doubtful experiments should be attempted.

The language excludes taking into consideration schemes to destroy silver and substitute national-bank currency therefor, excludes the enhancing of the value of money to enrich the few, for those are the selfish schemes spoken of, the schemes which have robbed the people of their money. The President in his letter of acceptance repudiates that.

The wants of our people, arising from the deficiency or imperfect distribution of money circulation, ought to be fully and honestly recognized and efficiently remedied.

The President there recognizes what all people know, that there is a deficiency of circulation which ought to be remedied, but the Administration Senators on the Republican side of the Chamber and the Administration Senators on the Democratic side of the Chamber have not suggested any remedy by which they would furnish an abundant currency, or by which they would make up the deficiency to which the President alludes. Oh, no. They simply tell us how they would make more contraction by stopping the issuance of any more Treasury notes. All the President's followers are silent as to a remedy. When asked as to what they will do, some of them intimate that we

MUST ISSUE BONDS AND BUY GOLD.

They are a little cautious about saying what they are going to do with the bonds when they are issued. We know what they want. Others on this side say we will not permit the issue of bonds. So the thing is as much unsettled as to what is going to be done as possible. The people are getting somewhat curious as to how this deficiency to which the President refers is going to be supplied. The President continues:

It should, however, be constantly remembered that the inconvenience or loss that might arise from such a situation can be much easier borne than the universal distress which must follow a discredited currency.

I do not know to what "discredited currency" the President refers, unless it be the "discredited currency" of the banks, which have failed to redeem their paper. I know of none of the Government currency which is discredited. The President probably alluded to the wind in these national banks after their collapse, when the depositors attempted to withdraw their deposits and were unable to do so.

For convenience of reference I here insert entire the portion of the President's letter of acceptance which I have been commenting upon:

The people are entitled to sound and honest money, abundantly sufficient in volume to supply their business needs. But whatever may be the form of the people's currency, national or State—whether gold, silver, or paper—it should be so regulated and guarded by governmental action, or by wise and careful laws, that no one can be deluded as to the certainty and stability of its value. Every dollar put into the hands of the people should be of the same intrinsic value or purchasing power. With this condition absolutely guaranteed, both gold and silver can be safely utilized upon equal terms in the adjustment of our currency.

In dealing with this subject no selfish scheme should be allowed to intervene, and no doubtful experiments should be attempted. The wants of our people, arising from the deficiency or imperfect distribution of money circulation, ought to be fully and honestly recognized and efficiently remedied. It should, however, be constantly remembered that the inconvenience or loss that might arise from such a situation can be much easier borne than the universal distress which must follow a discredited currency.

Taking this letter of acceptance of the President, together with the Democratic platform and the declarations of some of

the orators throughout the country, the Democratic party was placed before the people squarely for bimetallism. I do not think anybody will question that. After the election the whole situation changed, and they say, "Now that we have got the votes of the people we will use them as we choose; we are of the same opinion we were before this letter was written and before the people voted for us." Then some of those who claimed to be friends of the Administration came to Washington. The leader of that gallant band of patriots was a gentleman by the name of Villard.

Mr. GEORGE. Is that the same gentleman who was president of the Northern Pacific Railroad Company?

Mr. STEWART. The same gentleman. He said if the Senate did not yield immediately that a mob of gold bugs would be brought here to demand action, and he threatened several Senators in the Marble Room to that effect. The demand was that the Sherman act should be repealed at once, and nothing put in its place but a provision for the issue of bonds. An attempt was made to repeal the Sherman law last session by a bill being offered for that purpose. The attempt to call the bill up and have it considered was unsuccessful. Nearly all those who favored the repeal of the act were Republicans, and I will read the names of those voting yea and nay:

[RECORD, February 6, 1893, Fifty-second Congress, second session, volume 24, part 6, page 1242.]

So far as the Democrats are concerned, I think that only five of the Senators who voted against the consideration of the bill have been converted to the support of the pending measure by the reasoning of the President and by the calamity howlers and the bank panic. The only men amongst those who were opposed to it last February and now in favor of it I shall name. I do not want to do them injustice, and if I make a mistake in the names I wish to be corrected.

It is now supposed, but I think it is doubtful, that the Senator from Georgia [Mr. GORDON] will vote for unconditional repeal. I think from his speech that I shall show him that he has pledged himself to the support of silver, but I put him amoug them. The Senator from Virginia [Mr. HUNTON] I put among them, and the Senator from North Carolina [Mr. RANSOM], and the Senators from Indiana [Mr. VOORHEES and Mr. TURPIE].

Those five have changed. I think no others have been stampeded by the demands of Wall street. There has not been such a general conversion after all. With all the power of patronage and the power of the newspaper press brought to bear upon them, only five have gone down. I think that a pretty good record for the Democracy. I was a little astonished at my friend from Indiana [Mr. VOORHEES], for I know he is a brave man, and I have always admired him very much on account of his devotion to the people and their devotion to him. He expresses my views so well with regard to the question of repealing the Sherman law, I do not reflect upon him, but he expresses my views so well, and I like to have my views well expressed—that I shall read what he says. I find this in the RECORD of February 18, 1893:

Mr. VOORHEES. I should have voted the other day to take up what is known as the Sherman act and for its repeal, but for the fact that its passage would absolutely demonetize silver and leave it supported by not one word of legislation. I thought the measure was audacious; I thought it an outrage to ask men like myself and others to absolutely sweep from under the silver currency every vestige of law. That is not what we meant at Chicago; that is not what the people mean.

I should vote for the repeal of the Sherman act simply because it is vicious in principle, but it must be in connection with something better. You might as well authorize a circulating medium based upon tobacco by the hogshead or cotton by the bale as upon silver in its bullion shape. It must be coined into money, and such is the position of the Democratic party as declared in national convention.

How truthfully the Senator from Indiana states his position then and my position now; and I have faith to believe that it will be his position before this debate is over, that he will return to the principles of the Democratic party as indorsed by the President in his letter of acceptance. I do not believe he will keep the people in suspense

BY STRIKING DOWN SILVER

without a substitute.

The Senator from Indiana has often inspired me. I have looked upon him for the last twenty years as a sort of pillar of cloud by day and a pillar of fire by night on this subject. He always hits the nail squarely on the head. I shall read some of his remarks made in 1892, which are so pertinent to the present occasion that I reproduce them, not to place him in a false position, but to show how clearly and forcibly he states the principle of bimetallism, how clearly his heart is with the great heart of the American people, and how entirely he represents the people of his great State. In presenting a petition on the 29th of February, 1892, he said:

Mr. VOORHEES. I send to the desk a petition.

The CHIEF CLERK. A petition of 27 members of Stillwell Post No. 375, Grand Army of the Republic, of Colfax, Ind., praying for the defeat of the free coinage of silver.

Mr. VOORHEES. Mr. President, in presenting this petition I desire to say that it is the first communication of the kind ever received by me from citizens of Indiana. My respect for those who send it induces me to submit by way of reply and explanation some observations of my own, and of a somewhat personal character to myself.

It is now nearly fifteen years since I became a member of this body. At the very beginning of my service I was assigned to a position on the Committee on Finance, which position I have ever since been allowed to retain. A few weeks after I took my seat I addressed the Senate, fully and in detail, on the condition of the finances of the country, advocating the free coinage of silver, and denouncing its demonetization in 1873. This was in January, 1878. In the approaching State election of that year in Indiana I was made the candidate of my party for return to the Senate, as distinctly and explicitly as if I had been nominated by every Democratic convention held in the State.

The most prominent issue by far at that time before the people of Indiana was the restoration of silver money to the lawful condition in which it had stood from the foundation of the Government to the year 1873. A popular majority of more than 30,000 votes was cast at that election for the members of the Legislature who honored me with their support, Gen. Benjamin Harrison being the opposing Republican candidate. Since then I have been twice reëlected, each time by an increased majority, each time without opposition in my own party, and each time over the most prominent Republican leader in the State for the time being. On all occasions, whether a candidate myself or laboring for the election of others, I have advocated the free coinage of silver, and have always been known as its open supporter.

My position, whether at home in Indiana or here, has never been a moment in doubt. I have not obtruded the issue upon the public mind needlessly, nor, I trust, in an unbecoming manner, but neither have I relegated it to the rear or flinched from its support to accommodate the interests or the aspirations of those who are opposed to it. Sir, I make this brief personal reference and this citation of my own record for the purpose of again saying that no class of citizens, and indeed no one citizen of Indiana has ever heretofore placed a petition hostile to silver money in my hands or remonstrated with me in regard to my own position on that subject. Indiana is a very full and populous State. There are two millions and a quarter of inhabitants within her borders. She will cast next fall, at the Presidential election, nearly 600,000 votes. Those who live in that State are also a very intelligent people, and especially on political affairs.

For more than the third of a century parties have been very evenly divided in Indiana. Elections have been closely, vigilantly, and stubbornly contested. Able and careful discussion has pervaded every neighborhood. Thoroughly trained and highly educated party leaders, such as Thomas A. Hendricks and Joseph E. McDonald on one side, with Oliver P. Morton and Benjamin Harrison on the other, besides many more that might be named, have left no political issue in obscurity or of doubtful meaning in the great State to which they belonged.

No Democratic platform has been adopted in Indiana since the demonetization of silver in 1873 which did not favor its restoration, and no Republican platform in that State has dared to avow distinct opposition to it. In fact, if the question could be divested of its political bearings and disassociated from the interested ambition of individuals, I sincerely believe, from repeated canvasses of the State, embracing every county in it, that there is not 5 per cent of the adult population of Indiana, irrespective of party, opposed to the coinage and use of silver currency as it was authorized by the framers of the Constitution a hundred years ago.

I believe that is true, and that is why I so bitterly oppose snap judgment; that is why I oppose this proposed legislation, without giving the people a hearing; that is why we ought to resist it; and that is why our resistance will be commended by the American people. I can recall no instance where the Senate has resisted legislation stubbornly, where eventually the country did not sustain such resistance. The Senator from Indiana continued:

Such a petition, therefore, as I have here presented to-day at once caused me to look for some new and presumably illegitimate and unnatural element at work amongst the people. But slight investigation has been necessary to discover a remarkable attempt at imposition and fraud on the most worthy class of our citizens. I hold in my hand a circular letter bearing the name of one MICHAEL D. HARTER, and addressed to the Grand Army posts of the country. This man seeks to alarm the soldiers of the war for the Union on the subject of their pensions. He warns them that a movement is on foot to put silver money in circulation, depreciated to such an extent and in such a debased condition as to be worth only 70 cents on the dollar, or even less, and that with such a dishonest currency their pensions are to be paid.

The soldiers of Indiana know whether I have been faithful to their wants and interests, and they will believe me when I assure them that this circular is not true; that no measure is contemplated, or can ever by the remotest possibility become a law, by which they will be paid their pensions, now or hereafter, in money less valuable, dollar for dollar, than the very best money, whatever that may be, in circulation anywhere in the world. It is well worthy the soldiers' attention that the silver dollar of the fathers, of 412½ grains, was devised by Thomas Jefferson, sanctioned by Washington, authorized by the Constitution, and put into circulation by Alexander Hamilton, the first Secretary of the Treasury of the United States.

It is also worthy their attention that this dollar has never, from that day to this, stood for a single moment below gold in its purchasing power or in the financial centers and money markets of the world; indeed, its purchasing power at the time it was secretly stabbed nigh unto death in 1873 was 3 per cent higher than that of gold. And even now, crippled and maimed as it is at the hands of its treacherous enemies, and falsely proclaimed to be a depreciated and debased currency, 30 per cent below par, it still supplies every want of man, and goes as far in doing so, dollar for dollar, as the best gold ever coined into money. The horse that can be bought for a hundred dollars in gold can be bought for a hundred in silver; the suit of clothes that can be bought for $25 in gold can be bought for $25 in silver; and if a man prefers to have gold rather than silver in his pocket, he can to-day buy the gold itself with silver, dollar for dollar.

No one need be misled on this point. There are at this time more than four hundred millions of silver money in daily and hourly circulation in this country. The coined currency itself, and the silver certificates based on silver coin held in the Treasury, are to be found doing a large and honorable business in every neigborhood beneath the flag. By the legislation of 1878, supplemented by subsequent enactments, silver money has been restored to its legal-tender powers and to its full dignity and honor, with the single exception of the resriction on the mints as to the amount of its coinage. Not a dollar of it can now be found, from the north end of Maine to the south end of Texas, in a depreciated condition, passing at a discount, or holding its head in any market, whether of produce or of money, lower by the breadth of a hair than the proudest gold ever gambled for in the dens of Wall street.

Silver money is this day so sound and acceptable amongst us and passes so smoothly and evenly at par with gold that it is in constant use even by its enemies without a knowledge or suspicion on their part that it is in their hands. There is hardly a Senator on this floor at this moment who has not in his possession and who is not in the daily habit of carrying silver money, in the form of silver certificates, with which he can, and sometimes does, buy gold at even rates across the counter of the banks, and with which he pays his board or his rent if he is poor, or the expenses of his palatial residence and splendid entertainments if he is rich.

Mr. President, let us all therefore be thankful for silver money, the money of the Bible, the money of the patriarchs, the money of the ages, the money of the fathers, the money of the Constitution, and the money of the people, the same yesterday, to-day, and forever. We behold the $400,000,000 and over which we have, and know it to be good. Free coinage simply means more of the same sort. It means good money and more of it, and there is not a laboring man in all the land, I care not where or what his politics, who does not pray for such a measure. It would come at this time to the toiling millions like soft rains to the parched and burning desert.

Sir, there is no friction or want of harmony between the two great money metals of the world. The cry so often now heard that the coinage of silver and its use will drive gold out of this country is a notoriously false cry. The facts of history not only refute such a statement, but place it beyond discussion and reduce it to contempt. The dismal prediction of gold exportation from our shores was repeated a thousand times on the floors of both branches of Congress when silver was restored to coinage in 1878, and the raven croak of coming disaster was taken up all over the land by the agents of the money power, the monometallists, the plutocracy.

To meet, expose, and crush this false prediction it is only necessary to point out the fact that while there were $230,000,000 of gold money in this country in 1878 there are more than $700,000 000 now. Why, sir, the present able and accomplished Secretary of the Treasury, Mr. Foster, in his report of December last, boasts of the return of gold to the Udited States and cites that great fact as the leading reason for the enlargement which he claims has taken place in the volume of our currency. This very important official statement is to be found on page 28 of the Secretary's report, and it leaves the false prophets, the loud-mouthed enemies of silver, without a rag to cover their nakedness and their shame.

Sir, not only gold and silver money in this country are on terms of absolute equality, but the same is true of all other branches of our currency. The greenback and the bank note have exactly the same purchasing and practical legal-tender power as gold and silver. There is no unevenness anywhere, and it is the same thing now to the Government whether it pays its debts in one kind or another of our diversified currency. So far as value is concerned the Government can pay in gold just as well as in any other kind of money.

The gold dollar is worth no more than the dollar of silver, or the greenback, or the bank-note dollar, and will purchase no more of the necessaries of life and is far less convenient for use. The bondholder who staid at home and speculated during the war received gold when the soldier was compelled to receive depreciated paper. This policy of injustice and outrage I denounced at the time, and I continue to denounce it now. The soldier should at all times be paid in the best money—in gold—or in that which is as good as gold, and I am in favor of so paying him now.

I notice, however, that I am asked in the petition I have presented not only to vote against the free coinage of silver, but also against the reduction from 412½ grains to 371¼ grains of silver in the dollar. This request is based on the statement of MICHAEL D. HARTER in his circular that it is proposed to give 371¼ grains of silver a legal-tender value of 100 cents. The soldiers of Indiana will know how to estimate this statement when they are assured that nothing now is, or ever was, intended by free coinage except to give back to the people the old dollar of 412½ grains, nine-tenths fine, and therefore standard silver, that well-known dollar which received the sanction of the greatest minds ever known in American history.

We seek simply to restore the silver dollar as it existed when the soldiers of the Revolution received their pensions, and when the veterans of the war of 1812 were placed upon the pension rolls. No complaint was made then. Silver money then proved itself, as it has ever since, as good as the best. The Government commits a great wrong in paying those who offer their lives in its behalf in depreciated currency, whether in payment of their wages in the field, their bounties, or their pensions. I held during the war for the Union that the contract for their wages ought to be kept good with the soldiers in the field, and that the difference between the greenback and gold at that time ought to be made up to them by the payment of a gold equivalent in greenbacks. Nor would I now for any consideration known to the human mind aid in depriving the soldier of a single farthing due to him from his Government.

At the same time, I am not willing to stand idly and silently by and allow him to be imposed upon by those who are seeking their own interests and ulterior designs through his sensitive fears of personal loss. The movement of the money power to dwarf and contract the circulation of the world more than one-half by destroying silver currency, thus promoting the aristocracy of wealth and a government of the plutocracy, shall not muster into its service the soldiers of Indiana if I can help it. The soldier lives not for himself alone, but likewise for his wife and his children, and when he is gone, and his children become a part of the great laboring, moving, struggling mass of the community, he desires that there shall be enough money in ciculation to pay them fair wages for their labor and to give them a fair chance in the battle of life. He does not wish to see a contracted currency hoarded away in the hands of the few, owned and controlled by great corporations and syndicates, with only here and there a meager amount for the laboring people.

But great stress is laid by the enemies of silver on the fact that when bullion is taken to the mint and coined the coin as money is worth more than the bullion. This is equally true as to gold and silver both, and if it should stop the coinage of one metal it should also stop the coinage of the other. But inasmuch as the great body of the people—farmers, mechanics, wage-workers, pensioners, and other worthy classes—have to do only with the money itself, with the dollars after they are coined, with the currency after it has received the authority of the Government, I do not see how they can suffer any loss, certainly no more in silver than in gold at the mints. If the act of coinage puts silver at par with gold, it goes with that value into the hands of the people. The question for the people is honest, lawful money, and every dollar which has the authority of the Government upon it is honest and is lawful.

Sir, I speak not for others upon this question; I speak for myself, and recognize the responsibility I owe alone to those who have sent me here. It is said there is trouble in the silver question at this time. It is said it is dividing and distracting political parties, that there are divisions in both great parties in regard to the proper course to pursue. This all may be true, but the friends of silver have not made the trouble. Gladly would we have seen the silver dollar let alone in its sphere of usefulness and honor. Deeply do we regret the continued and venomous assaults upon it. We are simply defending one of the institutions of the founders of the Government from the greed and avarice of the great money-changers of the world.

We look back in history and find ourselves in company with Washington, Jefferson, Hamilton, Madison, John Marshall, Monroe, Jackson, Clay, Calhoun, Webster, Van Buren, Silas Wright, Marcy, Seymour, Benton, Cass, Douglas, Hendricks, Morton, Allen G. Thurman, Salmon P. Chase, and Abraham Lincoln. No fault was ever found in silver by these illustrious men, nor danger feared by them on account of its existence and use as money. The statement that the silver dollar ever cheated or defrauded any human being out of his just dues or the reward of his labor is shown to be false on every page of American history. For nearly twenty years past we have listened to dismal prophecies as to the injurious effects of silver currency. No one of them has come true; no one of them has been found to have been true at any time in the annals of the Republic.

I seek to proscribe no man on this question. I do not present it as a party test, nor shall I submit to having it so presented to me. I shall pursue for myself the line of duty which lays so plainly before me, and I shall do so without let or hindrance from any source. I shall vote my own convictions and answer to my constituents for my action. Nor will the silver issue ever obstruct my vision nor my course as to other and perhaps greater issues. It is in full harmony with the overpowering and masterful issue of tariff reform, and it has proved itself a powerful help and handmaiden to free government in the defeat of the bill intended for the forcible subversion of free elections throughout the United States.

It is lately claimed, however, as a last resort by its enemies, that nothing should be attempted at this time on the subject of silver because nothing can be accomplished; that, owing to the fact that the two Houses of Congress and the executive department of the Government are not in agreement, no measure on the subject can become a law. If this is a reason for nonaction on the subject of silver, it is a still more powerful reason, and pleads with still higher force against any action on the still greater subject of tariff reform. The free coinage of silver can pass both branches of Congress, but will, doubtless, be vetoed by the President; while any measure of tariff reform, free wool, or anything else, can pass only one House, with the absolute certainty of being vetoed if by any possibility it should pass both. Such a reason for nonaction on any subject is worthless and untenable. Let us, therefore, do our duty as each one sees it for himself.

But let there be action—bold, constant, and aggressive action—against every evil in sight, leaving the consequences to that high Providence which rules in the councils of nations, as well as in the affairs of men. The spirit of the people at this time expects no one to shrink back from the conflict at any point in the line of battle simply because he is not assured of immediate success. The Bruce of Scotland was taught the ultimate point of courage, duty and endurance, by the climbing spider's repeated failures, but constant action and final success. The just ends in view by the laboring people of the United States in the present crisis of their affairs are few and simple but as far-reaching and as powerful as the mighty principles which uphold life, liberty, and the pursuit of happiness. They may be stated in brief space as follows:

First. Absolute equality in the burdens and blessings of government founded on a tariff reform which will place, as nearly as possible, all the necessaries of life on the free list, causing wealth, and the graduated incomes of wealth, rather than the wants and necessities of working people, to pay taxes and furnish Government revenues.

Second. A full and sufficient volume of money in circulation, consisting of gold, silver, and legal-tender paper currency, at par with each other and interconvertible.

Third. Free elections in all the States, untrammeled by "force bills," or any other Federal machinery implying a want of faith in the intelligence, the honor, or the patriotism of any portion of the American people.

Fourth. Rigid economy in public expenditures so that no more billion-dollar Congresses may come to curse the country.

Is it strange that bimetallists love and respect the Senator from Indiana? With a continued record for twenty years in one straight honest direction, with continued efforts for all that period of years to restore the money of the Constitution, to stop contraction and hard times, is he not entitled to great consideration, and may we not expect that he will here and now

HELP US RESCUE SILVER.

from the death which the gold bugs have decreed for it? I think he will, when I go on further and show the difficulties in his path. If he secures the passage of this law and sanctions the crime of 1873, I think I shall show him that silver can not recover from that blow and that there will be no hope for silver in the next four years. Since the Senator from Indiana made his speech things have changed. The President has written a letter which I commented upon as I went along.

It is now generally conceded that the $150,000,000 of Treasury notes issued under the Sherman act did not make the panic, did not do any harm. It is now generally conceded that the panic was created for the purpose of stampeding Congress, for the purpose of giving the people an "object lesson," and in order to start the panic it was necessary for the Secretary of the Treasury to

ABOLISH THE MARKET PRICE OF SILVER.

He abolished it in July, and the result was there was no market price for silver. The market price having been abolished by the Secretary, no silver could be bought, the banks of Denver could get no currency, and so they broke. That is the condition of affairs we find. There may be a difference of opinion as to whether the Secretary was right in abolishing the market price of silver; but he absolutely did it. So there was no market left in the country for silver, and just before the Secretary abolished its market price, the English Government suspended the coinage of silver in India.

We have an agent at the Court of St. James, who might have been instrumental in bringing about that result. Ex-Senator Bayard is an eminent monometallist. He has the high distinction, whether enviable or unenviable, of having been on the Committee on Finance in 1873 which demonetized silver. He was the associate of the Senator from Ohio [Mr. SHERMAN], and he has recently written a letter to this country, in which he shows himself a most enthusiastic admirer of the single gold standard. He was at the Court of St. James, and by some means the Herschell committee when investigating the matter recommended the suspension of coinage in India, asserting that the United States was going to repeal the Sherman act. We did not know it in this country. Every time a proposition has been submitted for that purpose in the Senate

IT HAS BEEN VOTED DOWN.

The Herschell committee, however, ascertained it, from the language of their report. It seemed almost certain they had some official information. Perhaps Mr. Bayard knew it and told them. It must have been he from the language of the report. It looks like official information. Free coinage of silver was suspended in India and then the Secretary of the Treasury abolished the market price of silver in this country. That broke the banks in Denver, and the panic became quite general. Just previous to that there was some petroleum, or rather dynamite, thrown on the situation by the President.

The panic came and the calamity howlers began. They had been waiting for this opportunity for twenty years, and they started afresh in full blast. The banks in the East were refusing credit and squeezing their Westean brethren, to give them an "object lesson," as it is termed. When things were in this excited condition this document was issued from the White House, which is very unusual:

By the President of the United States of America.

EXECUTIVE MANSION, *Washington, D. C., June 30, 1893.*

Whereas the distrust and apprehension concerning the financial situation which pervade all business circles have already caused great loss and damage to our people, and threaten to cripple our merchants, stop the wheels of manufacture, bring distress and privation to our farmers, and withhold from our workingmen the wage of labor—

Who got up the distrust but the gold men? But for them there would not have been a ripple, as nothing had happened in the affairs of the country which had not been in operation for years, except the movement to bring an "object lesson" and repeal the Sherman act, which Mr. Villard demanded in February last.

This is very sensational, coming from the Executive, and very unusual, very inflammatory:

And whereas the present perilous condition is largely the result of a financial policy which the executive branch of the Government finds embodied in unwise laws which must be executed until repealed by Congress—

This was in June. The market price of silver had not then been abolished. The President said the law must be executed until repealed.

Now, therefore, I, Grover Cleveland, President of the United States, in performance of a constitutional duty, do by this proclamation declare that an extraordinary occasion requires the convening of both Houses of the Congress of the United States at the Capitol, in the city of Washington, on the 7th day of August next, at 12 o'clock noon, to the end that the people may be relieved through legislation from present and impending danger and distress.

Was there ever a more inflammatory proclamation issued? It had its desired effect. Things went tumbling when it came out. I will insert the proclamation in full in my remarks.

The full text of the proclamation is as follows:

By the President of the United States of America.

EXECUTIVE MANSION, *Washington, D. C., June 30, 1893.*

Whereas the distrust and apprehension concerning the financial situation which pervade all business circles have already caused great loss and damage to our people, and threaten to cripple our merchants, stop the wheels of manufacture, bring distress and privation to our farmers, and withhold from our workingmen the wage of labor:

And whereas the present perilous condition is largely the result of a financial policy which the executive branch of the Government finds embodied in unwise laws which must be executed until repealed by Congress:

Now, therefore, I, Grover Cleveland, President of the United States, in performance of a constitutional duty, do by this proclamation declare that an extraordinary occasion requires the convening of both Houses of the Congress of the United States at the Capitol in the city of Washington, on the 7th day of August next, at 12 o'clock noon, to the end that the people may be relieved through legislation from present and impending danger and distress.

All those entitled to act as members of the Fifty-third Congress are required to take notice of this proclamation and attend at the time and place above stated.

Given under my hand and the seal of the United States at the city of Washington, on the 30th day of June, in the year of our Lord 1893, and of the Independence of the United States the 117th.

[SEAL.] GROVER CLEVELAND.

By the President:

ALVEY A. ADEE,
Acting Secretary of State.

Mr. STEWART. We come now to the great financial measure of the President as proposed in his message to Congress, and I shall examine his recommendations and see how much weight they are entitled to in the consideration of this matter, for this was a proper mode of communicating with Congress; this was in the line of his legitimate function. The inflammatory part of the call for the extra session was unusual and unnecessary. The Constitution provides, however, that the President shall communicate from time to time to Congress the state of the country, and make his recommendations; so this is a document entirely within his jurisdiction, and one we are bound to consider respectfully and weigh upon its merits. It is communicated in an orderly way and is not a stump speech, is not a lecture on the outside, but is a communication from the President of the United States calling upon Congress

TO LEGISLATE UPON AN IMPORTANT MATTER.

We have to deal with the message on its merits. If it contains reasons which commend themselves to our judgment we must follow them. It is not a command, and should not be so regarded. The President is not a dictator. His message is simply a recommendation. He says:

The existence of an alarming and extraordinary business situation, involving the welfare and prosperity of all our people, has constrained me to call together in extra session the people's representatives in Congress, to the end that through a wise and patriotic exercise of the legislative duty with which they solely are charged, present evils may be mitigated and dangers threatening the future may be averted

Our unfortunate financial plight is not the result of untoward events nor of conditions related to our natural resources; nor is it traceable to any of the afflictions which frequently check national growth and prosperity. With plenteous crops, with abundant promise of remunerative production and manufacture; with unusual invitation to safe investment, and with satisfactory assurance to business enterprise, suddenly financial distrust and fear have sprung up on every side.

I should like to know where the invitation to investment comes from in this country, unless it be to invest in bonds? I should like to know when property is falling, as it has been for the last twenty years, where the invitation to investment is? I do not think there is much in the President's statement. If there was a general invitation, somebody would accept it, and the fact that people refuse to invest, shows there is no opportunity for profitable investments. The President differs with the business community about the invitation to investment, unless it be investments in bonds and money, because money and bonds are the only things which are going up in price. If he means there is any inducement to invest anywhere else, he differs with the practical business men of the country. Why is money hoarded, unless it be because it appreciates faster than real estate? Real estate is going down, and nobody wants it.

Numerous moneyed institutions have suspended because abundant assets were not immediately available to meet the demands of frightened depositors.

Why could the assets not be made available? Was it a surplus of money; did the $150,000,000 that was put out prevent the assets being available and convertible? The complaint we hear to-day is that there was no money and no way of converting the assets. They were paying a premium for money about the time this message was written. There was a great struggle because of this deficiency of money. After looking through this message, we find there is no recommendation to supply that deficiency, a deficiency which the President, in his letter of acceptance a year previously, stated existed then. He goes on:

Surviving corporations and individuals are content to keep in hand the money they are usually anxious to loan, and those engaged in legitimate business are surprised to find that the securities they offer for loans, though heretofore satisfactory, are no longer accepted.

That was a scheme to stampede Congress.

Values supposed to be fixed are fast becoming conjectural, and loss and failure have invaded every branch of business.

"Values supposed to be fixed!" Why, values have not been fixed for twenty years. We have had the machinery in operation regularly for twenty years for putting them down.

I believe these things are principally chargeable to Congressional legislation touching the purchase and coinage of silver by the General Government.

What ideas of the purchase and coinage of silver by the General Government. He believes that that has caused a stringency in the money market. He thinks that "values supposed to be fixed are fast becoming conjectural, and loss and failure have invaded every branch of business." Who has lost by the silver

dollar? I shou'd like to see anybody who has lost by that. I should like to understand what the President bases his belief upon. I do not believe any such thing. Everybody knows there is no such thing at all; that $150,000,000 of Treasury notes have not disturbed values, but have sustained them. It is nonsense to suppose that. It is impossible.

To go on:

This legislation is embodied in a statute passed on the 14th day of July, 1890, which was the culmination of much agitation on the subject involved, and which may be considered a truce, after a long struggle, between the advocates of free silver coinage and those intending to be more conservative.

"Conservative." That I do not like. "Intending to be more conservative." Why, by and by house robbery will be considered conservative; murder will be considered conservative. Wholesale robbery by changing contracts is now called conservative. Here was an accumulation of nearly eight thousand millions of gold and silver, which was the reservoir. The production of a single year would make a very small percentage of increase and the failure for a year a very little decrease. The destruction of one-half of the stock of the precious metals, we are told, is conservative. The President's idea of conservatism is revolutionary. Is changing all contracts payable in either gold or silver into contracts payable in gold alone conservative? Doubling the obligations of contracts—is that conservatism? Is that conservatism which conserves the interests of one class and robs the other?

IT IS A MOST ODIOUS CONSERVATISM.

It is a conservatism which is ruining this country, and is taking the property of the masses and transferring it across the Atlantic, to increase that enormous fabric of wealth which has been procured without toil, which has been procured by cunning, by manipulating legislation, by taking advantage of our condition, by robbery of us, and adding to the thousands and thousands of millions controlled in London and in New York. If these men are conservative, then I want no conservatism. I denounce those men as revolutionists, and I say to them that it is dangerous to become revolutionary.

There is nothing that the anarchists, whom we all condemn so severely, have suggested in their belief in destruction that is so revolutionary, that is so destructive of human rights, that is so productive of such a vast amount of misery and ruin as this. It destroys one-half of the world's accumulation, doubles all the obligations of contracts, blocks the wheels of progress, and tends to barbarism and misery. Conservatism! Conservatism! If those who advocate the gold standard are conservative, then is robbery conservative. If they are conservative, then is Herr Most a conservative.

Undoubtedly the monthly purchases by the Government of 4,500,000 ounces of silver, enforced under that statute—

"Enforced under that statute?" That was before the abolition of the market—

were regarded by those interested in silver production as a certain guaranty of its increase in price.

Undoubtedly it did increase the price, as any other demand would. But the demand for gold increased more rapidly than the demand for silver with the increased purchases. Gold has gone up 20 per cent since 1890 and silver has remained about stationary, until the Secretary stopped purchasing the full amount.

But there have been other things done, in the doing of which

HONEST MEN COULD NOT HAVE PARTICIPATED.

In the first place, all public officials having to do with the Government have been constantly telling the public that silver was not good money. They have been constantly telling the public that this law was going to be repealed. They have been constantly warning the world against it. They have been circulating evil reports in regard to it. They have been declaring that the law was to be repealed, so as to intimidate purchasers. The whole power of the Government has been brought to "bear" the price of silver.

The Government has finally abolished the market so as not to have any market price, so it can be governed by what they call the London market price, which is made by

THE MOST EXTRAORDINARY MANIPULATION.

India is required to pay in England interest on her public debts to the amount of about $60,000,000 per annum in gold, and there are some other charges which India has to pay in England. Those charges are met by the sale of council bills through the Bank of England. These council bills are drafts on India, payable in silver. They are bought by merchants when they have remittances to make to India. The sale of these bills is just like a sale of just so much silver, as sometimes we sell silver certificates in New York.

Mr. PLATT. On whom are those bills drawn?

Mr. STEWART. They are drawn upon the Indian government. They are issued, payable in India. They are bills of the Bank of England, payable in silver in India. They are simple drafts.

Now, when they want to depress silver, all they have to do is to have an overissue of these bills. When they want to down the price of silver they can do so by selling those council bills. The price of these bills in London is taken as the market price of silver in this country. It has been a purely arbitrary thing. Yet the President says we undoubtedly expected that the price would go up. Certainly we did. We did not anticipate this manipulation, or the scramble for gold in Europe for war purposes and speculation which put up gold faster than the additional purchases could put up silver.

The result, however—

The President says—

has been entirely different, for immediately following a spasmodic and slight rise, the price of silver began to fall after the passage of the act, and has since reached the lowest point ever known. This disappointing result has led to renewed and persistent effort in the direction of free-silver coinage.

That effort has been made all the time. We were disappointed because their rascality and the scramble for gold exceeded our expectations. If they had bought squarely at the market price, if the Government had declared that it was the policy to put silver bullion on a parity with gold bullion; if the Government had maintained that silver was good money under the law in existence; if it had paid out silver as the law required; if it had coined it and paid it out for the redemption of Treasury notes, silver would have been respectable, and if there had not been a great increase in the demand for gold silver would have advanced in price as compared with gold. But the combination between the executive department and these gold manipulators of London, to the destruction of silver, they having the execution of this law, was what put down the price.

WHEN SILVER FELL BELOW THE COST OF PRODUCTION,

down to 72 or 73 cents an ounce, the Secretary would not buy. Suppose he had bought at that time; the price of silver would have gone up, and that would have been an object lesson that would not have tended toward the passage of this bill. They had to disgrace silver to repeal this law. They had to do that before Congress began its next session.

Mr. ALLISON. If I do not interrupt the Senator, I do not quite understand his statement of the process by which these council bills, so called, can be depressed. To whose interest could it be to depress the value of those bills?

Mr. STEWART. I shall reply to that.

Mr. PLATT. Mr. President——

Mr. STEWART. One at a time. I should like to reply to the Senator from Iowa.

Mr. PLATT. It has not been stated specifically upon whom these bills are drawn and what they are for. I do not think the answer was complete.

Mr. STEWART. They are drawn, payable in silver, in India.

Mr. PLATT. By whom?

Mr. STEWART. By the Bank of England.

Mr. WASHBURN. Upon whom?

Mr. STEWART. The Bank of England issues them and makes them payable in India. They are good, of course, unless they are repudiated.

Mr. PLATT. Are they payable in rupees?

Mr. STEWART. Payable in rupees, in India.

Mr. PLATT. Who buys them?

Mr. STEWART. They are bought by anybody. They are receipts to the Government, and they pay so much interest.

Mr. ALLISON. If the Senator will allow me, I did not quite understand him with reference to the council bills. I understand they are drawn by the secretary for India in London.

Mr. STEWART. Yes.

Mr. ALLISON. They are payable in rupees, and are sold in the open market.

Mr. STEWART. That is true.

Mr. ALLISON. They are sold to merchants who have imported articles from India.

Mr. STEWART. That is true.

Mr. ALLISON. At the sterling price, whatever that may be.

Mr. STEWART. Yes.

Mr. ALLISON. The secretary for India, who is acting for the Indian government, is desirous of getting a good price for the rupees in pounds sterling in order to pay the interest upon the debt of the Indian government. What I desire to know is how could that secretary justify himself in depressing the price of these bills?

Mr. STEWART. That is what I wanted to answer when I was interrupted. The secretary has said at some banquet, by

way of boasting, that he had taken advantage of the market, and that when the price should go up he would sell and depress the price. When the price got up to 20, he did sell a very large amount, and he congratulated himself upon the fact of taking advantage of the market.

Mr. ALLISON. That was not for the benefit of the Indian government.

Mr. STEWART. It was to depress the price.

Mr. ALLISON. Undoubtedly the effect would be to depress the price of silver bullion to a certain extent, because the council bills come in competition with silver bullion. If these council bills were not sold in this manner, then this account would be settled by silver bullion being sent to India. There is no doubt about that.

Mr. STEWART. Yes, and by selling more than the market required the effect would be to depress the price. There was an object in depressing it. They wanted to bring down the price of silver to degrade it. The Indian government is not interested in depressing silver, but the London management is.

Mr. PLATT. But the secretary for India would not sell any more than was necessary to realize money enough to pay the Indian government taxes, would he?

Mr. STEWART. No.

Mr. PLATT. He has to do that anyway.

Mr. STEWART. He could sell them in any regular way on the market every time the price went up. I observed a statement in the English papers at the time we were considering that bill—I do not know whether I can put my hand upon it now—and it was said that they could teach us a lesson. At all events, we have been selling in competition with those bills, not in competition with the silver bullion. We have had to compete with them. But whether they have been selling or not, they could issue $100,000,000 without any silver to draw against, and if their necessities ever required them to issue them to pay government taxes they could issue more than they had silver for. It is the competition with these silver bills that fixes the price of silver.

To go on with the President's message:

Meanwhile, not only are the evil effects of the operation of the present law constantly accumulating, but the result to which its execution must inevitably lead is becoming palpable to all who give the least heed to financial subjects.

He says the evil effects are accumulating. What are the evil effects of this law? What has it done? We were told all the while that they were evil effects, and that they were accumulating. We have been told that for fourteen years. Where is the specification as to what was done? They have not used the silver at all. All that has been done has been to issue $150,000,000 of legal-tender money.

Meanwhile, not only are the evil effects of the operation of the present law constantly accumulating—

I repeat, what are the evil effects? We have heard a great deal said about them, but we have not had them pointed out.

This law provides that in payment for the 4,500,000 ounces of silver bullion which the Secretary of the Treasury is commanded to purchase monthly, there shall be issued Treasury notes redeemable on demand in gold or silver coin, at the discretion of the Secretary of the Treasury, and that said notes may be reissued. It is, however, declared in the act to be "the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio or such ratio as may be provided by law."

Suppose it is; how are you going to do it? The law provides for that, to buy so much per month and to coin whatever is necessary to provide for the redemption. The only way to meet the requirement of that law is to make a market for it. The law requires that that shall be done.

What the United States declared in that act was that it proposed to restore the parity of the metals, and I suppose that common sense would teach the Government to restore them in the only way that they ever had been or ever can be restored. Parity has been maintained in all ages by using the cheaper metal, and when the demand would increase for that it would go up to the level of the other. That is the only way it can be done. But I do not know that anybody could suppose that the parity of the two metals could be maintained by redeeming silver coin with gold coin and refusing to buy silver. Congress increased the purchase of silver to maintain the parity, the Secretary stopped purchasing to destroy the parity. The President does not quote the other method by which this parity is to be maintained—that is, by purchase, by coinage, and by the use of silver.

This declaration so controls the action of the Secretary of the Treasury as to prevent his exercising the discretion nominally vested in him, if by such action the parity between gold and silver may be disturbed.

Of course it would disturb the parity if we should use only gold. But by using silver, as provided by the law, it would not disturb the parity. It was a declaration that we were moving toward bimetallism, and that is what it was put in for, and that we are going to buy more silver.

Suppose, as I said last night, that this great Government, with its enormous resources, should determine that it will

BUY SILVER AND SELL GOLD.

That would produce the equilibrium at once. It would make it easy for those having gold obligations to pay them, because they would have more gold; prices would rise in Europe and the producer of wheat would get more gold for his wheat and the producer of cotton would get more gold for his cotton than they now do. Gold would go where it would do some good. What good does gold do here? Send it to Europe. Make it plentiful there where you sell your wheat and cotton.

The trouble is that the European markets determine your prices of wheat and cotton here. Gold is scarce in Europe, and they pay you very little for your produce. Let the gold go where it will make rising prices, so that you will get more for your products. Take silver as the money that measures contracts honestly, and we shall have prosperity here. We shall produce more, because we shall have rising prices for labor and the products of labor; because the people can then make money. Silver is the better money and more universally used. Let the gold go. Bring up the prices of silver, and let gold go. Sell gold while its price is high. But if we commence buying gold and selling silver, other countries will be in a hurry to get rid of silver.

Now, we have a chance to get a better market for our gold and at the same time to acquire silver, the better money, for home use. Gold has become too dear as compared with the value of property, silver has measured the value of labor and has measured the value of property honestly. Gold has not. It has gone up in price 50 per cent. Silver goes along hand in hand with property.

IT IS GOLD THAT HAS GONE UP.

It is gold that is cornered. It is gold that we can not get. So that if we have any adequate amount of money at all we must have something else besides gold.

Why do they want us to buy gold? Why, so as to make a market for what they have. The gold ring are in the position of a man who has a corner on stock and who likes to have you buy at his price. They have got the gold cornered, and therefore they would like to have us buy the gold at their price. Those men have got the gold of the world cornered, so they put the price up so high that we shall be slaves in order to ever get possession of the money at all. That is the situation.

Mr. PALMER. Will the Senator allow me to ask a single question?

Mr. STEWART. Oh, yes.

Mr. PALMER. Is it not quite as likely that a corner in silver could be created?

Mr. STEWART. That is the question; and I thank the Senator for asking it. It is very pertinent and very suggestive. Do you not know that the more stock there is, the harder it is to corner? If the Senator is familiar with that business he will know that when there is only a little stock it is easily cornered. That is one of the reasons why the gold ring want but little gold. They can not pool the silver mines of the world very easily.

The gold and gold coin, however, is already pooled. If they could corner silver it would no doubt satisfy them just as well; they want the volume of money of ultimate redemption small enough for them to corner. They have

A CORNER ON GOLD

and they do not want it broken by increasing the volume by adding silver. They do not want the stock of metallic money increased because it would interfere with their corner. They are going to "squeeze" us and take the lifeblood out of the people of the United States and do not want to be interfered with. We are in debt. We have sold money short, and they propose to squeeze us. The less money there is the worse it will be for the shorts. These people in England and in New York are long. They have it pooled. The world is short, and they intend to destroy the world and take all the world has, if necessary, in order to make themselves richer. We want to break that corner. We want more stock. We want the use of silver, so that we can get something with which to fill our shorts. We are short. Property has gone down. We have not property enough to buy the gold which we must pay if we are denied the right to pay silver according to the contract.

Mr. PALMER. I will ask the Senator whether that is akin to the process known as watering stock; whether the process that he proposes is the watering of silver?

Mr. STEWART. What?

Mr. PALMER. Is there not some such term as watering?

Mr. STEWART. Yes, and I am glad the Senator has asked the question. There was no water in either gold or silver coin. There is not now, there never has been, and there never will be.

THE DEMONETIZATION OF SILVER

was a regular cinch on those who had sold money short. In other

words, they had become indebted. They had agreed to deliver either gold or silver, but the gold ring destroyed the silver crop and compelled delivery in gold. There never was a more rascally stock operation than the destruction of half the world's money after the other half was pooled. It was like felonious stealing or burning up half of the stock of a company after the community had sold it short with a view of squeezing and robbing the shorts.

But suppose that speculators inside should get hold of 100,000 shares. Then when the Senator comes to sell, he finds 100,000 shares out, instead of 50,000, and the Senator will then have to pay from twenty to thirty times its value in order to get the 50,000 shares so as to be able to save himself from great loss. Would not that be right?

Mr. PALMER. I understand that a corner is broken by issuing more stock.

Mr. STEWART. No, we do not want to do that. They have retired one-half of the stock of gold and silver. In the case supposed gold and silver are the stock of the corporation; these rascals have retired and hidden away one-half of the stock; and we want to get it out again, so as to clean up and have a fair deal. These people have bought it and have hidden it and pooled it. We want to get it out where it can be used again. That is all we want to do. We want to save ourselves. Those men have hidden this stock that was on the market and prevented us from dealing fairly.

The President continues:

This declaration so controls the action of the Secretary of the Treasury as to prevent his exercising the discretion nominally vested in him, if by such action the parity between gold and silver may be disturbed. Manifestly a refusal by the Secretary to pay these Treasury notes in gold, if demanded, would necessarily result in their discredit and depreciation as obligations payable only in silver, and would destroy the parity between the two metals by establishing a discrimination in favor of gold.

That is a monstrous proposition. Let us analyze it.

In the first place

THE LAW PROVIDES FOR THE COINAGE OF SILVER.

That ought to have some influence with the Department, but it does not appear to have. If we pay these Treasury notes in silver they would not be good; how absurd that is! Why does it not discredit the French money and the German money when those governments refuse to pay gold and do pay silver? Their credit is about as good as ours—not as good as ours ought to be, but about as good as ours is, considering the way the Administration manipulates it. But it did not affect their credit at all to pay according to the contract, they exercising the option. But the President says that if these notes had been paid in silver it would discredit them, and

MAKE GOLD AND SILVER PART COMPANY

still further. How is that? If the law had been carried out from the beginning, if silver had been coined to provide for this redemption, and there had been no clamor about trenching upon the reserve, what would have been the result? They are not payable in gold. They are just payable in silver. If Mr. Foster, when he went to the bankers' dinner at Delmonico's on the 17th of November, 1891, had said to these gentlemen, "I do not propose to take the gold reserve to redeem these notes; that was not contemplated; the law requires me to coin silver to provide for their redemption, and unless there is a surplus of gold not needed for any other purpose I shall coin silver dollars, and they shall be paid out," there would not have been a word said, and no more trouble about it than there is about the silver certificates. If the Secretary had not been inveigled at that dinner into making a foolish speech and into making

A PROMISE HE HAD NO RIGHT TO MAKE,

to put the Government on the wrong tack, there never would have been anything said. The law would have been executed. That was the beginning of all the trouble.

Let me proceed with the message:

Up to the 15th day of July, 1893, these notes had been issued in payment of silver bullion purchases to the amount of more than $147,000,000.

That is very good.

While all but a very small quantity of this bullion remains uncoined and without usefulness in the Treasury, many of the notes given in its purchase have been paid in gold.

While they remained uncoined and without use! Was that the fault of Congress that they remained there uncoined and without use? Or was it the fault of the Department that was required by law to coin them? He lays the blame on Congress when his own Department is disobeying the law. He complains that it was lying there uncoined when Congress made it his duty to coin it for the purposes of redemption.

This is illustrated by the statement that between the 1st day of May, 1892, and the 15th day of July, 1893, the notes of this kind, issued in payment for silver bullion, amounted to a little more than $54,000,000, and that during the same period about $49,000,000 were paid by the Treasury in gold for the redemption of such notes.

Whose fault was that?

IT WAS A MANIFEST VIOLATION OF LAW.

Who paid them out? Who disregarded the law? Was it Congress or the Secretary of the Treasury? Here the President is complaining against Congress for his own shortcomings. Everybody knows very well that if this law had been fairly administered there never would have been any trouble; that Treasury notes would have been paid in silver if it was more convenient for the Government to do that. Everybody knows that if there had been anybody at the helm who regarded the interests of the American people more than he did the exporters of gold, there would have been no trouble about this law.

The policy necessarily adopted of paying these notes in gold has not spared the gold reserve of $100,000,000 long ago set aside by the Government for the redemption of other notes, for this fund has already been subjected to the payment of new obligations, amounting to about $150,000,000, on account of silver purchases, and has, as a consequence, for the first time since its creation, been encroached upon.

Why was it encroached upon? Because the Secretary would not coin, as required by law, the bullion provided for redemption, because he would not use it. Then the President called Congress together to remedy a wrong committed by the Secretary of the Treasury himself, who was under the control of the President. If Congress must be called together every time the Secretary of the Treasury commits a wrong, then we shall have to be in session all the time.

We have thus made the depletion of our gold easy, and have tempted other and more appreciative nations to add it to their stock.

Who has made it easy? The Administration or Congress? Congress had provided enough for the redemption, and had given the discretion to pay in either coin for the benefit of the United States. But Mr. Cleveland says we

GAVE THAT OPTION TO GOLD EXPORTERS;

that we took it away from the United States, and that because we took the option away from the United States, we must repeal the law. If we had not object lessons in the cases of France and Germany of precisely the opposite character, there might be some excuse. But when it was the established policy of France and Germany, with that same option, to pay their obligations in gold or silver, and we knew that they exercised the option for the benefit of their own country, we supposed that there would be patriotism enough in the Treasury Department to do the same.

But suppose, Mr. President, you have an agent who is at liberty to pay an obligation of yours in wheat or corn. Suppose the wheat cost you ten times as much as the corn. Your agent is there to protect your interests. Suppose he should pay so as to injure you. Would you think him a faithful agent? Thus giving his option away would make a private agent responsible in damages for a breach of trust.

Still it is proclaimed by the President that the Secretary of the Treasury has been doing this, and by doing it has created trouble. Let him remedy that trouble. Let him be a faithful agent for the Government and act for the benefit of the United States, and we shall have no trouble.

That the opportunity we have offered has not been neglected is shown by the large amounts of gold which have been recently drawn from our Treasury and exported to increase the financial strength of foreign nations.

If you give them an opportunity to take advantage of this Government I suppose they will take it. I do not suppose the exporters of gold are so high-toned that they would not take advantage of the Secretary's generosity. The Heidelbachs and Ichelheimers, I suppose, would make as good business arrangements as they could if you gave them an opportunity.

The excess of exports of gold over its imports for the year ending June 30, 1893, amounted to more than $87,500,000.

I suppose the Secretary wanted it exported, or he would not have given it to them. He would not have been obliged to.

Between the 1st day of July, 1890, and the 15th day of July, 1893, the gold coin and bullion in our Treasury decreased more than $132,000,000, while during the same period the silver coin and bullion in the Treasury increased more than $147,000,000.

Of course silver would increase, and of course gold would decrease, if he would not pay out silver, but would pay out gold. Suppose he had paid out the silver and kept the gold; he would have had the same right to do it. I do not know why he complains of Congress about the result he has produced himself.

Unless Government bonds are to be constantly issued and sold to replenish our exhausted gold, only to be again exhausted, it is apparent that the operation of the silver-purchase law now in force leads in the direction of the entire substitution of silver for the gold in the Government Treasury, and that this must be followed by the payment of all gold obligations in depreciated silver.

"In depreciated silver!" If they are payable in silver, if that is the contract, is it not his duty to pay it and save the Government all he can? Silver is depreciated! Who depreciated it? It never was depreciated until the gold money-masters struck it down, first by legislation and second by administration. Yet

he is advocating its further depreciation. The President in this very document

ADVOCATES CUTTING OFF THE MARKET

and depreciating it to the point of absolute destruction, when we have $600,000,000 in the country.

I undertake to say that when silver is no longer a valuable metal, in the sense that silver bullion may be if converted into coin, it can no longer float except as credit money. I know that in subsidiary coin, with a limited legal tender, a small quantity may float as token money, but this great mass of silver that is not used for subsidiary purposes—$600,000,000 of silver coin in the country—if you take away from silver bullion its market and you destroy its value as silver coin, it must then be a credit money, and is of no use. You might just as well have paper, if it must be redeemed in gold. Yet the President proposes by this process to put it in a position where it must be redeemed in gold.

The Senator from Ohio, who demonetized silver, proposes to sell bonds. What is the use of that?

At this stage gold and silver must part company, and the Government must fail in its established policy to maintain the two metals on a parity with each other.

Why must they part company? Because the Administration will not execute the law, and for no other reason. Of course they will part company, and silver will become credit money, when you have a thousand millions of the stuff and only $100,000,000 of gold with which to redeem it.

Given over to the exclusive use of a currency greatly depreciated according to the standard of the commercial world, we could no longer claim a place among nations of the first class, nor could our Government claim a performance of its obligation, so far as such an obligation has been imposed upon it, to provide for the use of the people the best and safest money.

We would not be classed among "first-class nations." Was not Germany first class when she conquered France? Were not Austria and Holland and all Europe first class nations twenty years ago? They had silver, and not gold. "First class!" Ah, we should be "first class" if we had plenty of money so as to develop our resources. It is money that makes us first class; it is the volume of money that makes business lively and develops resources and makes us first class.

SUPPOSE SILVER HAD NOT BEEN STRICKEN DOWN.

Suppose there had been no fraud about that; suppose we had gold and silver which had never been touched; suppose the Paris conference of 1867 had not been held; suppose that Germany and the other nations composing the Latin Union had not been represented there; suppose there had been no legislation to destroy silver in this country—what would have been our condition? Should we not have been first class? We had more gold and silver mines than all the rest of the world. We had a more enterprising and energetic people than existed on earth. We were so situated, as neighbors with those who had gold and silver mines, that we could draw unlimitedly from them. We should have been the central figure of all the world. We should have been to-day the commercial center of the world, because we had the gold and silver of the world at command.

If we had been allowed to mine and coin our own money, we should not have been paying from $150,000,000 to $200,000,000 interest to Europe; our railroads would have been built with our own money, as they were during the war, when we did not have international money. When we had no foreign credit we built railroads faster than at any other time. Then we had our own domestic money, greenbacks, and if we had the money from our own mines, our own domestic money, we should have been prosperous, we should have been *the* first-class nation.

But now the President proposes that we shall become "first class" by borrowing money; that we shall rival Great Britain

BY GETTING DEEPER INTO HER DEBT;

that we shall continue to sell our wheat and cotton cheaper and cheaper; that while England's wealth expands in bonds and money, ours must contract and shrink under the baneful influence of falling prices.

So far as such an obligation has been imposed upon it, to provide for the use of the people the best and safest money.

"The best and safest money;" I have heard a great deal about the "best money." The best money, in the estimation of the usurer, is the money that will do the most robbery, and is the most dishonest. That is the money that is the "safest" for the swindler. But the "safest money" for the laborer, the "safest money" for the honest man, is the money of the contract, the money that will do equity between man and man. That is the "best money." If we have that, then we shall have prosperity. When we have that kind of money we shall have prosperity. But never in the world was there any prosperity with what they call the "best money;" that is, the money that is growing dearer all the while.

There has been a great deal said against usury. But this beats usury every time. There never has been anything to beat this since the usury which Moses prohibited in early times.

The inventions they had made up to that time do not compare to the present method of securing what is desired by legislation.

If, as many of its friends claim, silver ought to occupy a larger place in our currency and the currency of the world through general international coöperation and agreement, it is obvious that the United States will not be in a position to gain a hearing in favor of such an arrangement so long as we are willing to continue our attempt to accomplish the result single handed.

Now, I tell you just the reverse of that. If the United States would open her mints to the free and unlimited coinage of silver, Europe must also. When I get further on I shall show that Great Britain lost the trade of India because India had honest money and Great Britain had dishonest money; that they could manufacture profitably in India because silver contained the same purchasing power that it always had, until the rupee was called the perverse rupee; that England bought in India; that with all her superior machinery, her skill, and her more enlightened people, England could not compete with Indian manufacturers. While England used their gold, dishonest gold that was appreciated, India used honest silver.

It was demonstrated. Our people ought to look into these demonstrations. When facts are laid before them they will read them after awhile. If we had honest silver that continued to measure our transactions between our fellow-men honestly

WE WOULD HAVE PROSPERITY.

If gold went to a premium so that England and Europe had dishonest, appreciating gold, and we had honest, stable silver, they would be excluded from our markets practically; they would have to stand the loss, and could not compete with us. We can join the silver-producing countries, and have their trade. The only question is will there be enough; but whether enough or not, it will come nearer being honest than gold alone. But then it will not be the gold standard. Europe will be using gold and will not be competing for our silver, but she will let the silver-using countries use it. We shall have the best money, and if gold goes to a premium we will let it go there. Then we will bring England to her knees.

The idea that we should lie down and allow them to rivet the shackles about our limbs, let them pass this repeal bill and put us on a gold standard, let our people be in debt to them, and let them choke every debtor as they are choking them to-day is preposterous. The groan of debtors is

THE RESULT OF FOREIGN PRESSURE

to-day and makes the country sad. We hear the groans in this Capitol of men of enterprise who have borrowed of Europe. They are told, "You must make your legislators adopt the gold standard or we shall destroy you." I do not speak by guess, I speak facts. It is notorious. The foreign creditors are pressing every debtor in this country. They are sending him here to petition. They make him clamorous, because they have been sucking his blood and threatening destruction.

It is well said that the debtor is the slave of the creditor, and we are fast becoming the abject slaves of this British syndicate that controls the colossal accumulation of bonds and money which struck the admiration of Mr. Gladstone so forcibly and of which he boasted so arrogantly.

The great trouble is that an international agreement is difficult to accomplish; that there is some labor about it. You get the silver and it will take care of you. You have some money. Accomplish the result. Why can we not get a whole lot of silver single handed and alone; and if we take silver and do not need the gold will we not be a more independent nation? If we become an independent nation with an independent financial policy will we not be in a better position than if we go there as the humble suppliant of Great Britain? Have we not been there as her suppliant long enough?

Have we not suffered enough from her sneers at every conference, telling us in the most autocratic manner, "We will hear what you have to say, but we are instructed by our government to refrain from discussing the question of bimetallism. We tolerate you; we will hear your petition, but we will not even reply to your argument in favor of bimetallism; our government forbids us discussing the question; we are satisfied with our single gold standard; we are a creditor nation; the dearer money is the better; we will be satisfied; our income is payable in money; we want that money very scarce and very dear so that it will take a great many days' labor, a great deal of wheat, and a great deal of cotton to get it; the more we can multiply the wheat and cotton that are required to pay this interest the better satisfied we will be; we will not condescend to discuss with you your petition, but out of politeness we will hear you and then we will laugh about you."

I was talking with an eminent gentleman the other day, introduced to me by the Senator from Missouri [Mr. VEST]. He is

an eminent European financier, examining the monetary condition of the various countries of the world, one of the most intelligent gentlemen I ever met. In the course of the conversation he said to me, "You have got a great country.

IT IS THE GREATEST COUNTRY IN THE WORLD.

Your resources surpass the resources of all Europe. You have a great country. You have a great people. You can not be compared to any people anywhere. It is a marvelous country, but there is only one drawback." "What is that?" "Well, under your present monetary system you are simply a financial colony of Great Britain." Said I, "Do you mean to say that that is the opinion entertained of us in Europe?" "Certainly, that is the opinion of all intelligent Europeans. We have often laughed about it at the club. You are a financial colony of Great Britain with all your resources. While that exists, of course you can not have any independence."

Mr. PALMER. May I ask the Senator from what country the gentleman he speaks of comes?

Mr. STEWART. He was a native of Sweden. He resides in Paris most of the time. He is a high official of Sweden, a gentleman of very great intelligence, and he understood our situation better than some of us do.

The President says:

The knowledge in business circles among our own people that our Government can not make its fiat equivalent to intrinsic value, nor keep inferior money on a parity with superior money by its own independent efforts, has resulted in such a lack of confidence at home in the stability of currency values that capital refuses its aid to new enterprises while millions are actually withdrawn from the channels of trade and commerce to become idle and unproductive in the hands of timid owners.

Now we will analyze this sentence. This is a marvelous statement:

The knowledge in business circles among our own people that our Government can not make its fiat equivalent to intrinsic value.

"Its fiat equivalent to intrinsic value." In the first place, there is no such thing as intrinsic value, and I do not know what he means by its "fiat." If he means to destroy the silver so that it will be only fiat, which has got to be sustained by gold, very well; but business circles know very well that if we buy silver and open our mints to that, the silver bullion will be as good as gold bullion; and that the fiat business only pertains when you demonetize it. That is what he means by it.

Nor keep inferior money on a parity with superior money by its own independent efforts.

I do not know exactly what he means by that. Which is the inferior money and which is the superior money? Are not greenbacks kept on a par with gold by the efforts of the Government, by the stamp of the Government? Is that true? What is he talking about? I do not know what he means by it. It appears to be a kind of rattling loose talk.

Has resulted in such a lack of confidence at home in the stability of currency values that capital refuses its aid to new enterprises, while millions are actually withdrawn from the channels of trade and commerce to become idle and unproductive in the hands of timid owners.

Now, I think I can diagnose the situation a little better than by the aid of the President. The fact is that almost all enterprises have been unproductive because property has fallen, not because anybody is afraid of the money. That is not true. While farms are going down people do not want to buy farms. No new men want to go into the wheat business because wheat is cheap. They do not want to go into the iron business because it is cheap. Is not that the reason? Is it not because they are afraid of the money of the country that they do not want to buy a cotton plantation? If cotton is a good thing they would put their money into cotton; if they were afraid of money they would not put it into cotton and wheat farms.

If that is true they would not hoard it; but the President says they hoard this money in which they do not have any confidence. Is not that a strange thing? Has not the President got a little little mixed there? Is it not a fact that

WHEN PROPERTY IS GOING DOWN

that is the reason why they will not put their money in property; and is it not a fact that property is going down because money is scarce? Has not the same thing always happened under contraction? Money can not be used in productive enterprises because property is growing cheaper and money is growing dearer. They can not afford to put it in property because property has gone down.

The President has failed to diagnose the situation. If he had a little more experience in business matters in the country, and had not been so extensively engaged in city affairs, he would have known something about the laws of trade. When property is going down people do not want to put money in it. The reason why the money is withdrawn is not because it is bad money and people are afraid of money. It is because it is good money that they want to get it; and they are afraid to put it in property, because they fear it would not pay. So the President has not got that right at all.

It is very interesting to follow the course of the President's reasoning in this remarkable document, and this document is a thing we have to discuss. There are some documents that do not belong here. This belongs here. As I said in the beginning, the President communicated his views to Congress for our consideration, and we are considering them.

Foreign investors equally alert not only decline to purchase American securities, but make haste to sacrifice those which they already have.

There is no doubt about that. Foreign investors are just playing monkey with him. If they can create a panic here by withdrawing gold, they will do it. It is even alleged that this gold was shipped out of the country at a loss for the purpose of depressing the market, and then it comes back to pick up the harvest. That is a very common thing. Jay Gould reduced it to a science and showed how that can be done. It will be remembered that for several years in the fall of the year the Government bought a lot of bonds, twenty or thirty million dollars, when we had a surplus, and the speculators got the hang of that perfectly. During the year they would invest their money in bonds, pick up the bonds, and draw interest. In the fall of the year they would borrow the money there was in the banks. They would make a squeeze; they would knock stocks down. Then the Government would come to their relief and give them gold for the bonds, and they would make their harvest.

It is said they used to reap from five to twenty million dollars income right along. That was a common thing. It was regarded as a part of their ordinary harvest, their harvest time. When they came to move the crops they would harvest by knocking stocks down. England is playing the same game on us. We are selling no more bonds; no more bonds are being bought in, but England has a lot of English operators operating with Americans, and they withdraw this gold, lock it up, sell bonds, sell some securities, break the market down, and bring it back and pick up the harvest. They are making an annual crop, and will continue to do so as long as we depend upon borrowing.

It does not meet the situation to say that apprehension in regard to the future of our finances is groundless and that there is no reason for lack of confidence in the purposes or power of the Government in the premises.

The President was driven to that because he was unable to point out how this had injured the Government, how it had injured anybody up to the present time. He says never mind; you may beat me on that. You may show up to this time it has done no harm. That is no answer. The experience of twenty years is no answer at all. We told you all along it was coming; that a crisis was at hand. We have told you that ruin was going to come over humanity. The fact that it did not come is no answer. Still we told you that, and although we told you a lie a thousand times still it does not make any difference. We are truthful. Although what we have said is false you must not doubt us. It does not injure our credit for veracity to lie for twenty years every time we speak. It only emphasizes our credit for veracity and makes our predictions more dangerous all the while. That is what the President says; that is what all the gold bugs tell you.

The very existence of this apprehension and lack of confidence, however caused, is a menace which ought not for a moment to be disregarded.

"The very existence of this apprehension." Who created the apprehension? Was it Congress, or was it the fellows who have been lying about our currency for twenty years and every time have been mistaken?

The fact that they have lied about it and created an apprehension, the fact that they have manufactured falsehood, is a thing that Congress should know and act upon as a serious matter. The very apprehension was created by a lot of false predictions for twenty years. We have got it up. Now we have got a scare on.

Possibly if the undertaking we have in hand were the maintenance of a specific known quantity of silver at a parity with gold, our ability to do so might be estimated and gauged, and perhaps in view of our unparalleled growth and resources, might be favorably passed upon.

Why, you can not maintain a part of silver at a parity with gold without maintaining it all. If there is 1,000,000, or 500,000, or 1,000 ounces of silver, and nobody bids for it, it has got to sell for what you can get for it. You can not maintain the parity until you open your mints and take it all. There must be the same demand for silver that there is for gold. If you are going to maintain the parity they must have equal advantage, as they had during all the ages. If the parity is to be maintained it can not be maintained otherwise. That is ridiculous; that is the way to maintain the parity. The idea that you can maintain a parity by closing your mints against silver and keeping them open for gold is absurd.

But when our avowed endeavor is to maintain such parity in regard to an amount of silver increasing at the rate of $50,000,000 yearly, with no fixed termination to such increase, it can hardly be said that a problem is presented whose solution is free from doubt.

Why, during all ages the mints of the world were open to take

all the silver, and the problem was solved the same as it is solved as to gold. Limitation destroys it. If silver is not to be a money metal I do not care whether you use any of it or not. I do not want silver used as credit money. It is too expensive. If you are going to have credit money, use paper. I do not want to use any silver at all, unless used for money. I will not vote for any such bill. I would rather have silver entirely destroyed and say that it shall never be money, than have any bill that pretends to use only a part of it, that pretends to treat it as a commodity, If you can only treat it as a commodity I do not want it at all.

If there is not gold enough

WE MUST HAVE SILVER

or we must have both. That is my position. It is too cruel, too unreasonable, too outrageous to bind the influences of enterprise to gold alone with a shrinking quantity and destroy this civilization for the sake of those who have a corner on gold.

I undertake to say it is outrageous for those who have a knowledge of the scheme of the creditor class to vote for the gold standard. The fact that the obligations of this country payable in money, if paid in gold alone, will absorb the entire wealth of the country, ought to admonish Senators. Our country is mortgaged for more than its assessed value, for more than its real market value, and all the laborers and all the producers of this country must be slaves if the interest of existing obligations must be discharged in gold. It is the design of our masters to make us slaves. Look at Europe. The condition of the laboring classes in Europe

IS A GREAT DEAL WORSE

than it has been at any time for fifty years. There is no more middle class in Great Britain. The middle class grew up when gold and silver were discovered in the New World and prospered for three hundred years and gave us the British constitution, gave us parliamentary government there, and planted colonies here. That was before the iron heel of contraction had destroyed their liberties. There would have been no reforms in England, there would have been no free colonies here, if during the two hundred years that this country was being populated previous to the Revolution the condition of Englishmen had been then as it is to-day. The condition of Englishmen in England is reduced about to what it was at the commencement of the sixteenth century, when a bushel of wheat was worth 12 cents, and when there was no piece of money sufficiently small for a man to receive for a day's labor.

Mr. GEORGE. Can you prove that proposition.

Mr. STEWART. I can prove it; I have the books to show that it is true.

That was the condition then. They were just merging out of that condition. They were once sold with the lands as villeins. Our ancestors, when they lost their money, became slaves, and were sold with the land. But they commenced having free-holds, free-leases, and ninety-nine-year leases when new money came from the New World. The lessees became owners, and the land holders rose from 30,000 to 100,000 in the sixteenth century, in one hundred years. Dr. Jacob has figured that out exactly. Then they went on increasing, and there were 160,000 at the commencement of the Napoleonic wars. Then specie payment was suspended for twenty-two years, and debts were contracted. Then on another higher plane the country prospered immensely. Then they resumed gold payments and confiscated the property of every man of enterprise in Great Britain, reduced the land holders back to about twenty thousand. They have had their iron heel upon the producing classes ever since; and the people of Great Britain are now in a state of bondage, and they could not now send out such colony as populated this country.

I will proceed to read further from the President's message.

The people of the United States are entitled to a sound and stable currency, and to money recognized as such on every exchange and in every market of the world.

That I deny absolutely. No country in the world has established that kind of money. The money of any country loses its money function so far as paying debts is concerned or any other function when it leaves the country where it was created. The money of any country in every other depends upon its commodity value. Its commodity value will depend upon its money value in the country where it is created.

THE PURCHASING POWER OF THE MONEY AT HOME

is the way it is estimated in foreign countries; and it is the business of exchange to compare the purchasing power of the different money of the various countries of the world and convert the money of one country into the money of another. But the idea that the money of any country is recognized as such on every exchange in every market in the world is not true in any sense.

Their Government has no right to injure them by financial experiments opposed to the policy and practice of other civilized states, nor is it justified in permitting an exaggerated and unreasonable reliance on our national strength and ability to jeopardize the soundness of the people's money.

Listen to this: "Their Government has no right to injure them by financial experiments opposed to the policy and practice of other civilized states." Injure them? The Government has no right to injure the people by financial experiments opposed to the policy and practice of other civilized states.

Does the President mean by that that the Government of the United States has no right to coin money and regulate the value thereof, whether that be or whether it be not the practice of other civilized states? What has the practice of other civilized states to do with the constitutional power of the Government of the United States to coin money and regulate the value thereof? If the Government has no right to make money in a different way than to follow the practice of civilized states,

THEN THE QUESTION MIGHT ARISE

what states are civilized. The Government has no right to have any different practice than other civilized states. All the other civilized states have different practices and different modes, and which one has the Government got a right to follow? It has got no right to have a policy of its own, no right to follow the Constitution. It seems to me that is queer language to use in a message. If the President knows what it means, I do not. If it means what it says, it is not true.

Nor is it justified in permitting an exaggerated and unreasonable reliance on our national strength and ability to jeopardize the soundness of the people's money.

Well, how can the Government tell whether the people have an exaggerated and unreasonable reliance? Just mark this language:

Nor is it justified in permitting an exaggerated and unreasonable reliance on our national strength.

How are we going to prevent an unreasonable reliance? Some people may have a very exaggerated idea. Would you make it a criminal offense if they did? How would you prevent having an exaggerated idea? He says the Government is not justified in permitting it. What kind of a law would you enact to prevent it? The Government must not permit its citizens to have "an exaggerated and unreasonable reliance on our national strength and ability." I suppose that is our ability to jeopardize the soundness of our people's money. They may have a very unreasonable estimation of the ability of the Government

TO JEOPARDIZE THE PEOPLE'S MONEY.

I do not know how the President would prevent their having that kind of an exaggerated idea. I have a very exaggerated idea of the power of Congress to jeopardize the people's money when I see one-half of it stricken down by legislation, and when I see the opposition there is to restoring it. How is the President going to prevent me from having a very exaggerated idea of the enormous power of the Government to do wrong? If I had a key to that part of it probably I could do the President justice. He has not furnished a key to it and probably I do not understand it. I am commenting upon it as I understand it.

This matter rises above the plane of party politics.

I do not know exactly what he means by "this matter," whether he means what preceded it, the exaggerated reliance of the people upon the strength of the Government, or what else.

This matter rises above the plane of party politics.

I think the matter of destroying half the world's money and imperiling the people is a little below politics. I think it is about the meanest thing there is about party politics.

It vitally concerns every business and calling and enters every household in the land.

If he means the money question he is right; if he means that the evil effects of bad legislation enter into every household he is right; if he means the money comes in every household he is wrong, because he proposes to make it so scarce that it can not get into many households. It is difficult to comment on this language, because there is no key to it.

There is one important aspect of the subject which especially should never be overlooked.

Let us see what that is:

At times like the present, when the evils of unsound finance threaten us, the speculator may anticipate a harvest gathered from the misfortune of others, the capitalist may protect himself by hoarding, or may even find profit in the fluctuation of values; but the wage-earner—the first to be injured by a depreciated currency and the last to receive the benefit of its correction—is practically defenseless.

I do not know what he means by depreciated currency. If he means a deficient currency, if he means contraction by destroying the currency, then he is right. He is defenseless, because he can get no employment. There are abundant object lessons of that fact on our streets in all our principal cities. The wage-worker is defenseless, because there is not money enough that enterprises can go on; but he is not injured on account of any

depreciation of currency in this country. If he can get the currency we have he is all right.

He relies for work—

The President says—

upon the ventures of confident and contented capital. This failing him, his condition is without alleviation, for he can neither prey upon the misfortunes of others, nor hoard his labor.

Of course he can not, and the bondholders understand that perfectly. They understand when they have the money cornered and when they have made it so dear that a poor man can not get it, he is in their power. They have the money and

MAKE A SLAVE OF HIM,

and they understand that perfectly. That is what we protest against. With plenty of money, so that business enterprises can be prosecuted, the laborer is all right and he prospers with the prosperous community. No community can be prosperous without an ample supply of money. It all comes back to the same point.

One of the greatest statesmen our country has known, speaking more than fifty years ago when a derangement of the currency had caused commercial distress, said: "The very man of all others who has the deepest interest in a sound currency and who suffers most by mischievous legislation in money matters, is the man who earns his daily bread by his daily toil."

Mr. Webster at that time was talking against the banks that were unsafe, the country banks that were bursting. He was talking just about the difficulty we see among these national banks that were doing business on wind, and when they were called upon they could not pay up, and he said the laborer would get caught first. Mr. Webster was not talking about their being caught with good gold and silver coin. Mr. Webster was in favor of both gold and silver coin. It was Mr. Webster who said it was unconstitutional to demonetize either of the metals; that the provision of the Constitution taking from the States the right to coin money and conferring it upon the General Government made it obligatory upon the Government to coin both gold and silver.

I think that quotation from Mr. Webster is farfetched. It would apply to these inflated banks that were bursting around the country, but it would not apply to the money of the Constitution. Mr. Webster would be shocked if he knew his language was applied to such a purpose as this. The President would have done well to have read the whole speech from which this extract was taken. Then he would have seen the application and would not have been misled by quoting it in this connection.

These words are as pertinent now as on the day they were uttered, and ought to impressively remind us that a failure in the discharge of our duty at this time must especially injure those of our countrymen who labor, and who because of their number and condition are entitled to the most watchful care of their Government.

I agree with the President there, that these words should take deep root in the opinions of every public man: and he should see to it that

THE LABORER IS NOT DEPRIVED OF MONEY.

He should see to it that the great discoveries that make this age the favored age in all history provide an ample supply of gold and silver coin, see to it that this generation is not robbed of that inheritance to enrich a rascally few to fatten on the misfortune of others, to gather for them an unearned increment at the expense of the masses of the people. It is this legislation which we condemn and which the President favors, this multiplying of tramps through this country. That is the legislation proposed, and every intelligent man knows it. My friend from Indiana [Mr. VOORHEES] has often told the people how the tramps are multiplying by this robbery of 1873, by this destruction of silver money of the country. I have heard his ringing voice. I have felt the grand response that came from the people when he advocated the people's money for the people, for the laboring men.

Ah, if the President of the United States had been a student of the speeches of the Senator from Indiana his language would be more intelligible; it would not require a key, and he who runs might read and understand!

It is of the utmost importance that such relief as Congress can afford in the existing situation be afforded at once.

I say so, too. I say it should be afforded here and now in this bill, and that this bill should be a measure of relief and not a measure of oppression. I say that this bill should not strike down silver, because that gives no relief except to avarice. It should restore silver, because that gives relief to labor; that insures prosperity; that restores the rich heritage of gold and silver reserved throughout all the ages for this favored generation.

The maxim "He gives twice who gives quickly," is directly applicable.

So say the laboring masses; so say downtrodden humanity; so say the farmers of this country who have sold their wheat for 50 per cent discount because the money of the Constitution was stricken down. So say the cotton-planters who have lost by this foul league $1,500,000,000 in the last five years, taken from their labor and their toil. So say the people of America,

GIVE US BACK THE MONEY OF THE CONSTITUTION,

and give it quickly.

But if he means to give to the usurer more, add to his bonds greater purchasing power, enhance the value of the money, absorb the wealth of the people, continue to rob, and whether you do it quickly or slowly you do it more than twice—if he means by demonetizing silver you have increased the purchasing power of bonds twice, he is right, and by repealing the law you increase it twice again. Now, I say construe this message in the spirit it professes to the United States, construe it in favor of the people and restore the money of the Constitution.

It may be true that the embarrassments from which the business of the country is suffering arise as much from evils apprehended as from those actually existing.

The President is constantly reminding us of evils which have not happened. The President is conscious of the fact that these predictions have not proved true, and he wants to keep telling us about the apprehension.

It may be true that the embarrassments from which the business of the country is suffering arise as much from evils apprehended as from those actually existing.

I think that evils and apprehensions both exist. I think the evils existing are long continued falling prices and hard times; and I think the evils apprehended are a continuance of that condition of things. I think they are both about enough; but if he means by evils, apprehended evils from more money, then he is altogether off; he has misjudged the situation.

We may hope, too, that calm counsels will prevail, and that neither the capitalist nor the wage-earners will give way to unreasoning panic and sacrifice their property or their interests under the influence of exaggerated fears.

I do not think the President has done much to allay those fears. He has been showing there was a very bad condition of things for nine years, and if all he has said is true we ought to have been pretty nearly annihilated by this time.

Nevertheless, every day's delay in removing one of the plain and principal causes of the present state of things enlarges the mischief already done and increases the responsibility of the Government for its existence.

"Every day's delay * * * enlarges the mischief." He has not told us what mischief; he has not told us what has been done; he has not shown that there has been injury done. It is all apprehended; nothing else at all. It "enlarges the mischief already done." Who did the mischief? Why, men who have been getting up this false alarm, who created this panic by squeezing and by threatening, by making a money pressure, and by threatening them. They created it. They have done it every day; they are going to do more mischief.

Mr. President, the President continues:

Whatever else the people have a right to expect from Congress they may certainly demand that legislation condemned by the ordeal of three years' disastrous experience shall be removed from the statute books as soon as their representatives can legitimately deal with it.

I agree with him; if there is any such legislation as that I should like to have him point out legislation that has any disastrous experience in it. I know it has had the experience of disastrous predictions. But I do not know of any experience anybody has had that has done any harm. All that we have got from it is $150,000,000 Treasury notes. It has done some good; but certainly there are no ill effects from it. It would have had some good effects if it had been fairly treated. Treating it badly, as has been done, he has not been able to point to more than an apprehension. So the President must find something beside the Sherman law to apply such a thing as that to.

It was my purpose to summon Congress in special session early in the coming September that we might enter promptly upon the work of tariff reform, which the true interests of the country clearly demand; which so large a majority of the people, as shown by their suffrages, desire and expect, and to the accomplishment of which every effort of the present Administration is pledged.

Now, that is rational. Tariff reform was an issue and if he called Congress together to enter upon that he would not have taken any snap judgment. That was a square issue.

But while tariff reform has lost nothing of its immediate and permanent importance, and must in the near future engage the attention of Congress, it has seemed to me that the financial condition of the country should at once, and before all other subjects, be considered by your honorable body.

Now, I say that is a snap judgment. That was not submitted to the people. The people never have agreed that the Sherman act shall be repealed without a substitute. The whole of this business is a snap judgment, and I here and now predict if the Senate can prevent the repeal of the law it will not be six months before the whole country will join in thankfulness that the Senate did its duty. They will be as thankful for such service as they are now to the Senate that a minority of the Senate by obstruction prevented Chinese suffrage, that the Senate prevented the Fed-

eral control of local elections by obstruction. You can not name one of the schemes frustrated by the Senate that ever has been

SANCTIONED BY THE PEOPLE.

When did the Senate ever resist a measure which the country afterwards approved and insisted upon its being crystallized into legislation? You can not name one. Suppose the Senate had been advised of the demonetization of silver in 1873 and resisted it, and there would have been only a minority against it; would we not thank them for it? Do Senators recollect that this is the reënactment of the act of 1873, that it repeals all recognition of silver? You say that it does not destroy the legal character of the silver already out. It does practically in the practice of the Department. The Department has held that all the obligations must be redeemed in gold, and the speeches of Senators have constantly insisted that we have got to increase the reserve and redeem them all in gold. Then, if you destroy it as a valuable metal, you will have utterly destroyed every vestige of silver coin except the subsidiary coin in the United States.

I earnestly recommend the prompt repeal of the provisions of the act passed July 14, 1890, authorizing the purchase of silver bullion, and that other legislative action may put beyond all doubt or mistake the intention and the ability of the Government to fulfill its pecuniary obligations in money universally recognized by all civilized countries.

Is not that a pretty rough proposition? If it has got to pay debts, you must have legislation compelling the Government to pay its obligations in money universally recognized by all civilized countries. I know of no such money, but he promises it. Probably it means a money metal that all civilized countries recognize. Of course he has to exclude China, Japan, and Mexico, and others. I do not know that Mexico coins it, but he has to exclude other countries. He means I suppose by that that it has all got to be paid in gold. He demands here the repeal of that law and such legislation. This is pretty strong.

I earnestly recommend the prompt repeal of the provisions of the act passed July 14, 1890, authorizing the purchase of silver bullion, and that other legislative action may put beyond all doubt or mistake the intention and the ability of the Government to fulfill its pecuniary obligations in money universally recognized by all civilized countries.

Now, he asks us again to change the contract of the bondholder. The bond was originally contracted to be paid in lawful money. In March, 1869, the contract was changed from lawful money to gold and silver. Now he says that he wants that contract changed again. All the obligations of the Government are payable in either gold or silver. He wants them now made absolutely payable in gold. Did the President realize the recommendation that he was making, that the obligations should be made payable in gold? I know it has been the practice of the Government, but he wants legislation.

And that other legislative action may put beyond all doubt or mistake the intention and the ability of the Government to fulfill its pecuniary obligations in money universally recognized by all civilized countries.

Is that a recommendation in favor of the United States or against it? How many times will the bondholders change that contract, and how many times will the President recommend it to be changed? After a time they will recommend that it be paid in diamonds. It takes about as much to pay the debt of the United States in wheat and cotton as it would have taken when the war closed. You can not change it; and we are called together in extraordinary session, in the month of August, deprived of a vacation at the demand of the bondholders, to make another change in Government obligations. Now, what are we recommended to do by your President? To change these obligations again.

I know that the surroundings of the President were in favor of changing the obligations of the Government every day. Wall street does not care how many times the obligations are changed or how much they load the Government. They do not pay taxes. They deal with taxes, they deal in money.

THE BURDENS OF THE PEOPLE

do not annoy them; they are parasites; and I tell you in association with parasites, with dealers in other people's property, with those who reap where they have not sowed, the atmosphere is bad. If the President had spent more time out in the country where he would have had fair air and seen the men farming, he would not want legislation to change this contract again.

Now, I hope I have not hurt the feelings of any of these Administration Democrats or Administration Republicans. I do this in all kindness. I see the Democrats take it more kindly than the others. The Republicans get very angry with me if I say anything against their rally, but he is liable to err, he is liable to do wrong. The Senator from Oregon [Mr. DOLPH] shakes his head. He consents to it. The mere fact that the President recommended the change of these contracts that are payable in either gold or silver into new contracts payable in gold, is all right, I suppose, in the estimation of the Senator from Oregon, because the President said so. I have not got quite that far in my devotion to him. I think I had better put the message all in.

MESSAGE.

To the Congress of the United States:

The existence of an alarming and extraordinary business situation, involving the welfare and prosperity of all our people, has constrained me to call together in extra session the people's representatives in Congress, to the end that through a wise and patriotic exercise of the legislative duty with which they solely are charged, present evils may be mitigated and dangers threatening the future may be averted.

Our unfortunate financial plight is not the result of untoward events nor of conditions related to our natural resources; nor is it traceable to any of the afflictions which frequently check national growth and prosperity. With plenteous crops, with abundant promise of remunerative production and manufacture, with universal invitation to safe investment and with satisfactory assurance to business enterprise, suddenly financial distrust and fear have sprung up on every side. Numerous moneyed institutions have suspended because abundant assets were not immediately available to meet the demands of frightened depositors. Surviving corporations and individuals are content to keep in hand the money they are usually anxious to loan, and those engaged in legitimate business are surprised to find that the securities they offer for loans, though heretofore satisfactory, are no longer accepted. Values supposed to be fixed are fast becoming conjectural, and loss and failure have invaded every branch of business.

I believe these things are principally chargeable to Congressional legislation touching the purchase and coinage of silver by the General Government.

This legislation is embodied in a statute passed on the 14th day of July, 1890, which was the culmination of much agitation on the subject involved, and which may be considered a truce, after a long struggle, between the advocates of free silver coinage and those intending to be more conservative.

Undoubtedly the monthly purchases by the Government of four million and five hundred thousand ounces of silver, enforced under that statute, were regarded by those interested in silver production as a certain guaranty of its increase in price. The result, however, has been entirely different, for immediately following a spasmodic and slight rise, the price of silver began to fall after the passage of the act and has since reached the lowest point ever known. This disappointing result has led to renewed and persistent effort in the direction of free silver coinage.

Meanwhile, not only are the evil effects of the operation of the present law constantly accumulating, but the result to which its execution must inevitably lead is becoming palpable to all who give the least heed to financial subjects.

This law provides that in payment for the 4,500,000 ounces of silver bullion which the Secretary of the Treasury is commanded to purchase monthly, there shall be issued Treasury notes redeemable on demand in gold or silver coin, at the discretion of the Secretary of the Treasury, and that said notes may be reissued. It is, however, declared in the act to be "the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio or such ratio as may be provided by law." This declaration so controls the action of the Secretary of the Treasury as to prevent his exercising the discretion nominally vested in him, if by such action the parity between gold and silver may be disturbed. Manifestly a refusal by the Secretary to pay these Treasury notes in gold, if demanded, would necessarily result in their discredit and depreciation as obligations payable only in silver, and would destroy the parity between the two metals by establishing a discrimination in favor of gold.

Up to the 15th day of July, 1893, these notes had been issued in payment of silver bullion purchases to the amount of more than $147,000,000. While all but a very small quantity of this bullion remains uncoined, and without usefulness in the Treasury, many of the notes given in its purchase have been paid in gold. This is illustrated by the statement that between the 1st day of May, 1892, and the 15th day of July, 1893, the notes of this kind issued in payment for silver bullion, amounted to a little more than $54,000,000, and that during the same period about $49,000,000 were paid by the Treasury in gold for the redemption of such notes.

The policy necessarily adopted of paying these notes in gold has not spared the gold reserve of $100,000,000 long ago set aside by the Government for the redemption of other notes, for this fund has already been subjected to the payment of new obligations amounting to about $150,000,000 on account of silver purchases, and has as a consequence for the first time since its creation been encroached upon.

We have thus made the depletion of our gold easy, and have tempted other and more appreciative nations to add it to their stock. That the opportunity we have offered has not been neglected is shown by the large amounts of gold which have been recently drawn from our Treasury and exported to increase the financial strength of foreign nations. The excess of exports of gold over its imports for the year ending June 30, 1893, amounted to more than $87,500,000.

Between the 1st day of July, 1890, and the 15th day of July, 1893, the gold coin and bullion in our Treasury decreased more than $132,000,000, while during the same period the silver coin and bullion in the Treasury increased more than $147,000,000. Unless Government bonds are to be constantly issued and sold to replenish our exhausted gold, only to be again exhausted, it is apparent that the operation of the silver-purchase law now in force leads in the direction of the entire substitution of silver for the gold in the Government Treasury, and that this must be followed by the payment of all Government obligations in depreciated silver.

At this stage gold and silver must part company and the Government must fail in its established policy to maintain the two metals on a parity with each other. Given over to the exclusive use of a currency greatly depreciated according to the standard of the commercial world, we could no longer claim a place among nations of the first class, nor could our Government claim a performance of its obligation, so far as such an obligation has been imposed upon it, to provide for the use of the people the best and safest money.

If, as many of its friends claim, silver ought to occupy a larger place in our currency and the currency of the world through general international coöperation and agreement, it is obvious that the United States will not be in a position to gain a hearing in favor of such an arrangement so long as we are willing to continue our attempt to accomplish the result singlehanded.

The knowledge in business circles among our own people that our Government can not make its fiat equivalent to intrinsic value, nor keep inferior money on a parity with superior money by its own independent efforts, has resulted in such a lack of confidence at home in the stability of currency values that capital refuses its aid to new enterprises while millions are actually withdrawn from the channels of trade and commerce to become idle and unproductive in the hands of timid owners. Foreign investors equally alert not only decline to purchase American securities, but make haste to sacrifice those which they already have.

It does not meet the situation to say that apprehension in regard to the future of our finances is groundless and that there is no reason for lack of confidence in the purposes or power of the Government in the premises.

The very existence of this apprehension and lack of confidence, however caused, is a menace which ought not for a moment to be disregarded. Possibly if the undertaking we have in hand were the maintenance of a specific known quantity of silver at a parity with gold, our ability to do so might be estimated and gauged, and perhaps in view of our unparalleled growth and resources, might be favorably passed upon. But when our avowed endeavor is to maintain such parity in regard to an amount of silver increasing at the rate of $50,000,000 yearly, with no fixed termination to such increase, it can hardly be said that a problem is presented whose solution is free from doubt.

The people of the United States are entitled to a sound and stable currency and to money recognized as such on every exchange and in every market of the world. Their Government has no right to injure them by financial experiments opposed to the policy and practice of other civilized states, nor is it justified in permitting an exaggerated and unreasonable reliance on our national strength and ability to jeopardize the soundness of the people's money.

This matter rises above the plane of party politics. It vitally concerns every business and calling and enters every household in the land. There is one important aspect of the subject which especially should never be overlooked. At times like the present, when the evils of unsound finance threaten us, the speculator may anticipate a harvest gathered from the misfortune of others, the capitalist may protect himself by hoarding or may even find profit in the fluctuation of values; but the wage-earner—the first to be injured by a depreciated currency and the last to receive the benefit of its correction—is practically defenseless. He relies for work upon the ventures of confident and contented capital. This failing him, his condition is without alleviation, for he can neither prey on the misfortunes of others nor hoard his labor. One of the greatest statesmen our country has known, speaking more than fifty years ago when a derangement of the currency had caused commercial distress, said: "The very man of all others who has the deepest interest in a sound currency and who suffers most by mischievous legislation in money matters, is the man who earns his daily bread by his daily toil."

These words are as pertinent now as on the day they were uttered, and ought to impressively remind us that a failure in the discharge of our duty at this time must especially injure those of our countrymen who labor, and who, because of their number and condition, are entitled to the most watchful care of their Government.

It is of the utmost importance that such relief as Congress can afford in the existing situation be afforded at once. The maxim "He gives twice who gives quickly," is directly applicable. It may be true that the embarrassments from which the business of the country is suffering arise as much from evils apprehended as from those actually existing. We may hope, too, that calm counsels will prevail, and that neither the capitalists nor the wage-earners will give way to unreasoning panic, and sacrifice their property or their interests under the influence of exaggerated fears. Nevertheless, every day's delay in removing one of the plain and principal causes of the present state of things enlarges the mischief already done, and increases the responsibility of the Government for its existence. Whatever else the people have a right to expect from Congress, they may certainly demand that legislation condemned by the ordeal of three years' disastrous experience shall be removed from the statute books as soon as their representatives can legitimately deal with it.

It was my purpose to summon Congress in special session early in the coming September that we might enter promptly upon the work of tariff reform, which the true interests of the country clearly demand, which so large a majority of the people, as shown by their suffrages, desire and expect, and to the accomplishment of which every effort of the present Administration is pledged. But while tariff reform has lost nothing of its immediate and permanent importance, and must in the near future engage the attention of Congress, it has seemed to me that the financial condition of the country should at once and before all other subjects, be considered by your honorable body.

I earnestly recommend the prompt repeal of the provisions of the act passed July 14, 1890, authorizing the purchase of silver bullion, and that other legislative action may put beyond all doubt or mistake the intention and the ability of the Government to fulfill its pecuniary obligations in money universally recognized by all civilized countries.

GROVER CLEVELAND.

EXECUTIVE MANSION,
August 8, 1893.

Now, I come to an extraordinary document, a document not communicated to us in the regular way, a document which is unusual. It is a very peculiar document. It is dated:

EXECUTIVE MANSION, *Washington, D. C., September 25.*

MY DEAR SIR: I hardly know how to reply to your letter of the 15th instant. It seems to me that I am quite plainly on record concerning the financial question.

My letter accepting the nomination to the Presidency, when read in connection with the message lately sent to Congress in extraordinary session, appears to me to be very explicit.

If the message was intended as a key, and I think it appears it was explanatory, it ought to have been furnished before the voting by the people. The letter of acceptance was a very good bimetallic letter, if you take it with the platform, but there was no key. Now, he is going to have it construed afterwards. If he had published that key at the time he published the original conundrum and accepted the nomination with that conundrum, if he had had the key, which he says is a key of that letter, and if he had published it,

HE WOULD NOT HAVE BEEN PRESIDENT TO-DAY.

It is a good thing for him that he kept the key until after he was elected; but is that a fair way to deal with the people? His Northen letter is not only monometallic, it is not only in favor of destroying silver, it is in favor of changing all the Government's contracts from contracts payable in either gold or silver to contracts payable in gold alone.

Mr. DOLPH. Have any utterances of the President since his recent election been any stronger or more emphatic or more conclusive on the silver question than his message during his first term as President?

Mr. STEWART. None.

Mr. DOLPH. Then I can not understand the Senator. He says if some of the subsequent utterances had been made before the nomination he would not have been nominated. He was nominated when his position was well known on this question and when his utterances were just as much official utterances before the American people as after his second election.

Mr. STEWART. You know it is said among some religious denominations—

That while the lamp holds out to burn
The vilest sinner may return.

Did they not hail him as a lost sheep coming back when he accepted that nomination?

Mr. DOLPH. But they nominated him before he had written his letter of acceptance and when they knew precisely how he stood on this question.

Mr. STEWART. They fixed a platform for him to stand on.

Mr. DOLPH. They fixed a platform that was broad enough for him to stand on with his utterances and his position on the silver question.

Mr. STEWART. But he made his utterance to fit the platform. He submitted to the will of the convention and was elected. If he had not fitted his utterances to that platform he would not have been President. He was very willing to do it at the time. I say it is fortunate for him that he did not publish the key to his letter of acceptance at the time he published the letter.

Mr. Cleveland, in his letter to Governor Northen, continues:

I want a currency that is stable and safe in the hands of our people.

I agree with that.

I will not knowingly be implicated in a condition that will justly make me in the least degree answerable to any laborer or farmer in the United States for a shrinkage in the purchasing power of the dollar he has received for a full dollar's worth of work or for a good dollar's worth of the product of his toil.

How solicitous the President is for fear that the money in the pocket of the laborer, which he has not got, will shrink in its purchasing power. What a calamity it would be if there should be a shrinkage in the money that the laborer could not get. How he would suffer! Would he suffer by having more money? But, Mr. President, did you ever think how the President might be benefited by not only preventing the shrinkage of money but by increasing its purchasing power? Do you know that when his salary was fixed it was raised from $25,000 a year, at which it had stood for fully three-quarters of a century, the purchasing power of the dollar was not more than half as much as it is now? Do you know that the $25,000 that Mr. Lincoln and all his predecessors received would to-day purchase more than $50,000 would at the time the President's salary was enhanced?

I do not pretend to say that the President has any solicitude about keeping the purchasing power of money in his hands; but the idea must suggest itself when he is so solicitous that the purchasing power of money shall not shrink where there was no money. There is no danger of shrinkage there. The only question is whether they are going to get any money to buy bread with. That is what they are troubled about. What they are troubled about is that money has got so dear it has reduced them to slavery. What they are troubled about is that

FARM PRODUCTS HAVE BEEN SOLD SO LOW

that the farmer can not produce them at a profit. What they are troubled about is that the only thing which increases in value is money, and everything else diminishes in value. They are not dealers in money. It was a very curious thing to me how it happened that the President became so solicitous about the accumulations in the pockets of the tramps in the country that they should not shrink. It was a matter that I should never have thought of, that the Senate should never have thought of, how the tramps would be affected by the purchasing power of the money that they had accumulated if it should shrink. I should never have thought of that in the world. How observing a man the President is, how his far-seeing eye extends to the remotest corners of the world.

I not only want our currency to be of such a character that all kinds of dollars will be of equal purchasing power at home, but I want it to be of such a character as will demonstrate abroad our wisdom and good faith, thus placing it upon a firm foundation and credit among the nations of the earth.

He is very solicitous about our money abroad. Now, I have some statistics about that. I want the money here. I think too many dudes go abroad and spend too much money. They would not have so much to spend if we had honest laws. I do not rejoice so much over the fact that a hundred million dollars are taken out by these men who turn foreigners, and turn against their own country when they get home. When we get more money I think we can take care of those people. We have some money here among our people. The idea of universal money never has existed in the world.

I want our financial conditions and the laws relating to our currency safe and reassuring, that those who have money will spend and invest it in business and new enterprises instead of hoarding it.

Let me state, Mr. President, they will never do that until property goes up. As long as you have a shrinking volume it never will. So long as our money is in the safe to draw more interest they will keep it there. He has got to reverse his plan or he never can make it appear that contracting the money of the world down to gold will produce it. So long as he goes on with this process of reducing the world to a gold standard, so long as the people will hoard gold they will go long on the thing that they think is going up. They will invest in gold because it is going up and pays more than interest.

You can not cure fright by calling it foolish and unreasonable, and you can not prevent the frightened man from hoarding his money.

Well, if he has got sense enough to get money he will hoard it as a general rule if it pays him. If you destroy enterprise and have falling prices he is going to hoard it. It seems the President has this back-end foremost. I think his book was upside down when he studied political economy.

I want good, sound, and stable money and a condition of confidence that will keep it in use.

Well, if you do have confidence, your property is going down. The condition of confidence never can be created, let me tell the President, unless property is going up. Men are not fools. If property is going down they are not going to have any confidence in its going up. We have had experience in that. Property has been going down for twenty years. What makes property go up?

Demand does it. If people do not think property is going to rise in value they keep their money and do not invest in property. If the money were not good the case would be different, because a man can afford to sacrifice something if it is bad money; and he can buy property at low prices. But the truth is, the President can not make these people believe it is bad money so that they will put it in property that is falling.

Within the limits of what I have written I am a friend of silver—

He is a friend!—

but I believe its proper place in our currency can only be fixed by a readjustment of our currency legislation, and the inauguration of a consistent and comprehensive financial scheme

I do not know what he means by a readjustment of a comprehensive financial scheme, unless I had a key to it. I would give something to know what he means by that. I wish he had made a suggestion as to what he means by that. I should like to know if he means that he is a friend of silver as money. If he is, then remonetize it. He reminds me of a story I heard an old sailor tell when I was a little boy. It was on the Ironsides at the time we had a scrimmage with Great Britain. They had a Quaker aboard and he was nonresistant and would not fight. The redcoats commenced boarding the ship, and he saw things were getting in pretty close quarters. He took up a marline spike, and as one of the red-coats climbed up he would hit him on the knuckles with the marline spike and knock him loose, and he would say as the red-coat dropped into the sea, "I do not mean to hurt thee; I trust thee can swim." He was a friend of the red-coats about the same way that the President is a friend of silver. He knocks it down and tries to kill it, but trusts it can swim and take care of itself.

I think such a thing can only be entered upon profitably and hopefully after the repeal of the law which is charged with all our financial woes.

"Which is charged." But the charge is false. It is general without any specific statement. He has undertaken by this means to give the dog a bad name and then kick him. I should like to see the specification. I have been running all through and I have not found anywhere why he assumes it guilty without having any trial on a specification. That is not according to the American idea of fair play.

In the present state of the public mind this law can not be built upon nor patched in such a way as to relieve the situation.

The public mind is such that we can not have anything to relieve the situation. It can not be patched up. No suggestion that is to relieve the situation. Why publish your suggestion that we can not have anything to relieve the situation? It can not be patched up. No system is proposed. First we must have destruction. We must kill the patient before we apply any remedies. Now, we do not believe in resurrection in a miraculous way in these times, and we do not believe in a President's disposition to exercise the power of restoring life if he had it.

I am, therefore, opposed to the free and unlimited coinage of silver by this country alone and independently, and I am in favor of the immediate and unconditional repeal of the purchasing clause of the so-called Sherman law.

Now, it seems to me that ends the whole difficulty. He has come out flat-footed now, and says he is opposed to independent legislation, that he does not care for your platform, that he does not care for his letter of acceptance. He has given you the key to it now.

HE IS THE FRIEND OF MONOMETALLISM.

He has got the votes, and his Wall street friends want silver destroyed. They want the money they have increased in value. He has thrown off all disguise, and with all the excuses that you hear by Senators, and all the pretenses that were made when this session first commenced, that he was a bimetallist, the President is a monometallist now. He has relieved the situation; he has made the issue broad. He does not believe in independent action. He does not believe we can do it, as he has said repeatedly; he is more honest about that than some of the others. He says it can not be done in that way. He says in his message that Europe is opposed to it. He does not believe it can be done here. He knows it can not be done abroad. He does not want it done at all. That is the situation.

Now comes the most remarkable portion of this very remarkable production. It would not have appeared if the President had been fully informed as to the relative duties of the two departments of the Government, the legislative and executive. In fact none of these communications would have appeared if he had followed the precedents of the fathers. I call attention to these remarkable words:

I confess I am astonished by the opposition in the Senate to such prompt action as would relieve the present unfortunate situation.

My daily prayer is that the delay occasioned by such opposition may not be the cause of plunging the country into deeper depression than it has yet known, and that the Democratic party may not be justly held responsible for such a catastrophe.

Yours, very truly,

GROVER CLEVELAND.

The Hon. W. J. NORTHEN.

I will here insert the letter entire:

EXECUTIVE MANSION, *Washington, D. C., September 25.*

MY DEAR SIR: I hardly know how to reply to your letter of the 15th instant. It seems to me that I am quite plainly on record concerning the financial question. My letter accepting the nomination to the Presidency, when read in connection with the message lately sent to the Congress in extraordinary session, appears to me to be very explicit. I want currency that is stable and safe in the hands of our people. I will not knowingly be implicated in a condition that will justly make me in the least degree answerable to any laborer or farmer in the United States for a shrinkage in the purchasing power of the dollar he has received for a full dollar's worth of work, or for a good dollar's worth of the product of his toil.

I not only want our currency to be of such a character that all kinds of dollars will be of equal purchasing power at home, but I want it to be of such a character as will demonstrate abroad our wisdom and good faith, thus placing us upon a firm foundation and credit among the nations of the earth.

I want our financial conditions and the laws relating to our currency so safe and reassuring that those who have money will spend and invest it in business and new enterprises instead of hoarding it.

You can not cure fright by calling it foolish and unreasonable, and you can not prevent the frightened man from hoarding his money.

GROVER CLEVELAND.

Hon. W. J. NORTHEN.

Now, that is a most remarkable declaration. The Constitution points out how the President may communicate with Congress. He may by message recommend measures, state his views, and there his duty ends. I think no President has ever before this Administration discussed a pending measure before the people publicly. When it is taken into account that he has the vast patronage of this country and the Army and Navy at his command, his words are very important. The mode of discussing the proceedings of Congress is clearly defined. Andrew Johnson, in all the misdeeds that are attributed to him, never was charged with

DISCUSSING A PARTICULAR MEASURE

pending in Congress. It is true that he said Congress was an illegal body hanging on the verge of the Government, but he did not discuss the particular measures pending before Congress. For making that declaration, and it was one of the articles of impeachment brought against him, he was acquitted by the lack of two-thirds, 36 to 17, on the first article; and the article wherein it is charged that he said Congress was hanging on the verge of the Government was not acted upon. But the impropriety of the expression was universally admitted. But here is a discussion of the merits of a particular proposition pending before Congress, and a discussion in a letter and his astonishment expressed at the opposition of the Senate to do his bidding.

Now, this is not a new thing, but it is a very old thing. It has never occurred in England that I have been able to ascertain since the time of Charles I. Charles I attempted to interfere to prevent the bill of attainder passing the House of Lords after it passed the House of Commons against Strafford, and he appealed to the House and tried to prevent its passage. The Commons immediately passed a resolution that for the king to notice a bill pending was a breach of privilege. I will read from the fifth volume of Hume's History of England, page 362:

The King came to the House of Lords, and though he expressed his resolution, for which he offered them any security, never again to employ Strafford in any branch of public business, he professed himself totally dissatisfied with regard to the circumstance of treason, and on that account declared his difficulty in giving his assent to the bill of attainder. The Commons took fire, and voted it a breach of privilege for the king to take notice of any bill pending before the houses.

I think that no sovereign of Great Britain since that time has ever undertaken to take public notice of the bill pending. There is no doubt that Queen Victoria felt as anxious about the home-rule bill and as much opposed to it as a person could be, but if she had written a letter expressing her disapproval and arguing against it, saying she was astonished at the persistence of Parliament in passing that bill, or she was astonished at the opposition of the minority, it would have probably created a revolution in England. It has been supposed by some because the President might communicate the state of the country to Congress, therefore he is a part of the legislative department, and is at liberty to discuss with people all questions pending in Congress. That is not the case. On the contrary, the departments are kept distinct. Why? The reason is evident.

The issuance of this pronunciamento created considerable astonishment in Great Britain, and in the press of the next morning I find foreign dispatches treating of it. I read from the Washington Post of September 29, 1893:

[Washington Post, September 29, 1893.]

ON CLEVELAND'S LETTER—CRITICISM OF THE LONDON STANDARD AND THE THUNDERER—THINK HE HAS BLUNDERED—ONE OF THE PRESIDENT'S FOREIGN CRITICS SEES IN HIS UTTERANCES A RESEMBLANCE TO EMPEROR WILLIAM'S, AND ANOTHER IS REMINDED OF MR. GLADSTONE'S USE OF AMBIGUOUS LANGUAGE—"NOTHING TO BE GAINED BY POTTERING WITH UNWORKABLE THEORIES."

LONDON, *September 29.*

The Standard says editorially this morning of President Cleveland's letter to Governor Northen concerning the repeal bill in the Senate:

"No doubt that Mr. Cleveland's letter will have the result in America which people here think and expect it ought to have. There is a refreshing downrightness about his utterance, but once or twice in his scorn of chicane and double-dealing he has forgotten to some extent the constitutional limits within which he can exert his influence over the lawmakers for good. This makes his utterances bear occasionally a curious resemblance to those of Emperor William. The form is different, but the essence is the same.

"The present letter is more likely to retard the repeal of the Sherman act than not. The Senate will be more angry with Mr. Cleveland than ever, or pretend to be so. The letter seems, therefore, to be an error in tactics. Moreover, Mr. Cleveland fails to hint what should be done to lighten the stock of silver or avert a crisis. As matters stand it unquestionably would pay the Union better to go wholly over to silver. An honest silver dollar is far likelier to restore confidence than a false gold one, and Mr. Cleveland's gold dollar would be pinchback unless he should raise a large loan. In the end there must be a compromise, and it would be wiser to discuss a *modus vivendi* than to scold."

The Times says: "Mr. Cleveland evidently intends to make a political manifesto. If the meaning is somewhat ambiguous, it is not altogether his fault. The President, like the English premier, is sometimes obliged to use language to disguise thought. Nothing can be clearer, however, than the general principle enunciated; but as a practical guide to legislation it leaves something to be desired. We are surprised that Mr. Cleveland is capable of encouraging a delusion among some of his supporters by posing as a friend of silver. Nothing is to be gained by paltering with unworkable theories, or by trying to 'square' the friends of silver. The disasters resulting from the Sherman act have been brought about, as Mr. Herbert's report shows, by trying to compromise with an economic principle."

If there is a case where any President of the United States has undertaken to discuss in an open letter a bill pending before Congress I have not been able to find it. I think it is a bad precedent.

In this connection I wish to say that when elected in 1840, President William Henry Harrison had some very wholesome views with regard to Government and the dangers attending our form of government. In his inaugural address he said some things in regard to the

INTERFERENCE OF THE EXECUTIVE

with the other branches of the Government which it would be well to call to mind just now when the overweening power of the Executive is sweeping down the weak ones and sending open letters to the governors of States.

I read from the Congressional Globe of the Twenty-sixth Congress, second session, 1840-'41, page 232, as follows:

But the great danger to our institutions does not appear to me to be in a usurpation, by the Government, of power not granted by the people, but by the accumulation, in one of the departments, of that which was assigned to others. Limited as are the powers which have been granted, still enough have been granted to constitute a despotism, if concentrated in one of the departments. This danger is greatly heightened, as it has been always observable that men are less jealous of encroachments of one department upon another than upon their own reserved rights.

When the Constitution of the United States first came from the hands of the convention which formed it many of the sternest Republicans of the day were alarmed at the extent of the power which had been granted to the Federal Government, and more particularly of that portion which had been assigned to the executive branch. There was in it features which appeared not to be in harmony with their ideas of a simple representative democracy, or republic. And knowing the tendency of power to increase itself, particularly when exercised by a single individual, predictions were made that, at no very remote period, the Government would terminate in virtual monarchy. It would not become me to say that the fears of these patriots have been already realized. But, as I sincerely believe that the tendency of measures, and of men's opinions, for some years past has been in that direction, it is, I conceive, strictly proper that I should take this occasion to repeat the assurances I have heretofore given of my determination to arrest the progress of that tendency, if it really exists, and restore the Government to its pristine health and vigor as far as this can be effected by any legitimate exercise of the power placed in my hands.

In various other places in this document President William Henry Harrison, in his inaugural address, points out how the Government may be turned into a despotism by the exercise of Federal patronage and various other methods. A person reading this might suppose it referred to what is occurring to-day.

I shall read another passage from this admirable inaugural, found on page 233 of the same volume of the Globe:

The great dread of the former seems to have been that the reserved powers of the States would be absorbed by those of the Federal Government and a consolidated power established, leaving to the States the shadow only of that independent action for which they had so zealously contended and on the preservation of which they relied as the last hope of liberty. Without denying that the result to which they looked with so much apprehension is in the way of being realized, it is obvious that they did not clearly see the mode of its accomplishment. The General Government has seized upon none of the reserved rights of the States. As far as any open warfare may have gone the State authorities have amply maintained their rights. To a casual observer our system presents no appearance of discord between the different members which compose it. Even the addition of many new ones has produced no jarring. They move in their respective orbits in perfect harmony with the central head and with each other.

But there is still an undercurrent at work by which, if not seasonably checked, the worst apprehensions of our anti-Federal patriots will be realized. And not only will the State authorities be overshadowed by the great increase of power of the executive department of the General Government, but the character of that Government, if not its designation, be essentially and radically changed. This state of things has been in part effected by causes inherent in the Constitution, and in part by the never-failing tendency of political power to increase itself. By making the President the sole distributer of all the patronage of the Government, the framers of the Constitution do not appear to have anticipated at how short a period it would become a formidable instrument to control the free operations of the State governments. Of trifling importance at first, it had, early in Mr. Jefferson's Administration, become so powerful as to create great alarm in the mind of that patriot, from the potent influence it might exert in controlling the freedom of the elective franchise. If such could have then been the effects of its influence, how much greater must be the danger at this time, quadrupled in amount, as it certainly is, and more completely under the control of the Executive will, than their construction of their powers allowed, or the forbearing characters of all the early Presidents permitted them to make?

But it is not by the extent of its patronage alone that the executive department has become dangerous, but by the use which it appears may be made of the appointing power, to bring under its control the whole revenue of the country. The Constitution has declared it to be the duty of the President to see that the laws are executed, and it makes him the Commander-in-Chief of the Army and Navy of the United States. If the opinion of the most approved writers upon that species of mixed government which in modern Europe is termed monarchy, in contradistinction to despotism, is correct, there was wanting no other additions to the powers of our Chief Magistrate to stamp a monarchical character on our Government but the control of the public finances. And to me it appears strange indeed that any one should doubt that the entire control which the President possesses over the officers who have the custody of the public money, by the power of removal with or without cause, does, for all mischievous purposes at least, virtually subject the treasure also to his disposal.

The first Roman emperor, in his attempt to seize the sacred treasure, silenced the opposition of the officer to whose charge it had been committed by a significant allusion to his sword. By a selection of political instruments for the care of the public money, a reference to their commissions by a President would be quite as effectual an argument as that of Cæsar to the Roman knight. I am not insensible to the great difficulty that exists in devising a proper plan for the safe keeping and disbursement of the public revenues, and I know the importance which has been attached by men of great abilities and patriotism to the divorce, as it is called, of the Treasury from the banking institutions. It is not the divorce which is complained of, but the unhallowed union of the Treasury with the executive department which has created such extensive alarm.

How perfectly puerile talk of that kind seems to us to have been in the spring of 1841, when the collections and disbursements probably amounted to not more than thirty-five or forty million dollars a year. The collections and disbursements are now $500,000,000 a year. The revenue laws and the custom laws are complicated laws, and may be construed by the Department in such a manner that the slightest change will make or break great establishments. The great distilleries are all under the control of the Department and a technical violation of the distillery laws can be taken advantage of by the Treasury Department, and an honest man, who did not intend to do wrong, under those laws may be made a convict, or a rogue may be allowed to escape under a compromise. The whole business is practically at the discretion of the Department.

When we come to the currency laws, whatever laws Congress may pass providing for money, the Department will not execute. They not only exercise the broadest discretion, but do about as they please. They assume authority to change vast contracts by saying that notwithstanding the obligation may be payable in

one kind or another, they shall be paid in gold. Should not the Executive, with a patronage of more than 100,000 fat offices and more than a million and a half of dependents upon Government patronage, and with the Army and the Navy, be kept within

THE STRICT LETTER OF THE LAW?

It is time the people were jealous of his going outside and discussing legislation pending in Congress. I do not suppose in this instance that the President had any intention of doing anything unusual. It may have been different in some of his messages; but in this I have no idea that he realized that discussing a measure pending and expressing his astonishment at the action of the Senate was anything unusual. It must have come from a failure on his part to acquaint himself with our governmental machinery and with the proprieties.

If we let these things pass, they may become dangerous; they may become precedents. If one President discusses legislation before the people, others may do so. Angry discussions may grow up. One bad thing is a precedent for another, and when we find these vast powers in the hands of the Executive, and Congress is comparatively powerless, with no patronage, with no money to expend, with no army, with a limited control over the currency—indeed with no control at all over it—when we reflect that this Government has grown in its executive department far beyond what was anticipated by the framers of the Constitution,

WE SHOULD STAND, WITHOUT REGARD TO PARTY CONSIDERATIONS,

as Webster expressed it, on the watch-tower to give the alarm at the first approach of danger. So also said Mr. Calhoun and Mr. Clay, that it was their duty to call attention to the slightest irregularity, the slightest infringement, of the President of the United States upon the rights, functions, and duties of Congress.

I think the President's discussion in the letter to Governor Northen, of Georgia, was a breach of the privileges of Congress, was a gross impropriety. The English papers discussed it at once and spoke of it as something that Emperor William of Germany might say and Queen Victoria of England would not dare say.

The press is not entirely unanimous in trying to stampede Congress. The New York Sun in almost every article is calling attention to the fact that

SILVER WAS NOT MADE AN ISSUE IN THE CAMPAIGN,

but that something else was. The expressions in the Sun are so significant that, while I do not wish to burden the Secretary, I shall ask him to read the article from that paper which I send to the desk.

The VICE-PRESIDENT. The Secretary will read as requested.

The Secretary read as follows:

[New York Sun, October 1, 1893.]

LET CONGRESS GET TO DEMOCRATIC WORK.

Unquestionably there is excuse if not justification for the difference of opinion among both the Democrats and Republicans of Congress touching the proposition for the unconditional repeal of the purchase clause of the Sherman act. The platforms of both parties admit of such disagreement, and both of them would appear to have been specially and adroitly constructed for the purpose of evading a definite decision of the silver question. That question was left open to debate. It was left to settle itself. Both parties made their great issues on the question of the tariff and the question of the force bill.

The silver question, accordingly, is now undergoing a wholly unpartisan discussion in Congress. Both parties are split on it; or rather the disagreement with regard to it, recognized and permitted by the platforms of each, is manifesting itself in each. If the provision of the Sherman law is unconditionally repealed, the result will be achieved by a combination that is in no sense partisan. It will be accomplished by a majority made up of both Democrats and Republicans, and only so can it be accomplished. The Republicans being in a minority in both Houses of Congress, of course they are powerless to pass any measure of themselves. The Democratic advocates of unconditional repeal are in a hopeless minority in the Senate, and they can only succeed in their purpose by the aid of the majority of the Republican minority.

Thus the silver question as now presented to Congress forms no issue between the parties. The division upon it is not partisan. Inside of each party there is disagreement as to it. The position of a Senator or a Representative with reference to it can not be treated as a test of his party fealty. Good Democrats and good Republicans are on both sides. Neither side can be read out of its party because of its convictions and its vote on that question. A like difference exists among the great body of Democrats and Republicans, respectively. There is no party union on the subject. Moreover, the question has not been referred to the people for their judgment. The only indication of the popular desire is afforded by unpartisan expressions of public opinion, indicating that the majority of the people as a whole, and without reference to party lines, are anxious for repeal.

When that question is removed from the consideration of Congress and the people, however, the party lines are drawn sharply on the tariff and the Federal election law. On each side, Democratic and Republican, the position of a Congressman with reference to either or both is a test of his party loyalty. A Democrat who does not vote for the repeal of the election law, and for the destruction of the whole system of protection, and for a constitutional tariff for revenue only, is false to his party. He forfeits his title to the name of Democrat. He puts himself outside of the Democracy. He is a servant faithless to the Democracy and the people. Conversely the same holds true with the Republicans.

Hence we rejoice to think that the nonpartisan question of silver must soon be out of the way, and then the square partisan issues decided by the people last November will be settled by Congress in accordance with their mandate. The spectacle of a Democratic Administration and a Democratic Congress courting a necessary Republican alliance in order to pass a measure as to which Democrats disagree, is not refreshing, is not edifying, is not politically healthful. Naturally the Democrats meet the Republicans to contest with them over great principles and policies. It is unnatural that they should go to them for help. It is humiliating that a Democratic Administration should be relying upon it when the whole power is in their own hands. Mr. CRISP is Speaker of the House of Representatives, and not Mr. REED. Vice-President STEVENSON is presiding over the Senate, and not Mr. Morton. Mr. Cleveland is in the White House, and not Gen. Harrison.

The Democrats are asking no Republican help to repeal the election law. They expect and invite united Republican hostility. They want no Republican aid to destroy the robbery of unconstitutional protection and to pass a constitutional tariff for revenue only. They intend to do the whole job, of themselves and unaided, in obedience to the command of the majority of the people.

This extraordinary session of Congress has now been in the Capitol nearly two months, and Mr. Cleveland has been in the White House nearly seven months. It is nearly eleven months since the people put the Democracy in control of the Government with the command to destroy every vestige of protection as a system of robbery; yet, so far, not a blow has been struck for the extinction of the McKinley tariff, "the culminating atrocity of class legislation." The November elections are near at hand, and the fidelity of the Democratic party to its trust is on trial.

Stop wrangling over silver! Stop parleying with protectionists in the preparation of a tariff for the destruction of protection! Get through with the simple task of framing a constitutional tariff for revenue only, and have it before the House of Representatives as soon as the repeal of the election law is passed! The people want to see the palpable results of Democratic rule. They have had the promise; now they want the fulfillment.

Mr. STEWART. Mr. Dana is evidently a philosopher, and is getting a little suspicious of the alliance between the Republicans and the Democrats. I think that I see a little indecent haste on both sides as to which shall get in the foremost ranks of the Administration supporters of this measure. I think the Republican followers of the Administration have thus far shown more enthusiasm than they have shown in staying in their seats to fight it out.

Mr. President, the little episode in the discussion has been instructive to me. I have learned from it that the Senator from Massachusetts [Mr. HOAR] is practically oblivious to the importance of this bill, what great contempt he has for the rights of the minority, and his apparent idea that no good is ever obtained by checking the ruthless aspirations of the majority. The Senator compared this bill to the question of negro slavery, and pretended that

THE ENSLAVEMENT OF FOUR MILLION PEOPLE

of this country in chattel slavery was more important than this scheme, which he is pushing forward with so much zeal, to enslave sixty millions of people on this continent and hundreds of millions elsewhere. He is ignorant of history if he does not know that a people deprived of money become slaves, and have in all times become so: he is ignorant of history if he does not know of this. He is ignorant of the intention of his associates if he does not know that the object of this scheme is so to augment the weight of debt as practically to absorb all of the proceeds of labor. He is ignorant of the situation if he does not know that he is engaged in a revolution more radical than any that has ever been attempted by legislation before; and he pretends that good always comes from rash and violent and oppressive acts of the majority.

Why is it that by the Constitution and the laws for a hundred years the minority have had some rights to protest? Can that Senator or any other Senator state an instance where the minority has prevented the passage of a bill where that bill was not subsequently found to be bad?

Suppose the majority had had its way in 1870. We should have had Chinese sovereignty. Suppose a majority had had its way in 1891. We should have had monarchy here. The minority has done much good in preserving

THE INTEGRITY OF THIS GOVERNMENT.

The majority in this case is under the control of the money power and the press. Does not everybody know that if Mr. Cleveland were in favor of free coinage that would have a majority of two-thirds in each House of Congress? Does not everybody know that the minions of the gold kings during the past have boasted of the power and advantage they enjoyed? This is not the first time that the Senator from Massachusetts in these halls has insisted that the majority should vote to put the chains of slavery upon the people. He was quite as earnest two years ago to take the elective franchise from the people, to deny them home rule, and to place them under the Executive control at the polls.

I have before heard arraigned here the rights of the minority. It is the duty of a patriotic minority to preserve liberty here. The majority have the power; the majority have the patronage. The majority bow the knee to the gold kings, but there is generally an honest minority that will not. If we had not an honest minority we should have no Republic to-day. Let us be thankful that there is one place in this Capitol where the minority voice can not be choked or closed by bribery, by patron-

age, by power—a place where it can be heard; and that place is the Senate of the United States, which is the guardian of the liberties of the people.

I am tired of hearing despotism advocated by legislation by the majority, a majority that did not exist twelve months ago, a majority that could not exist but for the Federal patronage, money influence, newspaper clamor, and everything that goes to blot liberty from the land. Let any bill that has been beaten in the Senate

BY AN HONEST PATRIOTIC MINORITY

by its obstructive measures, be brought forward here, and see if it is not denominated as hideous; see if it is not considered against the spirit of our institutions. But the majority has been beaten upon one bill, and it will be again.

Who knows what interests are in the Chamber? Who knows how much bank stock and Government bonds are here? No investigation has been had.

Mr. President, I ask pardon for the digression.

There is a gentleman in the South by the name of E. R. Quillin, who has written a letter which so happily describes the situation that it attracted my attention. I do not want to shirk, but, as I am getting a little hoarse, I should like to have that read also, because I think it ought to be a part of the history of these times, inasmuch as it explains how this struggle is regarded.

The VICE-PRESIDENT. The Secretary will read as indicated, in the absence of objection.

The Secretary read as follows:

[The Clayton (Ala.) Courier.]

THE GREAT STRUGGLE.

The correspondent from Washington in the Montgomery Journal, after writing of the splendid victory of the Democratic party on last November, and with it a revival of general confidence that the country was soon to enter upon a broad and liberal policy that would restore the Government to the sole province of its founders, to be the people's obedient servant, jealous in care of their present needs, and prompt to anticipate their necessities along every discernible path of progress, and it was proclaimed that the first duty of the hour for the people was to relieve them of crushing taxation, then to assure their civil liberties, then to place about the two metal moneys of the Constitution the safeguards of laws immutable to the machination of foreign financiering, goes on and says:

"How auspiciously dawned the day of Democratic redemption! Inspired with new hopes and buoyed with new aspirations, the horoscope was bright and rosy as unclouded June skies smiling to the rising sun. The country was at peace with all the world, and harmonious in all their relations with each other, the people of the great Republic set out trustfully to move along the lines and by the policies for which they declared at the last national election."

Mr. VILAS. Mr. President, I desire to have submitted to the Senate the question whether or not that paper shall be read by the Secretary.

Mr. STEWART. If the Senator objects I shall read it myself.

Mr. VILAS. I do object.

Mr. STEWART. As the Senator objects, I shall read it myself.

The VICE-PRESIDENT. The Senator from Wisconsin objects to the Secretary reading the paper which has been sent to the desk. The Chair will have read the rule governing the case.

The Secretary read as follows:

RULE XI.—OBJECTION TO READING A PAPER.

When the reading of a paper is called for and objected to it shall be determined by a vote of the Senate, without debate.

The VICE-PRESIDENT. Under Rule XI the Chair will submit to the Senate the question whether the paper, the reading of which was called for by the Senator from Nevada, shall be read by the Secretary.

Mr. HOAR. Will the Chair kindly have the title of the paper read so that Senators may understand what it is?

The VICE-PRESIDENT. The title will be read.

The Secretary read as follows:

[From the Clayton (Ala.) Courier.]

THE GREAT STRUGGLE.

Mr. HOAR. That is sufficient. I thought perhaps it was a public document.

Mr. PASCO. I understand that the Senator from Nevada has withdrawn his request for the reading.

The VICE-PRESIDENT. The Chair did not so understand.

Mr. STEWART. Yes, I withdraw it.

The VICE-PRESIDENT. The Senator from Nevada withdraws his request for the reading of the paper by the Secretary.

Mr. MORGAN. I desire the permission of the Senate to say that when objections of this kind are made, they ought to be made *in limine*. Senators ought not to wait until the paper is read, or half read, and then object. In my judgment, the objection in this case has come too late. Senators ought to be vigilant if they want to object. That is all I desire to say now.

The VICE-PRESIDENT. It was the duty of the Chair to take notice of the objection made by the Senator from Wisconsin. Under the rule, the Chair has done so. The Senator from Nevada, however, in the meantime, has withdrawn his request for the reading of the paper at the desk.

The reading of the paper was concluded by Mr. KYLE, as follows:

But what of the change that has come over the spirit of our political dreams? For change indeed there has come as suddenly as some convulsion of the elements of air and water, shaken by power inscrutable to human conception. But this much is known: This change was wrought by an influence not within, but far without our domain. Such a panic sets in as stupefies the simple people and baffles the serenest philosophers. The President calls an extraordinary session to relieve the country of distress inflicted upon it by agencies in Europe inimical to our money policy, who, with their allies in New York, begin what is no more nor less than an insidious and terrible assault upon what the best thought of the world concedes to be the metal money of the masses. The great creditor nation, Great Britain, had lost heavily in other lands less solvent than ours; her money had grown dearer, holding as she does hundreds of millions of securities in America, her safest and most profitable field of investment.

The word was given to the New York banks, and they, in turn, passed it to all the national banks of the country, that financial ruin and disaster were inevitable unless Congress made haste to repeal the silver-purchasing clause of the Sherman act. Secretary Carlisle goes to New York, and there, with trusted friends of the President, a conference is had, which the sympathetic press proclaim is entirely harmonious. The call for the extra session soon follows, and the bankers and the press predict that the President's message will do much to relieve the situation. He asks the repeal of the Sherman act, while the banks and the press applaud; the session convenes and the chosen friends of the Administration present measures in complete accord with the message. It is a bitter disappointment to the defenders of the people's money; for they can only see in this blunt declaration of policy not a ray of hope for silver. Western and Southern Democrats had been cheered by the Chicago platform declaring for bimetallic coinage without discrimination by the mints. Now, although they are asked to surrender their long cherished convictions, they are promised not even a makeshift, much less a substitute, which the party demanded. Silver coinage is to be stopped altogether, and the chosen friends of the Administration will make nothing nearer a promise than that some of them profess to believe this action does not mean the demonetization of silver.

From the humble plan of urgent appeals to Congress to relieve the country of dire distress, the repealers resort to arrogance and threats that patronage will be withheld from those Democrats who have the hardihood to differ with the Administration. Talk of the conspiracy of 1873! It does not hold a tallow candle to that of 1893. The first came like a sneak thief, the last comes now like a robber exulting in his power, relentless, cruel, brutal. Nearly the entire metropolitan press yield to the enormous pressure of the money power, to the beguiling sophistry of the bondholders and to the imperiment dictation of the national banks. The result is the most appalling visitation of unmerited privation that ever afflicted an innocent people. The conspirators overdid the thing. Members of the House, hitherto ardent advocates of free coinage of both metals, were weakened and stampeded. The majority in the House for the repeal was so large that it so overmatched the expectation of the bankers and repealers that they deemed it due time to loosen the torturous thumbscrew, believing the Senate would be bound by the decisive action of the House, the "popular branch" of the Federal Legislature, to obey the will of the Executive and—get a place at the pie counter.

But not so; although there were in the Senate, as in the House, members who discovered excuse to defer the fond hopes they had raised among their constituencies, there were sturdy souls in the upper body not to be routed from unflinching defense of the policy which years and years of study, research, and observation had convinced them was America's safest course in dealing with the nations and money powers of the world. But just now the banks are losing somewhat of their recent arrogant confidence, and are growing impatient and insolent even to Senator VOORHEES, because of the delay in the Senate, a delay that he is utterly powerless to prevent. The Eastern press echoes and voices this effrontery, as it indulges in flippant and scornful words about senatorial dignity and deliberation.

It is time the conspirators were reflecting on their own loss of dignity in the manner they are counting unhatched chickens. Unconditional repeal will never pass the Senate without revolution which would be worse than that by which the force bill was sought to be fastened upon the people. There are just about thirty-seven vigorous and determined gentlemen in the Senate who feel entirely justified in using every constitutional right in resisting what they believe to be a murderous assault upon silver, and that they will exercise their every right nobody who knows the situation and the character of the men harbors a shadow of doubt. Such men as TELLER, STEWART, WOLCOTT, MORGAN, PUGH, HARRIS, BATE, GEORGE, BUTLER, COCKRELL, DANIEL, CALL, the two JONESES, BERRY, VEST, VANCE, COKE, and WALTHALL are stirred to the bottom of their souls, and they alone can and will prevent the consummation of unconditional repeal. TELLER has called it a "damnable bill," and so say they all.

Senator VOORHEES occupies a most trying position; and while he has made the best of it, he has the look of one who is in strange company, with which he is ill at ease. He has been obliged to sit and listen to some of the sharpest and plainest criticism of his abandonment of the cause of which he was for years an honored champion that ever fell upon the ears of a Senator. And he has a far-away look as though he was hearing from the people in Indiana; and so are the others who have acted upon the proposed legislation hearing from the people. That hectic hue of resolution, which marked the passage of the Wilson bill by the House, is beginning to be "sicklied o'er with a pale cast of doubt." Members of the House whose ears are not too far away from Mother Earth, and not carried away with inclining to the clink of gold, the promise of patronage, and the prediction of future power, may hear a mighty ominous rumbling that betokens the gathering of an avalanche of political retribution.

The people do not often all speak at the same time, but when they are once sure of their bearings and make up their minds that unscrupulous power is busy shaping devices to enslave and degrade them, then good-bye to the fellows "dressed in a little brief authority" who heed not their will.

> The voice of the people, through silent a time,
> While they look on and wonder at error and crime,
> Will answer oppression's contempt of their might,
> And roar like a lion attacked in the night.

Mr. STEWART. I do not propose to read much from authorities upon this question, but inasmuch as I find such a general want of comprehension of the real subject, I should like to call the attention of the Senate to a very pointed and able article, and a short one, in the American Journal of Politics, written by F. J. Scott. I do not know the gentleman, but his article is entitled "The Gospel of Bimetallism," and I think he states the

case very well. I think Senators who have not read up on this subject will do well to pay attention to this, and either read it themselves or listen to my reading:

THE GOSPEL OF BIMETALLISM.

[By F. J. Scott.]

May it please the reader to be reminded of a few facts, and then to reason from them.

FACTS OF HISTORY.

1. Gold and silver have together been the coin metals of the world since history records anything.

2. For many centuries all civilized nations have endeavored by law to fix a relationship of value, and since the fifteenth century a definite weight and fineness for all gold and silver coins. Until 1873 these relations had become fixed and nearly invariable throughout the world; and both were equally bases for the issue of national and other bonds, of bank paper money, and other credit currency.

3. That the great variations of production of each of these metals at different periods have not disturbed the business exchanges of the world which have been performed with both of them; for when the silver mines of Peru and Mexico were adding an unprecedented volume to the silver of the world the increase stimulated commerce, but did not materially affect the value of the coin relatively to gold; and when the unprecedented increase in gold production from California, Australia, and Idaho from 1849 to 1865 was pouring a flood of gold into the commerce of the world, gold coins did not materially depreciate in value, nor silver increase, and both continued to be valued as before, relatively to each other; but both decreased in value relatively to commodities. Later on when the Comstock mines, from 1865 to 1874, bid fair to make a similar increase in silver, no fall ensued in the value of silver as metal, and the United States silver dollar in 1873 was worth 3 per cent more than its mate in gold.

4. Previous to 1873 the laws of all the great commercial nations made gold and silver interchangeable at fixed proportions, some making gold the national unit and some silver, but the greater part silver. The free coinage of only one of these metals obtained in one country, and of both metals in another country, so as to make the privileges of the two about equal in the world at large, and while the principal of bimetallism was not established in theory, the legal ratios of the coins were, in fact, the ratio of the commercial value of the two metals, uncoined, throughout the world.

5. The lessening value of silver began in 1873, when two among the greatest of commercial nations, the United States and Germany, having changed their unit of currency from silver to gold, gave notice to the commercial world that silver might not in the future be as fully legalized as it always had been up to that time, as a standard basic money. France, Belgium, Italy, and Switzerland in their relation as "The Latin Union," in consequence of the action of the United States and Germany, deemed it prudent to stop the free coinage of silver. Thus legislation in the United States and Germany forced other countries to legislative acts increasing the potency of gold and decreasing that of silver.

This legislation alone seems to have produced the derangement we now see. Reversal of that legislation by the United States would therefore seem to be the logical beginning of a restoration of the value of silver.

FACTS OF PHILOSOPHY.

1. The average production and average value of any two commodities is more equable than the average product or average value of either one.

Wheat and corn are the most valuable of the staple grains of the United States. If debts were payable in either, on the ratio of 50 pounds of wheat to 100 pounds of corn, creditors and debtors would be aware that both grains were liable to fluctuate in production and in demand so that the prudent business man would find it safer to have an option to pay in either than to bind himself to one only. If the creditor, by legislation, could make debts payable in one grain only, that grain would go up in price and the other would go down, no matter which was favored. And if any community were convinced that such a law were to be enforced at some future time, the effect would follow, though not perhaps so rapidly.

But so long as an option remains the law of averages in production and demand operates to make the double standard more uniform than the single one. Assuredly, if the production of both increases more rapidly than the demand, both may fall in value relatively to other commodities, but it would not take more of both to pay a debt, and *vice versa*. This is a form of fluctuation in the value of money and all other commodities that no intelligent government assumes to guard against. A barrel of flour is no more bought with the same number of gold dollars at different times than it is with the same number of silver dollars. The value of money is measured always by what it will buy, and fluctuates continually. The only influence law has in the matter is to ordain what metals shall be received as money, to coin those metals, to guarantee the weight and fineness of the coins, and there to leave them.

Now let us suppose that wheat and corn had been used as a medium of exchange for untold centuries, measured by government measures and proportioned in value as two to one, by law, all over the world. Then suppose that several nations, large consumers of both, should make laws forbidding the same rate of transportation for corn as for wheat, deny its use except in very small amounts, in payment of debts, and thus indicate its abandonment for a part of the use it before had. Would not everybody see that wheat would go up on the strength of its sole use for even that one purpose, and that corn would drop a little by reason of its disuse for one purpose?

2. It is an axiom that the value of all things which have commercial value is determined by use, and by the increase or decrease of the cost or rapidity of production relatively to use.

Evidently if governments, which establish by law what is money and legal tender in payment of debts, make a law the effect of which is to diminish the potency of one kind of metal coin money, and to augment the use and potency of another kind, the law is a controlling factor to change the relative and positive value of both metals.

It is estimated that nine-tenths of all the gold and silver commercially accessible in the world is in the forms of coin. The one-twentieth, more or less, not coined, and used for ornament and architectural decoration is altogether out of market after it is thus used, and rarely gets back into commerce; so that the commercial product of both metals is mostly absorbed by the coin use. The fraction demanded for decorative purposes is in fact a demand and lien upon the coin stock of the world.

Gold is coined free on presentation of the metal at the mints. Silver is denied free coinage. Legislation is all pointed to make an added potency for gold and a diminished potency for silver. Gold rises and silver falls. Free coinage and equal legal potency are for the two metals what equal rates of transportation are for produce. Is it not evident that legislation, and principally that of the United States, has been the cause of the fall of silver and the rise of gold?

This is rather elementary, but I feel from the tenor of the debate on the other side that something more elementary and more in kindergarten style is needed than I am myself able to give. It is not lengthy, and I want to call particular attention to it.

Suppose that corn had been obstructed—

He is supposing a case where corn and wheat had been used as money for a long time, and he says:

Suppose that corn had been obstructed in transportation by an unequal rate for quite a number of years, and in consequence has fallen in value at the farm; and wheat has an added value equal to the decline on corn; and after this result had been wilfully brought about by dealers in wheat, that these dealers should fill the air with denunciations of corn as a bulky and vulgar food, and no longer to be used in payment of debts, and after the price should drop again by reason of such influences, the same dealers should suggest that as corn is not worth as much as formerly the government should make a new bushel measure for corn so that they shall have a half more to a bushel. Would that be wise legislation? Would it not be a changing of weights and measures for the benefit of one class, and fraud toward all others? Would it not suggest legislation in the other direction, viz: to stop the unequal rate of transportation, and to disseminate the truth with regard to the essentially constant and equal value of the great twin products? Would it not be wise to review the laws and undo the legislation which caused such mischief?

To reach honest bimetallism the road is direct, clear, and logical. All talks of maintaining the "parity" of the two metals while knocking out the props from under one of them is based on ignorance of the philosophy of money, or mercenary interest in gold and bonds.

He puts it rather straight. There is a great deal of mercenary interest in gold bonds and in bank stocks all around.

The first mistake in United States legislation on this subject was made in 1873 when the gold dollar was substituted for silver as the unit of our currency; the silver dollar having been the unit from the time of Washington down to that time. Had the double or combination unit, now known as the bimetallic unit, been adopted then, the basis would have been a safe one. Or, later, had the coinage of silver remained free as that of gold, the theoretical change of unit might not have affected the relative value of the metals. But when in 1873 the equality of rights to the mints was denied, bimetallism received a stab from which it can only recover by a repeal of the legislation which inaugurated the war on silver; by the establishment of the bimetallic unit; and by the restoration of free coinage alike to both metals. This is the "straight and narrow way," the only logical way to a realization of honest bimetallism, and the restoration of the value and the parity of silver.

Is it not reasonable to suppose that a reversal of the legislation which brought about this result may restore the value more rapidly than it was lost?

We want honest dollars. The present gold dollars are not honest dollars. They are decidedly dishonest dollars. Within the past twenty years they have increased in value out of the loss on silver. The restoration of bimetallism theoretically and practically is to preserve the old yardstick of value against the revolutionists who have added 40 per cent to the value of gold by the legislation of the past twenty years.

I agree with him. I am opposed to these revolutions. I am opposed to anarchists, and of all mean anarchists the meanest are the anarchists of wealth. It is very dangerous for anarchists of wealth to be trying these experiments. When they

UNDERTAKE TO REVOLUTIONIZE THE STANDARD

and rob the masses, then they have no moral right to the protection of law; it rests on the bare legal right. The time has often been in history when that right had to be maintained by might. Those who have got the wealth are entirely too few in number to make the present structure of society safe. A moneyed oligarchy now, at this age of the world, could be triumphant for a while, but you know the men who gain wealth by art, by trickery, or by fraud can only defend it in that way. Their soldiers must be hired, and when the wealth of this country rests upon hired servants, soldiers of fortune who are hired, it is not well protected. You had better have it distributed. You had better let the law of natural distribution operate, and let all people have some property, if you want to have property safe. Property is not safe when the few get it all by fraud.

It may not come now, but these anarchists of wealth are

LAYING THE FOUNDATION FOR REVOLUTION.

They are courageous, but when fraud and corruption seem most powerful there is the most danger. I recollect very well when in New York a disrespectful remark in regard to Boss Tweed subjected a man to a good deal of danger; I was told "a man might be arrested and sent to the Tombs." I recollect very well when the Empire of Napoleon was peace on the surface, and fraud, rascality, and corruption were below. They had an election. The empire was peace; nobody dared question it, and in less than a year Napoleon fell. When any scheme based upon fraud and oppression seems most omnipotent it is in the most danger. When slavery was protected by the Constitution they went still further and said it was a divine right, and the preachers preached that it was right.

I remember the first time I ever heard the right of slavery questioned was in a town near Lake Ontario, Sodus Bay. I heard a discussion between a Presbyterian minister and Frederick Douglass. He was a young man just then coming out and he was questioning the divine right of slavery and the Presbyterian minister was maintaining its divine right. They were discussing the question there from a religious standpoint. Ninety-nine

of all the religionists both North and South believed in that divine right. Everything was one way; but still there was

A MORAL SENTIMENT AGAINST IT

that convulsed this country and we had war as the result. When questions of that kind are smoldering beneath what appears to be a serene exterior there is danger.

Do you know that the people of this country feel that they have been deeply wronged and are being robbed of their money? Do you know that there is a sense of injustice planted in the heart of every man who is driven from his home by reason of having his mortgage doubled by legislation? Do you not know that all his neighbors sympathized with him, and do you not know the sense of injustice that every man feels, when his property is depreciated to enhance the value of another man's property? There are forty million, yes fifty million people, sixty million people in this country who feel that they were outraged by the act of 1873; and feeling so, they do not relish the arrogance, they do not relish the self-righteousness, they do not relish the cant, when those who have changed it and made gold the dishonest dollar talk about an honest dollar, talk about conservatism, when by their very radical rascality they have

REVOLUTIONIZED THE MONEY OF THE WORLD.

If you, resting here in security, do not believe there is a feeling in this country produced by a great wrong you do not understand the situation. I know that money can hire newspapers; I know that patronage can sway majorities; I know that insolent majorities can demand a vote; that conscript substitutes are anxious to get their work done and get home and get their pay. I know all that; I understand it; but be admonished that there is a deep undercurrent in the minds and hearts of the American people that this great wrong ought not to go unpunished; and when they hear the arrogance of our British masters saying that they have an advantage of us and that they will not even consider the question of equities, but they will take the last dollar; that they will not consider the use of both metals because they are a creditor nation and it is their interest; when they see those high in office in this country agreeing with their British masters that we ought to be robbed, that it is legitimate to rob the American people—when the American people hear this talk they have a feeling that the superficial man can not realize.

I tell you, Mr. President, that those who are pressing this great wrong forward

ARE TREADING UPON A VOLCANO,

because the great mass of the American people feel that it is a great injustice and wrong. They see themselves driven from their homes without fault of theirs. They see that all their efforts have availed nothing. They see poverty where there ought to be prosperity. They see all the results of their labor transferred to a favored few, and most of them in foreign lands. They see those who fought for the independence of this country and the sons of those who sacrificed their lives for its independence now begging bread, because you have destroyed the value of their property. Go into any old community and see the old inhabitants who have lived on the farm for generations, whose ancestors bore arms to secure the liberties of this country, and you will find them starving. Go along these streets and you will see the descendants of the men of the Revolution begging for low and menial places about the Departments, many a lady asking to be a charwoman, to get bread, and you see these offices doled out to persons who can be serviceable, to persons

WHO CAN SERVE THE GOLD RING.

You see in the fat places those who can serve the gold oligarchy. Do you think the people are blind to these outrages? Do you believe that they have no hearts to feel? They feel the degradation that you are bringing upon them. They see the gradual process of slavery which you are carrying on. They see the end is inevitable. Here are the charioteers of wealth riding whip and spur over the heads of the people. They see the newspapers in New York, owned by aliens and foreigners and influenced by foreign greed, doing all they can to destroy civil liberty where it has been defended most, the only place where there can be security. We hear Mr. Bennett and Mr. Pulitzer talk about abolishing the Senate, that "it is no use; it is in our way; it prevents us from making money." Two years ago those of us who were defending the rights of the people were heroes because it suited them. The rascals are heroes now.

The men who write newspaper articles here of course work for hire. I do not blame the boys, because they could not get employment unless they did it. Take, for example, our friend Mr. Jones. When he was on the St. Louis Republican he was a good bimetallist, and now he abuses any man who thinks that way; and yet he is a very conscientious man. The question is, have his morals changed or has his position changed or his interest changed? These boys who write on the newspapers write just as the paper wants them. If they did not do it they could not get employment. Mr. Pulitzer, spending most of his time in Europe, wants to make a point and to carry out some scheme, and of course the boys have to write that kind of stuff.

If that does any good, all right; but when it gets out among our people it does us a great deal of good, because they appreciate it. Some of us would be very unpopular if you would speak of us flatteringly. If Mr. Pulitzer and Mr. Bennett spoke of us favorably it would endanger our popularity. This author says:

We want honest dollars. The present gold dollars are not honest dollars. They are decidedly dishonest dollars. Within the past twenty years they have increased in value out of the loss on silver. The restoration of bimetallism theoretically and practically is to preserve the old yardstick of value against the revolutionists who have added 40 per cent to the value of gold by the legislation of the past twenty years.

The gold dollar is a dishonest dollar to the extent that the metal in it exceeds the mean value of gold and silver. The silver dollar is a dishonest dollar to the extent that the metal in it is less in value than the mean value of gold and silver.

Our Government is at last brought face to face with the danger to itself from the abnormal demand for gold which our monetary legislation has been the principal agent in producing. All the nations, we hear, are scrambling for gold. It has risen constantly in value. It is rising now, and the failure to restore the "parity" of the two metals by the restoration of honest bimetallism will be the signal for a demand for gold that will send our Secretary to be a borrower, a beggar for money, and a manufacturer of debt for the country that refuses to use its own resources.

That kind of business Mr. Carlisle must carry on; he must borrow money if he refuses to use the money that can be got from our mines, and he must continue to humiliate the United States. This author says:

SELL GOLD WHEN IT IS HIGH.

Permit me to ask: When do we like best to let our wheat, cotton, corn, and pork fly the country? When they bring a high price or a low price? Was it a better policy to sell Lake Shore stock in Europe when it brought $1.40 or when down to 60 cents? When anything is away up in price is a good time to let it go, is it not, whether wheat, cotton, corn, or gold? Gold is high priced now; very high—has not been worth so much for many years. Let us sell it and get for it something, anything we want, in exchange.

If the United States takes a bold initiative on this question and makes coinage free, France and England will probably find they have some gold to sell while it is away up. Germany is in a fair way to be cured of her Government's mania for the gold basis. Her farmers and manufacturers with great earnestness are pressing to have silver restored to its old equal place with gold; and they point to the steady misfortunes that have followed its demonetization as evidence of its folly. England in her Indian Empire, with her 240,000,000 people, is maintaining the silver basis, while only her 40,000,000 at home have the gold basis. Make silver coinage free and it will raise the price of silver all over the world. Dutch, English, French, and American coin speculators will hasten to buy silver while it is low priced wi h gold, which is high priced. That will lower gold as the process goes on and raise silver—relatively to each other, I mean—the joint value of the two remaining the same.

Mr. President, then I want to call particular attention to Germany, and there is no doubt by precisely the same process with Germany the bondholders produced the depreciation of silver:

Our country can turn back the tide of silver money depreciation by exactly the same process that Germany and the united bondholder classes of the great cities have produced it, viz, by making it the interest of hoarders of gold to sell in such volumes as to drop its price. The monometallists have been just twenty years bearing silver. The United States is in a condition to turn the tables on them—to sell high and buy cheap. It is a battle of the democracies of this country, France, and the world against the allied bond owners of the great cities. Compromises are out of order.

I agree with this author. Compromises are out of order. How can we compromise with sin if we have to commit a crime? They do not propose to compromise unless we stab silver. The Senator from New Jersey [Mr. MCPHERSON] would not consent to any compromise that was not a murder of silver.

[At this point the honorable Senator yielded to Mr. PETTIGREW for a call of the Senate.]

Mr. STEWART. I suggest if Senators would spend more time in the Senate Chamber and less time in the cloakrooms, it would not be necessary to be thus elementary. They do not stay in the Chamber long enough to get a good understanding of the question. There has been enough silver talk in the last eight years here to give Senators some understanding of the question; but when the gold men come forward and make their speeches, it is obvious that they have spent their time in the cloakroom and do not understand anything about it. I do not allude to the present occupant of the chair [Mr. HILL in the chair], because he understands both sides. He occupies both sides, and of course he understands all about the question; but as to the rest of them they spend too much time in the cloakroom.

Mr. CAREY. Will the Senator from Nevada allow me to suggest to him that so far as the vacant seats were concerned—just before the last call for a quorum—it was caused by the fact that the Senator who has in charge the matter of calling the attention of the Chair to the absence of a quorum informed Senators on this side that they would be permitted to go and get their dinners, and he would not make a call for thirty minutes. The last call was not purposely made.

Mr. STEWART. What right have Senators to be so anxious about their dinners? They ought to forego eating.

Mr. PALMER. Will the Senator allow me?

Mr. STEWART. Certainly.

Mr. PALMER. The Senator from Montana [Mr. POWER] informed me a few minutes ago that it was the understanding there was to be no call for half an hour.

Mr. STEWART. I am sorry Senators were taken by surprise. I do not want to make them uncomfortable. When they get their stomachs filled if they would attend to business a little while and give us a chance to educate them there would be some hope of progress, for I do not think there is any subject in the world upon which there is so much interest as there is upon this question. I exclude from that remark my friend from Indiana.

Mr. VOORHEES. And the Senator from Nevada also.

Mr. STEWART. I may be excluded from that possibly, for I have been here and paying attention all the time. It is treated as a very light matter by the Senator from Massachusetts [Mr. HOAR]. He called it a very trivial matter. He did not know there was anything very much involved in it, and got very indignant to-day evidently because he had been out of the Senate Chamber so much he did not understand what the question is; and that is why I have taken this author as a text, who states it more tersely than I have been able to do. He says:

Let our Government use its influence to place silver honestly on an equality with gold for use in the United States alone. Free coinage and equal legal-tender potency for silver would be the first step to check the use of gold and the scramble for it. Increase the use and value of silver and you decrease the necessity for gold. The increased demand for gold is the result of legislation undermining the former potency of silver. The enactment of the bimetallic unit and free coinage of silver will bring down the value of gold and raise the value of silver. They will meet halfway. It has taken twenty years to depreciate silver to its present price. The length of time it may take to bring back the old parity in other parts of the world can not be foreseen, but the policy of honest bimetallism would be immediate and most healthy in its effects on all productive industries in our own country. The writer also believes that the moment the United States adopts the double standard, discussion will be renewed among all civilized nations, which will result in the universal adoption of bimetallism.

That is very different from the kind of bimetallism which is monometallism we hear here. The way to liberate ourselves from British rule is to lay down and let Great Britain place her financial heel across our neck! Absolute submission is the only independence that the greed of avarice can suggest to us. I believe that is the plan the President suggests.

A recent speech of Lord Balfour's, late prime minister of England, indicates clearly that other nations are hoping for our action in this direction.

Still the Senator from Iowa [Mr. ALLISON] says we can act in the other direction; we can do what our enemies want us to do, and refuse to do what our friends advise. When the enemies of the human race—the bondholders, the parasites that prey upon the labor and toil of the world, and by legislation double contracts—advise a thing, I look with suspicion upon it. I remarked this morning that I am delighted to find the course of the silver men distasteful to the gold aristocracy of Great Britain. They thought it was impudence and presumption to resist for one moment here their exorbitant and extortionate demands; and I see before me in America the sons of some, perhaps, who fought in the Revolution who despise the American financial flag, who trample upon it and value nothing but the British mark of servitude. "It is English, you know," English in this Chamber, if it turns out that way now.

It was not the case until the present Administration came in. A majority in this Chamber were American; now the majority are in favor of making this people a financial colony of Great Britain; and as they know it is pretty mean they do not like discussion; they want to do the work and get it out of the way. They do not like to stay here and have the world gaze at their

SURRENDER OF THE LIBERTIES OF THE AMERICAN PEOPLE

to this alien enemy. They do not like that, but the right of debate will enable us to keep them here for a little while. We are feeble, it is true, but we can stay here a little while until the American people can see who betrays them and turns them over to British rule. This author goes on to say:

A recent speech of Lord Balfour's, late prime minister of England, indicates clearly that other nations are hoping for our action in this direction.

The land-holders, the manufacturers, and the colleges all agree with us, but that monster power that rules the English press, that knows no law but avarice, and no interest but rascality, inhumanity, and cruelty—that power dominates England and dominates us. It demands a pound of flesh and wants the pound doubled. The small demands of Shylock of old are looked contemptuously upon by this new power that Gladstone so admires.

Surely we who have a stronger interest than any other nation in sustaining the value of silver, ought to take the initiative in our own behalf.

We took the initiative to destroy. The Senator from Ohio in his report, which was counteracted by the adverse report of Senator Morgan of New York, declared that the single gold standard was an American idea, yielded to reluctantly by France that had the double standard.

An international monetary conference can only be asked for with self-respect when the United States shall have shown other nations that she has the courage to act for herself in her own interest before asking their cooperation to help her help herself.

I ask the Senator from South Dakota to read the rest of this article.

Mr. KYLE read as follows:

It is a trite old adage that "He who would be free himself must strike the blow." But we have appeared in three international monetary conferences as a party self-maimed, committed to an illogical policy of duplicity; asking help to steer towards a harbor of financial safety, after having sailed away from it of our own volition, and while continuing to sail away from it. No ability of our delegates, exceptionally able as they were, could extricate our Government from the humiliating position they occupied in such conferences. American ears have tingled with shame to hear from foreign representatives, "if your Government believes in bimetallism why does not your Government vote for it and adopt it? None so much interested as yourselves in doing it."

A very lucid writer (Charles Harrison, deceased) has illustrated the question of a bimetallic basis in this quaint way: "We can not understand the idea of acknowledging that a man should have two feet and then try to stand all the time on one foot; or, giving one foot rights and privileges not accorded to the other; or, not treating them as equals; or, contending that only one foot should be recognized and the other employed as a subsidiary; or, the many other devices which may be resorted to to deny equal rights and powers to the two. Admitted that when a man is walking or running he is first on one foot and then on the other, he still finds his balance and solidity in having the two feet and those feet equal. He does not want one made of cork, or otherwise a subsidiary foot if he wants to either walk or run." I will add that our everyday experience that the right hand performs services that the left hand does not do so well, would not be a good reason for dispensing with the latter. Yet this is precisely what our own legislation has done and perpetuated against bimetallism. We began the process of slowly paralyzing one arm and one leg of the financial system, and have been engaged in this new form of hari-kari until, alarmed at the effect of our own work, we have appointed delegates to three international congresses to ask other governments to help us to stop maiming ourselves.

Since the people in the platforms of the two great national parties have over and over again distinctly given their adhesion to the principle of bimetallism, and State party conventions have done the same thing with even more distinctness, and a third party has arisen bearing this issue to the front, and the President (elected by reason of the strength of this third party) has proclaimed himself a bimetallist, and desirous of maintaining the parity of the two metals, why is it not the logical, the brave, the wise, the politic, the honest thing for the United States Congress to adopt the bimetallic basis, enact equal rights of free coinage for the two royal metals, and then send greeting to foreign powers, then ask that the principle be recognized and made universal in theory and law, as it has been in fact for a thousand years?

When we fix the principle of bimetallism in our organic law we may then leave the details of coinage to international conferences and to officers of mints, who have often little need and little knowledge of the great problems of political economy that affect the common weal of mankind, and which are involved in financial questions affecting the equality of rights and the stability of commerce throughout the world.

F. J. SCOTT.

Mr. STEWART. I will make no further comment on the able article of Mr. Scott. It explains itself more fully. But, as my time has now expired, I will take occasion in the near future to present my views on other branches of the subject under consideration.

Chinese Exclusion.

SPEECH

OF

HON. JAMES G. MAGUIRE,

OF CALIFORNIA.

IN THE HOUSE OF REPRESENTATIVES,

Friday and Saturday, October 13 and 14, 1893.

The House having under consideration the bill (H. R. 3687) to amend an act entitled "An act to prohibit the coming of Chinese persons into the United States," approved May 5, 1892—

Mr. MAGUIRE said:

Mr. SPEAKER: The measure now before this House is of tremendous importance to the Pacific coast, especially to the State of California. More than one-third of all the Chinese inhabitants of the United States are located in the city of San Francisco, most of them in the district which I have the honor to represent. I shall not attempt to go over in detail all of the grounds upon which the people of California object to Chinese immigration and upon which they object to restoring the privilege of residing in this country to the Chinese, who by their own defiance of our laws have forfeited that privilege.

This task has been most fully and ably performed by my distinguished colleague from California [Mr. GEARY]. To him more than to any other man has the great West looked for the defense of its interests in this contest; and it gives me pleasure to testify that in his effort their expectations have been fully and splendidly realized. If anything was wanting to complete his defense of our position it was furnished in the masterly and thorough argument of the gentleman from New York [Mr. BARTLETT]. But there are some phases of the Chinese ques-

tion which have not yet been discussed as I think they should be, and to them I will devote my time.

THE QUESTION OF PHILANTHROPY.

I am opposed to the extension of the period of registration for the Chinese, and I base my opposition upon a love of humanity as broad and as deep and as strong as that which animates the gentleman from Massachusetts [Mr. MORSE] in his mistaken zeal for the improvement of Chinese civilization and the salvation of Chinese souls. I have no prejudice against the Chinese people, no desire to injure them nor to see them injured or oppressed. It is in no spirit of harshness or unkindness to the Chinese that I oppose their immigration to, and their residence in, our country. I base my opposition upon my love for our Caucasian civilization, upon my love for the glorious institutions of liberty, equality, and justice which constitute the crowning glory of my country, and to the defense, support, and promotion of which the life and property and sacred honor of every true American are constantly pledged and dedicated.

I stand upon the universal, God-given right of self-defense, which belongs to communities and to nations, as well as to individuals, and I insist upon the right and the duty of self-defense for our civilization, which is the soul of our national life, as fully as the right and duty of self-defense against armed assailants of our physical autonomy is recognized.

From the dark ages of universal tyranny and slavery, through centuries scarred by the agonies and stained with the blood and tears of God's noblest children, our civilization has been evolved, and eternal vigilance is the price of its preservation.

Those scarred and blood-stained centuries represent the gulf between our civilization and the semibarbarism of China. Can these civilizations be mingled, with advantage to the lower and no harm to the higher? That is the theory of the Eastern philanthropists, but it is directly contrary to the knowledge which the evidence of actual experience has given to the West. That experience has demonstrated that, in meeting and mingling, the higher civilization loses a hundred fold more than the inferior gains.

On the abstract question of philanthropy we are not far separated from our Eastern brethren, but, as they see the Chinese problem only in the abstract, they are in no such position as that which we occupy, to balance and compare the advantages and disadvantages of Chinese immigration to the cause of humanity and civilization. The wide difference of sentiment between the East and the West on the Chinese question is not due to any fundamental difference in our principles; it is due to the difference between our tolerably complete knowledge of the question and your imperfect knowledge of it. You see the hardships imposed by our Federal laws upon the Chinese, and your sympathies go out to them because you do not see the other side of the picture. We see the oppression, misery, degradation, and slavery to which our own laborers are reduced as a direct result of Chinese immigration. We see that the imported Chinese coolies are mere agencies in the hands of monopolists—domestic and foreign—by which our own people are gradually reduced to a condition of wretchedness approximating to the social condition of the Chinese slaves, and without the slightest feeling of malice against the unfortunate Chinamen we demand their exclusion and their deportation as necessary measures of defense to our own people.

GEARY ACT MILD AND HUMANE.

The bitter attacks which have been made upon the Geary law in the press and in the pulpit, and upon the floor of this House, are without foundation and unjustifiable. That law was not, in any sense, harsh. It was mild and humane. It was not a deportation law, but a registration law. Under its terms no Chinaman lawfully in this country at the time of its passage was to be deported, provided that he should, at any time within one year after its passage, make up his mind to abide and obey its simple, easy, and convenient requirements. Every Chinaman was permitted to determine for himself whether he would comply with the law or submit to deportation as an alternative, and he was given a whole year within which to make up his mind on that question.

Why did the Chinese refuse to register? Why did they refuse to submit to a reasonable regulation, such as all of the great nations of the earth impose upon aliens sojourning within their borders?

That regulation can scarcely be distinguished from the passport system established and enforced by nearly all of the great civilized nations. The wisdom of such laws among highly civilized nations has been questioned: but the obligation of a citizen of one country, going into the territory of another, to respect the passport laws of that country has never been questioned before.

The gentleman from Kentucky [Mr. MCCREARY] explains their failure to register by saying that they were advised by their employers and friends and by the lawyers whom they consulted that the regulations thus made by Congress were unconstitutional, and, relying upon that advice, they refused to comply with the law.

The McCreary bill, now under consideration, is practically an act to relieve them from the consequences of their violation of the Geary law on the ground that they were misled in the matter by the advice of their lawyers. Now, sir, it is a matter of general knowledge, wherever the Chinese live in any numbers, that no Chinaman who refused to register was animated by any motive or judgment arising within himself, but was absolutely controlled and directed in his violation of our law by an edict issued by a combination of Chinese slave-owners known as the "Six Companies."

It is a matter of common knowledge, sir, that nearly all of the Chinese laborers in this country have been imported practically as slaves, and are owned, at least for the time of their residence here, by these six importing Chinese companies. It is also a matter of common knowledge on the Pacific coast, and it can be easily proved to the satisfaction of any man upon this floor, that these companies have been constantly engaged in the fraudulent importation of Chinamen into this country during the whole period of our legal restriction and exclusion, in defiance of our laws. Sufficient evidence of this is to be found in the report of the select committee on immigration and naturalization, sent by this House to the Pacific coast in March, 1891, to investigate questions arising under the Scott exclusion act.

The testimony accompanying this report shows that, in spite of the exclusion acts that had been passed prior to that time, Chinese were being smuggled in over the British Columbian and the Mexican borders of the Pacific coast States and Territories constantly.

What was the motive of the Six Companies in opposing registration? It was, plainly and clearly, their purpose to prevent the authorities of this country from providing any satisfactory means of identifying the fraudulently imported coolies whom they were bringing in. A great and lucrative part of the business of the Six Companies will be destroyed the very moment that a means of absolute identification of those who have a right to be here is established. It is impossible, owing to the absolute disregard of truth among the Chinese, and the cunning and skill displayed by them in all their evasions of our laws, to make proof by parol to the satisfaction of any court, of the fraudulency of any substantial part of the illegal importations thus effected.

As long as the Six Companies can prevent us from making satisfactory rules for the identification of those who have a right to reside here, and consequently a means of identifying those who come in fraudulently, their trade will flourish, their importations will continue, and they will grow rich by persistent violations of our laws. They issued their edicts forbidding the Chinese to register, and those who dared to defy our laws dared not defy the laws and the judicial institutions existing in this country among the Chinese, and to which they submit with absolute and unquestioning obedience. They did not refuse to register because of any personal objection that the individual Chinaman had to registering. They refused to register because they feared the iron bars and the pistols of the "highbinders," who threatened to mete out Chinese justice to those who would comply with our law, far more than they feared any law or institution of this country.

In the city of San Francisco where I reside, and within the district which I represent, there are, and have been for twenty years, secret Chinese tribunals, dealing with offenses against the regulations of the Six Companies, dealing with offenses and obligations arising between Chinamen, and executing their Chinese edicts with a rigor and a harshness unknown to the execution of any law ever made by the regular lawmakers of this country; aye, often executing the death penalty with a certainty and a ferociousness which makes the individual Chinaman fear and obey them, and which drives him back into his contractual slavery in spite of our constitutional and statutory guarantees of individual liberty. They know no liberty. Though they are in a land where personal liberty is guaranteed by the Constitution and the laws, they dare not demand the legal rights given them by our institutions.

Compliance with the Geary law was easy. Compliance with it would have secured to those lawfully within our borders the right to reside here just as long as they might desire. But the willful refusal to comply with its provisions imposed certain clearly defined consequences which they have chosen to take rather than to register. In obedience to the decrees of an alien institution in this country, and of alien laws—an Asiatic form of government within our Government—more rigorous and more effective than our laws, they have chosen deportation as a consequence of their refusal to register. That consequence does

not flow from our action. It flows from their choice, deliberately made, upon a full year's consideration.

The gentleman from Kentucky [Mr. McCREARY] in attempting to show that the enforcement of this law against the Chinese would be a disgrace to our civilization, said that no other nation had done anything that would compare in infamy with our purpose of deporting eighty-five thousand Chinese residents of this country and sending them to the home from which they came, to the country to which they still owe allegiance, to the country to which they look for protection, and through whose ministers they now appeal for every claim of right which they assert under our treaties or our laws.

Mr. McCREARY of Kentucky. I think my friend has unintentionally misrepresented me.

Mr. MAGUIRE. I do not think I did.

Mr. McCREARY of Kentucky. I want to state wherein I think the gentleman misrepresented me—not intentionally, of course. I voted for the Geary act; I was in favor of its enforcement. One year having elapsed, I think under the circumstances, as the Chinese were misled by the opinions of their attorneys, they ought to have six months more in which to register. If that is what the gentleman represented me as saying (for I was not in the Hall when he made the remark) then he represented me correctly.

Mr. MAGUIRE. Let me state substantially what I said; and I think the gentleman will find no reason to object.

The gentleman from Kentucky in speaking of our enforcing the Geary law at this time, according to the conditions which that law and the subsequent action of the Chinese people have created, and deporting 85,000 Chinamen now domiciled here, remarked that such a course would disgrace our civilization, and would involve a violation of the rights of humanity, such as no other nation has ever committed. That I understand to be his statement.

Mr. McCREARY of Kentucky. I said in substance (my speech is printed) that if we should now undertake to deport 85,000 Chinese who were misled by their attorneys, and who in my opinion desire now to register, it would be an act the like of which we could not find in modern times.

Mr. MAGUIRE. Now I say there is no self-respecting nation in the world that does not, when its passport laws have been wilfully and persistently violated, expel the alien who refuses to comply with those laws. I say that citizens of foreign countries who visit the most highly civilized nations of Europe must show their passports, must show their right to be in the country, or they must get out, if the laws require a passport. And this is an answer to the much-heralded claim that in the enforcement of the Geary act we require a Chinaman to prove his innocence, and put the burden of proof upon him for that purpose.

Mr. McCREARY of Kentucky. Will the gentleman allow me to ask him one question?

Mr. MAGUIRE. Yes, sir.

Mr. McCREARY of Kentucky. Do we impose the same restrictions upon any other class of people within the United States that we do upon the Chinese?

Mr. MAGUIRE. No, sir; because we have no other class of people who so persistently defy our laws and trample upon our institutions.

Mr. McCREARY of Kentucky. Does any other nation on earth impose such restrictions upon foreigners visiting the particular nation as we do upon the Chinese?

Mr. MAGUIRE. You mean in exact provisions?

Mr. McCREARY of Kentucky. Yes, sir.

Mr. MAGUIRE. I do not know of any provisions in precisely the same terms. The Australian colonies have adopted a system very like ours for their protection. My colleague [Mr. GEARY] informs me that France has such a registration law applying to all aliens.

Mr. McCREARY of Kentucky. Does the gentleman say that France has any such law operating on any class of people going to France as we have to-day in operation against the Chinese—the law known as the Geary law? I believe no man can say that such is the fact.

Mr. MAGUIRE. My information is furnished by my colleague [Mr. GEARY], who will answer the gentleman's question.

Mr. McCREARY of Kentucky. Is there in France any law compelling any man going there to register and prove his residence and providing that he shall be presumed to be guilty of not having a residence in the country unless he shows the contrary?

Mr. GEARY. My colleague [Mr. MAGUIRE] yields for a moment that I may answer the gentleman. France has a law requiring that all aliens coming within her borders for the purpose of engaging in trade shall register and take out a certificate; and penalties are attached to the violation of that law, just as we attach penalties to the violation of our laws. There is nothing new about such a provision. Mexico had such a law, up to 1867, requiring all aliens within her borders to register; and when this Government made demand upon Mexico for redress of injuries inflicted on Americans in that country the answer made by the Mexican minister was that the persons claimed to have been injured were not registered, and therefore the Mexican Government was not responsible for any injury inflicted upon them.

A law exactly similar to this was passed by England under George III on three different occasions, and I can not find any record of its ever having been repealed.

Mr. McCREARY of Kentucky. Did they have to prove residence?

Mr. GEARY. No; but the absence of the certificate is a sufficient proof to the contrary. We do not make a man who takes out a license to sell liquor prove his residence; but we say his business shall not be continued unless he exhibits the certificate to the proper authorities.

Mr. McCREARY of Kentucky. Would it be presumed if you were arrested in France that you were guilty until you proved yourself innocent?

Mr. GEARY. My friend can find an answer to that in the practice of our courts.

Mr. McCREARY of Kentucky. I am not talking of the practice of the courts, but of France.

Mr. GEARY. Well, I did not have an opportunity of visiting France in the capacity of my friend. I presume he was allowed to go without it and not required to make proof either. [Laughter.]

Mr. MAGUIRE. The gentleman from Kentucky is exercised perhaps because he was not asked to register over there.

SIMPLY A PASSPORT SYSTEM

Now, Mr. Speaker, there is an apparent harshness in the statement that a man charged with an offense must prove his innocence—that there is a presumption of guilt if a man is charged with refusing or failing to comply with the law. If a Chinaman is unjustly charged with violating the registry provision of the Geary law, he is himself necessarily possessed, not only of the knowledge, but of the exclusive evidence of his right to reside in this country. Why should he not be required to produce it just as I would be compelled to produce my passport if I should visit France or Germany.

A demand for the passport of an alien is not a trial for crime.

While a violation of the registry provision of the Geary act involves a forfeiture of the violator's privilege of residing in this country, it is not a crime in itself.

The Geary law simply provides, substantially, that no Chinese person is presumed to have a right to be in this country unless he has the certificate which the law requires him to take out. That is made the sole evidence of his right to be in this country. It is made at once the exclusive and the conclusive evidence of that right. When he is charged with being here unlawfully and says: I am here lawfully, the court says, produce your certificate. That is the affirmative proof of innocence about which these gentlemen have been talking—simply that and nothing more. He carries in his pocket, under the law, the exclusive evidence of his right to be here, if he has a right to be here, and the law simply requires that he shall put his hand in his pocket and produce that exclusive evidence of his right when it is demanded.

Mr. BOWERS of California. Just the same as you would have to do when you went to Europe.

Mr. MAGUIRE. It is as my friend suggests, as if I went to France, not as a commissioner of finance but as a common citizen of this country, I would be required to exhibit my passport whenever requested to do so by a proper officer. I would be asked to prove my right to be there and would have to produce my passport, just as the Geary law requires the Chinaman to produce his passport—certificate of registration—which is the exclusive evidence of his right to be and to remain in this country.

Now, Mr. Speaker, the immigration of Chinese to this country and the residence of Chinese amongst us has been to us a curse and a blight. The Pacific coast has felt this, of course, more deeply than any other part of the country. The Pacific coast receives them. Nine-tenths of the Chinamen coming to this country have been sifted through San Francisco. They have been, to some extent, filtered through the rest of the country, but the great burden of all the incubus and of all the hardships resulting from Chinese immigration have fallen on the Pacific coast States and Territories.

Mr. MORSE. Will the gentleman answer me what the relative proportion is between the Chinese and the white population in the Pacific States?

Mr. MAGUIRE. In the district which I represent there is a vastly greater number of adult Chinese male population than of

adult males of the Caucasian race, citizens and aliens combined. That is the situation there. That was true of the whole city of San Francisco, according to the statistics, until quite recently. I believe it to be the condition in San Francisco now. I believe the census returns of Chinese population in San Francisco to be wholly and grossly inaccurate.

I do not impute any fault to the census bureau in the matter. It is simply impossible to get an accurate return of Chinese population without their active coöperation. Ever since 1880 they have had a strong motive for concealing their numbers, and I believe they have done so.

Mr. WEADOCK. Let me ask the gentleman when it was that you had a vote on the question of Chinese immigration on the coast?

Mr. MAGUIRE. In 1879.

Mr. WEADOCK. Was not the result of that vote 150,000 against admitting the Chinese to 600 in favor of it?

Mr. MAGUIRE. One hundred and fifty-four thousand in opposition to their immigration and 883 in favor of it, if my memory serves me right.

Mr. WEADOCK. One hundred and fifty-four thousand against Chinese immigration?

Mr. MAGUIRE. Yes, sir.

Now, Mr. Speaker, from the social standpoint, from the moral standpoint, from the sanitary standpoint, from the industrial standpoint, Chinese immigration has been a curse and a blight upon the fairest portion of this great land of ours for thirty years. California is the garden spot of the American Union and she has been well nigh reduced to the level of a Chinese colony. The exclusion acts have happily preserved her from that fate, but the exclusion accomplished by those laws has not been by any means complete or perfect.

Such laws are extremely difficult of enforcement directly because of the vast lengths of our unprotected coast and border lines, across which they come almost at will.

The Geary law has vastly simplified the enforcement of exclusion, and although little has been done to carry out its purpose, our people look with dread upon the threatened surrender of any of its advantages.

Now, I do not intend to discuss the course of the present Administration in the enforcement of the Geary act since the 5th of May, 1893, but I am bound to admit that it needs defense.

I believe that the Treasury Department has, from the beginning, done its duty fairly; that it has recognized a law regularly enacted by this Congress as a sacred thing, which it is the duty of the executive department of this Government to enforce until it is repealed.

But there has been great complaint, and just cause for complaint, on account of the course pursued by the Department of Justice of the present Administration. That, perhaps, has been sufficiently discussed by my colleague [Mr. GEARY], and in the letter read by my colleague [Mr. BOWERS of California], addressed by Judge Ross of that State to the Attorney-General of the United States. Why did not the Department of Justice proceed with deportations to the extent of the means at its disposal? Why did it not deport the two Chinamen who were remanded by the United States Supreme Court for deportation in the test case? If the reason has been communicated to any member of this House I would like to hear it.

THE CHINESE HIGHBINDERS.

There are thousands of professional Chinese criminals, known as highbinders, in this country, hundreds of whom were pirates in China. Banished from that country they came to our shores, to burglarize our houses and to swell the ranks of the overstocked highbinder societies here.

A large proportion of these wretches are now subject to deportation for failing to register under the Geary act, and one of the worst features of the McCreary bill is that it will restore to them the privilege of remaining in this country.

Mr. BRETZ. What is a highbinder?

Mr. MAGUIRE. A highbinder is just what the gentleman from New York [Mr. BARTLETT] described him to be. A highbinder is a professional blackmailer and murderer, a man whose business it is to levy tribute upon the industrious people of his race, and upon the fallen women of his race, and who in case of denial to himself or to his society, will enforce the payment of that tribute by violence and murder in the most brutal and revolting forms.

Mr. BRETZ. Chinamen or white people?

Mr. MAGUIRE. Chinamen entirely. Do you mean to ask if the highbinders assault white people?

Mr. BRETZ. Yes.

Mr. MAGUIRE. Not in San Francisco, just yet.

In this behalf, it is probable that they are more strongly influenced by the fear of what the white people would do than by moral considerations. A Chinaman who will murder another Chinaman for money would probably not be restrained from murdering white men by conscientious scruples alone.

Now, sir, immediately after the decision rendered by the Supreme Court of the United States, affirming the validity of the Geary act, and establishing its constitutionality, the chief of police of the city of San Francisco offered, through his officers, who are thoroughly familiar with Chinatown and with the Chinese population, to point out one thousand highbinders—professional criminals—who had been satisfactorily shown to be such, in the course of his dealings with them, and asked that, as they had not registered, the deportation laws should be put into force against them first, and that they should be driven out.

In that way it was hoped to get rid of that element, with an element which it controls, the Chinese female slaves who have been imported to San Francisco and scattered around the surrounding towns for immoral purposes. It was proposed that they should be driven out, and a part of the moral cancer which they brought with them thus cut away and removed from the State.

If that had been done, if to the extent of the means available the suggestion of the chief of police had been accepted, and one thousand—a small proportion of the Chinese criminal element there—had been deported, the people would have felt much more kindly toward the proposition now made of giving to the Chinese another chance for registration. These highbinders have prevented their fellow-countrymen from registering, at the behest and command of the Chinese Six Companies, and the people felt that, when this great class of criminals and moral lepers had placed themselves within the reach of our laws for deportation, they should be promptly dealt with. It seemed as if the time long and patiently awaited had come, when, under the laws of our country, their privilege of remaining here would be canceled, and California relieved of that portion of its moral scourge.

But the people's hopes were not realized, and now the proposition is to restore to all those people, as fully as to all other Chinese, the right to register, the right to remain, the right (or opportunity) to carry on their infamous traffic, and execute the Asiatic laws now prevailing in that portion of San Francisco occupied by the Chinese. If the law had been enforced to that extent, or if the law remaining unrepealed and unamended shall be enforced to that extent, until the highbinder element shall be banished, there would be far less objection to extending the period of registration, under proper safeguards, to those then remaining. I do not mean that we should now give any direction that any particular class of the Chinese who have forfeited their rights to live here should be selected by law for deportation; but if the Government, exercising the powers and the means given to it by this Congress, should go on for the next two years trying and deporting that class of Chinamen, as we would have the right to do, one great object would be achieved.

Only a certain number, as the gentleman from Kentucky [Mr. MCCREARY] showed the other day, can be tried and deported within a given time. It would take two years to get rid of the classes that bear the brand of at least one term of penal servitude for violations of the laws of California.

Why not let the Geary law stand as it is for two years, provide a reasonable fund for the deportation of those with whom the courts can deal in that time, and let the worst element of our Chinese population be disposed of before we further discuss the propriety of giving the less objectionable another chance to register?

If that should go on for two years under the provisions, as to means, made by this Congress, the Chinese population would be very largely scattered from San Francisco; the vilest of its criminal elements would have been sent from our shores entirely; a better feeling would prevail everywhere concerning the treatment of the Chinese question; and we might then, with a safety which we can not count on now, reopen to such Chinese as might then remain in the country the opportunity for registering, if we should deem it wise, under the conditions then existing, so to do. But until the most offensive, the most degrading, the most destructive influence of the residence of the present body of Chinese in this country shall be removed, under the right which they themselves have unquestionably given us, any provision for extending the period of registration will be a severe blow to the interests of the Pacific States.

PRIVILEGE ROBS LABOR.

The people of California are unanimous—no, not quite unanimous——

Mr. MORSE. Right there will the gentleman allow me to ask him a question?

Mr. MAGUIRE. No; not yet. Let me finish what I am about to say and then I will answer your question.

I was going to say that the people of California are unanimous in their desire to be rid of this element; but unfortunately there are some Californians who are in a position to enjoy the benefits,

the substantial benefits, flowing from a system of civilization such as the gentleman from New York [Mr. SICKLES] presented here as one agreeable to his mind—the lowest wages at which servile labor can possibly be secured, and an aristocracy of employers growing rich by their privilege of appropriating the fruits of others' toil.

The gentleman favors a higher standard for American labor, but it is manifestly impossible to maintain one standard of wages for American labor and another for alien labor, competing in the same market, with natural opportunities equally closed against them.

The principles of democracy, in accordance with the laws of God, recognize but one rule of right among men. That rule of right awards to labor all that it produces. It is utterly incompatible with the asserted right of any class to live, by privilege, upon the labor of others.

Cheap labor is labor that is worth more than its wages—labor that produces more than it receives—and any industrial system which compels labor to give up to a privileged class any portion of the wealth which it produces is a system of robbery, abhorrent to the laws of God and destructive of the primary principle of human association—justice.

There are a few hundred monopolists in California who favor Chinese immigration, because it furnishes them with cheap labor and enables them to live more luxuriously at the expense of the laboring classes. Now, I will answer the gentleman's question.

Mr. MORSE. My question, Mr. Speaker, is this. The gentleman speaks about no difference of opinion, and substantial unanimity in regard to the matter of restricting immigration of Chinese. I do not think there is any difference of opinion here about that. I think the House is a unit on the subject of restriction. The gentleman spoke about a vote that was had in California. That was several years since, of course.

Mr. MAGUIRE. It was in 1879.

Mr. MORSE. Of course that antedates the Geary law, which was passed by the Fifty-second Congress. I want to ask my friend from California if he understood that vote to which he has referred to be an indorsement of the Geary act? That is my question.

Mr. MAGUIRE. I understood that vote to be a declaration that in the experience of the people of California Chinese immigration was a curse; and that, for the benefit of the State of California and of our common Union, it ought to be stopped. It went no further than that, because there were no further questions presented to the voters at that time. It was an indorsement of the principle of the Geary act, although the act itself was not in existence.

Mr. REILLY. Mr. Speaker, will the gentlemen allow me to ask him a question?

Mr. MAGUIRE. Certainly.

Mr. REILLY. It is this. If there had been no question about the validity of the act of 1892, the Geary act, and it was thoroughly understood by the Chinese people themselves that it was to be enforced, what effect do you think that would have had in taking out of the country those who felt or knew they were unlawfully here? Would any great number of the Chinese have gone, voluntarily?

Mr. MAGUIRE. If on the 5th of May of this year, immediate steps had been taken to enforce the deportation clause of the Geary act they would have gone from our country in thousands, and they would have gone at once.

Mr. REILLY. Well, now, if the bill reported by the Committee on Foreign Affairs, extending the privilege of registering for a period of six months only is passed, and it is understood that it is to be enforced, would it have the same effect?

Mr. MAGUIRE. It would not be understood that it would be enforced. The attorneys for these six companies are already telling their people that, as the vote in the Supreme Court of the United States (I use the word vote most respectfully) stood 5 to 3 on the constitutionality of the Geary act, with one justice absent, who is supposed by them to be opposed to the decision of the majority of the court; with a new judge, supposed to be in sympathy with the Eastern sentiment on that subject they will be able, if a new law be passed and a new test case presented to the Supreme Court of the United States, to have the registration and deportation act declared unconstitutional by that court. They are counting upon it. They are advising their clients in that way to-day. They will make the contest. This will be a battle to the death on the part of the Six Companies, and as long as the "highbinder" influence can coerce the individual Chinese, any law which will destroy the importing business of those companies will be resisted.

Mr. MORSE. Let me call the attention of the gentleman from California to a statement made by the chairman of the Committee on Foreign Affairs. He is a gentleman who does not speak at random, and I believe he spoke advisedly when he said as I remember, that he had information that the Chinese would register if the time was extended six months.

Mr. MAGUIRE. Did he say that he had received that information from individual Chinamen, or from anybody authorized to speak for them?

Mr. MORSE. From somebody authorized to speak for them, I understood.

Mr. BRETZ. Who was that?

Mr. MORSE. He did not say, but we may infer that it was the Chinese minister.

Mr. MAGUIRE. He was asked who it was, because it was suspected that he referred to the Chinese minister, and because on the Pacific coast, it has been supposed that the Chinese minister and the Chinese consul have been "standing in" with the Six Companies in their defiance of our laws.

Mr. PIGOTT. Let me ask the gentleman why it is that no amendment has been proposed excluding from the advantages of this extension act those persons who are known as highbinders and criminals?

Mr. MORSE. That is right. I would vote for that.

Mr. GEARY. Well, we will take your vote, and offer that amendment.

Mr. MORSE. All right.

Mr. MAGUIRE. We will present an amendment providing that the extension shall not operate to include any person who has ever been convicted of crime in this country.

LAND MONOPOLY AND THE LABOR QUESTION.

The gentleman from Massachusetts [Mr. MORSE] scouted the idea that 90,000 or 100,000 Chinese in this great country could be a source of any real hardship to the country, or any menace to our institutions, social, political, or industrial, and as one basis for his statement in that behalf he called attention to the magnificent, boundless, inexhaustible, natural resources of this country. Our natural resources are indeed measureless and inexhaustible, and if they were open to the people of this country on fair and equal terms—on the terms on which the great Creator gave them to mankind—the gentleman's argument on that phase of the question would be sound.

But these natural resources, without access to which labor can produce no wealth at all, are not open to the people. They are monopolized. Monopolized—in that word see, ye ages, comprised "the cause of the curses all annals contain." Chinese labor would not and could not oppress American labor if our lands were free, but, as it is, land monopoly and cheap imported labor are the upper and the nether millstones, between which American labor is being ground into serfdom and pauperism, as I will presently explain. The natural resources of the Pacific coast, the natural resources of our entire country, are the private property of a few individuals.

This great country, which we are pleased to call ours, belongs, by legal title, to a few landlords whose number and proportion to the whole people are annually growing less.

Every cheapening of labor, by any means, increases the market value of the land and the rent rolls of its owners; thus, by a double process, widening the gulf between the landless poor and our growing landed aristocracy. American labor, driven from the natural sources of independent self-employment, is forced to enter the labor markets of cities and towns and compete for employment with the cheapest labor that is there offered for sale.

Mr. MORSE. Who is responsible for that condition?

Mr. MAGUIRE. The people are responsible, because they have the power to correct the evil and do not exercise that power; but it is to be hoped that the people will ere long relieve themselves of that responsibility.

The monopoly of the natural earth and its God-given resources is the colossal crime of modern civilization, beside which all other oppressions of the poor are insignificant. Land is the exclusive source of human subsistence. All wealth, all means of physical subsistence, are extracted by labor from the natural earth. Indeed, man is a land animal in every sense. His food, his clothing, his shelter, his very body, all come from the land and all to the land return again. He must live upon the land and from the land, if he live at all. Even the sailor and the aeronaut are not exempt from these conditions of human existence, for the decks trodden by the one and the bars and ropes which support the other are of land.

The right to life, which we all regard as sacred and inalienable, can not be more sacred than the right of access to the exclusive means by which life can be supported. "You take my life when you do take the means whereby I live."

Yet, in this land of unexampled and unparalleled political liberty, a few men own and control the only source from which the masses of the people can draw their subsistence.

Those few have, therefore, the unnatural power to dictate the terms upon which the masses of the people of this country can

live—to fix the terms upon which they may have access to the natural resources that the Creator made necessary to the support of their lives. The Creator not only made and freely gave those resources as a common heritage to all his children for their support and sustenance, but he is constantly from day to day replenishing and improving them by the operation of his natural laws.

The creative power, by its changing seasons, by its sunligh and its rains, and its drifting winds, by its processes of growth and decay in the vegetable and in the animal world, is ever building up and replenishing the elements of the land that yield subsistence for mankind.

The unquestioned legal right of our landed class to entirely exclude their fellow-citizens from the lands of our country involves the power to inflict all oppressions less than such exclusion.

We have, therefore, under the forms of the greatest political freedom, a land system which creates an absolute despotism, under which the land-owning classes are lords of the industries, the liberties, and even the lives of their landless fellow-citizens.

It is in connection with this institution and this condition that we must consider the question of Chinese immigration. To consider the question abstractly is not to consider it at all. Upon the abstract question of human rights we are practically agreed.

You plead for justice and humanity to 85,000 Chinese. I plead for justice and humanity to 60,000,000 of Americans, whose hard conditions of life are being made harder by competition with Chinese slavery.

You do not see that you are really pleading for an increase of the oppressive power of American landlordism, with very little if any good to the individual Chinamen in whose names you speak.

True, they will be slaves if they are returned to China, but they will be slaves if they remain in this country, and their presence here will tend to degrade our laborers to the level of slavery.

HOW LABOR IS DEGRADED.

The condition of land monopoly prevailing in this country tends to fix the wages of all labor according to the standard of living of the lowest class of laborers seeking employment in the country.

American labor is no longer free, because its natural opportunities for self-employment, although they are measureless and inexhaustible, as the gentleman from Massachusetts [Mr. MORSE] has said, are closed against it by monopoly. It can no longer escape from an unsatisfactory labor market, but, in spite of the fact that wages bear no relation whatever to the value of labor, it must bid for employment against the cheapest labor that is offered there.

The tendency and the end of such competition in an overcrowded labor market where there is still an army of unemployed laborers, after all demands for labor have been supplied, is to reduce all wages to the line at which the unemployed surplus, facing the alternative of beggary and starvation, are willing to work.

I have seen the whole problem of labor's degradation worked out in practical life before my own eyes. Thirty years ago, sir, labor in California was comparatively free, because land was comparatively free there. Labor was then paid according to its production and not according to the lowest standard of living prevailing among the laborers as now. It was then worth what it produced and it was paid accordingly.

Laborers being then free to go upon the virgin soil and build their homes and establish their own industries, and being able there to comfortably feed and clothe their families and to educate their children in the standard branches of useful learning, were not obliged to remain in the labor market when it offered less favorable conditions. Then California was labor's "Promised Land." Then California was the last rampart from which the boasted and really glorious "standard of American labor" has been permitted to float.

Then there were in our land no tramps, few paupers, and no surplus labor in enforced idleness.

Then sparseness of population and the consequent lack of social advantages, imposed the only hardships that were known. What wonder that those who knew the freedom and the happiness of those conditions yearn for their return.

I saw the change of social conditions come. I saw the shadow of land monopoly steal over and encompass our Golden State. I saw a few hundred men become the absolute owners and masters of her great material resources, that were manifestly intended by their Creator to furnish homes and subsistence to 40,000,000 people. I saw an empire of her best and richest land pass by act of Congress under the dominion of a single, soulless corporation. I saw the gates of natural independence in home and industry closed against American labor.

I saw labor driven from its lucrative and independent retreats in the mountains and valleys into the markets of the cities and towns, there to be sold as a commodity at prices fixed by the laws of trade.

I saw the wages of American labor changed from the value of its product down to the price fixed by the alternative of pauperism, while the wealth-producing power of labor was increased, on the average, in all departments of industry elevenfold.

I saw the beneficiaries of monopoly manipulating the labor market to keep the price of labor down. I saw them importing, in tens of thousands, the coolies of China, not for the benefit of the Chinamen, as Eastern philanthropists persist in believing, but for the double purpose of bearing the labor market, by maintaining a surplus and of teaching American laborers to live on the rations of Asiatic slavery. These beneficiaries, let me say to the gentleman from Kentucky [Mr. MCCREARY], are the Californians whose brass bands and streaming banners heralded the dawn of Asiatic slavery on the Pacific coast in the ratification of the Burlingame treaty; and they, sir, would again furnish bands and banners to celebrate the resumption of their slave traffic if the Geary act were repealed.

In the great State of California, whose natural resources are confessedly capable of supporting 40,000,000 people, I saw the horrors that are supposed to result only from overpopulation, prevailing with a population of only 1,000,000.

I saw the millionaire and the tramp, contemporaneous menaces to our civilization, arise out of these conditions.

I saw the millionaire, without productive effort on his part, become a multi-millionaire, upon the tribute commanded by his purchased and granted privileges: and I saw the army of pauperism growing as he grew, and growing because of the conditions that made him grow—recruited by thousands from the ranks of unemployed labor—a ghastly procession of vice and crime, and rags and filth, and torment and despair, drifting listlessly, as "flotsam and jetsam" on the tide of our civilization, to whatever goal a just God may deem suitable at the close of their earthly hell.

These are the results as I have seen them on the Pacific coast, of land monopoly, supplemented by the importation of Chinese slaves. These are the conditions which we seek to mitigate by the enforcement of the Geary act.

The picture that I have drawn is no "distorted vision," no "distempered dream," but a stern tragedy in real life enacted in the open light of day. An awful tragedy on which the curtain rose within my memory, and upon the last act of which—the final triumph of humanity over monopoly—I hope to see the curtain fall within my lifetime.

DECLINE AND FALL OF ROME.

These results of land monopoly are not (excepting the Chinese slavery phase) peculiar to California or the West.

They prevail throughout the civilized world, wherever our land system prevails: but in the older sections of our country the change from free conditions antedates the earliest recollections of the generation now upon the stage of public life, and the Chinese phase of our Western problem has no parallel east of the Rocky Mountains.

But it has a striking parallel in the history of the decline and fall of the civilization and power of ancient Rome.

Macaulay tells us that "in the brave days of old," when Rome was mistress of the world; when to be a citizen of Rome was esteemed the proudest privilege of manhood, her "lands were fairly portioned" among her citizens. In the period of her decline and fall the lands had become the property of a few great landlords who employed slaves to work them. The landless citizens, thus excluded from the poor privilege of working as laborers upon the lands which once their fathers owned, drifted helplessly to the cities and towns, and there, in the helplessness of enforced idleness, they sank into pauperism and vice. Their debased suffrage became mere merchandise in the market, thus extending instead of controlling the powers of the monopolists. The soldiers of Rome became supplicants for alms, and their children hereditary paupers. The outer form of her official life alone preserved the semblance of Rome's departed glory. Then Rome fell, and, over the sepulchre of her once splendid civilization, her epitaph was written: "*Latifundia perdidere Italiam*" ("Great estates ruined Italy").

Shall history be permitted to repeat itself? Shall the lords of our land be permitted to work it with slave labor? Shall they be permitted to exclude our brethern, and our fellow-citizens from the poor privilege of earning their living as hired laborers upon the land in which, by natural right, they have an equal interest with the landlords themselves?

Shall they be permitted for their private gain to bring upon our country the curse that shattered the Empire of Rome? Shall they be permitted to turn our civilization backward, and make the ages of its development droop again?

No; this is our country, this is our civilization. Their preser-

vation is our first, and our highest duty, and is the truest friendship to mankind.

We of the West do not yield to the people of New England in love of humanity. As a native son of New England I glory in her devotion to the cause of liberty, and civilization. Our warfare is not against the unfortunate Chinamen. We would rather help them than hurt them.

We are struggling to preserve our own people from the hell of slavery that yawns beneath them. That accomplished, we will, in proportion to our numbers and our means, match every dollar and every effort that New England will contribute for the enlightenment and civilization of the Chinese, and for the betterment of their moral and social condition. Until American labor shall be made free we demand that it be protected from the competition of slavery. The emancipation of our own labor is the only just alternative for the exclusion and deportation of the Chinese. This brings me to the discussion of that alternative—the emancipation of labor.

HOW TO MAKE LABOR FREE.

The gentleman from Massachusetts [Mr. MORSE] asked: "Who is responsible" for the condition of land monopoly prevailing in this country, and I answered that the people are responsible, because they have the power to correct the evil and do not exercise that power.

The question is pertinent and important, because if the greatest evil of Chinese immigration results from faults in our land system, it may well be asked why we do not cure those faults and let the Chinese remain.

The gentleman's question, touching as it does the very heart of the great social conflict now agitating the civilized world, deserves a more complete and a more detailed answer.

The remedy which I propose for the evil of land monopoly is simple, just, practical, and unquestionably sufficient. It is this: To appropriate to public use, by taxation, for the support of our Federal, State, and municipal governments, the entire rental value of all land, irrespective of improvements, and to abolish all other taxes.

Would that be just? If it would not be just it would not be expedient. I hold that no permanent good ever resulted from an act of injustice. "Never yet did men or nations prosper finally in wrong." Entertaining these views and believing with Daniel Webster that "Justice, sir, is the great interest of man on earth," I am fully convinced, after mature deliberation, that the remedy is not only just in itself, but that it embodies the only means by which justice can be permanently and universally established among men.

Land is the common heritage of all mankind. It was freely given by the Creator, with all of its elements and all of its powers, for the equal use and sustenance of all mankind. It was not given to any one generation, nor to any class or classes in any generation, but equally to all mankind, from the first child of nature to the last human creature who shall inhabit the earth.

Land is the common heritage of every child of God—not as the heir of his natural father, not according to the possessions or the will of his natural father, whose right to land perishes with his own life—but as the direct heir of the Universal Father, from whom the right to life, to liberty, to air, to sunlight, are likewise directly inherited.

The true province of government is to regulate the use of this heritage by its citizens while preserving to each his equal right therein.

Why do men monopolize land?

To cure the evil of land monopoly the motive for it must be clearly understood in order that the incentive may be intelligently removed. Is the motive self-aggrandizement, or is it malicious, or is it mercenary? Our common experience is alone necessary to determine the question.

The motive is almost wholly mercenary. The desire for power over other men has its influence, but it is purely incidental.

Profit, either present or prospective, is practically the sole inducement to land monopoly. That profit is yielded either in present ground rent or future enhancement of the land value.

What is ground rent, and why does land, the natural elements and qualities of which remain unchanged, continue to advance in value in all growing communities?

Who produces the rental value of land? What influence has Chinese slave labor upon ground rent?

Ground rent is the landlord's share of production. It is the tribute charged by the owner of the natural earth for allowing others to use it. Its measure is stated by Ricardo to be, referring to any given piece of land: "the excess of its produce over that which the same application can secure from the least productive land in use."

In practice it may be generally stated that the rental value of any given piece of land is the difference between the average value of its product and the average cost (labor and capital) of production, for the period of the lease.

It is therefore manifest that whatever increases the value of the product, without increasing the cost of production, increases ground rent, as: an increased demand for the product, resulting from increase of population, or other cause, or an improvement in the quality of the product.

It is also manifest that whatever reduces the cost of production tends to increase ground rent, as: a reduction of the wages of labor, inventions of labor-saving machinery, and improvements in the methods of combining and subdividing labor.

Thus it is that, under our land system, every contribution to material progress, as well as every reduction in the wages of labor, attaches itself to the land and inures to the benefit of the landlords in increased ground rent.

For example, let us suppose that a given farm, or a shop or store site, which can be operated by one man, will yield a ground rent of $150 per year, when the standard wages of the required labor are $2 per day; if the wages of such labor be generally reduced to $1.75 per day, the cost of productively using that land will be reduced about $75 per year, and the amount of that reduction of cost can be added to the rent, unless, as another result of the reduction of wages the price of the product also goes down in the market.

Making an allowance of $40 on account of the reduction in the price of the product (a very liberal allowance), we have a net saving of $35 per year, which the landlord can add to his rent. This is the primary effect, only, of the reduction of wages upon the value of land. There is another effect equally important. A piece of land which will yield a certain amount of rent annually as a net income, is worth as an investment twenty times the amount of its annual net rent.

Therefore, an addition of $35 per annum to the rental value of the land in question would increase its market price $700.

Thus, the reduction of 25 cents per day in the poor man's wages not only lessens his purchasing power to that extent, but actually adds $700 to the price of the home which it is his life's ambition to secure.

This is the result which every reduction of wages brought about by Chinese competition has produced in California.

This is the result which, with greater or less intensity, is being produced by land monopoly everywhere.

The displacement of labor by labor-saving inventions drives the displaced laborers into the market to swell the army of the unemployed. The natural opportunities for the redistribution of the labor thus displaced being closed by monopoly, competition among laborers is intensified, wages reduced, and rent correspondingly increased.

This is the process which is enslaving labor and exalting landlordism everywhere.

PUBLIC ENTITLED TO ALL GROUND RENT.

We have now seen, in brief outline at least, what ground rent is and how it arises. We have seen that it is an increment of value produced and imposed upon the natural earth by the presence, industry, enterprise, inventiveness, and virtues of the whole people of each community in which it arises.

We have seen that it absorbs all of the general advantages of the material progress of the whole people; that to the landlord it is in every sense an unearned increment to which as landlord he does not in anyway contribute.

Merely permitting labor to use land productively is not a contribution to production, because the land, with all of its useful elements, was given to mankind by God, and would have been accessible to labor if the shadow of landlordism had never darkened the horizon of our civilization.

The landlord is not entitled to the rental value of his location, because he does not produce it.

The community is entitled to the rental value, because the community does produce it. Every value belongs of natural right to him whose labor or service produces it, and without whose labor or service it would not have existed. It is immaterial whether the value be produced by one person, or by ten persons, or by a million persons. It belongs to those who produce it—individually, if it be individually produced, collectively, it it be collectively produced.

The argument in favor of leaving the accrued rental value of land, that is, the unearned increment which has already attached to land, to the present owners, is based upon a mistake of fact. There is no such thing as an accrued rental value attaching to any land. All future rental values of land depend upon what the people will do in the future, and not at all upon what they have done in the past.

It is, therefore, just for the people who produce the rental value of land to take that value by taxation for their public uses.

This rule applies to all land whether it be owned by landlords or by speculators or by its immediate occupants.

The value which the public gives to the location should be paid to the public by the person who is in a position to control or appropriate that value.

As the landlords have confessedly no moral or legal right to compel the people to put forth the enterprise and industry necessary to produce and to maintain the rental value of their lands, they certainly can have no moral right to privately appropriate any of the direct or indirect results of such enterprise and industry as the people may voluntarily put forth.

As to improvements, the man who plants an orchard, or digs a ditch, or builds a house or a fence should pay no more taxes upon his orchard or his field or his lot than he would be required to pay if he had made no improvements whatever.

The value of the improvements belongs to the man who makes the improvements, by the same rule of right which awards the value of the location to the people who produce it; and a wise concern for the public interest dictates the encouragement of improvements by exempting them from taxation, rather than the discouragement of improvements by placing any kind of burden upon them.

The man who builds a house or plants an orchard increases the means of satisfying human wants, and is a benefactor of mankind in spite of the fact that his motive may be purely selfish; while the man who keeps a foot of useful land out of use works a corresponding injury to mankind.

The expediency of raising all public revenues by a single tax on land values, as a substitute for all other forms of taxation, further appears in the fact that it would save nine-tenths of the expense and waste now involved in levying and collecting taxes upon personal property, upon imports, and upon business privileges, all of which taxes are regularly shifted from the primary payers to the ultimate consumers—falling principally upon the overburdened farmers and laborers of our country.

Besides it would require men to pay taxes according to the advantages which they receive from the community, and not according to their necessities, as now.

As such a tax would bear upon land according to its value, and not according to area, and as the value of farming land is very small, by comparison with the value of land used for commercial and other industrial purposes, the small farmers—the most heavily burdened class under our present system—would find the single tax less in volume and far less oppressive in method than the complex and accumulated burdens of the direct and indirect taxes which now fall upon them with notorious inequality.

A tax on land values is the only property tax that always falls with proportionate equality upon all owners and that can not be shifted from the person paying it to the ultimate consumer or user. The reason that it can not be shifted is that while a tax on any other kind of property tends to check its production, and thus, by the law of supply and demand, to increase its price sufficiently to cover the tax, a tax on land values forces idle land into the market, increasing the supply of land offered for sale or lease, and thus, by the same law of supply and demand, reducing, instead of increasing, the rent. Heavy taxation of houses increases the rent of houses by the amount of the tax, but heavy taxation of land values decreases the rent of land. All political economists are agreed on that proposition, and it needs no argument.

Such a change in our taxation laws would not be an impairment of any vested right of landowners, because the power and right of taxation, to the extent of taking the entire rental value, whenever the public good may seem to require it, has been absolutely reserved to our governments, national and State, against every foot of land that has ever passed into private ownership in this country.

EFFECTS OF THE SINGLE TAX.

The effect of such a system of taxation upon the monopoly of land in this country must be instantly apparent. It would at once make such monopoly unprofitable and wasteful to the monopolist. It would at once take away the only incentive that now exists for the monopoly of land. It would compel all landowners to use their land productively, or at once let it go to those who would so use it.

Every user of land could afford to pay the margin of production or economic rental value of his land in taxes; but no man, above the mental level of a fool, would pay taxes amounting to the economic rental value of his land for the mere purpose of monopolizing it.

It would put an end to land speculation and the train of evils that follow ever in its wake. It would put an end to the collection of speculative rent, to booms, and to industrial depressions.

It would encourage the productive use and improvement of lands by relieving them of all public burdens, while insuring permanency of tenure, security of improvements, and security in the fruits of all productive effort.

It would forever settle the conflict between capital and labor and, by improving the condition of labor, put an end to strikes and boycotts and lockouts.

It would make land freer to labor than it was in California forty years ago; freer than it was on the Atlantic seaboard two hundred years ago.

It would restore the once cherished dignity of American labor, and the grand individuality which was once the distinguishing characteristic of American citizenship.

As a relief to our overcrowded labor markets, it would be equal to the discovery of a new and free and fertile continent in the Pacific Ocean, and its advantages would be more permanent.

Will our New England humanitarians accept the alternative; rise with me to this higher level of philanthropy, and assist in securing and building up our own civilization, as the best means of extending its advantages to the people of China?

With this emancipation of American labor accomplished, we could safely receive and absorb and civilize twice as many Chinese as have ever been within our borders, and, at the same time, furnish an object lesson to the other myriad millions of China that would set her civilization a thousand years forward, within the span of a single decade.

Which then, I ask, is the truer philanthropy? Is it that which you advocate, by which the powers and unjust privileges of American landlordism would be increased, and our own civilization degraded, in order to secure to a few thousand Chinese the doubtful advantage of living in slavery in this country instead of living in the same slavery in their own country? Is it not, rather, that which we advocate, by which our own civilization will be preserved and lifted up from the influences that are degrading it, and a new impulse given to the civilization of the whole world, such as no other single act in the world's history has ever given.

Your charge of cruelty and inhumanity against us in our treatment of the Chinese is unfounded and unjust. Never have any people been more patient, more law abiding, or more considerate under the pressure of similar evils than have the people of California in their treatment of the Chinese people.

Chinese exclusion and deportation are merely measures of necessary self-defense, and are in no sense race persecutions. Our warfare is not against the individual Chinamen, but against the deplorable conditions which their immigration and residence bring to us.

As well might we charge the people of the East with cruelty and inhumanity to the unfortunate passengers of plague-stricken ships, when, in protecting yourselves from the ravages of cholera, you enforce your quarantine laws.

PHILOSOPHY OF HENRY GEORGE.

We can not permit the evils of slave competition to afflict our people while we await the emancipation of American labor. The process of emancipation is too slow. The people are yet too greatly divided in opinion concerning the best method of emancipation. They have not yet sufficiently learned that labor never can be free except where land is free.

Knowledge must ever precede right credence, and right credence must ever precede correct political action.

The people are reading and studying the philosophy of Henry George. Progress and Poverty, which a distinguished English writer has happily denominated "a glorious gospel of justice," is steadily and rapidly changing the credence of the world on the subject of land tenure.

It is the herald of the next great step in the order of social evolution.

It is a practical development of the principles of Jeffersonian Democracy. It is a justification of our Declaration of Independence. It is a vindication of "the ways of God to man."

The manifest truths of its philosophy will speedily unify the world's credence, "Never yet share of truth was vainly set in the world's wide fallow."

The education of a nation on an economic question is not to be accomplished in a day, though "the stars in their courses" should work with the educators.

In the meantime, self defense becomes more than a right; it becomes a most sacred duty.

NATURAL RIGHTS OF CHINESE.

You ask if I do not recognize the Chinaman in this scheme of creative beneficence? I answer yes. I recognize most fully the natural rights of the Chinese. I do not question their equal right to the elements which the Creator has given for the sustenance of human life; but I recognize the fact that the same Creator has established the family, and by his law of human gregariousness has established the community and has decreed that through the family and the community civilization shall be evolved and defended.

He has the same right to an independent home that I have, but he has no right to invade my home, nor I his; and, as I have but followed the Creator's law of evolution in building up the institutions which constitute my civilization, I have a right to defend them, as well against the unarmed invader from China as against the armed soldier from Great Britain.

BUILDING TRADE'S PETITIONS.

In connection with the industrial phase of this question, Mr. Speaker, I desire to present several petitions from various trades

unions of California, praying for the enforcement of the Geary act.

I also desire to read, as presenting labor's view of this question, the following extracts from the petition of the Bricklayers' Union, which I will file here, and which has been indorsed by resolution in every union belonging to the Building Trades Council of San Francisco.

The extracts to which I desire to call special attention are as follows:

The importation of Chinese coolie labor into the State of California, and sister States of this Union, and the simultaneous closing of natural opportunities against our own people, have during the past twenty-five years been gradually but steadily reducing American labor to a condition of slavery. * * *

The oppression of monopoly on the one hand, and the competition of Chinese slave labor on the other, threaten to speedily degrade our American laborers below the standard of family life, by reducing wages to the bare cost of maintaining unmarried coolies.

I commend this vivid but not overdrawn picture of the ordeal of American labor to the Eastern sentimentalists who profess such an undying devotion to the abstract rights of man. I commend it also to the ministers of religion who are deploring the decadence of church influence among the laboring classes, while as representatives of religion they are promoting the humiliation and the degradation of labor by their advocacy of Chinese immigration.

[Mr. MAGUIRE here gave way to a motion to adjourn, reserving the right to conclude his remarks to-morrow.]

October 14.

Mr. MAGUIRE (resuming). Mr. Speaker, when the House adjourned last evening I was discussing the industrial features of Chinese immigration and residence on the Pacific coast. I endeavored to show that in California certain social forces, supplemented by the competition of Chinese coolies, had reduced the wages of labor to a point that bears no relation whatever to the value of labor, but is regulated solely by the standard of living of the lowest class of labor in the country; and that, as slavery is the lowest form of labor competing there, our laborers are being reduced to its standard of living.

THE VALUE OF LABOR.

The gentleman from New Hampshire [Mr. BAKER] asked my colleague [Mr. GEARY] if the Chinese did not give full value in labor for the $300,000,000 which as surplus earnings they have carried from the Pacific coast to China during the last twenty-five years.

I answer yes. They gave much more than value for it to the people who were in a position to take advantage of the cheapness of their labor, but they compelled the laborers of our own race to surrender an equal proportion of the value of their earnings to the same monopolists.

Let me say further to the gentleman, that, before the coming of the Chinese, American laborers received more than double the wages now prevailing in California, and they gave full value in labor for every dollar that they received in wages then. The wealth-producing power of labor has since that time increased many fold. Yet, in spite of increased wealth production, their wages have fallen 50 per cent. Will gentlemen, professing a desire for justice to labor, applaud that result?

When the lands of California were free and the American laborers there had the option to leave the labor market when its conditions were unsatisfactory, and go out upon the land and establish independent industries and means of subsistence for themselves, no competition of servile labor could injuriously affect them, but would tend perhaps to drive them to higher pursuits, and to callings better suited to their intelligence and capacity than the kind of labor for which they are now obliged to compete with the Chinese.

But we have no such conditions existing there now. American labor is not free there. It has no alternative there, any more than it has here, to leave the labor market when the conditions become unsatisfactory. It must find its employment in the labor market; and with the constant presence of a large body of unemployed laborers in that market, the tendency of the law of supply and demand—the supply exceeding the demand—is to reduce wages, regardless of the value of labor, to the lowest standard of living which will be adopted by the most hardly pressed class of laborers looking for employment. With thousands of surplus laborers of our own race in the labor markets of California wages would, in any case, be reduced to the lowest standard according to which Caucasian laborers would consent to live: but, with that army of unemployed Caucasian laborers supplemented by nearly a hundred thousand Chinese, whose standard of living is so low that no American laborer can submit to it and live, you can imagine the condition to which Chinese immigration has brought our laboring people.

ATTACKS ON CALIFORNIA.

As I stated yesterday, there is a class of men in California that favors Chinese immigration. A representative of that class, Mr. W. W. Hollister, was a prominent witness before the committee of investigation sent by Congress to California in 1876. He testified that Chinese labor, or labor as cheap as Chinese labor, was absolutely necessary to the great productive industries of the State, and he cited his own case. He testified that he was conducting a farm and that it was impossible for him to pay $30 a month for European or American laborers to cultivate his farm and make any money upon it; he testified that he could get Chinese labor for $15 a month, and that his farm was thereby made profitable.

Being questioned by a member of the committee, he stated that his farm, usually cultivated, consisted of 15,000 acres of land, that in addition to that he owned other lands, of the best in California, to the aggregate amount of 318,000 acres. To men who are thus monopolizing all that section of our country the cheapest form of labor available is most desirable, and with the power of wealth these men have everywhere and at every opportunity, through the powerful channels always accessible to wealth, sought to ridicule, to slur, to denounce, to berate the masses of the people of California for opposing Chinese immigration, and have denounced them as "sand-lotters" and "hoodlums" and people opposed to peace, to honesty, and to good order.

Those statements have been repeated on the floor of this House, and, while I do not blame gentlemen here, residing in the East, for repeating such statements when they come upon the authority of Californians, I do denounce them as false and unjust, as the outcry of the 800 monopolists against the 154,000 people of California, who in 1879 stood against the demands of the promoters of Chinese immigration, who sought to increase that immigration solely for their own personal advantage, regardless of the distress and the oppression and the ruin that their mercenary purposes brought upon the State. I say further that no country in the world, no section of this great country, animated as it is in all its sections by a love of fairness, justice, and law, can present a better showing than California makes with respect to her treatment of an alien, an objectionable, and an obnoxious race.

There is no section of this Union in which the Chinese people under similar circumstances, would be treated as well as they have been treated in California. There never has been, save in very exceptional cases, any danger to the lives or the property of the Chinese people in California. They have generally been protected from injury and insult, and even where, in a few isolated communities, the laboring classes, seeing their families in suffering and want and the monopolists of the only resources from which they could produce a living by their labor employing Chinese serfs to work the natural opportunities that they controlled, leaving their white fellow-citizens out as a body of surplus human beings to die—even there, when those people, moved and maddened by the impulse of despair, drove the Chinese out of the isolated towns of which I have spoken, they treated them with no violence, they even helped them to carry their baggage from the places from which they were deporting them down to the places of railroad or water transportation.

I do not justify the acts of the men who did attempt to take the law in their own hands and to remove the Chinese; but I do say that acts of violence and hoodlumism against the Chinese have been remarkably rare in California's treatment of this race under the circumstances.

MORAL AND SANITARY OBJECTIONS.

The moral phases of this question have perhaps been amply discussed, and I shall therefore deal with them very briefly. The Chinese people, at least those who come to this country, constitute an inferior civilization. They have brought with them and planted in our midst the vices, the crimes, and the immoralities of an inferior civilization. They have made them cheap and alluring to the young of our race. They have driven great numbers of the boys and girls of our country, first from the schools and then from the workshops—from the schools by disabling their parents from maintaining them during their proper period of education—driven them untimely to seek employment in the workshops in competition and in contact with the Chinese, and they have again driven them out of the workshops by competition.

The contact has blunted their moral faculties; and the alluring cheap vices of this race, opening to them and beckoning them from every Chinese washhouse and nearly every Chinese institution in that city—opium smoking, Chinese gambling, lewdness, and worse vices constantly open on such terms as make them accessible—have blasted the lives of thousands of California's fairest and brightest sons and daughters.

A class of white children, some of them grown to a sort of distorted manhood and womanhood, lives now in San Francisco, degraded by contact with the Chinese, known as "opium fiends," numbering hundreds. They do not, perhaps, run up into thou-

sands because they do not live long enough to constitute a very great class after they have contracted the vicious habits of the Chinese.

I have seen in reformatory and penal institutions in California scenes and evidences of the moral and physical degradation of white children by these Chinese vices that should appall the civilization of the East. Scenes and evidences that do appall every Eastern man or woman who, dealing practically with the Chinese question, undertakes, even for a few hours, to investigate it on our coast.

The men who speak in the name of humanity, in favor of the importation of Chinese, or of restoring to those who are here the right to remain, are men who have never seen the other side of this question—men who have never studied it from a practical standpoint. But East and West, the men who understand this race, who understand its destructive influence upon our people, are like the gentleman from New York [Mr. BARTLETT], like the gentleman from Pennsylvania [Mr. SIBLEY], like every other man who has given thorough study to the subject, in perfect accord with the demands and prayers of the people of the Pacific coast.

The sanitary condition produced by the establishment of this Asiatic city in the heart of San Francisco is, beyond description, dangerous and loathsome and fetid. There has not been a time within the last ten years, according to the testimony of leading physicians of San Francisco who have examined the matter, and the statements of the Board of Health of San Francisco, when that quarter of our city has been free from loathsome, contagious diseases—from diseases that breed in the dirt and filth and offensiveness with which the Chinese habitually surround themselves, in spite of our laws.

They know nothing and care nothing about hygienic laws, and they resent our sanitary regulations as persecutions.

Mr. RAY. Let me ask the gentleman this question: Are the municipal authorities of San Francisco powerless to remedy that state of things? Why can not the police power of the city take hold of it and correct it?

Mr. MAGUIRE. The police power and the power of boards of health—the best boards of health in the world are maintained there because it is absolutely necessary that they should be the best—are battling with these conditions and have battled with them constantly. They have so modified them as to make it possible for the city to escape epidemics. Fortunately the favorable climatic conditions, as stated in two of the Congressional committee reports here, make San Francisco a place unfavorable to the growth of the diseases that are carried there and bred there by these people. It has been declared by both of your committees that such conditions existing in any city in the East, or in any city in Europe, would spread desolation and death among the people beyond all human power of prevention.

Our police authorities and our boards of health have battled against these evils and these dangers constantly, and fortunately with great success so far as the body of the white people are concerned.

Mr. BAKER of New Hampshire. Will the gentleman yield for a question?

Mr. MAGUIRE. I have only five minutes, but I will hear the gentleman's question, because I have been answering one of his points.

Mr. BAKER of New Hampshire. I would like to ask whether the Chinese in San Francisco own the property that they occupy?

Mr. MAGUIRE. No, sir; as a rule they do not.

Mr. BAKER of New Hampshire. Then, why do you not compel the white men who own the property to keep it in proper sanitary condition? That is my question.

Mr. MAGUIRE. Well, that opens up a field of discussion too extensive for the very limited time that remains to me. The courts of California have been dealing with that question for years. A California State law requiring that 500 cubic feet of air should be provided to each occupant of a Chinese bedroom was resisted with the same desperation with which this law has been resisted, and by the same authority—the Six Companies. They resist every sanitary law that is enacted; they carry their resistance through all the courts, and they yield only under absolute compulsion of the final judgment of the highest court to which the law gives them a right of appeal or application.

RELIGIOUS PETITIONS.

Petitions have been presented here from a number of highly respected and highly respectable religious organizations for the repeal of the Geary act. These organizations have no thought of working injury or injustice to our laboring people. They move upon the impulse of their religious zeal for the salvation of Chinese souls, and are oblivious to the other side of the question. They do not see the moral ruin, the degradation, and the suffering which that immigration has brought to our own people, and naturally enough, in the name of that humanity which they see represented in the Chinese, knowing nothing of the considerations of humanity due to our own race, they plead and pray for increased facilities to Christianize the Chinese.

But, Mr. Speaker, I venture to assert that for every one of the disciples of Confucius that all the missionaries and ministers of the gospel have ever really converted to Christianity, I can point to fifty white children, children of our own race, who have gone from Christianity and from all the influences of civilization down to degradation, ruin, and infamy through competition and contact with the Chinese residing in this country. I claim, sir, that the moral and physical ruin wrought among our people by this invasion will outweigh a hundred fold, aye, a thousand fold, all the good that all the missionaries and all the ministers have ever done in the matter of improving the moral condition of the Chinese.

Now, there has been some criticism and some complaint indulged concerning a remark made by my colleague, Mr. GEARY, in relation to the petitions presented by conferences and associations of ministers of religion throughout the country to this body. I make the same objection to the attempts of these religious bodies to reënforce their perfectly proper personal petitions by appeals to the power and membership of their respective churches. I deny that any religious conference in this country, or any religious association in the United States, represents or is authorized to speak for the political sentiments or political opinions of those who constitute the membership of their churches. I deny that any annual conference of two hundred ministers has a right to control, or does control, or does represent, the political sentiments of the sixty-four thousand members of its faith.

The same proposition was presented, the same stereotyped resolutions that have been here filed were submitted to the annual conference of the Congregational Church in California the other day and their adoption was urged. They were finally adopted, but the proposition to declare that the conference represented the sentiments of the members of the church on this question was rejected. It was rejected because two or three ministers rose and strenuously protested that the conference had no right to speak on this question for the members of the church, and declared that three-fourths of the church members were opposed to the position which a majority of the conference was ready to assume.

Mr. MORSE. Has the gentleman from California the resolutions of the Congregational conference to which he referred? If so, I hope he will print them with his remarks.

Mr. MAGUIRE. I have only the newspaper clipping to which I have referred and there is substantially nothing in it except what I have stated. The resolution adopted was for the repeal of the Geary act.

DEFECTS IN M'CREARY BILL.

Now, Mr. Speaker, my colleague [Mr. GEARY] has clearly pointed out some very serious defects in the bill now pending, and has submitted amendments calculated to correct them.

If this House is determined, against the protests of the Pacific coast, to extend the time for Chinese registration, every consideration of good faith and national dignity require that these amendments be adopted, so that the act shall be as effective as possible for the purposes for which it is intended. Without the provision for photographing the Chinese who register the act will be practically a nullity. I thank the House for its attention.

Pan-American Monetary Union.

SPEECH
OF
HON. WILLIAM M. STEWART,
OF NEVADA,

IN THE SENATE OF THE UNITED STATES,

Monday, Tuesday, and Wednesday, October 23, 24, and 25, 1893.

(Being the legislative day Tuesday, October 17, 1893.)

The Senate having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. STEWART said:

Mr PRESIDENT: I ask that the amendment of which I gave notice be read.

The VICE-PRESIDENT. The amendment will be read.

The Secretary read the amendment intended to be proposed by Mr. STEWART, as follows:

Add as an additional section to the bill:

"SEC.—. That the President of the United States be, and he hereby is, au-

thorized and directed to invite the several governments of the Republics of Mexico, Central and South America, Haiti, and San Domingo to join the United States in a conference to be held in Washington, in the United States, within nine months from the passage of this act, for the purpose of 'the adoption of a common silver coin to be issued by each government, the same to be a legal tender in all commercial transactions between the citizens of all the American States represented in the conference,' and when such common coin shall have been agreed upon by the majority of the governments represented in such conference, and when the governments so invited and participating in such conference shall have opened their mints to the free and unlimited coinage of the common silver coin so agreed upon by the conference for the benefit of depositors of silver bullion, the United States will also open its mints to the free and unlimited coinage of such common silver coin."

Mr. STEWART. Mr. President, on the 24th day of May, 1888, the most important law for the benefit of this country that has been considered for many years was passed without a division. If that law had been executed in good faith by the executive department we would have to-day unexampled prosperity in this country. But as usual, everything passed by Congress for the relief of the people in furnishing them an adequate volume of circulating medium is arrested in the executive department. The law to which I allude is entitled "An act authorizing the President of the United States to arrange a conference between the United States of America and the Republics of Mexico, Central and South America, Haiti, San Domingo, and the Empire of Brazil." The first section provided for the invitation and the meeting of the conference and matters of organization. The second section provided:

That in forwarding the invitations to the said governments the President of the United States shall set forth that the conference is called to consider—

First. Measures that shall tend to preserve the peace and promote the prosperity of the several American States.

That is very general and of very little consequence.

Second. Measures toward the formation of an American customs union, under which the trade of the American nations with each other shall, so far as possible and profitable, be promoted.

That might be of some use, but it has been of no practical use, however.

Third. The establishment of regular and frequent communication between the ports of the several American States and the ports of each other.

That would be very useful, if there had been any practical way of carrying it out. To have rapid communication by water between the several states of the American hemisphere would have been a good thing, but it would have required legislation by Congress to carry it out, and probably large appropriations.

Fourth. The establishment of a uniform system of customs regulations in each of the independent American states to govern the mode of importation and exportation of merchandise and port dues and charges, a uniform method of determining the classification and valuation of such merchandise in the ports of each country, and a uniform system of invoices, and the subject of the sanitation of ships and quarantine.

That would have been useful if carried out; indeed they made some arrangement with regard to it.

Fifth. The adoption of a uniform system of weights and measures, and laws to protect the patent rights, copyrights, and trade-marks of citizens of either country in the other, and for the extradition of criminals.

Provisions were made in regard to those matters, but producing no great result. There is nothing in that to produce any great result or marked effect upon the general prosperity of the western hemisphere. But the sixth was the important proposition. It was the best law which has been passed for twenty years, and it would have produced greater benefits than any law passed in twenty years if it had been carried out.

Sixth. The adoption of a common silver coin, to be issued by each government, the same to be legal tender in all commercial transactions between the citizens of all of the American states.

There were two other minor propositions to be considered. In pursuance of the invitation all the states invited came, and they came with the purpose of carrying into effect every provision of the invitation. They came in good faith, and a most intelligent body of men they were. When they came to the sixth provision they appointed a committee composed of leading delegates from the several states and from the United States. The majority of that committee made a report, which is as follows:

The committee presents to the conference for its consideration the following:

The International American Conference recommends to the nations represented in it—

(1) That an "International American Monetary Union" be established.

(2) That as a basis for this union, an international silver coin be issued, which shall be a legal tender in all the countries represented in this conference.

(3) That to give full effect to this recommendation, there shall meet in Washington a commission composed of one delegate from each nation, which shall determine the quantity, value, and proportion of the international coin and its relation to gold.

That this commission meet in Washington in a year's time or less after the final adjournment of this conference.

E. A. MEXÍA.
J. ALFONSO.
JUAN F. VELARDE.
CARLOS MARTINEZ SILVA.
JERONIMO ZELAYA.

WASHINGTON, *March 10, 1890.*

Unfortunately the delegates from the United States would not join in that report. They would do nothing about it. After having invited the nations of this hemisphere, except Canada, to appear for the purpose of establishing a coin that should be a legal tender in all the Americas, the United States repudiated its own invitation. The delegates, as shown by the debate, felt themselves very much wronged, as they were; but English influence had interfered; a new Administration had come in, and a scheme was on foot to make some kind of a commodity out of silver. The Windom plan was then under consideration by the Department, and that was thrown into the discussion. The delegates from the other states informed our Government that they had not been invited here to consider the subject of a paper circulation of any kind or to treat silver as a commodity. The report of Mr. Mexía, a delegate from Mexico, in support of the proposition is very strong, and it is not very long. He said:

The sixth section of the act of the Congress of the United States approved May 4, 1888, reads as follows:

"Sixth. The adoption of a common silver coin, to be issued by each Government, the same to be legal tender in all commercial transactions between the citizens of all the American states."

Pursuant to this article, a committee has been named to report upon the method of carrying into effect the idea which it sets forth.

According to all the data at hand, the importations into the United States from the several countries comprising the Spanish-American republics exceed by a considerable amount the exportations of the United States to the same countries. The excess, which is a very large figure, is against the United States, who pay it in gold.

I have the statistics (which I shall introduce later on) of the last year's trade with those countries. The balance was $144,000,000. I will introduce the table, because I shall have occasion to call attention to the items contained in our trade with those countries. The balance of trade against us was $144,000,000 last year. I continue to read from the report of the Mexican delegate:

The object in giving a common silver coin to the nations which compose this conference is to facilitate the commercial transactions, and to avoid those great fluctuations in silver which have been the cause of serious difficulties to the nations using this metal, and at the same time have rendered burdensome the commercial intercourse between the United States and the Spanish-American republics. This committee essays the task of discovering the method of counterbalancing these difficulties in such a way as to make it prejudicial neither to the Government of the United States nor to the Spanish-American states.

Two methods present themselves: The first—adopting as a general basis the project suggested by the Secretary of the Treasury of the United States, Mr. Windom, who proposes the issuance of certificates of deposit in exchange for silver bullion deposited, giving to the certificates the value the bullion may have in the market on the day of its receipt, and redeeming said certificates upon the basis of the market value of silver on the day of redemption.

This method, important as it is on account of the position and talent of its author, is still in the form of a bill and subject to alterations when it shall reach discussion in the Congress of the United States; it lacks, therefore, a definite basis upon which the committee could formulate a report. It is clear that it would be impossible, or at least very difficult, for this committee to present a project based upon that of Mr. Windom, when the latter might be defeated or not be acceptable to the majority of the House of this Congress, thereby entirely repudiating the idea; however, it would not be difficult for a like scheme to be adopted by the several countries here met together, each one receiving the deposit of the bullion and issuing promissory notes or certificates of deposit under the same conditions as those of the Government of the United States.

I repeat, this is still a hypothetical case which should not at the moment occupy our attention, but rather should we follow the course of the debates in the American Congress, so that they may serve us as a guide in the future.

Another project which appears to be the easiest and most practicable, for it is within the reach of all, that is to say, of the masses, is the adoption of a silver coin, of one or more denominations, of a design and value hereafter to be agreed upon, based upon the dollar which now exists in the United States of North America.

A 50-cent coin would also be of great utility, if it were given a value equivalent and proportionately equal to the aforesaid dollar.

The probable production of the United States is to-day from $59,000,000 to $60,000,000 of silver per annum; that of Mexico from $45,000,000 to $50,000,000, while the other Republics of Central and South America only coin some $25,000,000, more or less.

The issue of this international coin should be equitably distributed between the several countries in proportion to their population and coinage, leaving always a margin for the natural expansion which might and would result from this monetary union. The circulation of the international money should be compulsory among all the nations represented in this conference as regards the dollar, and with respect to the 50-cent piece, only in payments of the latter amounting to $50 in each case.

A monetary commission might be created by the governments interested, each naming one or more representatives, who should assemble and occupy themselves exclusively with the details of issuing the aforesaid international coins. The amount coined by the projected monetary union to be limited to $—— per annum, the monetary commission meeting every three or five years to determine in assembly the increase or diminution of the amount to be issued.

The great importance of this monetary union can not be denied; for, without prejudicing any one outside of our own limits, it greatly benefits the industries of the Spanish-American nations, of the United States, and of all which compose this conference; it increases the wealth of the world, for it stimulates the production of silver, and, giving it a fixed value, prevents those terrible fluctuations so dreaded by merchants and producers.

Establishing a fixed type would serve as a basis for all commercial transactions and would inhibit one nation from so influencing exchange that the benefit might always accrue to it at the expense of the American continent.

E. A. MEXÍA.

The view taken of the conduct of our administration was disgraceful. The rebuke of José Alfonso, delegate from Chile, was well deserved. He said:

As is known, the International American Conference has been called to deliberate, among other matters, on the adoption of a common silver coin for America. The subjects submitted to consideration were chosen by the in-

viting Government. If it is easy to imagine that the governments invited might accept all, the greater part, or only some of the subjects proposed for the consideration of the conference, since they could not choose them beforehand, this supposition can not be allowed by the Government which issued the letter of convocation. It seems that a change of opinion must have taken place, which it would have been necessary to communicate to the conference, which, in the face of this fact, should have determined that which it considered opportune and convenient.

The explanations called forth in the committee to overcome this difficulty have not produced a result which can be considered satisfactory, and have left it as it was. The distinction which is claimed between administration and government, so as to deduce from that that the Government made the law to which the conference owes its origin, and that the administration has done nothing but execute it and carry it into effect, this distinction can not establish between these two entities such a line of departure as shall make him that executes conflict with him that orders, it being evident that the truth is just the contrary, since the execution should conform itself to the letter and spirit of the command which it has to fulfill. One would have to clash with all the principles of a correct administration to admit a different idea.

Moreover, that the proposition presented to Congress should have for its object to regulate the relations of internal order in this country, and that the conference should occupy itself only with international matters is not an argument that will set this point any straighter. Many of the matters submitted to the consideration of the conference, in case they should succeed in establishing an international agreement, and notwithstanding this character, should authorize a direct and immediate influence in the internal condition of all the nations which may participate in it. Among these is numbered one relating to the adoption of a common silver coin which will circulate, if it should be accepted, in all the countries represented in the conference. And so true is this that one of the reasons which is put forth to defeat the measure consists exactly in the danger which the citizens of this country would encounter being obliged to accept this coin.

It should still be added that the conference can not maintain relations nor negotiate except with what is called the Administration, whose plans and propositions are the only ones it takes cognizance of. It must not for this reason await the result which the report of the Secretary of the Treasury may attain in Congress. What interests us is to know what is the opinion of the Administration. At present that opinion, shown by an official act, consists in the issue of certificates for deposits of silver bullion payable in gold for the value of the silver according to its current price in the market, the deposits being made in the Treasury. It would leave absolutely annulled the law called "Bland," which authorizes the purchase and coinage of not less than two millions and no more than four millions of dollars in silver per month. Evidently a measure is discussed which is diametrically opposed to that of the adoption of a common silver coin.

Leaving these last considerations for a moment, and speaking of the proposition of the honorable delegate, Mr. Estee, the undersigned accepts the general idea which this proposition contains relative to the establishment of an American monetary union. He thinks illogical the limitation to the effect that the international coin issued may be used only up to a given quantity in each payment, since it is proposed to circumscribe within certain limits the quantity which will be allowed to be coined. He reserves his liberty of action for the appreciation of the details of the proposition which perhaps might be improved by the introduction of some modifications more of order than of meaning. With regard to the general principles on which he depends, he agrees perfectly with the honorable delegate.

JOSÉ ALFONSO.

It will be seen that in the course of his report he reflects upon the American delegates for not joining in the recommendation. Who will say that he did not have just cause of complaint? Mr. Coolidge repudiated the law of Congress under which the conference was held. He argued at length against carrying that law into effect. No action could be taken unless the United States would come into the arrangement.

The report was, after a long debate, modified so as simply to provide for another meeting the following year. The following is the modified report which was adopted:

The committee on monetary convention having considered the various amendments presented to the conference, submits the following report:

The International American Conference is of opinion that great advantages would accrue to the commerce between the nations of this continent by the use of a coin, or coins, that would be current, at the same value, in all the countries represented in this conference, and therefore recommends:

1. That an International American Monetary Union be established.

2. That, as a basis for this union, an international coin or coins be issued, which shall be uniform in weight and fineness, and which may be issued in all the countries represented in this conference.

3. That, to give full effect to this recommendation, there shall meet in Washington a commission composed of one delegate from each nation represented in this conference, which shall consider the quantity, the kind of currency, the uses it shall have, and the value and proportion of the international coin or coins, and their relations to gold.

4. That this commission meet in Washington in a year's time, or less, after the final adjournment of this conference.

E. A. MEXIA.
MORRIS M. ESTEE.

JUAN FRANCO VELARDE.
CARLOS MARTINEZ SILVA.

WASHINGTON, *April 2, 1890.*

The invitation was to agree upon a coin which should be a legal tender in all the American States. This was in accordance with the act of Congress, but was repudiated by the United States delegates. They modified that and agreed to meet again the following year. The conference met in 1891 in pursuance of the report last above set forth. The delegates of the United States presented a proposition, as an ultimatum, which was entirely different from what the conference had been called together for. The proposition of the delegates from the United States was as follows:

I.

While fully recognizing the great convenience and importance to commerce of the creation of an international coin or coins, it is not deemed expedient at present to recommend the same, in view of the attitude of some of the great commercial powers of Europe toward silver as one of the metallic currencies, and the varying ratios established between gold and silver by the several countries represented on this commission.

II.

That many of the difficulties to the establishment of an international coin or coins might be removed if the adoption of bimetallism and the establishment of a common ratio between gold and silver by the great commercial powers could be secured.

III.

The commission recommends that the countries represented therein unite through their respective governments in inviting a monetary conference of all of the powers of the world, to be held at London or Paris in 189-, to consider—

First. Bimetallism and the equalization of gold and silver, to be fixed by international agreement.

Secondly, the universal assimilation of monetary types, both of gold and silver, and their legal international circulation for all purposes.

WM. A. RUSSELL.
N. P. HILL.
LAMBERT TREE.

March 23, 1891.

This was the proposition of the delegates of the United States when they convened the second year, that they should abandon the idea of a common coin for all the American States, and extend the invitation to all the world, knowing very well that Great Britain would be there and prevent action, as she always does. In fact, it was a direct snub. After a considerable debate, the delegates from the other countries had to acquiesce in the ultimatum of the United States. Nothing else could be done. In the course of the debate, Mr. Romero, who was president of the conference, made some remarks, a portion of which, referring to the condition of Mexico, I shall read. He said:

I beg to be allowed to grasp this opportunity to state the position of Mexico on this question, repeating, perhaps, what I previously stated on a similar occasion as delegate from Mexico to the International American Conference.

Mexico is legally a bimetallic country, because we have both gold and silver coins, both being legal tender; but practically it is a silver nation, because all our business is carried on exclusively with silver, since, owing to the difference of the price in the markets of the world of both metals, all of our gold (and we do not yet produce much) is exported, while a considerable part of our silver remains in the country in the form of coin.

I will mention, briefly, the disadvantages the depreciation of silver in the markets of the world produces in Mexico, and at the same time (be not astonished) the advantages accruing therefrom.

I wish to call particular attention to this, because I have been down in Mexico and know what Mr. Romero said is true.

The disadvantages are three:

(1) An increase in the price in Mexico of foreign goods which has to be paid in gold.

(2) A loss to the national treasury in the funds sent abroad to pay the interest of the Mexican bonds held in Europe, which loss is equivalent to an increase in the rate of that interest.

(3) A loss to wealthy Mexicans living in Europe, when their capitals or revenues are sent to them, equivalent to the depreciation of silver, between 25 and 33 per cent.

The depreciation of silver has not affected in any perceptible way the working of our silver mines, but, on the contrary, our production of that metal has considerably increased since 1871, when the depreciation began, although this increase is due, of course, to the construction of railways, to the long peace the country has enjoyed, and to the restoration of our public credit. I do not know of any silver mine where work has been stopped owing to the depreciation of silver.

These disadvantages are, however, of but little account when compared to the benefits we have received from the depreciation of silver, and which are the following:

I wish to call particular attention to the benefits which happened to Mexico from the depreciation of silver. They are the same benefits which accrued to India, and which caused so much jealousy on the part of the manufacturers of England and created so much anxiety and excitement among the farmers and producers of England:

(1) As the Mexican commodities we export, such as coffee, indigo, henequen, etc., are sold in the foreign markets in gold, they command now a higher price at home, where they are bought for silver, which really amounts to a bounty when exported equal to the difference between the actual price of silver at home and their price in gold in the markets of the world, which has been between 25 and 33 per cent. This bounty has produced the effect of considerably increasing the production and exportation of commodities which could not be exported before.

That is precisely the way it operated in India. Before silver depreciated they never exported wheat, and they now export between fifty and sixty million bushels annually. It is so with cotton fabrics. Formerly they could not supply themselves, and now they are exporting sixty to seventy million dollars worth of textile fabrics which go to China and Japan. The production of tea and other products has also been stimulated. For a long time the question was discussed whether they could bear the additional load of debt occasioned by the discount they had to pay to convert their silver into gold, in order to pay the English debt, than they could with silver and gold at a parity, and the Royal Commission demonstrated that they could carry the debt now easier than they could if the two metals were at a parity.

There were, however, other causes which brought about the demonetization of silver in India, to which I shall allude later on. England was barred out from trade in India. India was supplying the Asiatic trade and cutting England entirely off, and Manchester and Leeds and other manufacturing centers

of Great Britain protested that gold and silver must be equalized or they would be excluded from the trade of Asia. The same principle operates in Mexico.

(2) And perhaps the most important advantage has been to keep in Mexico a very large amount of money which formerly used to go out of the country as soon as coined, it being the only article of export with which imported foreign goods were purchased, thus leaving a very limited amount to transact the business of the country. The reason why this money does not go out now is because it has become more profitable to export commodities in the place of silver, which remains in the country in the form of coin, to the great benefit of business.

It is natural that when the Mexican dollar loses from one-fourth to one-third of its value in Mexico by sending it abroad, that it should be kept in the country, and that in its stead other articles should be exported, thus considerably increasing the circulating medium in Mexico, to the great benefit of all; and the country, therefore, is perfectly satisfied with the present condition of things.

(3) A great many rich men in Mexico, both native and foreign, used to realize on what they had in the country and send the proceeds to Europe, where they found a safer, if not a more profitable, field for investment. But they can not afford to do so now, because their capital would be reduced one-third or one-fourth; and as, besides, there is now perfect security to life and property in Mexico and a large field for profitable investment has been opened by the building of railways and the consolidation of peace and order in the country, capital is entering instead of leaving Mexico.

I traveled through Mexico last summer, and I know that all Mr. Romero says is true. Take, for example, the reduction works for silver, lead, copper, and other ores. Some of the ores were formerly shipped to this country, but they are now reduced in Mexico. Five very large establishments have been erected by Americans there in the last three years, involving an outlay of many millions of dollars. I conversed with some of these gentlemen, and they told me that they could carry on any kind of manufacturing in Mexico much more advantageously than in the United States; that money was plenty; that there had been no material changes yet in wages; that there was plenty of labor they could hire, and that prices had not advanced very materially, but just enough to stimulate business; and the people having plenty of money, they were able to conduct any kind of business there with more profit than they could in the United States.

Mr. PALMER. If the Senator will allow me, as I understand him to be speaking from his own personal knowledge of matters in Mexico, I ask if it is not true that the wages in that country are much lower than in the United States?

Mr. STEWART. Yes; it is true that the wages are lower in Mexico than in the United States; but they are higher in Mexico than they were a few years ago; there has been a rise in wages all through that country, and there is great activity and prosperity there in consequence of their having plenty of money. Money in that country performs the same service that it does everywhere else. An abundance of money is followed by prosperity.

I inquired into the cotton industry in Mexico, and I found a large number of cotton mills had been built, and that they were supplying themselves with cotton fabrics and manufacturing other things, although it is a country which has just emerged from revolution. The Mexicans have been a very nonprogressive people. The country has been subject to discord and revolution. But on my last visit there I found everywhere evidence of enterprise. I saw the fructifying effects of plenty of money, and the same can be seen in any other country where there is an abundance of money. We can not manufacture now in competition with Mexico as we formerly did. We could if we had the same kind of money, but a country with dishonest, appreciating money can not compete with a country which has honest, stable money. For that same reason England could not compete with India. India has honest money. The "perverse rupee," as it is called, does not change in value, and India was fast supplying herself with manufactured products. She has closed the looms of England, and compelled England to take some action, and this action was forced by the public opinion of the manufacturing industries of England.

The agriculturists, the boards of trade, and the manufacturers of England are bimetallists, and they held meetings and petitioned that silver must be restored, and they appealed to the fact that they would be excluded from the Asiatic trade unless silver could be restored; but the money kings said "No"; London said "No, we will not restore silver money for you, but we will destroy India for you, and you can do what you please with her." That is what they have attempted to do. When that was done the bimetallists said "You have not done enough, you will probably encourage manufactures in China and Japan."

In reply it was said they were slow-moving countries, that it would be a long time before they could become competitors and supply the demand. Then it was said "Suppose, after all, the official information which you have acted upon and which you think is certain, that the United States will repeal the purchasing clause of the Sherman law, should prove to be a mistake, and the United States should open her mints to free coinage, then we should be cut off from the trade with all the silver countries." They admitted that, and consequently they have made extraordinary efforts to accomplish their purpose here.

The edict comes with a command from the bankers of London and New York, and through the newspapers and officials, that Congress must repeal the Sherman law or they will destroy us. They have the power to destroy a great many people. We owe England probably $2,000,000,000. They have their hands on their debtors and make them labor, and make them appeal to us. The English gold trust are in partnership with our banks, and the 3,500 or 3,700 national banks are all agents for this gold ring—this gold ring which would not allow England to have bimetallism to relieve the English manufacturers, but which put India on the gold basis, and now they must put us on the gold basis or they will be excluded from the silver-standard countries, because there is nothing better established than that no country with appreciating gold can compete with a silver-standard country.

Silver remains stationary; it measures property; it has kept pace with the general range of prices. In silver-standard countries you can pay contracts in the money of the contract, while in gold countries you have to pay in appreciating money more than you contracted to pay. You dare not go into enterprises because property is falling on your hands and stagnation and hard times exist; but prosperity exists where honest silver money is used, and Mexico is a good illustration of what I am speaking of.

I wish to say that Mexico has a very intelligent administration, a strong administration, it is true, but that is necessary for that country. It has a patriotic administration, and the President of that Republic is the peer of any president or any ruler in the world. He is a man of character, a man of heart, a man of nerve; and he has for twenty years, in a country which had been in revolution for fifty years previously, established and maintained peace and secured prosperity. It is true that the fall in silver cuts off its export and produces some distress there and makes it difficult for Mexico to pay her interest on her bonded debt due to foreign countries. She has assumed a vast responsibility in subsidizing railroads, but the burden is borne with ease. Everybody thought it was the wildest thing in the world for Americans to invest the large sums they have in that country on the vast subsidies which Mexico promised, because everybody thought that Mexico could not fulfill its obligations; but the prosperity of that country up to this time has enabled her to meet all her obligations. She may not be able to continue doing so now with the present price of silver, but she will be able to do it soon.

Mexico has great natural resources. She could supply this country with all the coffee and all the tobacco which we require, and her tobacco is just as good as that of Cuba; in fact, it is said that it is sent to Cuba and exported from there to other countries with a Cuban name. Experts say it is equally as good as the tobacco of Cuba.

As a coffee country Mexico has no superior. Her coffee is equal to the best produced in the world. The people of that country are developing those industries, and I think is is a matter of congratulation that our neighboring sister has emerged from fifty years of revolution, has had twenty years of peace, and is governed by a patriotic administration which has given her prosperity. If we had an Administration which would do for the United States what the administration of Diaz does for Mexico, we should have such prosperity as the world has never seen.

Mr. Romero, from whom I have read these extracts, is a man of great experience and judgment. Before I went to Mexico I conversed with him about the conditions there, but I had no conception of the great advantages that country was realizing from the free and unlimited coinage of silver.

I shall proceed with the quotations I desire to make. After considerable discussion as to the adoption of an international coin, they gave it up and adjourned, accomplishing nothing. I desire to read a paragraph from the statement of the delegate from Bolivia with regard to the disadvantages of trade: and it is only one among many facts, which I think equally important. When no resolution was reached and the question was referred to England, there was great gloom among the Pan-American representatives. The delegate from Bolivia explained his vote as follows:

Before voting, the honorable Mr. Obarrio, delegate from Bolivia, sent to the chair the written expression of the views upon which he founded his vote, requesting at the same time that the document be read and annexed to the minutes as an appendix.

The document appears as Appendix No. 2. The following notice was read by the Secretary:

Whereas, after animated discussions, we have been able only to reach the conclusion to put an end to our work without any practical result, owing to the difficulties which at the present time appear to oppose the establishment of the projected international American monetary system, and being in full accord with the report of the special committee, I shall support it, sincerely regretting that that other world beyond the seas, which was formerly en-

tirely ignored, should be an obstacle to the realization of the purpose which brought us together.

The original idea was the adoption of a silver dollar, exclusively American, which, uniform in design, fineness, and weight, should serve as a common unit and should circulate freely, and with the same value in all the countries of our continent, each of which should coin a proportional quantity. A monetary type having these conditions could not but assist and expand our commercial transactions, increasing at the same our social and political relations. And, as in the majority of the American countries, the silver dollar is the monetary unit, although with some differences as regards design, fineness, etc., many of those countries being in fact monometallists on a silver basis, since they have no other monetary type or circulating coin, the possibility, not without foundation, of making them uniform was thought of. But here another unforeseen obstacle presents itself, which appears to have been overlooked, rendering the proposed unification impossible for the present. This obstacle is the difference in the relation between gold and silver, which in all of the American countries is uniformly that of 1 to 15½, except in the United States, where it is 1 to 16. The perhaps not improbable adoption of the common type is the only way the desired unification of our monetary system can be secured, making New York, according to the opinions of competent persons, the American clearing house, as London is that of the whole world.

To form a complete idea of the difficulties presented by the diversity of coins in our continent, I shall limit myself to a relation of my personal experience. Upon returning from my country, at the end of last year, I took charge of some young men who are being educated in this country. To pay their passage and my own from the port of Mollendo to Panama in Peruvian *soles*, I suffered a discount of 30 per cent, giving 2,400 *Bolivianos* for 2,000 *soles*. I was compelled to bring the money for the tuition and expenses for a given time of these young men in draft on London at ninety days' sight, the only way some of our countries have for locating funds in these markets. I secured these drafts at a discount of 40 per cent, for the rate of exchange was then at 30 pence for a Bolivian dollar, a rate which fluctuates between 29 and 32 pence. These drafts negotiated here at $4.74 per pound sterling suffered another discount of 5.20 per cent, the total discount reaching the enormous figure of 45.20 per cent, thus reducing every 100 *Bolivianos* to only $54.80 American money; that is, almost half their value.

If to this be added the fact that the transportation rates for passengers and merchandise are extremely high, and prevent our sending our varied products in exchange for the manufactures of this country we consume, which on reaching Bolivia are trebled in value, it can easily be understood that the commercial relations between this country and mine can not be expanded.

Bolivia takes from the United States petroleum, white and colored cotton stuffs, in great quantities; hardware, agricultural implements; some machinery, carriages, and vehicles of all kinds, miscellaneous small articles of metal and glassware, plated ware, pianos, fine furniture, printing materials, etc.

We can not, as already stated, pay for these manufactures by exporting our products, owing to the high transportation rates, and we are forced to have recourse to the ruinous system of drafts, which, did the American silver dollar exist as a common unit, would not cost us more than 3 or 4 per cent for exchange rates for the accommodation of having our money in the form of a piece of paper easily carried in the pocket.

To-day that forced accommodation, for the reasons already expressed, reduces the value of our money nearly one-half.

The Bolivian commerce is not so insignificant as is generally believed. If Bolivia has not figured and does not figure in statistics as a commercial nation; if the figures ascribed to her therein do not correspond to her population, area, and varied resources, it is because all her trade is carried on through foreign ports since she lost her coast. Before this loss she imported and exported nearly all she consumed and produced through the Peruvian port of Arica, her natural outlet; therefore the statisticians considered as the foreign commerce of Bolivia merely the little she imported and exported through her lost coast. To form an idea of our foreign trade it will be necessary only to consult the official statistics of the Argentine, according to which during the first year of the war on the Pacific she exported through Rosario in silver ore alone over $15,000,000; seventeen millions during the second year, and nearly twenty-one millions in the third. All this from the departments bordering on the Argentine alone.

I only read that as a sample of the views of the delegates who were invited to adopt a common silver coin which should be a legal tender in all the American States. Other delegates spoke in like manner of the inconvenience and difficulties of the trade in consequence of their not having a coin common with us and of having to get their exchange through London. But nothing could induce the delegates of the United States to yield. They did not respect the law of Congress or the rights of our guests. Is it important for us to trade with them? Is it important for us to cultivate commercial relations with them?

I have in my hand an official memorandum from the Bureau of Statistics showing the trade with them during the last year, the articles, and the balance of trade. From that it appears that the balance of trade against the United States was $144,084,262, and the trade was in articles that we must have, that we can not get elsewhere.

WORTHINGTON C. FORD,
Chief of Bureau.

TREASURY DEPARTMENT,
Bureau of Statistics, September 15, 1893.

Balance of trade against the United States, $144,084,262.

So far as Europe is concerned, she produces not one article that we must have. But we must buy the coffee and the different spices and productions of the South American States. We will buy them. We sell our commodities to Europe and pay the South American States in drafts on London for the commodities we buy. We have a very small direct trade there. Whereas, if we had a coin common with them, and had a common prosperity with them, they would take our manufactured products and our farm products in payment of what we buy of them. We ought to send our manufactured products to the less advanced nations, where they have more of the raw material and less of the manufactured articles. It is with such nations that we ought to cultivate trade. Europe has only manufactured articles, which we ought to manufacture ourselves: but if we increased our trade with Mexico and South America we should get the raw materials for our manufactures, and we should be able to send them our manufactured articles and get raw materials that we must have.

We invited Mexico and South America to come here under a pledge to establish a common coin which should be a legal tender in all the American states. But when they came here we treated them with the utmost contempt, kept them here for awhile, and then let them go back under the promise that we would do better another time, but when they came a second time we refused altogether. All this matter has failed because we would not comply with the invitation that we sent out. I was talking with the Mexican officials last summer and they said that when the United States invited those nations to come, and then refused to confer upon the most important question that was contained in the invitation, it was a sad day for all Americans. Now, I propose that we invite them back, and put a provision into the law that we will be bound by the conclusion arrived at. We were in every moral sense bound before.

Suppose we had established a coin common with them and with our people, what would be our situation to-day? We would have good money, rising prices; we would be mining and coining our own money, and our trade with Mexico and South America would be growing. As the delegate from Bolivia said, New York would be the clearing house for all America. We have it in our power to do it; but England says we shall not.

Before I proceed further I want to call particular attention to the disadvantages that England labored under before she put India on a gold basis, to show why she did it; the disadvantages of dishonest money, the disadvantage of money that will steal every day and every night by growing more and more valuable. Gold is the worst thief in the world.

Mr. DOLPH. Are they putting India on a gold basis?

Mr. STEWART. They are putting her on a gold basis.

Mr. DOLPH. I thought they were putting her on a silver basis.

Mr. STEWART. They contemplate putting her on a gold

basis. I have heard a great deal about that. That gives me an idea that I will elaborate.

Mr. DOLPH. Then I will withdraw it.

Mr. STEWART. No; the Senator can not withdraw it, because the idea has reached me. It is too late to withdraw it. I hope I shall make it reach my friend from Massachusetts [Mr. HOAR], so that he may understand it before we get through. The idea will not hurt him if he gets it.

What is the proposition? The proposition is to repeal this act and go to a gold standard, and make all silver money and all paper money redeemable in gold. Nothing will be real money of ultimate payment but gold. Then you will have $82,000,000 of gold, of real money in the country, in the Treasury. That is all you have. Then you will have of stuff to be redeemed, over a thousand millions. They say, "Very well, we will strengthen that and buy more gold." If you buy more gold you will put up the price. All stuff, both silver and paper, is just the same as paper; it is not standard money at all; and the great trouble with the whole country is that we have got too much stuff to be redeemed and not enough money with which to redeem it. They are talking of redeeming this with standard money. They say silver is not to be standard money. It must be maintained by redemption in gold.

The Treasury Department has said that we will keep silver at par by redeeming all this in gold. If you do, you have only got $82,000,000 of money in the Treasury. If standard silver dollars are not standard money you are on an inflated basis, and you are liable to have a panic any hour. You will have to buy several hundred millions more gold, and must keep it on hand constantly to keep afloat the thousand millions of promises. This will be the case when you reduce silver by this bill and by the ruling of the Secretary to a promise to pay gold. If silver is not to be standard money, the Treasury is now bankrupt.

Mr. DOLPH. I think the Senator's colleague has contended that it does not make any difference what kind of money it is so that it has the stamp of the Government on it; that makes it good money.

Mr. STEWART. The Senator from Oregon did not understand my colleague at all. He ought to listen to him a little more, and then he will know more about it. My colleague said that the amount that you can keep afloat determines prices. He did not say it was safe to float $1,000,000,000 of credit on $82,000,000 of real money. There is a difference between money and a promise. You are reducing this entire stuff to promises, and how are you going to keep them out? You must continue to buy gold, and that will keep up the price of gold. See how you stand. The gold is now cornered. You can get no gold from Russia, because she has been wise enough to give her people fiat money that does not have to be redeemed. So you can not produce a panic in Russia, because their money is not redeemable. It is irredeemable money, real money. Credit money depends upon promise of redemption in some other money.

France protects her gold by paying silver when gold is asked. So with Germany. France has $900,000,000 and Germany has some $300,000,000 or $400,000,000. Austria has about $150,000,000. She bought this gold ostensibly to redeem her paper, but if she should commence paying it out to redeem her paper money she would lose it all. Exchange between Vienna and London is about 20 per cent.

Great Britain is the only country in the world in a position to have international money. She has an income of $500,000,000 a year in interest from foreign countries. The other countries have to pay her. So that she has command of all the free gold of the world. She generally takes her pay in produce at a very low rate. Consequently she can pretend to have an international money; but she has raised the rate of interest three or four times in the last few years to keep her gold.

Our Treasury is open to all the world. Every kind of money we have is liable to be redeemed in gold. So that whenever any combination of men feel disposed they can take our paper there and draw gold. Then you must buy more gold. Then they can draw it out again and keep putting up the price in that way. They can force the issue of any amount of bonds they desire. The United States will be in their power. They can make the public debt higher than it was during the war. If you undertake this foolish game of repudiating the standard money you must keep buying gold to sustain the credit of the Government.

The free gold passes from nation to nation. No nation can have more than its distributive share, unless it is hoarded. More than half of the gold in the world is to-day hoarded, either for war or extortion. The balance is cornered by a few banking institutions in London and in New York, so that they have the power of creating a panic at any time; they can knock down your stocks and buy them in at their pleasure. The whole property of the United States is at the mercy of this gold ring, which controls the gold which floats according to the laws of trade.

What I want is more standard money, good money that will take care of itself, money that is not a promise to pay, money that redeems itself. That is what I want. When we have destroyed the standard money that has been coined under the Bland act, and which is a legal tender for the payment of debts—when you say silver must be redeemed in gold and you have the gold basis, then this country is bankrupt. Thus you give to the gold ring the privilege of buying gold and putting up its price, while in putting up its price they put down the price of commodities.

They have not yet undertaken to redeem rupees in India in gold. When they attempt that they will bankrupt India. It will destroy India financially, the same as it will us. They are treating the rupee now as fiat money. Suppose that Russia should say that her circulating medium shall be redeemed in gold; Russia would be a bankrupted country in one year. Suppose France and Germany should change their policy and say that all their money outstanding shall be redeemed in gold; it would make the same trouble for them.

We are the only gold country in the world, a debtor nation, that allows speculators to draw our redemption money from under our circulation. Why is it necessary to pass this bill and bring ruin upon the United States? That is the intention. The combine intend to rob us and we help them do it. They have no other intention.

I now want to read a little from the testimony of Maj. Gen. Phelps, a prominent Englishman, describing the effect of the gold standard in England and the silver standard in India:

Maj. Gen. PHELPS. The gold price of articles is falling because the price of gold has risen much higher than the price of silver. Now, there is another point on which I hope Mr. Cotterell-Tupp will allow me to ask him, whether he has really considered that bimetallism would cost no man a farthing. I am inclined to think that the owners of fixed gold incomes, those who are paid in gold, would find that their outlay would steadily increase from the time of bimetallism being introduced; the owners of consols, the owners of railway debentures, would find that their sovereign would no longer purchase 20*s.* worth, but would sink down to its price of 20*s.* All consumers would suffer from the rise in wages, which would inevitably follow from bimetallism, which would increase the wage fund enormously.

The Indian mill-owners, who are now cutting the throats of the unfortunate people in Manchester and Lancashire, would find that their profits would dwindle, and instead of having the monopoly of the Eastern supply of coarse yarns, they would find that Lancashire was again competing with them and probably beating them out of the field, both in East Africa and in Japan and China. Then the Indian tea-planters would find that their tea was no longer so profitable; in fact, all the persons who export from India make the greater part of their profit from the fall in exchange. If they send their goods to England when the exchange is at 1*s.* 4*d.*, and before they are paid it goes down to 1*s.* 3¾*d.*, then that farthing is an item of profit which they can not calculate upon.

I now come to the last portion of Mr. Tupp's pathetic appeal to John Bull, and I feel that he has got that large and powerful animal entirely by the wrong limb. He appeals to John Bull to take pity upon Anglo-Indian losses. Now, if all the Anglo-Indian wives died to-morrow John Bull would not turn a hair; he would not trouble his head about it; he has his own poor's rate, his own paupers, his own misery, his own back slums, his own labor question, and he does not care anything about the Anglo-Indians and their unfortunate family affairs. I therefore think that this appeal *ad misericordiam* is rather unfortunate. What we wish to show to John Bull is that he is injuring himself. If we prove to John Bull that he is injuring his trade, we twist his tail in a very tender place indeed. Suppose we bring to his notice the fact that the cotton industry in Lancashire has in some branches been annihilated by this stupid monometallic protectionist system.

Gen. Phelps continues:

The Manchester people are aware of it thoroughly now. It has taken a number of years to awaken them to it; but when one sees that the export of cotton from Lancashire has remained at one million per annum, while the export from Bombay has risen to, I think, between seventy and eighty millions, that is a fact that comes home to every Lancashire cotton-spinner. I have been among the working classes of Lancashire and Nelson, and elsewhere, and I have found them waking up and rubbing their eyes and wondering how they could be so foolish. Then we have to point out to the landlords of England that the falling off in the value of their estates, which to them is inexplicable, is also traceable to that year when silver was demonetized and the great gold famine was started. It is the gold famine that has destroyed the value of English estates. Once get the landlords to understand that and you will find that the British lion will be very wide awake in another tender part.

Then look at the farmers, who from the same date have been losing enormously, the whole of their working capital. I have seen it estimated in some review at £300,000,000 since bimetallism ceased. It is a deadly disease that is destroying the whole of the profit of the tenant farmers, swept off their income, and left many farms mere heaps of weeds. Get the tenant farmer to understand that that is due to this selfish protectionist policy, and he will soon cry out for free trade in both metals, and he will be noisy enough until the noble animal works up. The farmer grumbles at the continued fall in the prices of wheat. It is rather, perhaps, teleological. He will not be able to connect the cause and effect; but he sooner or later will see that whenever there is a fall in exchange, whenever the value of the rupee drops, immediately there is an increased quantity of wheat sent over from India. The native exports his wheat on a silver basis, and gets paid on a gold basis.

Of course, as long as that continues the unfortunate farmer will see the price of wheat continually dropping away. Impress these facts upon the English public, and you will find that the British lion will wake up. But talking to him about the Anglo-Indians, and about their wives, and about the little visits to the hill stations, and about sending their children home, you will never get him to understand why the children should not stay with their parents and be sent to the board school in the cantonment. That is the idea of the average Englishman. And also you should get him to understand (and this is a very important matter) that if bimetallism were restored and perfect free trade were restored at our English mint, the result would be that the center of all the exchange operations of the world would be more and more in London. Therefore you may reasonably appeal to the merchant, to the banker, to the farmer, to every person in England, and show him that bimetallism is to his interest: that I beg respectfully to sug-

gest to my friend, Mr. Cotterell-Tupp, would be the point of view that he should lay before the British lion.

That point of view has been presented in England until it has been understood, until it has driven the English statesmen to thinking about the matter.

I produce other reports to show that notwithstanding our McKinley bill their trade increases here, while it has fallen off in the East in consequence of the free silver there, on account of having a currency there cheaper than gold. But it was not cheap comparatively. Dishonest gold could not compete with honest silver, and they had to commence the destruction of honest silver in India in order to destroy Indian manufactures and Indian competition. We are to be served in the same way. I have other documents showing their anxiety for fear we will not repeal the Sherman law, but will open our mints to silver and come in competition with them in the Asiatic trade.

[At this point the honorable Senator yielded to Mr. FAULKNER, on whose motion the Senate took a recess.]

Tuesday, October 24, 1893.

Mr. STEWART. Mr. President, I believe that agitation and discussion, where great questions are involved, are most beneficial. In looking over the United States and communicating with citizens of various States, I find that where the slavery agitation was most violent there is the most activity of the human intellect. I find that in Kansas and Missouri, where the agitation was greatest, a much higher average of intelligence and a broader grasp of public questions are found than in any other part of the country. I find in those sections they appreciate danger to the Republic more quickly, and are more zealous of the rights of American citizens than in other sections which are not so violently agitated. It makes no difference on which side of the original contest the parties were, their intellect was manifestly brightened, and was even enlarged by the violent contest they had

I have before me two letters, written by a Missourian by the name of James H. Birch, which show a grasp of the situation which is remarkable. I will read a portion of them, and I think any Senator who will read these two communications from this Missourian will appreciate the fact that he is not only a patriot, but that he is a man of broad and comprehensive vision. The first is dated July 6, 1893, published in the St. Joseph Herald, right in the center of the original conflict. He says:

GOLD OR SILVER—AN IRREPRESSIBLE CONFLICT—UNDER WHICH KING?

St. Joseph Herald, July 6.

When Abraham Lincoln in 1858, in his debates with Douglas announced the fact that there was an "irrepressible conflict" between freedom and slavery, and that this nation could not endure half slave and half free, he but uttered the convictions of a philosophical mind filled and illumined with the conflict and compromises on the slavery question, as shown by our history since the formation of the Government, to the last act in 1854, which uprooted the first compromise of 1820. He saw that the question of compromise was but a makeshift for the hour, while at the bottom was a fundamental principle, which, like Banquo's ghost, would not down, and that the time would come when either the Union would be dissolved or slavery destroyed. His prophetic genius withheld from him the fact that he himself was to be *quorum pars magna fui*, and that, Sampson like, when it was destroyed by his own hand he would be its victim.

The day came, and from the conflict of arms the Union emerged stronger than ever, with slavery destroyed—and to-day every one rejoices both that it came and so ended. The greater question of the rights of the States and the perpetuation of the Union was the real issue, but, when the States went under, the subordinate factor which incited their acts went down forever also. Since when the question of "compromises" has ceased, and that disturbing element no longer raises its angry face.

To-day we are in the midst of another "irrepressible conflict," not whether Senator Toombs shall call "the roll of his slaves within the shadow of Bunker Hill monument," but whether the gold oligarchy shall call the roll of their slaves for all time within every cotton, wheat, and corn field in this great land, from which, after such heroic struggles, personal slavery was finally banished forever.

How truthfully he states the present question! It is whether we shall be ruled by a moneyed oligarchy, the like of which was never seen, a fabric which challenged the admiration of Gladstone, a power which he was proud to serve, a power whose leading idea was and is to absorb the labors of all men. Ten thousand million dollars from foreign countries and the annual contribution of $500,000,000 is a colossal fabric, and when that colossal fabric announces its policy to be aggrandizement for itself, degradation and slavery for the masses, well may this author say that the question is not whether Senator Toombs shall call the roll of his slaves on Bunker Hill, but whether this colossal combine shall call the roll of their slaves in every cotton, wheat, and corn field in America. He proceeds:

The conflict of this day as compared to that one, had this much in favor of the former: The Southern man believed slavery was right; he believed it was the best condition for the slave; he fed him, clothed him, and housed him in return for his labor, and took care of him in sickness and old age—while the men of to-day who are attempting to establish the gold king under whom to rule the world are guiltless of a conscience that reaches beyond the advancement of their own power as "money-getters." Like the slave oligarchs they have picked their time, when they have a President who will assist them, as James Buchanan did the Southern men, and they feel through the action of Mr. Cleveland and his Cabinet that their hour of triumph is at hand, and with such help they can dethrone silver, and crown their golden god as the future king. The majestic presence of the United States, risen as it were in a night, from the lost Atlantis, has filled Europe with consternation. Through liberal laws we have reached a point that our very existence threatens theirs. Unable to control or destroy our intelligence, genius, or enterprise, culminating as it has in the most remarkable spectacle the world has ever witnessed—now in progress at Chicago, and fearing the influence which it will spread over the world—they have marshaled their forces for a final battle. Knowing how easily they had controlled the eastern hemisphere through their financial ideas of strength, they feel that unless they can shackle the freemen of America with their golden rivets, the battle for supremacy is lost to them forever.

Alexander Hamilton wanted a government stronger than theone our fathers made, but failing to get what he wanted, he loyally accepted it, and said, "That a system of government which controlled the Army and purse of the people was strong enough to perpetuate its own existence." And so it has proven.

Charles Parsons, at the bankers' congress at Chicago, said, "The banks virtually controlled the purse of the nation." Through that purse they propose to control the people as well as the nation. And the assertion by the people of late years that they have the supreme right to control that purse and to declare what that purse shall be filled with, has aroused this congress of bankers, who, under the lead of Mr. Cleveland, have thrown off all disguises, refuse all compromises, and demand that silver be demonetized and gold enthroned as king—and they, as a self-existing, moneyed oligarchy will rule the world.

An oligarchy of brains coupled with integrity has always been a model government, and yet our fathers, in framing ours, refused to permit anyone to make laws or direct their enforcement, except those which they selected for themselves, by their votes. And now an oligarchy of "money-getters" ask that they be entrusted with the powers under a golden king to control the purchasing power of the greatest productions of this, the greatest of modern nations. The very statement of the proposition is enough to raise the spirits of those who fell on the battlefields thirty years ago, whether of the blue or the gray, and forces them to raise their voices in protest against such desecration, and to inquire for what they fought and died, if in the end their children and friends were forever to be enslaved.

Look at the history of the last four months. What better evidence of the power of this golden king do we wish? Fifty millions of gold exported, and the country trembling on the verge of bankruptcy, and those men who organized and assisted in bringing about this condition of affairs demanding that they shall have full and complete control, and then they will placate this "movable king" in consideration of transferring to them full power over the purse of the nation.

I have but stated the issues involved. Every one can work out for himself the condition of affairs should the people surrender to this oligarchy of "money-getters." Our people have settled all questions of government until the only practical question left is, "Shall man be free to get the full benefit of his labor?" There is not gold enough in the United States to pay the interest on the railway bonds of the United States for one year, to say nothing of the enormous indebtedness carried by the people in other ways. And it is a standard made of this metal, that is sought to measure the valuation of the product of the labor of the people of the United States. A product the deportation of but fifty millions of which has plunged us into our present condition, and which only promises us relief by unconditional surrender, thus trying to force the people through the distress which it has produced to sell their birthright for a "mess of pottage."

"Fling me," said Rhoderick Dhu when a prisoner to King James, to his minstrel who had reached him, "the picture of the fight. How met my clan the Saxon might." Just so, the people are watching and waiting to see how their representatives will meet this "Saxon might." How shall it be done? There is but one way. The day of compromise is past—thus sayeth the bankers' Congress, and so said the Southern leaders in '61. Then let us accept the gage of battle and declare all compromises off. This country can not endure part gold and part silver. The conflict is irrepressible. One or the other must go—but which? To surrender to gold means eternal tribute—and what is tribute but slavery. A joint reign means the return of our present condition, whenever the powers of gold are able to organize it. The horrors of the result of the consolidation of $1,700,000,000 of greenbacks into 6 per cent gold-bearing bonds from 1866 to 1873 can never be forgotten—and he who forgets that recent history of his country is one who is satisfied with his daily wages, however small, and will only fight for wages.

What line of battle do you propose? Let it be one, which, when won, will bring us to an end. Were I to make it, it should be the Treasury note redeemable in silver. This, while not demonetizing gold, would supersede it. Let it seek its abode in Europe. What use have we for it, except to pay off the hundred millions of gold-bearing bonds. With this discharged we are free from Europe and making our own standard, can do business among ourselves with it, never fearing that in the dead hour of the night this congress of bankers will seek and plot measures to rob us of the wealth of the furrow which, while being turned up to the sun, is fertilized with the sweat of the farmer's face.

Is there no Blaine now living? Who can call another Pan-American congress, and consolidating the two Americas on this question agree to make the American dollar and stand behind it in opposition to the European dollar. The western hemisphere against the eastern hemisphere. To-day we are but the political antithesis of the monarchies of Europe. We have fought our way from their relentless grasp until we are free. Are we not strong enough to fight this new battle and add another chaplet to the helmet which adorns our goddess of liberty?

But some of our gold friends are prepared to shriek: "Why, gold will go to a premium?" Well, let it go. Who is hurt by it? Wasn't it 200 per cent premium during the war? Was not every reverse of the Union armies seized hold of by the patriotic gold gamblers of that day to send the price of gold higher, and greenbacks lower, just as the present gold gamblers are doing to-day with silver. And yet with not a single gold dollar, not a single silver dollar, the soldiers went on fighting at $13 a month until the Government reigned once more supreme. And then these great financiers who love gold so well, got Congress to pass a law to turn the 2,000,000,000 paper dollars which had been sold at 3 to 1 into 6 per cent gold-bearing bonds. Let gold bear a premium. Then gold will buy more silver, but there its power ends—it can neither oppress nor terrorize the people. The gold standard in Europe sets the price of wages. The price of wages sets the price of food—therefore, with the gold standard alone in the United States, we would have gold wages and consequently gold prices for everything else. Our farmers and mechanics, who are complaining of wages and prices to-day may figure on what their condition will be in the hands of these men who forced the Government in 1866 to consolidate their 40 per cent greenbacks into 100 per cent gold-bearing bonds. Let the gold go. It was a traitor to us in the days of the war. It has no sympathy with the sufferings or misfortunes of the people. With self-righteousness it pours out its Pharasaical cant denouncing the Publican because he can't pay his taxes like it can.

This article is already longer than I contemplated, and yet I have entered into no detail or argument—only presenting the lines of the fight. I may do this later.

J. H. B.

He wrote another article, after having stated the issue, and

stated it fairly, stated it as Mr. Gladstone states it, stated it as every historian knows. He then in his next article points out the remedy, a Pan-American union, a monetary union for the silver producing countries, independence of Europe altogether. But here in the Senate while we are discussing this same issue we are called obstructionists, and it is said we are thwarting the will of the majority. I deny that we are thwarting the will of the majority.

The will of the majority is with us. It has been with us all the time. It was with us by 19 majority last February. It is with us to-day. It is the Administration and the gold ring that are thwarting the will of the majority. Even the senior Senator from New York [Mr. HILL] has declared over and over again that he is a bimetallist and for the use of both gold and silver as money. That is his will, but his will is thwarted by the London combination with our Administration. There is a large majority in the Senate who still say they are bimetallists and want free coinage; and that is their earnest desire. If their will was not overcome by the money powers and by the Administration, we would have no difficulty in passing a free-coinage bill.

Both platforms and all platforms for twenty years have declared in favor of bimetallism and made the people believe that they were honest in it, and the people voted for the candidates honestly on that belief. The will of the great majority of the American people has been unequivocally expressed. Who has thwarted it? Who are the obstructionists? Was it the will of the majority that struck down silver in the act of 1873? Was it the will of the majority that prevented the passage of the free-coinage bill in 1878? Ah, no; there was a majority of nearly two-thirds in favor of free coinage in both Houses in 1878, but it was the will of the Administration that thwarted the will of the majority. It was the loaves and fishes and the power of money that obstructed legislation.

In the last four or five years, when we passed through this body three free-coinage bills and other measures in favor of silver, who has thwarted that will? Has it been done by the people? Has it been done by those who are called the minority here now? No; it has been done by the money powers and the cohesive power of public plunder. That is the way the will of the majority has been stifled. Never in all the history of the world was such a bold, such an aggressive attempt made to thwart the will of the majority of the people of the United States as expressed at the ballot box as the effort to destroy silver at this extra session of Congress.

Who are the filibusterers? The Administration have for twenty-five years filibustered against legislation to allow the will of the majority to be expressed. They have trampled upon the laws of Congress. They have gone upon the stump, and said the money that Congress ordained was not good money. They have used the most corrupt, the most aggressive, the most outrageous means, secret at first, public now, to enslave the majority. Let the Administration take off their hands, and let the majority express itself in this Chamber, and we are two to one in the majority.

I am opposed to stifling the will of the majority, but thank God the rules of the Senate allow us to hold out a little and point out that the majority is being coerced; that the majority is being obstructed; that the majority that they claim is a fradulent majority, and was not sent here for such a purpose as they are now attempting to execute.

This arrogant gold ring tell us that we are thwarting the will of the people. Let them bring the platform. Let them bring the platform in any State that declared for gold monometallism.

I say there was never such an outrageous, bold, and corrupt organization to thwart the will of the majority of the American people as this gold ring now doing its worst, now trampling upon the rights of the people, this colossal power of England supplemented by the bankers of New York—the oligarchy that seeks to rule this country in place of the Constitution and laws, and to deny to the people the right to speak for themselves as they have spoken for twenty years. I believe in the rule of the majorities, but I do not believe in the rule of corrupt money oligarchies that seek to enslave the majority.

[At this point the honorable Senator yielded to Mr. POWER.]

Mr. STEWART. Mr. President, I now call attention to another article by James H. Birch in which he suggests a mode of relief which I think is the true mode to adopt.

THE IRREPRESSIBLE CONFLICT—THE AMERICAN VS. THE EUROPEAN DOLLAR.

[Written for the St. Joseph Herald, July 20.]

In my first article I took the position that there was an irrepressible conflict between gold and silver, using the words of Mr. Lincoln on the slavery question. This conflict has been brought on by the gold trust of Europe, aided by its adherents in this country. It is not the result of circumstances as a consequence of the great disparity in value between the metals to-day, but of conditions forced upon the people by the acts of the gold trust itself. In 1873, when it first secured the demonetization of silver, it was worth a premium over gold, thus proving beyond question that the conspiracy intended its removal from circulation as currency in order that it should be able in the future to control the money supply and wield its great power for their own benefit. The success of the gold trust has been so complete that it now openly demands that which it secretly accomplished in 1873.

Its success in thus advancing the purchasing power of gold to double what it was then, aided by the election of Mr. Cleveland with his well-known views on the subject, has made it so insolent in its demand that it now openly and arrogantly demands that silver again be demonetized, and that the whole question of the currency be committed to it. Thus we have the issue fairly tendered to us by the gold trust. It claims that it is impossible to make silver equal to gold by simply enacting a law to that effect, so long as the gold dollar will buy more in the markets of the world than a silver dollar can. It admits that we can make it a debt paying token among ourselves, but that in foreign countries it is bought and sold at its commercial value. That by increasing the ratio we add to its intrinsic value, but its commercial value abroad will be simply its bullion value. Why does not it also state that in foreign countries the stamp of the United States on our double eagles is discredited and that it is only receivable at its bullion or commercial value, exactly like our corn and wheat and cotton?

Having, therefore, by its own acts during the last twenty years reduced the value of silver from a premium to 23 per cent below, it seeks now to avail itself of its own crimes and to entirely annihilate silver after thus discrediting it, and offer as their chief reason the fact that it no longer has a money value. Confronted, therefore, with this condition, and seeing no escape therefrom on the principle of ratio, let us therefore accept the fight on the issue tendered and declare ourselves monometallists with silver as a single standard, buying and selling gold as we do our cotton and wheat, and thus rid ourselves of this everlasting strife between the two metals.

I would say in regard to that matter that every country is practically on one standard most of the time, but that soon regulates itself, because they use the cheaper metal, which soon brings it right up to par, and then the other metal becomes cheaper, when they use that; so they vibrate back and forth. That is the double standard. It is the right to use either metal and make it money.

People are scared about the single silver standard, but the world has been on that standard more than half the time, because during all the ages it has been the more plentiful metal, and it has been more frequently used than gold; but money can be made of the two metals, and it is that which has made the automatic theory tolerable, otherwise it would have been abandoned long ago, and no fanatic would be crazy enough to advocate the more treacherous of two metals where there is not enough to maintain civilization. I proceed with the reading of the extract:

Let gold be the European standard and silver the American standard, and the end will reveal who has the best of the fight. The people of the United States will never submit to the single gold standard, thus giving to the gold trust the power to settle the value of the productions of our people, with its capacity at any time to transfer gold enough to Europe to paralyze business, destroy confidence, and bankrupt the country, as it has done in the last four months. A people who would thus voluntarily relinquish such power into the hands of the most soulless trust in the world or ever conceived of, either in or out of Tartarus, will in the end be slaves, as they would deserve to be. In fighting such a Tartarean scheme wisdom dictates that we do as our fathers did, and set up its most perfect antithesis, for we are fighting a people who, having failed to subjugate us with arms, are now seeking our destruction through the powers of gold. Let us therefore make the silver standard pure and simple—our standard—eliminating entirely gold from our currency—for we know it is both traitorous and treacherous, and therefore unfit to be in partnership.

Europe would uphold and maintain the gold standard, and the people of the United States, by putting themselves behind silver alone, would make it their standard. What, therefore, would be the logical result of our action? With such nations as would likely join us in maintaining the silver standard the forces would be nearly equal. The frightened cry would go up again that our mints would be the "dumping ground of the world." Admit it, the more they would dump the better. The uncoined silver in the world would not give us a per capita circulation equal to one-half now enjoyed by France, which would be less than we needed, while the annual production of the world—estimated at 150,000,000 ounces per year, would not keep pace per capita with our yearly increase in population and wealth. The logical result would therefore be that the silver product would be wholly absorbed and it would regain in a very few years the same value in the markets of the world that it had when the gold trust in 1873 sought its destruction and stealthily secured its demonetization. It was then worth a premium; why should it not be so again?

Whether it will be depends entirely upon whether we abandon it and deliver ourselves body and soul, as well as our children, for all time to this soulless creation, the gold trust. The effects of such a result upon the prosperity and happiness of the people of the whole world can not be calculated. It would be like opening the prison houses of the millions who earn their bread in the sweat of their face and inviting them out to enjoy the sunshine and breeze intended for all. Accompanying such an act by an assemblage, not of a monetary conference to settle the question of ratio, but of the representatives of all the governments in North and South America to agree among themselves in the coinage of an American dollar, would place silver as the American financier's king and a full rival in power and influence to the European golden king, whose palace is to-day in Lombard or Thread Needle street in London. This issue presented by such a combination could not be doubtful. The emancipation which would follow would be hailed as the blessings of a second Magna Charta, and its results follow us forever. The United States, with its superiority in wealth, manufactures, enterprise, and intelligence, would direct the commerce of the entire western hemisphere, and New York would be the financial center of the western world and the rival of London.

'And the people of the western hemisphere, freed from chains once before broken by their courage, but now riveted by the moneyed power of Europe, would, under its inspiring influence, be beyond all future attempts at subjugation and our enfranchisement fully achieved. We would, of course, hear the old stale cry that the people could not absorb the silver. The fact is that the people to-day do not absorb the gold supply. It is only found in the banks and the great vaults of the great cities, or, when plenty, in the Treasury of the United States; they preferring its gold certificate to the gold itself. The simple Treasury note, issued in lieu thereof by the Government of the United States, exchangeable, not redeemable, at all the subtreasuries, would give it additional strength, for while it would represent the silver token, it would carry with it the power, strength, and dignity of the United States with its great people and their immense yearly productions of wealth behind it. Surely they would be the equal of the clearing-house certificates of New York and Boston, which alone saved those cities from a fate equal to the fate

of Sodom and Gomorrah. It would have solved the currency question forever.

The power of the gold trust would be forever broken. Money would, to a great extent, lose its incentive for evil and recognized but as the handmaid of agriculture, commerce, and manufacture it would go hand in hand with these three great avenues to prosperity with smiling countenance, a companion in sunshine, and a friend in adversity. Again we would hear the pitiful cry of inflation. Oh, yes! I said the gold trust was soulless, but even their triple-plated armor would be pierced and the place where th soul once was would give evidence of their agony, when confronted with the idea that the people were no longer dependent upon them for relief, and that they would be forced to loan at reduced rates of interest or use it in legitimate business, drawing but one percentage instead of loaning it to others to use—thereby forcing the people to pay two percentages for its use.

Inflation! of course. It would carry stability, friendship, and courage with it, and, as a logical sequence, prosperity to every community and the enhancement of the prices of labor as well as the products of labor. How beautiful are those laws which double the value of gold, beside the infamy of those which double the value of labor and property. This is the marrow of the entire controversy. The one side fighting for mastery and the other for freedom. Whether the value of gold shall continue to increase or the homes and the products of the great toiling millions who own this magnificent country. To this end we shall finally come. It may be deferred, but it will come. It took our English ancestors hundreds of years with many wars to permanently establish the principles of the Magna Charta, but to-day it is the very breath of our political existence, just as the enactment of the principles I thus foreshadow will be of our financial freedom.

The task before us is formidable in the strength of our enemies; but not more so than that of our forefathers when they undertook to break the shackles which bound them to England; and, following their example, every nation of this hemisphere finally accomplished it, and to-day the Monroe doctrine is a "fiat" which no European monarchy dare to infringe, receiving its final crown when the French troops, under American orders, left Mexico. Having thus achieved our freedom and maintained it in connection with our glorious unity and history, who but those who are cowardly at heart, traitorous in mind, or corrupt in finance will say that in our matured strength we can not free ourselves from this impending catastrophe, if we so desire it. Who can contemplate with serenity the results that would follow the success of this last most fearful and fatal blow to the liberties of our race.

Forty-five years ago I was one of 76 backwoods Missouri boys, under command of Lieut. (now Col. William B. Royall of the regular Army) encamped on the Arkansas River, near Coon Creek. We were attacked by 800 Comanches and Apaches, and after two hours' heavy fighting, repulsed them with a loss of 63, whom we buried in the sands. They were armed with bows and arrows and lances. We were armed with breech-loading carbines, and superior arms alone saved us from destruction. Thirty years afterwards the gallant Custer with his splendid dragoons met Sitting Bull with his warriors armed with Winchesters, and but one man got away to tell the tale. It was simply a question of weapons. The "semibarbarians" of the West are fighting with bows and lances, while the gold trust uses breech-loading carbines. Arm us equally and the Custers of finance will meet a similar fate. If we surrender our weapons to the gold trust we may be thankful if we get decent burial in the sands. If, however, we choose our own weapons, as we have the right and power to do, we can successfully resist the most powerful assailants of the monied powers.

Let us not underrate or mistake the purposes of the gold trust. It is buttressed by the monarchies of the Old World, and behind them are the gold Warwicks who uphold their thrones. They mean absolute power and control. They will admit no partnership, no membership, that hesitates in absolute obedience. England feels that with this question settled in her favor she is more than compensated for the loss of her colonies in America, for she regains in rich and powerful subjects a hundredfold more than she would have had, had she held possession of them. The scheme is worthy of her greatest statesmen, who find that she can conquer and subject countries through her financial policies, upon whom she could make no impression with arms. She has changed the policy with which she opened the ports of China for easier and more powerful methods, for she finds in the United States men who are ready to open the "gates of Troy" and invite her with songs and music to take possession. The powers of government are but spider webs in their sight, for their golden king rules the world by humoring all shades of political authority, taking care, however, that the tribute exacted, without which it can not exist, is rendered with thanks.

The silver party are men like Putnam, who left his plow in the furrow to fight for the liberty of his race. The one is a rich, powerful, and compact army, ready for the fight, and, conscious of their powers and their opportunity, are pressing it to a finish. The other is but the undisciplined militia, betrayed and surprised, with no coherence of action, but with the common impulse of the men of '76 and determined to maintain their inheritance. Accepting the gage of battle, they writhe in spirit, because they are forced by the forms of law to await the ides of November, '94, when, with serried lines and unbroken ranks, they will be ready for the conflict. The grandest sight upon earth is a body of freemen gathered in their strength for the defense of their inheritance. What matters it that the gold trust has been preparing for this for years.

What matters it that every nonproducing section or self-constituted body is arrayed on that side. The great chambers of commerce of every great city; the national banks all over the land and almost every private one, all the great dailies of the metropolitan cities; the President and his Cabinet, with their enormous patronage, subsidizing Senators, Congressmen, newspapers and everything else that is purchasable, assisted by every money dealer and money lender, make up the personnel of this great army of uniformed knights. They feel themselves capable of overthrowing every opposition, and once secure in their schemes, with a two-third Presidential veto in their favor are confident of their power to defy the "silver barbarians." History, however, is full of such examples, but in the end the people lived, and the English race were never conquered when great questions involving their liberties were at stake.

Just so in the present case. Our fathers planted wisely when they placed the purse of the nation in the hands of the representatives of the people and reserved to them the freedom of electing them every two years. Executives, Cabinets, Senates, are but their dependents, and only live because they permit their existence. No power can thwart their will when thoroughly aroused. Even England's Queen bows her haughty head before the demands of the House of Commons, and the full power of our House of Representatives has never been tested. Therefore let there be no heart failure in consequence of this terrible array, with their Chinese gongs and carpet knights, but at the same time let us not underrate the strength, nor be misled as to the purposes of this culminating criminal of the present century, the gold trust.

"Truth crushed to earth will rise again,
The eternal years of God are hers."

J. H. B.

That is a voice from Missouri, a voice from the borderland of Kansas, a voice from one of those men who lived through those perilous scenes of conflict forty years ago. It can be seen how patriotic a man can become who has lived in excitement and seen the approach of danger. He understands and points out to you the exact situation, and tells you the exact question: which is, shall this colossal gold trust of Great Britain, with its emissaries in this country, rule the people of America, or shall we strike for financial independence?

To speak of financial independence and be on the gold standard, is absolutely absurd and ridiculous in the estimation of any man who has studied the question. One-half of the gold is already hoarded for war purposes and for plunder; it is pooled. No countries in the world have any loose gold which can flow from them to others without obstruction, except the United States and Great Britain. Every other country is protecting its home circulation in some way, and even Great Britain protects hers by raising the rate of interest and by favorable rates of exchange.

Even Great Britain, with an income from other nations of $500,000,000 a year in interest, can not maintain an international gold standard; and yet it is said that the people of the United States must maintain an international gold standard, and buy gold so that the speculators may have it at their will. With only eighty-two millions of gold and one thousand millions of stuff to be redeemed, we are told that all this stuff, silver, paper, and all, must be redeemed in gold, that it must be first reduced to credit money sustained by this eighty-two millions of gold; that we can strengthen it; and it needs strengthening every day and every hour. To do this you have to buy gold.

What is the result of going into the market to buy gold? Every gold king in Europe knows that there is going to be a great advance in gold if the United States carries out the plan that is proposed, and Europe in newspapers every morning speak of the advance in the price of gold if we undertake to buy it. We shall have to pay a large price for it. You will not get gold bonds at par for 3 per cent; gold will go higher than that, because other countries are seeking it and are holding it. Russia will not give up her gold, because she is holding it for war purposes; France will not give up her gold, because war is imminent between France and Germany.

Germany, for the same reason, will not give up her gold. You can not get gold from any nation except England, and it is estimated that in all the British Empire there is only about three or four hundred millions. There is a dispute as to the exact amount, but that is all they have there. They are not going to give up much of that. We can not get it from that country without paying a high price, and they have a constant call upon us for interest and can call it back whenever they please. They say that we must go on and load up this country with more debt and taxes and raise the price of gold, which rules the price of products. What is that but slavery—slavery at the hands of those who control gold? All money but the $82,000,000 is to be destroyed by reducing it to credit money.

This bill means to strike down the standard silver dollars, so that they shall not be capable of redeeming themselves, so that they shall not be real money. That is the object and that is what the gold ring claim they will do, and that we shall find ourselves on the gold standard. That means that everything must be redeemed in gold; it means bankruptcy, and poverty, and oppression. That is the object of it, and so a few men, having cornered all the gold, can draw it out and produce a panic at any time.

What is to hinder the gold trust if we buy gold and put it in the Treasury, taking greenbacks, silver coin, or anything else, and drawing the gold out? The Department is administered on this theory. You draw out your gold and have to buy more. They keep playing that game with you. They get all the bonds they please for any purpose. England needs good investments for this vast accumulating interest. There is an accumulation of $500,000,000, or probably $800,000,000 a year in England, because foreign countries pay $500,000,000, besides what the colonies and the empire pay, amounting to seven or eight hundred million dollars a year. They have that for investment, and they would like to have United States bonds to invest that money in.

With wheat and cotton and farm products at reduced prices and with property discounted 40 per cent, yea 50 per cent, now to buy this gold in that way makes slaves of the people. To-day there are many districts in this country where the farmers are so poor that they can not clothe and feed their children and send them to school. There are plenty of districts in that condition in the surrounding country, and not very far from here. Go 20 miles from the cities in any place and you will witness poverty among the people. Their products are selling for next to nothing, and yet it is proposed to buy gold and make this a permanent policy.

I have the proof right here that silver is the better money; that silver comes nearer the maximum of stability, which is the end and aim of all financial legislation. I suppose those who print such information do not know what it means. Of course they do not know what it means, because they have to wait

until some gold man tells them. Here is proof that silver is a stable and an honest metal.

Mr. VOORHEES. From what does the Senator read?

Mr. STEWART. I read from the Washington Post of this morning. I suppose they would not have printed the article if they had known what it meant; but accidentally the newspapers print dispatches which tell the truth when they do not know what is meant. Plenty of the gold papers print the truth in this way, not understanding it.

The heading is "Silver in India." The article reads as follows:

THE PURCHASING POWER OF THE WHITE METAL HAS NOT DECLINED.

The Treasury Department has received a report made by Acting Consul General Jamieson to the Earl of Roseberry, on the effect of the fall of silver on prices of commodities in China.

The Earl of Roseberry is a member of the English cabinet, and he is a brother-in-law of the Rothschilds, if I recollect aright.

Mr. McPHERSON. He is a son-in-law of one of the Rothschilds.

Mr. STEWART. The son-in-law of one of the Rothschilds. He was a good man to make a report to, an able man undoubtedly.

The report was made on August 5, from Shanghai, and the object, as stated by Mr. Jamieson, is to show the "position which China occupies in regard to the silver question."

Discussing the purchasing power of silver in China, Mr. Jamieson says: "In other words, the purchasing power of silver has not declined in respect to any of the classes of commodities, and has even considerably increased in respect of the first and last classes—food stuffs and articles produced abroad and consumed in China. The purchasing power of gold, on the other hand, that is, its local market value, has steadily advanced with every successive fall in the sale of exchange on London, till now 4 shillings will purchase what formerly required 6 shillings and 6 pence, or 60 pounds will now do what used to require 100 pounds."

He summarizes his conclusions: "China has not been within the memory of the present generation a great absorber of silver. The fall in the gold price of silver appears to have produced no effect on the general level of prices of articles produced and consumed in China. As regards articles produced in China and commonly exported to gold-using countries there is a slight tendency to a general rise. The fall in the price of silver has stimulated exports."

Does not that little report sent to your Treasury Department and printed here this morning speak volumes? It shows that the purchasing power of silver remains in Asia what it was; that there has been a slight rise in the prices of exports, which have been stimulated, and that they have had an advantage. There have been no hard times in silver countries. The great thing, in order to allow men to trade with each other, is to have an honest measure of value as a medium of exchange, so that neither party will be swindled by time contracts. That has been the condition with silver, and that is its condition to-day. In the United States silver bullion will buy as much of any commodity as it would twenty years ago. If you want an honest measure there can be no doubt that silver is that honest measure, and if you want a dishonest measure there can be no doubt that gold is that measure.

Under the gold standard the manufacturers of England, as I have before stated, were compelled to close because they could not compete with the manufacturers in India and other silver-standard countries, and great suffering was the result. The recent effort in England, in conjunction with our Administration, was to destroy silver and to quiet the clamor of the people of Great Britain which came up and which proved that India had such an advantage in manufacturing and in commerce that she was monopolizing the trade of the Orient, and that very soon English manufacturers would be excluded from that trade.

Hence it was necessary to destroy India. They were then warned of our rivalry, but they were confident that they could control us, being aided by the national banks, a subsidized press, and an Administration elected as bimetallists, who are willing to change front at the bidding of the gold trust. They were confident that our Administration would turn against our people, and they claimed to have official information in advance that the Sherman law was to be repealed. They predicated their action in suspending coinage in India upon that information. Witnesses stated before the English commission that the Treasury Department would stop buying silver, law or no law. Law or no law, the Treasury Department would annul the Sherman act by refusing to purchase silver bullion. They then suspended coinage in India to silence the clamor in Great Britain which was fast overrunning parliament.

England has not yet been able to put India on a gold standard, nor can they in the sense that we are on the gold standard. They can not allow the rupee to be redeemed in gold; it is simply fiat money as they hold it there. England can no more put India on a gold standard than she can put Austria on a gold standard to stay; that is, they have failed to be able to redeem the paper of Austria in gold. They have gold, but they dare not pay it out. It is held there, and it is for the interest of the gold trust to store it away there, because it is easier for them to control the balance of the gold. It is, in fact, a part of the gold pooled. A thousand millions of stuff to be redeemed, we are dependent upon borrowing from England the money with which to redeem it. No country was ever placed in a more humiliating and disgraceful position.

Mr. DOLPH. Will the Senator yield to me?

The PRESIDING OFFICER. Does the Senator from Nevada yield to the Senator from Oregon?

Mr. STEWART. Yes.

Mr. DOLPH. It seems to me that the Senator speaks very disrespectfully of all our currency but gold by calling it "stuff."

Mr. STEWART. Yes; I call it "stuff," in the language of one of your Cabinet ministers. He called it "pig silver." That is what they call it, "stuff," "pig silver;" and I call it, in the language of the gold ring, "stuff," and you are making stuff of it, which will breed panics, because you are making it credit money and reducing it to stuff. You are denying it the virtue of the stamp of the Government, although Congress declared it was standard money. You say it must be redeemed; so says the President; so say the entire Cabinet; so says the gold trust; and so say those officials who betrayed the people by getting elected on one issue and then doing another thing.

The situation is further illustrated, and you will find it in all the press, that England, on the gold standard, can not compete with silver countries. In proof of that assertion I read the following from a China paper:

There was a rumor in the bazaars of Bombay when the mail left that government intended to levy very shortly an import duty of 17½ per cent on silver imported into the country. The rumor, which was entirely unauthenticated, has caused a panic in the native commercial circles, where it was feared that the adoption of any such measure would be productive of a further loss being sustained by the Bombay spinning and weaving mills, which are worked at present without any profits, and in some cases at a loss. The native mill-owners are of opinion that, should the rumor prove true, all that they could do to prevent themselves from incurring any further losses in their trade, would be to entirely close their mills for three months or even a longer period. They are also of opinion that by the levying of the duty, Lancashire and other cotton-manufacturing districts of England would be in a position to compete with India and find a market for their goods in China. They believe that the rumored course might be beneficial to government and to merchants and tradesmen of Europe, but would be a sort of deathblow to the mill industry of India. However there is at present no confirmation of the rumor. On Saturday last the Russian minister of finance issued an order directing that the prohibition against the importation of foreign silver coins shall come into force on September 13 next.

Now, this is what I said and what I have been contending for all the time. The object was to put them on a gold standard to reclaim the Indian trade. I saw an article this morning discussing the question in regard to putting on a duty upon silver imported into India for the purpose of increasing the value of the rupee, and thereby crushing these Indian manufacturers.

Mr. McPHERSON. I wanted to make an inquiry of the Senator, but I see that the Senator has already answered it.

Mr. STEWART. Here comes the Pall Mall Gazette of August 31, 1893, after giving the figures as to our money, discussing the affairs of the United States, which I will not read, but will print, as the first part is in figures, speaking of our currency and what we are doing. This is instructive and shows just where our Pan-America might be if we had the independence to relieve ourselves from the shackles of England.

UNITED STATES FINANCES.

The recent diminution of the resources of the United States Government can not be too fully recognized, especially as it has been of such an extent, financial position would in itself be a sadly interesting object of consideration, and so rapid, as to be quite phenomenal. The sudden dissipation of a strong even if it did not possess so much practical importance. The case is concisely put in the official report from which we quoted yesterday. The principal features of the last four financial years, that report says, have been the gradual shrinkage of the surplus and the increase in the Government expenditures. In the spring of 1889, when the Republican party came into power, there was a surplus in the Treasury of upwards of $100,000,000. Last year it was barely $10,000,000. This year it will hardly reach $2,000,000, and next year there will probably be a deficit. The chief causes of this change have been the extravagance of the Fifty-first and Fifty-second Congresses, the reduction in revenues due to the McKinley act, and the enormous increase in the payment of pensions. From 1872 to 1879 the sum annually paid for pensions by the United States Government did not exceed $30,000,000. In 1891 it had risen to $124,415,000, and during the present fiscal year it reached a total of over $160,000,000. Fifteen years after the war there were 250,800 pensioners on the roll. Four years ago there were less than 500,000, and this year there are over 900,000.

ARGENTINE AGRICULTURE AND THE PREMIUM ON GOLD.

We are so accustomed to looking upon an advance in the premium on gold at Buenos Ayres as an unmixed evil, leading to depreciation of securities and disturbance in finance, that we seldom regard the matter from the other point of view—the point of view from which the Argentine agriculturists and other local producers regard it. Among the circumstances which have combined to favor agriculture in Argentina in recent years—and the strides which the country has made from the pastoral to the agricultural state are remarkable—one of the most important has been the high premium on gold. This is made quite clear in a foreign office report just issued. The premium on gold has conferred a distinct advantage on the local producer who supplies articles for which there is either a demand abroad or which compete with a similar imported article. For either of these two classes he obtains a price based on the gold value of either of those two classes of articles in European markets. In the case of the former class, or exports, the produce sells for the value in foreign markets, and in the case of the latter class, or imports, the produce will fetch a price which is sufficiently low to undersell the similar foreign article, which pays a very heavy duty. The producer thus practically obtains a gold price, whereas he pays all his labor and current expenses in depreciated paper currency, thereby realizing an extra large profit. Hence the possible doubt as to the continuance of agri-

culture on its present large and rapidly increasing scale and of many now flourishing Argentine industries, should the premium on gold fall greatly and again approach par.

We have been saying all the time that they have had the advantage over our agriculture, that we were supplanted in the European market by the wheat and corn of India. Russia has the same advantage, because while she does not coin silver she keeps enough paper money out to keep it on a par with silver. Her rouble is on a par with the rupee all the time by the issuance of fiat money, and consequently the productions of Russia and of India are supplanting those of the United States in the markets of Europe. This gold scheme is fastening the chains of slavery upon our people and reducing them to abject poverty and misery. We understand it.

Here is a very able article from the North China Daily News, of May 12, 1893, with a table, upon this same question. The question is so little understood—the advantages of an honest silver currency are so little understood that I must be pardoned for calling the attention of the Senate to matters that they will not read, to matters that the press will not publish, to the facts as they exist elsewhere.

THE GOLD QUESTION,

To the Editor of the North China Daily News:

SIR: In my letter on this subject, which appeared in your issue of the North China Herald of the 17th of March last, I wrote:

"If it can be established as a fact that an ounce of silver will now purchase or exchange for as much on the average of certain articles (whose value has not been materially affected by other causes than those connected with currency) as it would have done twenty years ago, then it must be apparent that its purchasing power, that is, its value, has not diminished in that time.

"Believing as I do that this point can be most readily determined here in China, where silver is the standard of value, and gold but an article of commerce, and where the productions of the soil, and of manual labor have not been so much affected by extrinsic causes, such as cheaper transportation and improved methods of cultivation and manufacture, as in western countries, I venture to ask for a little space in your columns to bring forward such facts bearing upon the question as are readily available."

Since writing that article I have been more than ever impressed with the superior advantages offered by this country for investigating the subject, for the reasons above stated, as China is essentially a silver-standard country, and its financial system of the simplest character—free, except to the most limited extent, from all the complications connected with heavy loans and their attendant issues of Government obligations; and, furthermore, as the methods of agriculture and manufacture are practically the same as they have been for hundreds of years. In the matter of transportation, too, there has been no change, except on the coast, while the interior traffic is carried on in the same manner as it has been for generations past. It must be evident, therefore, that the cost of production here has not been influenced as it has been in the western world, by recent improvements in machinery and increased facilities for transportation which have altered from year to year the prices of commodities there, thus rendering them less suitable for purposes of comparison than those of this country, where the principal fluctuations in value are chiefly due to the vicissitudes of climate.

Since writing this article, moreover, the matter of currencies has formed the subject of debate in the House of Commons in England, and the appreciation of gold has been called in question there, as it was at the Brussels conference, by members who evidently have not given such careful attention to this point as its supreme importance most undoubtedly merits; so that it seems to be one's duty to aid in uprooting this financial heresy, by bringing to light the data procurable here, which I am certain are quite sufficient to open the eyes of all but those who will not see, to the fact that silver has not as yet, at all events, depreciated in its purchasing power; but that gold has appreciated enormously, and that all the disturbances of exchange and values in the gold-standard countries have been caused by the constantly increasing capacity of that so-called standard itself.

I have, therefore, availed myself of the rich mine of statistical information contained in the official publications of the returns of trade, made annually by the imperial maritime customs of China, to prepare a table of index numbers of twenty of the principal articles of production of this country, which I trust you will be able to find a place for in your paper. With regard to the articles selected, I would remark—

First. That they are taken from the returns of the northern ports of China, Newchwang, Tientsin, Shanghai, Chinkiang, Kiukiang, Hankow, and Ningpo.

Second. That they are productions of the country in the neighborhood of the ports from the returns of which they are respectively taken, and are among the most important articles of trade at those ports, many of them being such as are exported chiefly if not entirely to other parts of China for consumption.

This table is prepared on the same principle as are those in use in Europe for demonstrating the course of the market values of different articles of trade for a series of years, and, for the benefit of those who may not be familiar with it, I may explain that the initial values (in this case those of 1873) are taken as a standard at 100, or par, and those of succeeding years at the decimal equivalent of the average value of each article for any given year. Thus the values of all the articles are reduced by the decimal system to a uniform basis, and the course of each can readily be followed from year to year, as well as that of the aggregate value of all the commodities; so that it is very easy to determine at a glance whether any individual article has gone up or down, or whether the aggregate is increased or diminished as compared with the standard or starting number 2,000. The values of the commodities selected are, of course, on a silver basis, in the equivalent of taels, and, taking the par value of the aggregate at the decimal 2,000 in 1873, and following the line of aggregates for the ensuing years, it will be seen at a glance that, after a few variations, in none of which do the totals rise materially above the standard (2,000), prices settle down in 1892 considerably below the starting point, in 1873; which demonstrates that on the whole prices here in taels are lower than they were in 1873, or that the purchasing power of silver is certainly as great, if not slightly greater than it was then; as it is evident that 1,761 taels, the total for last year, would buy as much on the average of commodities generally as 2,000 taels would have done in 1873.

An examination of the table will show that the several articles have fluctuated considerably in value, from year to year, owing to natural causes—supply and demand, etc.; but there has been no general movement at any time in sympathy with the variations of exchange, and in particular in no article has there been a tendency to a regular advance in value such as must necessarily have taken place had there been any decline in the value or purchasing power of the standard, silver. Two or three of the articles stand at a higher level in 1892 than at the starting point; but a glance backward along the lines will show that this is simply a recurrence of high prices which has repeatedly taken place during the twenty years covered by the table, and which is chiefly due to droughts that have at times prevailed more or less extensively over the whole of Northern China, and very severely last season. On the other hand, there are several articles, and particularly teas, that have been affected in the opposite direction, and have suffered a reduction in value owing to a greater or less extent, probably, to a falling off in the demand; but, if the total of all the deficiencies on such articles were added to the aggregate for 1892, it would not bring the amount up to the par value, 2,000, of 1873. In other words, if the decimals for each of these articles were taken at 100 in 1892, the same as 1873, the aggregate would not be brought up to 2,000.

In China, as is well known, gold is in no way connected with the currency, and is simply a commodity, in every sense, as much as are teas or silk. No one here would think of offering a bar of gold in payment for any ordinary purchase, nor is it, or any other form of gold bullion or coin, ever seen in this country in circulation. Taking it, therefore, as a commodity, as it actually is, a reference to the commercial circulars, where it is regularly quoted, will show that it has advanced from 162 taels of silver per bar of standard weight and fineness since 1866 to 261 taels (the highest point touched) in March last, or somewhat over 60 per cent. That the advance from 1873 to 1892, inclusive, may be properly appreciated, I have given the silver equivalents of gold in each successive year in the horizontal line under that of the aggregates of commodities, adopting the same standard, 2,000, in 1873, as the starting point, and it will at once be seen how the commodity, gold, has advanced above the silver plane, 2,000, which silver, and all commodities, including gold, occupied in 1873.

That this enormous divergence between the values of gold and silver is entirely owing to an advance of the former and not, at all, to any decline in the latter, is, I think, abundantly proved by the attached table; for if silver had really gone down, even 5 per cent, then the aggregate value, for 1892, of the commodities specified would have been more instead of less than 2,000, and, with a decline equal to the difference between the two metals, instead of 1,761, as it now is, it would have been at least as high as the other commodity, gold, which stands, as shown in the table, at 2,950.

I am, etc.,

W. S. WETMORE.

MAY 11, 1893.

Table of index numbers for twenty Chinese staple commodities.

[Compiled by W. S. Wetmore from the returns of trade of the imperial maritime customs of China.]

*Assumed, returns of the article referred to not having been made.

SHANGHAI, *May 11, 1893.*

This has not been brought forth here. Here is a table showing some statistics of a country that is stationary. Much has been said about our improved methods of production, and that the advance in the price of gold was imaginary and not real, owing to natural causes that had reduced the average range of prices. We have frequently heard that statement, but when it has been investigated, that theory has been discarded by all philosophers and writers on economics. Even the great monometallist of Europe, Mr. Giffen, the great statistician, admits that there has been a very large appreciation in gold. But here we find a disturbance of 60 per cent, when gold has gone up in purchasing power 60 per cent, where you have had none of these improved methods, and where silver has advanced slightly in its purchasing power.

I regard the labors of this man as very valuable, as throwing light upon a disputed point.

How important and valuable it is to know which is the honest measure. It was a dishonest measure that closed the factories of England. Why could not robbery compete with the honest silver of India without the interference of the Imperial Government? If we open our mints and join the silver-money countries we shall have the trade of those countries and shut out Europe, and she will be brought to her knees; then she will have to open her mints to equalize; there will be no way by which she can destroy the prosperity of any civilized country; she can not lead us if we are represented by true Americans, if we are not betrayed. She can not continue to do to us as she has done to India, and as she is doing to us now.

Here we are commanded to change our policy, to have no money except what we borrow and what we pay for by such sacrifices as the world never before saw in wheat and cotton; that we shall carry on this policy of buying gold and putting it in the Treasury, and saying that the standard silver dollar shall be treated as credit money, and that prices shall fall and crush our finances and impoverish our country to buy gold.

Who makes the demand? Those who have gold to sell, those who have got the call on gold for $800,000,000 annually which is to be paid from the products of all the world. They ask us to enhance the value of their gold, to plunge this country in debt, to crush it by taxation, for the purpose of giving them a place to invest their annual interest income in safe bonds and for the purpose of enhancing the value of those which they hold.

Yet a subsidized press has the audacity to call this public sentiment, to call it the demand of the country, when the country has demanded the exact reverse, and when this gold ring would no more dare to submit the question to the people than it would to face the cannon's mouth. Submit it to them! No, they would never submit such a question as that. They play their tricks in the dark. They deal with marked cards and with loaded dice. They deal with members of Congress after their election. They nominate Presidents on false platforms to deceive the people. They can afford to spend a great deal of money for this purpose when the whole world is working for them.

I now read an extract from the London Standard to show the alarm which was then in existence. This was reprinted in the Chicago Inter-Ocean. The comments of the Inter-Ocean precede the article, which is headed "The London Standard's warning." It is taken from the Chicago Inter Ocean of Friday, July 28, 1893:

After explaining to its readers what has been done in India on the silver question, explaining the matter somewhat fully, the London Standard, the leading organ of British conservatism, winds up its editorial with the following "succedaneum" remark:

"What if the United States joined Mexico in declaring for 'free coinage of silver,' throwing over gold as too dear? What if the two American continents held out the hand to further Asia, and said: 'Let us have the white metal for our standard'? Chile, now hard hit, would eagerly respond, and all the crippled States of South America, and Mexico, and Japan, and China, and Java—all that mighty East, which cares little for Simla. It is a great danger, to which the present outburst of alarm and fear must not render us oblivious."

A great danger! I wish my friend from Maine who favors the passage of this bill would listen to that language. This Pan-American scheme may be regarded as a great danger! To whom? A great danger to British control. The bimetallists pointed it out when they suspended coinage in India. They pointed out to the British Government that it had not done enough. China and Japan may establish factories, but they reply and say: "They are slow countries." But they say, "Suppose the United States should adopt free coinage and join these countries, then that would be ruin to Europe; Europe would be shut out from the entire silver-standard countries and from our large trade." They understand that perfectly, and that is why the British Government, the British papers, and the British representatives in this country, and in this capital are so anxious to consummate this crime and do it quickly. They are anxious to have this giant bound and gagged so that it will not rise in its might and shake its fist at the tyrant. That is humiliating to our people.

Here is an interview with a very intelligent Mexican as to the effect of an international congress. It is an interview with Señor Don Alvarez, a merchant of the City of Mexico, and published in Our Republic, Oakland, Cal.:

CITIZENS READ THIS—WHAT A PROMINENT MEXICAN SAYS OF OUR TRADE POSSIBILITIES UNDER A FREE SILVER POLICY—VAST COMMERCIAL RELATIONS WITH MEXICO AND SOUTH AMERICA—BRAZIL, BOLIVIA, ARGENTINE REPUBLIC, CHILE, URUGUAY, AND PARAGUAY WOULD ALL TRADE WITH THIS COUNTRY INSTEAD OF GOING TO GREAT BRITAIN.

In order to reach all the business men of Oakland and San Francisco we print the following article:

[Denver (Colo.) Road.]

Señor Don Alvarez, a gentleman doing business in the City of Mexico, called on us this week.

He conducts a large mercantile business in that city and is visiting America for the first time.

"You have a grand country," said he. "I have been in New York, Boston, and other cities and visited the World's Fair at Chicago. I never dreamed your country contained such a progressive, inventive, and pushing people. I wish I could do business with your people, but I can not. I buy your cotton goods through London and Liverpool brokers and pay them in silver bullion, which they carry to India to coin into rupees that pass in India trade at par with gold. By this means they do by my country as they are doing by this beautiful nation of yours, namely, ruining our farming industries. By the way, I cut this article out of one of your Denver papers this morning, and I wish you would read it."

After looking over the numerous other newspaper clippings, he at last found what he wanted us to read. It read as follows:

"NEW YORK, *July 20.*

"The Evening Post says: 'The effect of the proposed closing of the large Amoskeag cotton plant in Manchester, N. H., during the month of August, it is asserted, has been generally overestimated. This, at all events, is the view of many of the leading cotton merchants here. It is regarded as probable that many other mills in New England, such as the Manchester mills, the Pembroke, Webster, and China mills, and the York Manufacturing Company of Saco, will shut down, but, nevertheless, the situation is not considered an alarming one by the New York merchants.

"'The closing of the Amoskeag mills will undoubtedly be followed by the closing of other large manufacturing concerns in New England and perhaps in New York. It will be done as a precautionary measure to prevent a large accumulation of goods during the autumn. There is already a large accumulation of ginghams, which will be forced down in price if the production continues at the present rate. A large proportion of these are goods for the spring trade. In view of the present financial disasters it is hardly to be expected that the country will have recovered from the drain by spring, so that trade will then probably be anything but brisk. In view of a smaller demand, therefore, it is but natural that the mills should diminish their output accordingly. This is best done by stopping work altogether and thus saving the heavy expense of keeping up the power, besides a whole month's wages. A month's wages for the Amoskeag operatives, I understand, amounts to as much as $225,000. This is the best time of the year for such a measure, for most of the operatives wish to take a vacation during the summer or can at least in winter when their living expenses are so much higher. If the mills had not decided to close now, they would probably have had to do so in December, when it would have been a very serious matter for the operatives.'"

After we had read it we handed it to him and remarked: "It's sad, isn't it?"

"Yes," said he, "but it is sadder still when one contemplates how utterly foolish it is to permit such a condition."

"How would you remedy it?" we asked.

"Easy enough!" he exclaimed, as he lit a cigarette and settled himself down in our big armchair. "Now listen. I buy thousands of yards of Amoskeag cotton in Europe every year, as all Mexican merchants do. Now, suppose your manufacturers would come to our Mexican merchants and say: 'Here, we have passed a free-coinage bill and can now allow you $1.29 per ounce for our silver against 70 cents per ounce allowed you by England.' How long would your Amoskeag mills be without orders under such a condition? Why, in no time they would be submerged with orders, and we would use Amoskeag and other American made cotton instead of that grown in India and manufactured in England. In fact, America would capture our entire trade, not only in cotton goods but in every other line of manufactured goods. Our people would exchange all their spare silver for American manufactured goods, if your people would declare free coinage for the metal it so abundantly produces, that would enable you to allow us $1.29 for our silver. Not a dollar of our silver would go to England at 70 cents an ounce, or any other price under $1.29 per ounce.

"Such a rise in silver Mexico yearns for. Our agricultural industries would immediately take a step forward and thus relieve the distress that now exists among our peon system. Speaking of peons, your country will have plenty of them in another ten years if during Cleveland's extraordinary session gold is made the sole basis of American prices and values. I can't conceive what your people are thinking about. To the south of my country lies a whole continent of silver nations eager to break away from the slavery of the Rothschilds-Bank of England combine. Your nation could capture the entire trade of Brazil, Bolivia, Argentine Republic, Chile, Uruguay, Paraguay, Peru, Equador, Colombia, Nicaragua, and the Lord only knows where you could reach—why, you could reach into China, India, and Australia by allowing $1.29 for silver."

"Yes," we interrupted, "but that would bring a flood of silver to this country, and we would become the dumping ground for all the silver of the world."

"Ha! ha!! ha!!!" laughed the señor, "suppose you should become the dumping ground for silver, wouldn't it be a blessing compared with the present condition that now faces you? If we dump our silver upon you we would not do so for the fun of the thing; we would buy your manufactured goods, and when buying them we would stimulate your manufacturing interests until the time would come when you couldn't find people enough to work in your mills. Would that be a sad condition?"

"No, but England would withdraw her gold, and——"

"Oh, bosh!" interrupted the quick-witted Mexican. "Suppose she did; what figure would that cut?"

"Our bonded debts," we ventured.

"Were made payable in coin," the señor added, "and silver was coin when the debts were made, besides, by that time England would allow $1.29 per ounce for silver just as quickly as Americans, for she would be fighting for her life to retain her commercial supremacy, and the only way she could hold her trade would be to either allow $1.29 per ounce for silver, the same as America, or order gunboats out and destroy the United States.

"Should she try the latter scheme, she would find the entire western hemisphere helping the United States, besides the nations like France and Russia and the entire Latin Union would be glad to dip into the row and help to

make it hot for the Rothschild family of gold owners. I tell you, my friend, the United States has it in her hands to obliterate the gold corner, and nothing can defeat you but the treachery of your President and the Shylock-owned tools of Wall street, who are backing him. I glory in your spunk when you hoist your black flag and yell 'Free coinage or a free fight.' Keep it up, and if the New England States succeed in killing the great cotton States of the South and your wheat-growing States of the Northwest and Pacific slope, and your mining States, let them do it. Then it will become your duty to boycott the Amoskeag mill and all other mills—usury mills and all, and begin to throw your trade elsewhere—among your own kind of people. By and by the great Pan-American idea of your late lamented Blaine will begin to become clear to you, and when that day comes you silver men will find plenty of friends below the Rio Grande River willing to ride bridle deep in blood with the devil, your Government, or anybody else, in order to destroy the condition of human slavery the Jew gold-metal owners have built up through their control of the monetary system."

That is the view of this Mexican gentleman. Unfortunately we have appeared to very great disadvantage when discussing this question with the representatives of other nations. When the Pan-American Congress was in session here it was humiliating to witness the contrast between our representatives and those of other countries in the arguments made at that conference. They pointed out the magnificent harvest of prosperity that was in store for the western hemisphere if they could declare their independence from English supremacy. They said "We have a magnificent country with its resources untouched, that will produce everything that you require; you now have to trade with us through England, and the balance of trade against you is from $130,000,000 to $150,000,000 per annum. You must have what we produce. You have made the conditions such that we can not trade with you. Break those conditions, brush them aside, give us a common coin, and establish a common brotherhood of nations; and then the western hemisphere will have prosperity. But without the United States we are helpless; without the United States we are subject to be plundered. We appeal to you as the great progressive nation of the western hemisphere to join us and establish a common coin that shall be honest, that shall measure the labor of man honestly, that shall enable us to pay our debts in honest money. Adopt a common standard of money that was the money of the world before gold was coined. Adopt the standard that has been in use among the great masses of the people from the dawn of civilization. Adopt the standard that will furnish money to the common people. Adopt the standard of money that is used by 1,200,000,000 common people. Reject the single standard of money of the rich, which they have cornered and hold, and with which they intend to destroy you if you attempt to get it."

Gold never circulated among the people. It passed with silver as an adjunct, irregular in production, sometimes hundreds of years passing when there was little or none produced; a capricious metal: the output now being consumed in the arts.

I have heard it remarked that if all the people in the world had their teeth filled that ought to have it would ruin England; that that would produce universal bankruptcy under the gold standard in a single day. It is being hoarded in Europe for military purposes. Yet here we are supplicating Great Britain, and there she stands with a string attached to the foundation of our currency, and she can draw it from under us whenever she pleases, and can rejoice in the collapse and the disaster, and can then come back and gather up the harvest.

Oh, if there were patriotism in this country! oh, if there were statesmanship! oh! if they would but hear the voice of the people, if they would obey the majority, if they would not defy the majority, we would have no trouble.

Ah, who are the obstructionists? I say that those who obstruct the will of the people obey the Executive. But those who obstruct the foreign gold trust repudiate the Executive and money control. If we are not in the majority in this Senate in votes, we are in sentiment. If the gold trust were on the other side, we should have four-fifths of the votes of the members of both Houses, on their conscience, on their convictions, and according to the speeches they have made to their constituents for the last twenty years.

[At this point the honorable Senator yielded to his colleague.]

Wednesday, October 25, 1893.

Mr. STEWART. Mr. President, on the 24th day of September, 1892, in addressing my fellow-citizens of Nevada, I used the following language:

How have we been making the fight?—

That was the silver fight—

We have been trying to make it within party lines. There is no possibility of either of the great parties taking up the question of silver. They are both under the control of the gold ring. The platforms of the two parties are written by the same persons. They are substantially the same. These parties are fooling with this question, just as the Whigs and Democrats did with the slavery problem. As many of you will remember, the Whigs and Democrats put in their platforms the same plank and nothing could be done until the third party rose.

Now, when the two parties unite, somebody must protest. They have the whole thing their own way now. The Republican and Democratic parties have united and agreed that there should be no agitation of the silver question. Why, it is a sham battle between them; they are fighting about tariff schedules. Both of the parties are going to raise the same amount of money by a tariff for the operation of the Government, but they allow the people to fight over the manner of raising this money in order to distract their attention from the chief issue, the silver question.—*Chronicle, Virginia City, Nev.*, September 26, 1892.

I read from the New York Tribune of this date, October 25:

Republicans have won, and owe their victory to President Cleveland.

Again, the Tribune says:

Unconditional repeal is exactly the thing which tests the matter, and the Republicans are able to rejoice in the President's recommendation and unwavering support of that solution.

I now read from the leading Democratic organ, the New York Times, of this date, upon the same question:

In the situation at Washington as it has finally developed it is a source of sincere gratification that the Republican Senators, with the exception of the few rabid silver men, have acted in such good faith and with so clear a conception of their real duty. They knew that for the Democrats to refuse to follow the House and instead to adopt any compromise would be fatal to the Democratic party and of corresponding advantage to the Republicans. But they have steadily refused to lend their aid to any form of compromise, and have stood ready to support an amendment to the rules which would bring the Senate to a vote, though they knew that such a change would diminish their own power to resist the legislation of the majority in other directions. In this way the settlement of the financial question becomes, as it should, the work not of a party, but of the truest representatives of all parties.

I knew two years ago that there was really but one party in this country, and that was the gold party. I know it is hard for men to realize that there is a power higher than their party which controls its operations. It is hard for men to break from life-long associations, and it is well that they should hesitate before taking such a step; but, to my mind, it has been as clear as the noonday sun that the gold trust, which has its headquarters in London, is the dominant power, not only in this country but in England, Germany, Switzerland, Austria, Spain, Egypt, India, and some other countries. It is not entirely dominant in France or in Russia. Those two countries have taken every means they can to resist it, and are standing out bravely against this almost omnipotent power, but that it has had control of both political parties in this country I have been aware for a long time.

In the speech I made a year ago last September, from which I have read, I stated in some detail the proceedings which had been taken by the two parties, or rather by the gold party, to place candidates in nomination who would carry out the behests of the gold ring. Some of my friends in both parties read the platforms of their parties and said to me that these were bimetallic platforms, and inquired of me how I could doubt the good faith of these great national conventions; that they would not dare to say to the people that they were in favor of the coinage of both gold and silver upon equal terms, and then repudiate such a declaration. I told them I was satisfied that, as soon as the election was over, they would learn that there was a power greater than conventions, a power that would control the parties and that would bring them together as one party upon the main issue. I was not mistaken.

I am gratified at the patriotic stand taken by the majority of my Democratic friends in this Chamber. They have resisted long and vigorously, and they would have been successful in their resistance if it had not been for the Republican Administration Senators, who are eager to carry out the designs of the gold party and place this country on a single gold standard.

The fidelity of the Republicans to Mr. Cleveland is appreciated by the leading Democratic paper of the United States. I say "the leading Democratic paper," but perhaps I ought to qualify that. It has been for a long time the leading organ of the gold trust—the most persistent, the most consistent, and the most aggressive in the land. It does not forget to extend its thanks to all the true followers of the Administration, while it commends in the highest terms the President of the United States for taking in hand legislation for usurping the powers of the two Houses of Congress and forcing his views upon the country, irrespective of the legislative department.

I find in this morning's Washington Post language which would not have been published by any paper in the United States forty years ago. I read it to show the change of the times and the aggressions of the executive department upon the legislative department of this Government. I read from a description of our proceedings contained in the morning Post:

Unconditional repeal, with President Cleveland in the saddle, after jumping hurdle after hurdle, is at last coming around the last quarter, with the home stretch in clear sight. The race is nearly over. It has not been uneventful, although more than once the interest of the spectators seemed to lag, the old horse moved so slowly. Once, when Compromise was running head and head with the favorite, there was a good deal of shouting and the crowd thought that the race was over. Then President Cleveland showed his opponents how little they knew about jockeying, and now he comes galloping in, an easy winner in the home stretch. More than one rider, however, has been unhorsed, and the track has not been altogether free from mud.

[Laughter].

That is the way the executive department rides over Congress. His opponents sometimes underrate the President's capacity as a jockey, but now he is congratulated for having overridden Congress, as he is on the home stretch and sure of victory.

I find in the editorial columns of the same paper the same spirit of congratulation of the masterly skill with which the President assumes both the executive and the legislative power:

The triumph of unconditional repeal in the Senate, which is now practically assured, is a pronounced and unquestioned triumph for President Cleveland, in the sense that it means the passage, absolute and unqualified, of the legislation for which Congress was convened and which Mr. Cleveland, without the slightest deviation from his original line of policy, and without the surrender of a solitary point, has insisted from the beginning should take precedence of all other legislation.

The President has not lost a point in the game. Congress has been absolutely submissive. The President called Congress to do a thing and commanded it to obey without deviation, without the dotting of an *i* or the crossing of a *t*; and it is said Congress is about to obey. Such editorials as these fifty years ago would have alarmed the country; but now it appears that the entire press representing the gold trust—I mean the press in the commercial centers—are rejoicing at the great and irresistible power that the Executive has over the legislative department.

But, Mr. President, there is another tribunal before which this question may be tried, and when that tribunal understands the real issue to be between the rule of a gold oligarchy, composed mostly of alien enemies to this country, and the right of the people to have and to maintain an independent financial policy for the United States, I think there will not be much doubt what the verdict will be. True Americans can not march under the banner of a foreign gold syndicate; they will not march under that banner when they know that it is unfurled. They have been blinded by the clamor of newspapers and by the sophistry of public men. They have been lulled to sleep by the declarations of the platforms of the parties that bimetallism was the real end and aim, but now they will be undeceived.

Some one has sent me from the office an advance copy of Harper's Weekly, which is dated the 28th day of October, and which would come out regularly on next Saturday. But I presume that some one thought that I should be gratified to have the information early. I will read from that a few sentences to show how this conservative organ of the gold ring, always true to the money power, views the issue now pending:

The country needs to have done with the silver business; but the silver men want to put off the settlement, hoping for a better chance after three or five years. If an arrangement is now made for simply limiting and restricting the silver issues, we shall before long have to fight the same battle over again.

* * * * * * *

To repeat, the time has come to be done with the silver issues. The business of the country is depressed and needs the tonic of an emphatic repudiation of the silver schemes. The gold reserve of the Treasury stands at the lowest point ever reached since resumption in 1879, and much below the one hundred millions limit which is rightly regarded as the danger line. The financial position of the Government is further threatened by the serious decline in the revenues, itself largely the result of business depression. Compromises we have had enough to show that they are but patchwork. Compromise now means not only a postponement to the future of a real settlement, but an aggravation for the present of a gravely disquieting situation. Let us have unconditional repeal, cut loose from the drifting policy of the past, and start afresh on a currency policy which shall not have for its basis a depreciated and depreciating coin basis.

Marking out a policy that we shall not have a depreciating coin basis, but that we shall have an appreciating coin basis. Here is some indication as to how that basis, gold, will appreciate. I read from a dispatch in the Washington Post of yesterday morning:

ON THE VERGE OF A PANIC—THE FINANCIAL SITUATION IN INDIA DAILY BECOMING WORSE.

LONDON, *October 23.*

A special dispatch to the Times from Calcutta says: "Money is daily becoming scarcer. The 4 per cent discount rate of the Bank of Bengal is no criterion of the situation, as the bank artificially maintains the rate. The Bazar rate of discount is really 8 per cent. The Englishman (newspaper) advocates a gold loan of £5,000,000, and says that the necessity for this is absolute in order to avoid a panic."

If India is compelled to borrow gold to redeem more than a thousand millions of silver and paper and the United States is also compelled to issue bonds and buy gold to keep afloat over a thousand millions of silver and paper, at least $600,000,000 of gold must be borrowed by the two countries, and borrowed without delay. There is no gold in the world to supply such a demand. The attempt to obtain it would enhance the value of gold more than 50 per cent, or, what is the same thing, would reduce the price of property and services more than one-half. If neither India nor the United States will treat silver as money of ultimate payment, both countries are bankrupt, unless they can secure a sufficient amount of gold to provide for the redemption of their entire circulation.

Suppose India should go into the market for $300,000,000 of gold and the United States should do likewise, what would become of the industries of this country? How can the producer of wheat, cotton, and other farm products endure such an advance in gold, or, what is the same thing, such an enormous fall of prices of commodities? Gold would appreciate every day, every hour, every minute of time. While the laboring masses were struggling to produce property to maintain their families and pay their debts, their obligations would increase and their miseries would multiply, but the owners of gold and gold obligations would increase in wealth and power, whether they engaged in schemes of speculation or devoted themselves to luxuries and riotous living. The colossal fabric of which Gladstone boasted as the most remarkable in any age would expand and grow while the toiling masses would be compelled to struggle against inevitable poverty and misery.

That is the issue, and that is the object desired by our rulers who have agents in this Capitol to dictate legislation; who have elected a President determined to carry out their policy; who have nominated two candidates of the same gold politics, with the same disposition; who have elected one of them and placed him over Congress; he is in the saddle; Congress is helpless.

The union between the Republicans and Democrats is complete. The Republicans were more faithful than the Democrats to their chosen leader. The majority of the Democrats represent the great producing interests of this country. They are in sympathy with the suffering people whom they had left behind; and they have struggled these long weeks for some relief, some measure of recognition. But no recognition has been granted. It remains with them to say whether they will join us and see to it that this scheme shall be defeated, as the force bill was, or whether they will surrender to the colossal power of money and patronage.

As for myself, I would rather sacrifice my life than to see this country placed under the rule of the gold kings. The pretense that we are resisting the will of the majority is too false and flimsy to deceive any one. The majority, aye, all the people who have spoken for twenty years, have subscribed by their ballots to bimetallism. No party has dared to go before the people and ask them to indorse what is now demanded. The parties that have thus dealt treacherously with the people accuse us of resisting the will of the majority. As I said before, if I could have the convictions of the majority recorded in their vote, I would guarantee a two-thirds majority in favor of free coinage to-day in the Senate. I could take their speeches delivered before their constituents and delivered in this body for the last twenty years, and I could show that they are of the same opinion in regard to this question as myself. Nothing has occurred to change the situation.

The same unholy war that has been waged for twenty years, the war which was begun in 1867 at Paris, when by the influence of Great Britain and our delegation nineteen States were swung into line to declare that gold alone was money, has been waged from that day to this. The issue has never been changed. It was then and is now, shall a money oligarchy control the civilized world and create a favored class to rule the masses, or shall the people be free? That was the issue then; it is the issue now. It will remain the issue.

The time may come when these money anarchists may meet with a rebuke from the people which they do not anticipate. It is dangerous for capitalists to become anarchists. But if there ever were anarchists they are the parties who are revolutionizing the monetary system of the world and laying violent hands upon the metallic accumulation of all the ages, who are destroying the metallic basis which regulated the volume of money and which has been eulogized and pointed to as the great conservative element which could not be rapidly increased or diminished by the accidents of mining.

But the greed of the creditor class, disregarding all property rights, determined to change the basis, to change all contracts, and to remove from the foundation of circulation and credit one-half of its base. They are now about to consummate that scheme. The scheme was undertaken after the world had become vastly in debt on the basis of the two metals. The creditor class was not satisfied with the discounts, it was not satisfied with all the extortion that had been practiced upon failing governments and failing individuals; it was not satisfied with all these advantages of extortionate interest; but it determined that those who had the option to pay in either gold or silver should be deprived of that option and compelled to pay in gold alone; that the entire demand for money should fall on gold, knowing that gold, like all other commodities, is governed by the law of supply and demand. They knew what the result must inevitably be. They have not been disappointed. Thus far they have enhanced the value of gold at least 50 per cent.

The document I read yesterday showed the advance of gold in China, where the appliances of production have remained stationary. The same mode of agriculture is pursued in China to-

day which was pursued there a thousand years ago, and they have the same methods of transportation and the same methods of production. Still gold has appreciated in that country 60 per cent, while silver has remained almost stationary as compared with commodities. There was no decline in the value of silver. Silver does not decline there when measured by property and wages. It had appreciated slightly in the last few years, and gold had gone up more than 50 per cent. When we reflect what that means, when we reflect that there was more than a hundred thousand millions of indebtedness resting upon the civilized world the time this changed was made, we can have some conception of what is meant by making the purchasing power of that hundred thousand million 50 per cent greater than it was when the contract was made. But so it is.

This legislation will add to that percentage of appreciation probably 50 per cent more. The result will be seen all over the land. The result is now seen in suffering everywhere. The result is seen in the poverty of our farmers, who are supposed to be the bone and sinew and the reliance of this Republic. The result is seen in the fact that they are hardly able to clothe and send their children to school in many sections of the country. A short time, and only a short time, and the youth of this country, on account of their poverty, will be denied the privilege of a common-school education, as they are in all lands where this gold ring has complete sway.

This is the issue to be presented to the people. This is the issue which the President and the gold kings have made. This is the issue that neither of the great parties can escape, because the gold ring demand it.

Look at the condition of the parties in New York. They are told in New York that thirty-six electoral votes will be given to the party most faithful to the gold oligarchy. They tell one party that this is Republican rule; they tell the other that it is Democratic rule.

I deny that it is either Democratic or Republican rule. I affirm that it is the rule of the gold trust and nothing else, disguise it as you will. These two parties are turned over to the gold trust. Unless the people stand up for their own rights and their own manhood they will get no relief. Party platforms have become a mockery. They insult the intelligence of the American people.

The spectacle here presented is humiliating. After having claimed to be bimetallists before the country for twenty years, after having claimed that the silver question was not the issue, but that the issue was something else, to be brought here in the dog days to strike down silver and enthrone the gold trust, is a spectacle which the American people will not relish. Mind you, the American people have been equal to all emergencies. They love their country, they love liberty, they love independence, more than they love party. They have shown this in all great emergencies. They will show it now. I say to my friends—you who are true to the cause of bimetallism, you who have sympathy with the people you represent—you must stand with them and let the gold ring take care of itself.

Whenever the issue is fairly presented between the English gold ring and the American people there is very little doubt about the result. That issue will be made sooner or later. You are now about to take a step which will be an object lesson, which will make plain the designs of this gold oligarchy, which will make it so plain that a wayfaring man though a fool need not err, and the people are not all fools.

Now, I return to the importance of a union with the silver-standard countries, the countries which desire to be free and are willing to stand with us and strike for freedom, the countries with whom we trade, the countries to whom we become in debt many millions each year, countries whose trade is cut off from us except through London. Mexico and South America, with a balance of trade against us last year of $144,000,000, with China and Japan, with vast obligations against us each year where we have to buy the things we can not produce, are holding out their hands to us and say, establish with us an honest measure of value and we shall be independent of British rule.

Here is an interview with the Secretary of the Treasury of Mexico, printed in the Post of to-day:

MEXICO'S SILVER VIEW—MINISTER OF FINANCE JOSE I. LIMANTOUR ON THE MONEY SITUATION—LOOKING TO THIS COUNTRY—UNCLE SAM HOLDS THE KEY TO THE PROBLEM AND THE SOUTHERN REPUBLIC IS AWAITING WITH MUCH CONCERN THE ACTION AT WASHINGTON—A PAN-AMERICAN UNION AND ANOTHER MONETARY CONFERENCE URGED—A NEW ISSUE OF MEXICAN BONDS.

[By Pan-American Press Association.]

CITY OF MEXICO, *October 18, 1893.*

"Mexico is looking to the United States for a practical solution of pending financial problems."

The speaker was Senor Jose I. Limantour, Secretario de Hacienda, in an interview given your correspondent. By the words of its minister of finance the Mexican Government thus officially voiced its views on the financial issues of the hour, and in the course of the interview also made public for the first time the plan which has been adopted by the administration to tide over the financial stringency by a new issue of $15,000,000 in bonds.

While courteously declining to discuss the course of President Cleveland and the special session of Congress, the Mexican minister of finance said:

"I consider that with the United States, through its chief Legislative Assembly and Executive, rests the key to the silver situation. What is done by the United States now is what will largely shape the financial policy of the other American republics, and of the world in the future. I want to see the United States declare itself either one way or the other on the silver question, and the sooner a definite understanding is reached the better I will be satisfied.

"I do not believe in temporary measures or compromise. If the United States Government purchases 3,000,000 ounces of silver, or any other amount to cover Mr. Cleveland's Administration, merely as a temporary measure, I would not consider that anything definite has been gained for the cause of bimetallism. Especially do I think so if this amount of bullion were allowed to remain uncoined in the vaults of the Treasury building, as has been done in the past. What the world needs now is silver in circulation and not in storage. Idle bullion will do no good unless it is coined and put into the channels of trade, where it is so badly needed at present.

"I have no faith in the issue of more gold bonds by the United States, that the circulating medium may be swelled by this means. Increasing the national debt of any country by the issue of additional securities, except under extraordinary conditions, is like a man putting another mortgage on his real estate, or going to a pawnshop. The relief thus gained is only temporary, and the day of reckoning generally shows a worse state of affairs than before. No, I want to see the American people face this issue squarely and decide the fate of silver in a manly way.

"If the United States declares in favor of silver and proves its declaration by work, I would then favor the calling of a Pan-American conference on the silver question. On behalf of President Diaz and the Mexican Government, I will say that Mexico will do her part in arranging this conference and that our Republic will be regularly represented in it. The chief measure before this Pan-American convention for consideration by the government of the three Americas should be the establishment of a common coin of exchange which will pass in trade at par among all the people of the Western world. Probably the plan of the late Mr. Blaine on the Pan-American dollar of silver is as near to my ideal as anything I could name. This dollar of the Americas ought to be, as nearly as I am able to judge, nine-tenths of silver and the remaining portion made up of the customary alloys. Just the proportion and the number of grains of silver which would be equitable for all could be easily determined."

"Mr. Limantour, do you think a change in the ratio between gold and silver is one of the necessities of the day in the financial world?" was asked.

"Yes; the present ratio of 16 ounces of silver to 1 of gold in valuation is not just. Silver must be increased if the white metal is to be on a stable basis," he replied. "Just what this new ratio ought to be I am not prepared to say, but I am very sure a change is needed.

"After this Pan-American conference had outlined a general Western policy dealing with silver as money, I would favor holding another world's monetary conference. I believe the European powers are just as anxious as we that silver remain as a medium of exchange, that they may be ruled no longer by the money kings, when in need of funds for special usages. The military operations and prospects of the Old World compose a feature of the present question, which ought to favor silver as a means for increasing the available means for declaring and carrying on war if necessary.

"The trouble is that the people of the United States and of Europe do not altogether understand the current financial issues and are too inclined to take the word of the gold advocates as their guidance in looking at the matter. The governments of the world, I believe, understand the value of the double monetary standard, and will in time act accordingly. All of this would, of course, be determined in such a conference as the one of which I speak."

"Mr. Limantour," asked your correspondent, "what have you to say regarding the effect of the late depression of silver on Mexico, and the reports which are flying around regarding the dire financial straits in which your Government finds itself by the great premium on gold, with which you have to pay the interest on the national debt? Is it not true that you are holding secret meetings of the cabinet to devise ways and means by which to tide over the straits in which Mexico finds itself?"

"No," he replied, "there have been no cabinet meetings on this subject for two months, nor will there be within the near future, or until needed. The financial affairs of the republic are left in my hands and the President has asked no special cabinet action. It has been decided, however, to issue new government bonds to the amount of $12,000,000 to $15,000,000 to provide for present necessities. Please understand that this is not an increase of the Mexican debt, but it is merely the substitution of obligations from one form to another. In other words, we will sell these bonds to liquidate claims shortly due. The new issue will be placed in London."

The minister of finance is inclined to take an easy view of matters financial within his jurisdiction and thinks the large issue of bonds which has been recommended by some is not necessary. The suggestion as made is that the Government of Mexico render a statement to the nation of the exact amount of the foreign debt, giving full particulars, and that it call a financial congress to meet in the city of Mexico on the 1st of November.

This congress would be composed of ten representatives taken from among the principal merchants, agriculturists, manufacturers, and miners of the chamber of commerce of Mexico, and of a representative from each of the States of the Union; the ten representatives from the capital to be paid by the national treasury $500 apiece as fees, and the remaining each $1,000. The congress would close its sessions on the 31st day of December of this year, and could only postpone its sessions at the cost of the representatives themselves.

The object of the congress would be to study out and propose a law authorizing the Government to call upon the nation for a loan to be invested in the payment of the national debt in full. Supposing this to amount to $100,000,000 in gold, or in Mexican silver to $160,000,000, $1,600,000 in bonds could be issued of $100 each, bearing 3 per cent interest. These bonds would be placed at par throughout the republic by means of committees of representative persons to be formed in the capitals of the States, with branches in the towns.

"I do not believe the plan is a practicable one," said Mr. Limantour. "Even if it were necessary to issue this large amount in bonds, I do not believe the securities could be placed here at home. Money in Mexico returns a much higher rate on investments than the 6 per cent which the bonds would pay, and the capitalists would hardly incline to buy the bonds at this rate, so they would need to go abroad for sale anyway.

"The discount on silver has, of course, caused a great falling off in our customs revenue, but this is offset by the income derived from the new federal stamp tax now in successful operation in all the republic. It has been feared by some that the Government is considering still further taxation, but I assure the people through the press that their burdens will not be added to by any increase on taxes, according to present plans. As a matter of fact, Mexico is not hurt so much as the United States by the decline in silver. Our mines are operating at a far less expense than are those in the north, and

while I read of scores of properties in Colorado, Montana, and the other silver-producing States being closed, I have yet to hear of the suspension of any Mexican mines of importance from this cause. What slight loss may be encountered from this source will be more than made good in the increased prosperity to the country by the exportation of agricultural and other land products made possible by the present premium on gold.

"If the United States removes the duty on Mexican lead ores, which it now seems favorably disposed to do, Mexican mining will be greatly stimulated by the outlet thus given. The American smelting interests which have located at Monterey and elsewhere in Mexico by reason of the Windom ruling will not necessarily be sufferers. I think if the United States import duty is finally removed, Mexico will protect all her industries possible, and probably in this case grant other concessions which would easily offset any loss to the smelters now in Mexico."

Here is another interview with a very intelligent Mexican:

[The Road, Denver, Colo., October 7, 1893.]

Señor Don Terraszas, the wealthiest and most prominent merchant of Northern Mexico and formerly governor of the State of Chihuahua, in speaking to your correspondent to-day regarding the latest silver compromise proposed by the protected manufacturers of Pennsylvania, to coin silver free under the conditions proposed, said: "I regard the proposition as narrow and descending to simply benefit the silver-mine owner and no one else, while on the other hand the absolute free coinage of silver would redound to the prosperity of every dollar in your country. I will illustrate:

"AN ILLUSTRATION.

"Our (Mexican) trade with the United States as compared with that of England is almost nothing. We go to Europe for all our manufactured fabrics and nearly all our mining and agricultural machinery, in fact nearly everything produced by industrial labor. This is absolutely true of Central and South America. Now, sir, I can not but deplore the blindness of your manufacturers, legislators, and capitalists in clamoring for monometallism, for, look, sir, is it not a fact that can not be controverted, that were the United States to-morrow to adopt the free and unlimited coinage of silver at the ratio of 15½ or 16 to 1, thereby making every ounce of silver worth $1.29, would not Mexico, Central and South America, in fact every silver-producing country in the world become at once the consumer of your products, and we in turn sell you our raw materials.

"DUMPING-GROUND NONSENSE.

"I have heard your citizens say that the United States would become the dumping ground for silver. Now then, in the first place, it would be impossible for you to get an ounce of silver into the United States except in exchange for your products. In the second place, the Central and South American countries are free-coinage countries, and have the silver standard. That being so, England, in her present attitude toward silver, will only allow us the present London market price (the market price being made by England). No sane importer would buy her products, but instead, the United States, which is a nation that can rival the old country in manufactures, would receive the entire trade of pan-America. In other words, the traffic which is now being carried on between this continent and Europe would be swept from the seas, and instead you would do the trafficking of this western hemisphere. Why, sir, in a few years the United States would be the greatest producer and the financial center of the world.

"THE TRADE OF MEXICO.

"We would go to your capitalists and bankers to take our national, State, municipal, and industrial bonds, and other securities to the exclusion of the foreign powers. Our industries would look to your investors for financial aid as the entire American continent has heretofore to Europe. Europe is compelled to look to this continent to consume the product of her industries, and if she were shut out, her industrial classes would sink to abject poverty. Speaking figuratively, were Uncle Sam to stick his thumbs in his vest holes, and say to Europe in a Monroe doctrinal sort of way: 'Old lady, I see through the trick, you want to double your income and loan it to me. You double your money, and double my debt. I can no longer tie to your apron strings, but instead give my attention to the prosperity and happiness of my children and myself.'

"EUROPE WOULD BEG.

"Then Europe would beg for mercy and prosperity would reign. This hemisphere produces the silver and nearly all the gold, and I ask why one-half the developing power of the world, which it has taken centuries to produce, should be destroyed. Mexico, Central America, South America, and your own Western States are undeveloped and silver is the motive power needed to do the great work. I regard the present opportunity as the grandest ever offered a nation situated as is the United States to make the most advantageous move ever made on the political and financial chessboard of the world to her everlasting glory and prosperity."

That the silver standard is the only standard in the world under which the producing classes can have honesty and prosperity, can have an equal chance, there can be no doubt. That is demonstrated beyond peradventure. And when the gold men say you will go to a silver standard I reply, if we can get there we shall have prosperity. There is no hope of prosperity with the gold standard, with all the nations of the earth struggling for gold, most of it hoarded, and with Europe having the power at all times to draw it from under the foundation of our superstructure of finance and produce panic at pleasure.

I read from a market letter of Watson & Gibson, of New York.

[Watson & Gibson, 55 Broadway, N. Y. Daily market letter.]

NEW YORK, *Tuesday, October 3, 1893.*

DEAR SIR: We have just received from the foreign office in London the report of the British consulate in Mexico, dated in Mexico August 4, and presented to Parliament in September. First, we would call attention to the fact that consular reports made to our Government are not issued, as they should be, with anything approaching the promptness of British publications of the same class. Our reports are old before they are printed and given out. Now as to this British consular report, which is "On the effect of depreciation of silver in Mexico," we may quote the two concluding paragraphs:

"In striking a balance between the advantages and disadvantages arising to different interests in Mexico from a depreciation of silver, it must be borne in mind that the losses which would be sustained by the Government and the railway companies are essentially limited in their amount, whereas the benefits which would accrue to certain of the productive industries are susceptible of indefinite extension. Moreover, an increase in the productiveness of the country would make itself felt at once in an increase in the revenues of the Government, as well as of the railways.

"The only conclusion, then, at which it is possible to arrive is that a low price of silver, if permanent, would not only not be prejudicial to Mexico as a whole, but would conduce to its ultimate benefit by the stimulus it would afford to the development of its immense agricultural resources."

This recital by an Englishman of the advantages of a silver basis to a nation may be profitably perused by the Government to which it is addressed as apropos of the action of that Government in stopping free coinage in India, with the avowed purpose of ultimately putting it on a gold basis. The argument in favor of silver for Mexico would certainly apply to India.

I will say that putting India on a gold basis was not for the purpose of benefiting India, but it was for the purpose of breaking down the prosperity of India—breaking down her manufacturers so that she would be compelled to receive the manufactures of Great Britain. Furthermore, it was to enhance the value of bonds which England holds. India is now required to pay $80,000,000 per annum in gold, interest on bonds that are held in London, and by putting her on the gold basis and compelling her to buy gold it will advance the price of gold and the purchasing power of gold, and enhance the value of the obligations which Englishmen hold against India. There was no thought of benefit to the people of India in this cruel act of suspending the free coinage of silver. It was an act of confiscation and plunder, and was not disguised by the Herschell committee.

The Herschell committee in effect admitted that it would break up the manufactures of India and cripple the commerce of India. They admitted that, but they were attempting to answer the argument that the prosperity which India had enjoyed would be transferred to China and Japan, and they said those countries were slow and that they would not for a long time interfere with the trade of their own manufacturers. It was not to benefit India, but it was to destroy India for the benefit of the bondholders of England, and to stop the clamor of the manufacturers who had been driven out of India by the fact that India used honest money that measured time contracts fairly, while England used dishonest money which prevented production, crippled manufacturing, and made it impossible for her to maintain the trade of the Orient.

Here is an article from The Manufacturer, of Philadelphia, July 29, 1893, showing that some of the manufacturers in this country are beginning to realize the aim of the money power:

[The Manufacturer, Philadelphia, Pa., July 29, 1893.]

The assertion made in these columns lately that the movement for the complete demonetization of silver was the result of a British conspiracy to obtain from us at unnaturally low prices the cotton, wheat, silver, and other commodities produced by us, is fully sustained by the following letter, written to an American in New York by Mr. Robert Lacey Everett, a member of the British Parliament:

"The one great supreme aim of the moneyed classes and the London press is to restrict the supply of money so as to enrich the owners of it at the expense of the raisers of produce and the owners of land and other real property. We hope that the sharp intelligence of your people, in the main a nation of producers and landowners, will see through this cruel game of the moneyed classes and frustrate it. The miseries of the agricultural classes here are indescribable, but they do not clearly see why it is that their prices are forced down to their ruin, so that it is difficult to get them to move. The wits of the American farmers are sharper. I hope our salvation will come from you."

I hope so. I hope the salvation of the world will come from the free American people. It can come from nowhere else. Although the spirit of liberty was born in England, it developed and grew to manhood on the fertile soil of America. It has been crushed in its birthplace by the money power. That same power is attempting to crush it in its manhood on the American continent, and the question is, will it succeed? Its apparent success by taking advantage of the people in this extra session of Congress is no guaranty of its ultimate success. This is not the first time that efforts have been made by Great Britain to control and subjugate the United States. They have been persistent and constant from the time we were colonies until now.

I would weary the Senate if I were to detail the long cabal and intrigue to which British statesmen and British financiers have resorted to destroy liberty on this continent. But this last grand effort is sufficient. It will be an object lesson before it is done. I think what is occurring here and now is an object lesson. The convening of Congress in an extra session to legislate upon a question which was not in issue in the campaign, the persistent dictation of the gold press and the Administration to the two Houses of Congress, the subjugation of those Houses to the will of the Executive, are object lessons of which the lovers of liberty must take notice if they would preserve their independence in this country.

I will continue reading the article published in the Manufacturer:

Whether "the wits of American farmers are sharper" or not may be uncertain. It is difficult, upon any other hypothesis, to account for the fact that Congress has steadily resisted for years the clamor for abandonment of silver. But either the wits of American editors are not sharp, or these persons have deliberately lent themselves to promotion of the British purpose to feed Englishmen and to run English cotton mills at the expense of the American people, and to enhance the value of every debt owed to Britain by Americans. Gold monometallism and free trade, both are devices prepared by Englishmen for injuring other nations for British advantage, and so eager

are the plunderers for their prey that they are willing even to sacrifice their own agricultural population and their own agricultural industry that they may filch from their American victims the substance of the latter.

Though they say the times are good and the condition of the people of the Old World is improving, it is not true. My colleague gave a graphic picture of the sufferings of the people of England, of the starvation and misery of the lower classes, who are treated worse than brutes, who can not be raised to the level of the hackney horses in the streets, who are dying of want in its most hideous forms. He gave us that picture. I quote from the New York Sun a statement with regard to Italy:

[New York Sun, October 1, 1893.]

The fact should be recognized that Italy is an extremely dangerous element in the present situation. The country is in a pitiable condition. Things are so bad that a catastrophe of a violent nature is inevitable unless relief comes speedily. Silver disappeared from ordinary circulation months ago. Even copper is now vanishing. The premium on silver coin is now 10 per cent and on copper coin 2 per cent. The correspondent of the Sun writes that even when buying stamps in the post-office it is impossible to obtain change. Churchgoers have adopted the practice of putting pledges into the contribution box and redeeming them when they reach the amount of the smallest bank note. The money famine will not be tolerated much longer. It is openly asserted that war is the only desperate resource which can save the present Government. If the idea of war becomes tolerable to the Italians as it already is to the French, the situation could hardly be more ominous.

The great factor for peace is, of course, the financial power in other countries. This power was never stronger in Europe except in Italy, where it is reduced to impotence. It is taking alarm in other countries, and it will soon bring to bear all its influence to offset the dangerous tendencies of the day. Then the question of peace or war will be decided, and we shall have the answer next spring.

The money powers are exerted to prevent war. The masses of the people are starving and ready for anything. They would prefer to sacrifice their lives in war to the endurance of the present appalling condition which the money powers have placed upon them. Italy is on a gold standard. England put her there; and her people are crying for bread. Fifty years ago the whole continent was in a blaze on account of the starvation of the people, and revolution broke forth everywhere. Do the gold kings think that they can hold the masses of the world in subjection?

It is true they have enormous armies which furnish more bonds and enrich the gold ring, but the colossal military power of Europe will crumble. It is now a military camp. They can not discuss the question that we now discuss. They have no dictator as powerful as our President; but they have the traditions of monarchy and the immediate power of the gold ring to rivet the chains of slavery upon the masses; and they have an army of occupation more colossal than the world ever saw before, all to keep the masses in subjection. Although our executive department is more powerful than theirs, still we have not yet an overshadowing standing army. We have yet the right to go to the ballot box; we have yet the right to discuss these questions without being dispersed, as the people were in Germany on the pretext that they were disorderly assemblies. Bimetallists in Germany and Italy have been dispersed under the pretense that they were anarchists and disorderly assemblies.

Who are anarchists? Not those who toil, not those who are willing to obey the laws and work for bread. There may be a few, and they are very few, desperate, ignorant people so crazy as to raise their hands against law and order; but the great mass of the people of the world are law-abiding citizens and will observe the law to the last extremity. But the great anarchists are those who break contracts and confiscate property. It is dangerous for the money power to become law breakers in any land; oppression and tyranny breed revolution.

Stop it; submit to honest laws. Stop changing your contracts; because upon the faith of contracts and honest laws governments stand. This gold ring is sapping the foundation of the Government and the respect of the people for the laws. How can an honest farmer respect the law that doubles his mortgage after it has been made and drags him from his home? We plead for justice. If we have justice the majesty of the law will always been throned in the United States. It is only injustice and wrong that create danger. I say there is danger in invoking British rule; there is danger in enthroning the gold trust in this country. We plead with Senators to lay no more heavy hands upon the people. We plead with Senators to relieve the unjust burdens that have already been placed upon them by unjust legislation in these halls.

Think not that this question is not understood and can not be understood by the masses. The time might have been when it was safe to presume on the ignorance of the masses, but they were not the American people with whom they had to deal. I read from a paper published in Chicago. The daily papers that I read come teeming with abuse of those who resist tyranny of the gold ring.

[From Farm, Field and Fireside, Chicago, Ill., September 30, 1893.]

WHY TIMES ARE HARD.

Whatever it may be to others who through the sudden agency of the panic are made to feel its heavy hand, the story of hard times is no new tale to the farmers. They are the first to feel the tightening of the coils of selfishness and greed, which in the midst of plenty alone has the power to make hard times. The farmer has been battling for years against a gradual shrinkage of the prices of his products, wondering why it was so, and chafing at the ever tightening coils which every year, though crops were abundant, made it still more difficult to keep up his expenses, to say nothing of paying off the mortgage.

If he could have had the same prices for his 1893 crop as prevailed during the period from 1866 to 1870, before silver was demonetized, while the two precious metals—gold and silver—were at a parity, the American farmer would have had $1,463,000,000 more money to spend than he now has. With such a sum he could have paid off his mortgages, surrounded himself with comforts, educated his children, and in many ways made life pleasanter and work lighter. The following table, compiled from statistics which are as correct as such statistics usually are, will show the gradual diminution of the average price of an acre's product of corn, wheat, oats, hay, and cotton during six periods, viz, 1866 to 1870, 1871 to 1875, 1876 to 1880, 1881 to 1885, 1886 to 1890, all inclusive, and 1893. The values in this table are based on gold in all cases.

Here he gives the table summing up:

Product.	Value of an acre's product in—					
	1866–'70.	1871–'75.	1876–'80.	1881–'85.	1886–'90.	1893.
Corn	$12.84	$11.30	$9.62	$10.25	$8.81	$8.35
Wheat	13.16	11.90	12.00	10.20	9.07	9.00
Oats	10.92	9.81	8.58	9.17	7.50	5.75
Hay	13.23	14.38	11.57	11.15	10.19	10.00
Cotton	28.01	28.55	17.65	15.63	13.84	10.65
Total	78.21	75.94	59.45	56.40	49.44	40.75
Average	15.64	15.19	11.88	11.28	9.89	8.15

The value of his products being reduced nearly one-half with the continued decline in the price of property.

In this shrinkage of value as compared with gold is found the cause of hard times. The farmer gets nearly one-half less dollars for his products and consequently has one-half less dollars to spend.

It is useless to say that he is just as well off because the things he has to buy have also fallen in price in like proportion so that a bushel of wheat will buy as much clothing and other necessaries as formerly. If this were wholly true as applied to other commodities it would not be true as to his indebtedness if he owes anything, or to his share of public indebtedness such as school, town, county, State, and national bonds; also the salaries of public officials and public expenses are no less. So that his taxes, measured by the standard of dollars, are just as high as formerly.

As between 1870 and 1893, however, it takes nearly twice as much labor on has part to pay them. Railroad stocks and bonds also represent so many dollars, not so much in commodities; therefore the railroads must keep up freight and passenger rates, so as to pay dividends. To do so they can not reduce rates to correspond with the lower prices of farm products, so that with shrinking prices as compared with gold the farmer is caught at a disadvantage on every hand.

On the prosperity of the farmer, in this nation at least, largely depends the prosperity of all other classes except the security holders. If the farmers had that billion four hundred and sixty-three million dollars to spend it would give a tremendous impetus to all other lines of trade.

There is a reason for this terrible depression, or perhaps we could well say oppression, as all effects have a cause, but what that reason is and how to remedy the evil is a problem which will have to be solved before prosperity will be fully restored.

When we find popular journals that are circulating among the farmers express the situation so clearly as that paper does we had better take warning that what we do here will be understood elsewhere.

There is an admirable article in the New York Press, and inasmuch as it appeared in the great center of speculation, oppression, and fraud, I will ask that the Secretary read it. I do not think there are enough Senators in the Chamber to object.

The PRESIDING OFFICER (Mr. GALLINGER in the chair). Is there objection to the request of the Senator from Nevada? The Chair hears none, and the Secretary will read as requested.

The Secretary read as follows:

[New York Press, October 4, 1893.]

WHY PRICES DECLINE.

In an article in the October Forum upon "The Downfall of Certain Financial Fallacies," Mr. David A. Wells denies that the appreciation of gold has caused the general decline of prices of commodities. It is hardly necessary to explain that a certain theory is not a "fallacy" because Mr. Wells gives it that name, or that a theory has encountered "downfall" simply because he thinks he has disproved it. In this particular case some of the highest authorities maintain the doctrine repudiated by Mr. Wells. Mr. Goschen, late chancelor of the British exchequer, for example, said, so long ago as 1883: "The fall of prices comes from the rise of gold." Lord Beaconsfield said in 1879: "Gold is every day appreciating in value, and as it appreciates in value the lower become prices." Sir W. Houldsworth, British delegate to the Brussels International Monetary Conference, said: "It is said that the appreciation of gold has never been proved. If there has been a general fall of prices that is proof." Columns of this paper could be filled with such expressions of opinion from high authorties. The most respectable economic sentiment of the world is dead against Mr. Wells. But probably he does not mind a little thing like that.

The fall of prices which has been continuously operating for twenty years began when silver was demonetized in 1873. It is at least remarkable that the beginning of the downward movement should have been exactly coincident with the world-wide rejection of silver. From 1849 up to 1873 prices of staple commodities appreciated about 30 per cent. The rise stopped when silver was thrown out as a money metal by the civilized world.

Mr. Wells and all of his friends, we believe, admit that full remonetization of silver would be followed by an advance of prices. They complain of remonetization upon that ground, because, as they say, it would be unfair to creditors. But if remonetization will put up prices, is it not equally certain that demonetization must have put them down? How is it possible to

accept one conclusion and to reject the other? Mr. Wells contends that overproduction and mechanical improvements account for the depreciation of values. But in that case values would not be seriously affected by restoration of silver. The gold monometallists can not contend against such restoration as unfair to creditors if improved processes and excessive production depressed prices, because the improved processes will still be employed under bimetallism.

Will Mr. Wells seriously assert that prices would not fall if half the gold in the world should be thrown out of use? Every intelligent grown person knows that when the volume of money shall be reduced one-half the value of everything measured by money will fall. The reason, of course, is that money will then become scarcer, and any man who wants it must pay for it with an increased quantity of commodities. No other result is possible Now, in 1873 one-half of the money metal of the world (the silver half) was thrown aside and the consequences which might have been predicted at once appeared; the prices of commodities began to fall. As the commerce of the world, expanding vigorously in time of profound peace, required continuously increasing amounts of gold, the metal steadily appreciated and other values as steadily declined. Theory and fact exactly fit each other in this case.

That which is true of the precious metals is true o other commodities. Annihilate the cotton crop of the world and the price of wool will rise as the price of gold rose when silver was discarded as a legal-tender metal. Forbid the use of beef as food and mutton will have enhanced value. Stop the culture of the sugar beet and cane sugar will double in value. Dry up the petroleum wells of the world and all other kinds of oil will gain in price. Stop making bricks and every stone quarry will have higher value. Close the coal mines and firewood will bring huge prices. Plant no more wheat and the growers of corn and rye and rice will obtain more money for their products. The abundance of cotton keeps down wool. The cheapness of bricks cheapens the stone that the builders use. In precisely the same manner silver, used as a full money metal, would bring gold down to a lower level than that upon which it is now found.

Thus not only are the high authorities in opposition to Mr. Wells upon this question, but he has arrayed against him the experience of the world, and the theory which is based upon common sense and upon experience. It is, however, not surprising that Mr. Wells should struggle hard to make out a case against the appreciation of gold. When the wealth producers of the world fully realize that the demonetization of silver robs them by forcing down prices they will put an end quickly to gold monometallism and bury Mr. Wells and the other men of his school deep under the waves of their indignation.

Mr. STEWART. That is a very clear statement of the case. It has to be stated often in view of the fact that our rulers, the money kings, continually prate about intrinsic value.

I was peculiarly struck by some remarks made by the late Director of the Mint, Mr. E. O. Leech, at the Chicago Bankers' Assembly. I should like to call particular attention to this language, because it shows that the reasoning of writers upon economic science, the facts of every day, produce no impression upon the judgments or the opinions of those who defend gold monopolists. They all sing the same song, from the President down to the smallest newspaper advocates of the gold ring. Mr. Leech says:

How beautifully and truthfully Secretary Windom expressed in almost prophetic language the evil which lay at the root of our troubles when he said with dying lips before the New York Board of Trade and Transportation in January, 1891: "The quality of circulation is even more important than the quantity."

The quality of the circulation is even more important than the quantity! The quality depends upon the quantity. If the quantity is unimportant, why do the gold ring advocate the issue of bonds to buy gold? If quantity is unimportant, the $82,000,000 in the Treasury are as good as a thousand millions. Does anybody suppose that the quality of those $82,000,000, so far as it affects prices, does not depend upon the quantity? Suppose you had a thousand millions of gold there, would it not affect the quality of the money; that is, would it not be cheaper, would not prices go up?

The price of each unit is determined by the number of units in circulation at any time. My colleague has elaborated on that. Others have elaborated on it. It is an axiom in finance. Still here is an ex-Director of the Mint who is so much devoted to the gold kings that he repeats this as a beautiful thing! Nothing more absurd was ever uttered. It is well answered by what I have in my hand, another extract from the Farm, Field and Fireside, entitled Products against Dollars.

[From Farm, Field, and Fireside, Chicago, Ill., September 30, 1893.]

PRODUCTS VS. DOLLARS.

Are farm products and other commodities cheap, or is money dear? is the first question to settle in solving the problem why times are hard. Intrinsically farm products are worth as much now as at any time since 1866, yet the price, measured by the standard of dollars, has fallen $7.40 per acre; the average value per acre in the period from 1866 to 1870 being $15.64, while in 1893 it is only $8.18, nearly one-half less. It takes just as much labor to produce an acre now as then, the demand is no less, and the power of such products to support life has not diminished.

Nor is the diminution in price to be charged, as many suppose, to an increased production; the increase in the world's annual supply has not been more than to keep pace with the increased demand. The real value of farm products, then, has not diminished, but they are worth less in dollars only as compared with the artificial standard of gold.

If we compare farm products with other articles of real value, such as the products of the mines, iron, copper, lead, silver, etc., we find the ratio of decrease about the same. Silver, for example, since it was demonetized and compelled to take its place as a commodity, has shrunk in value as compared with gold from about the ratio of 15 to 1 in 1870 to 28 to 1 in 1893, thus keeping pace with wheat in almost an exact ratio.

There are some exceptions to this rule in certain manufactured articles which are controlled and the price artificially maintained by the standard of dollars through the agency of powerful trusts, strong enough to stem the tide of decline. Labor, also, through strong organizations into trades unions, has, up to the time of the panic, maintained its price, getting as many dollars for a day's work as in the period from 1866 to 1870, although the dollars have nearly twice the purchasing power in supplying the necessaries of life.

In the panic, however, labor has received a setback and the price of labor will probably now fall to the standard of commodities. The salaries of public officials, ministers' and teachers' salaries, doctors' services, and railroad freights—aside from these and a few more all things of real value have suffered together. It is therefore reasonable to conclude that as all articles of real value except such as are artificially maintained stand together, it is gold and all money and other articles of artificial value based on gold that have advanced, and not commodities that have diminished in price. By articles of artificial value are meant evidences of indebtedness such as bonds, notes, mortgages, etc., which are not intrinsically valuable in themselves, but receive value through legislation.

By influencing legislation, basing all these on gold only and demonetizing its sister money metal, silver, the owners of and dealers in such securities have made a master stroke of policy, giving them an immense advantage over the producing classes and all dealers in articles of real value.

The world's supply of gold is very limited, and its price dependent upon the exigencies of supply. Not of supply and demand, for the demand is always greater than the supply and is insatiable, but on supply alone. Knowing this, and being well posted on the intricacies of finances and legislation, the great financial institutions, aided by the holders and dealers in securities, acting on a common impulse of self-interest and greed, have quietly secured the demonetization of silver in all the great commercial nations of the world, thus greatly increasing the demand for and enhancing the value of gold. Thus by one master stroke they have in a few years nearly doubled the purchasing power of the securities they hold, based on gold.

For example, the holder of a Government bond can sell it for as many dollars to-day as in 1870, and with the dollars can purchase nearly twice as much of the necessaries of life. The interest, also, which he annually receives on the bond, has about twice the purchasing power as formerly. A farm mortgage contracted in 1870 would require nearly twice as much of the products of the farm and nearly twice as much labor on the part of the farmer to pay it off in 1893 as in 1870. The same is true of all securities of whatsoever nature. School, village, city, county, State, Government, railroad, and all other bonds and evidences of indebtedness are all payable in gold or legal-tender money, which is itself based on and exchangeable for gold.

England, the great creditor nation, which holds a large part of the securities of the world, seconded by the bondholders of Europe, and those of Wall street and the East, who have also vast sums loaned on Western securities, is the prime mover in this oppressive movement. England receives hundreds of millions, perhaps billions, of dollars annually for interest and dividends on investments abroad. By this master stroke of policy the purchasing power of this interest in procuring the necessaries of life has nearly doubled. It will be seen that the hypocritical cry of "honest money" as used by this class and that portion of the press which supports them is only the old cry of the thief crying "stop thief."

The remedy seems to lie in restoring silver to its former place as money, or in issuing greenback dollars based on the credit of the Government, rather than gold in the Treasury vaults. Whether the United States can maintain such money against the enmity of the bankers and England, and force England and the other European nations to the double standard, is a question for serious discussion. Something of the kind must be done to restore prosperity to our farmers.

I hold in my hand a very instructive document, an editorial from the London Times of September 29, 1893, on President Cleveland's letter to Governor Northen. It commends and criticises the President's letter in a sort of fatherly way, but on the whole appears to approve of it. It criticises a portion of the letter, which it regards as insincere and which it thinks should have been left out, but on the whole it is rather commendatory of the President's letter as being in line with the British policy of enslaving mankind.

The letter addressed a few days ago by the President of the United States to the governor of the Democratic State of Georgia is evidently intended to be a political manifesto.

There does not seem to be any doubt about that, for it was evidently intended to stampede Congress.

If the meaning of this utterance remains somewhat ambiguous it is not, perhaps, altogether the fault of Mr. Cleveland. An American President, like an English prime minister, sometimes finds himself in a position in which he has to use language in order to disguise thought.

That suits the English financiers.

Our kinsmen beyond the Atlantic may be congratulated on the fact that this feat is performed for their benefit in five paragraphs of a letter, instead of five columns of a speech. Nothing can be clearer than the general principles laid down in the President's letter to Governor Northen, but as a practical guide to legislation on the silver question it leaves something to be desired. Mr. Cleveland declares—and every sane American might do likewise—that he wants a currency that shall be "stable and safe"—

That every sane American might do likewise. An Englishman would not do that, because an Englishman wants a currency which grows dearer every day—

that shall secure for all kinds of dollars "equal purchasing power at home;" that shall demonstrate abroad the "wisdom and good faith" of the people of the United States; and that shall establish a "condition of confidence" which will bring capital into use for purposes of investment, instead of causing it to be hoarded uselessly through fear of varying values. All this, we repeat, is most excellent, if somewhat elementary, doctrine, though we are a little surprised that it should be necessary to preach it in a country which boasts itself to be so advanced as the United States. But Mr Cleveland goes on to add some observations which become intelligible only when we remember that the Democratic party includes a "silver wing," and that the silver-purchase repeal bill is met in the Senate, not so much with direct opposition as with ingenious devices of so-called compromise. "Within the limits of what I have written," the President says, "I am a friend of silver, but believe its proper place in our currency can only be fixed by a readjustment of our currency legislation and the inauguration of a consistent and comprehensive financial scheme." We do not think the "friends of silver" generally will derive much comfort from this vague promise, which, nevertheless, may encourage hopes that can not be realized, and ought not to be fostered.

The editor thinks that the President has gone too far when he

is encouraging a hope that can not be realized and ought not to be fostered. He ought not to encourage hopes that can not be realized, that silver will be restored to the people of the United States, and in that way give them relief, because Great Britain says no. That is the reason.

The silver purchase repeal bill has been passed by the House of Representatives, but it has encountered in the Senate a resistance which Mr. Cleveland forcibly denounces. It may, he says "be the cause of plunging the country into deeper depression than it has yet known," and he wishes to set the Democratic party free from any share of responsibility for a such a catastrophe. In Mr. Cleveland's opinion, no practical measures for the rehabilitation of silver can be entered upon until the ground has been cleared by sweeping away not only the compulsory purchase provisions of the existing law, but the alternative proposal that the United States should, "alone and independently," undertake the free and unlimited coinage of silver. We are entirely in agreement with Mr. Cleveland on these points, and we are only surprised that, appreciating, as he does, the imperative conditions of the case, he should be capable of encouraging delusions among some of his supporters by putting himself forward as "a friend of silver."

With all their admiration for Mr. Cleveland they have to condemn him for pretending to be a friend of silver, when the passage of this bill is doomed, as everybody seems to know. It is intended by the interests which the editor of the London Times represents to doom silver, and that is their scheme, and they are disgusted with Mr. Cleveland's suggestions, holding out any hope to the American people for silver. He ought to have known, then, that the intention is to rivet the chains of slavery on us so strongly that they can not be broken. That is what he ought to have said to the American people.

The British lion does not want the question discussed any more; and the President is criticised for even saying that he is a friend of silver. They say, in effect, that "he is a real enemy of silver and not its friend; that he is a real enemy of the debtor class and a friend of us, because we are the creditor class; he is really in accord with Mr. Gladstone, who desires to increase the income of the bondholders of England, the creditors, and to increase the burdens of the American debtors. It is true that Mr. Cleveland comes up to our standard so far, but we are disgusted that he should even say that he is a friend of silver, because he is raising hopes which can not be realized and may revive agitation by using such language."

The editorial in the London Times continues:

The opposition to the repeal bill is very determined, and many competent authorities believe that it will succeed, in the absence of any rule of closure in the Senate, in forcing a compromise upon the majority. The President's letter, while holding out a hope of future concessions to the silver party, opposes any such compromise on the basis of free coinage. A few weeks ago the "friends of silver" appeared to have abandoned the struggle even for this object. Mr. BLAND, the author of the silver-coinage act of 1878, spoke despairingly of the outlook. The excitement, he said, among the business community was so great that nothing could be attempted; "they would run over you like a herd of stampeded buffalo." But when the storm had passed, he added, "we shall give them another whirl at free silver."

We infer from the President's letter, and from the dilatory proceedings in the Senate, not, indeed, that the storm has passed, but that it has in some degree abated. The silver party are making a desperate fight for their monopoly, and Mr. Cleveland considers it necessary to conciliate them with a promise of future favors. Meanwhile it may be asked what ground there is for the President's declaration that the resistance to the repeal bill "may be the cause of plunging the country into deeper depression than it has yet known." The answer is furnished in Mr. Michael Herbert's report on the finances of the United States, which the British ambassador at Washington has recently transmitted to the foreign office, and which has just been published as a parliamentary paper. In 1878 the Bland act came into operation, under which the Secretary of the Treasury was directed to purchase every month, for coinage, not less than $2,000,000 worth nor more than $4,000,000 worth of silver.

In 1890, under the Sherman act, the monthly purchases were increased to 4,500,000 ounces of silver, but the amount to be coined was left, after July, 1891, to the discretion of the Treasury. The net result is that from February, 1878, to June, 1893, silver was coined to the amount of close upon $420,000,000, "or more than fifty times as much as was coined during the previous period of eighty-one years," while nearly 124,000,000 ounces of fine silver remained in the Treasury uncoined. The loss to the Government on the coined silver, from the difference between the market price and the nominal value, was estimated, down to the close of the last fiscal year, at $128,000,000. Moreover, the notes issued by the Treasury in payment for the silver purchased can not be redeemed in silver, and no provision has been made for their redemption in gold. From this and other causes "the gold reserves of the Government have been rapidly diminishing, while the gold obligations, through the issue of the coin notes, have been as rapidly increasing."

Just before Mr. Cleveland's inauguration in 1885, the Treasury stock of gold stood at $125,793,000; in 1888 it had risen to $218,818,000; on Mr. Harrison's inauguration in 1889 it had fallen to $197,874,000; on the passing of the Sherman act in 1890 it was $187,380,000; in June, 1892, it had sunk to $114,342,000; and at the close of the last fiscal year it was barely over $95,000,000; that is, nearly five millions below the reserve line. In the past five years the net loss of gold by the United States is estimated at $256,421,000. Silver and silver notes have been gradually substituted for gold in the home currency. For example, "the gold receipts of the Government, which in July, 1890, amounted to 95 per cent of the total receipts from customs, have fallen to less than 1 per cent." These facts have excited alarm among business men all over the world. Distrust in the ability of the United States to maintain gold payments has been aroused. American securities have been largely sold, and the flow of foreign capital into new enterprises has been checked by the doubts hanging over American credit. The recent depreciation of securities on the New York Stock Exchange has been computed at no less than $700,000,000. During the first six months of the present year the liabilities involved in the business failures registered were nearly three times the amount of those recorded during the same period in 1892. It is not surprising, therefore, that President Cleveland deems it necessary to speak in tones of grave warning. But nothing is to be gained by paltering with theories that are unworkable, or by endeavoring to square the "friends of silver." The disasters resulting from the Sherman act have been brought about, as Mr. Herbert's report shows, "by the attempt of Congress to compromise an economical principle."

I have read this article for the purpose of showing how critical the organs of the gold trust in London are against any intimation that there shall be a future rebellion against the imperial rule of the gold kings, and that they tolerate nothing of the kind. Absolute dominion is their ultimatum, and absolute submission is the end that they command. Congress may submit to that command sent to us by the Executive, but the people never, never.

But the gold advocates say that public sentiment is with them. I have shown that the public will of the nation is against them as expressed at the ballot box. I deny that public sentiment is with them. The public sentiment which comes to us through the commercial press is the public sentiment of the gold trust and those dependent upon them.

The New York World has all along been very confident about representing the people, but it has sometimes been forced to admit that it had not got the people up to the point of public sentiment, that the public sentiment which the World declared existed was not fully indorsed by the people, which means that the people were not fully up to the public sentiment of the people. I find in the World of September 24, 1893, the following very curious statement:

A good many of the friends of repeal are basing their hopes on this agreement concerning the duration of the daily sessions. They argue that if Mr. VOORHEES and Mr. GORMAN are intelligent and earnest men, it is incredible that they should have entered into an agreement to give their silver Senators another week to debate without receiving some compensation.

It is natural for the miser and the money-dealer to think that nothing should happen unless by a trade with them, and they get something in return; and this is the difficulty with the money-dealer. He must have something before he lets you have anything in return; he must have an equivalent, and he thinks the Senator from Indiana [Mr. VOORHEES] and the Senator from Maryland [Mr. GORMAN] were very foolish to let the silver Senators have the privilege of debate if they would not give something in return for it.

The only compensation that they could receive would be an agreement that a vote should be taken at the end of the ten or twelve speeches which Mr. VOORHEES said still remain to be made on the antirepeal side. Perhaps the argument will hold good. It is certainly a sound argument from the premises assumed.

Senators, however, who are near enough to leadership to be consulted on such an agreement aver that the duration of the daily session was the only subject of the understanding. If this is true, leadership on the repeal side has been absurdly weak. The strongest men in the Administration on the repeal side in the House and Senate do not believe that it has been so weak.

Any change from the situation of yesterday must necessarily be in the direction of hopefulness. What change there is is of the smallest, but it shows how much may be effected by well-directed public opinion. The rise in the price of foreign exchange to within 1 cent in the pound sterling of the shipping point of gold has had something to do with the change. The silver Senators have shown a distinct sensitiveness to public opinion. It is almost certain now that a vote will be reached if the country once more arouses itself from the apathy which followed the passage of the bill in the House.

If the country once more arouses itself from apathy, they can get some expression from the country which they have not got! The idea that a public sentiment which is so rampant can not be aroused from its apathy, a public sentiment that is so apathetic that it can not be aroused! When once aroused it will be an all-devouring fire, according to their editorials.

Whether the vote is taken before the end of next week or a month from now depends entirely upon whether the silver Senators are sooner or later convinced of the earnestness of the people.

Mr. Pulitzer, of course, can not get the silver Senators to believe that the people are earnestly on his side when Senators are receiving from the people letters and telegrams every day and every hour to resist the perpetration of what they term a crime. Our correspondents and our masters live in America, and not in Europe; they are farmers and producers, not idlers about European courts, not speculators engaged in dealing in bonds and stocks.

It is the climax of absurdity for Mr. Pulitzer to talk about public opinion in America. He may know about public opinion around the pleasure resorts and clubs in Europe, if he is admitted to them; but he knows very little about America. He has not been here for several years.

I have received a great many letters about this matter of public sentiment; and I think it is due to ourselves to let the country know that we are receiving them. These letters come from every part of the United States, and the information should go out to those who write them that nearly all the people are of the same mind, and are appealing to us in a similar way.

[Union Savings Bank. Union Safe Deposit and Trust Company, 233 Summit street.]

TOLEDO, OHIO, *September 27, 1893.*

SIR: I suppose the New York Herald will have to-day, to-morrow, or very soon a lot of telegrams showing public sentiment on the Sherman bill, etc.

I saw a telegram yesterday from the paper to its correspondent here, telling him it wanted interviews showing that the delay in repealing the Sherman act in the Senate was harmful to business. As I was not of that mind he said he could not use what I said. This is "public sentiment" with a vengeance.

Respectfully, yours,

WM. H. MAHER,
Vice-President Union Savings Bank, Director of Holcomb National Bank.

Senator STEWART.

That is the way these things are gotten up that are piled in here as public sentiment.

I read now a letter from New York City. Nearly every one of these letters come from persons who are absolute strangers to me:

NEW YORK CITY, N. Y., *September 22, 1893.*

DEAR SIR: Why not call down those men who are demanding that "the people demand unconditional repeal" by proposing to submit to the voters at the next Congressional election the three propositions, of free coinage, no coinage, and restricted coinage of silver. That which justifies obstruction is the fact that not two voters in ten would vote for the suspension of silver coinage, and I hope that your ultimatum will provide for the continuance of the present volume of silver currency until directly or indirectly the people have had a chance to express themselves on the question.

Yours, very truly,

CHARLES B. SPAHR.

Senator WM. M. STEWART.

AURORA, ILL., *September 9, 1893.*

Senator STEWART:

* * * Outside of the banks and a few capitalists here I do not think there are any who favor the demonetization of silver in any degree. The people would rather have a money that has some intrinsic value than paper currency with no intrinsic value behind it. The people have not been heard from yet, but it looks as if they might be smothered.

Truly, yours,

N. L. ROOD.

WAVERLY, MORGAN COUNTY, IND., *September 23, 1893.*

DEAR SIR: I am 64 years old, and have lived on the same farm for 33 years. I have taken no active part in politics for the last 15 years, but have been a close observer and taken a deep interest in the affairs of our country.

Never in all my life have I seen or known such colossal misrepresentation and impudence as is now witnessed by the daily press of all our great cities in the treatment of the monetary question and of the attitude of the Senate of the United States.

They assume, with the impudence of the devil, that the whole country is demanding immediate action by the Senate for the unconditional repeal of the Sherman law, and vilify and abuse individual Senators and the Senate as a body in a manner the writer never saw before; and the demand is so vicious and persistent as to lead me to believe that it is manufactured to order, and that behind it all is some gigantic, powerful conspiracy to utterly destroy silver as money.

Being a farmer and knowing that not one in every hundred thousand ever expresses himself to Congressmen or Senators, I write to say to you that the assumption that the great body of the people are making this demand is a stupendous fraud, unprecedented in the history of our country. The very opposite of this is true. Ninety per cent of the people of Indiana are opposed to national banks money and in favor of the free coinage of silver supplemented by full legal-tender paper money issued direct by the Government.

We are in a terrible crisis. Whilst you silver Senators are in a minority in the Senate you represent an overwhelming majority of the people. Stand fast. Use every means in your power to defeat the repeal of the Sherman law without enacting something better.

Yours, truly,

E. A. OLLEMAN.

Senator STEWART.

I do not know the gentlemen who write these letters, but from the way they write, I think they know what they are talking about.

THREE RIVERS, MICH., *September 23, 1893.*

DEAR SIR: Permit me to thank you for the noble stand you have taken in behalf of the people. I think I can safely say that nine-tenths of all the people in this part of the Union are in favor of the free coinage of silver.

Yours, truly,

E. L. LENHART.

Hon. Senator STEWART,
Washington, D. C.

Here is a telegram from the Knights of Labor of Toledo, Ohio, under date of October 18, 1893:

TOLEDO, OHIO, *October 18, 1893.*

To WILLIAM M. STEWART,
United States Senate, Washington, D. C:

District Assembly, No. 72, Knights of Labor, in regular session at Toledo, Ohio, sends greetings to the men fighting for America. Resistance to tories and British gold was and is patriotism. Stand for 16 to 1.

C. R. MARTIN, *Secretary.*

NEW YORK CITY, N. Y., *September 14, 1893.*

DEAR SIR: * * * The leaven of such speeches as yours is gradually doing its work, and one of these days you will be astonished at the result even in the Empire State, which is erroneously believed by the single gold-standard shouters to be solidly in favor of gold alone as money.

The spectacle of a United States Senator, walled up in the Senate Chamber, pleading for liberty and prosperity while a misleading and misrepresenting press, controlling the telegraphic communication of the country, is holding him up to ridicule and garbling and suppressing his utterances, I repeat, this spectacle is going to cause the popular condemnation of the unscrupulous newspapers who are, with such sublime impudence, endeavoring to whip the United States Senators into cowardly cringing to the hysterical and absurd parrot-like cry of those newspapers, of "repeal the Sherman act; stop buying silver."

Yours, truly,

RICHARD LACEY.

Hon. WM. M. STEWART,
United States Senate, Washington, D. C.

KANSAS CITY, MO., *September 5, 1893.*

DEAR SIR: * * * The great mass of the people of this section are with you in your grim fight against the great odds of the creditor class against the debtors.

Yours, truly,

E. M. HOLMES.

Senator STEWART, *Washington, D. C.*

HAYESVILLE, N. C., *September 6, 1893.*

DEAR SIR: The people here are in accord with you in your monetary views on the subject of silver, and I do not think they will brook the action of their Democratic Congress on this matter; or at best such is the current expression of opinion now.

Yours, truly,

T. J. HERBERT.

Senator STEWART, *Washington, D. C.*

DEMOPOLIS, ALA., *September 28, 1893.*

DEAR SENATOR: * * * Ninety per cent of the people of this State are with you and believe in free coinage.

Yours, truly,

F. L. FOSCUE.

DECATUR, GA., *October 2, 1893.*

SENATOR STEWART: * * * You are making a great fight for mankind and their liberties. I commend you. God and the people are with you. Contest every inch of ground. Free coinage and no bonds. Eternal war upon the Shylocks who are trying to destroy our Government.

Respectfully,

M. C. FULTON.

ALMO, KY., *October 4, 1893.*

SIR: I can not refrain from writing you, and saying that nine out of ten of the intelligent farmers in this section of Kentucky indorse your manly course in the Senate in defending the rights of the people against the mercenaries of England; and I will say further that the present members of Congress from Kentucky owe their seats in the House to the fact that they declared to the people that the platform of the Democratic party was for the free coinage of silver.

Respectfully,

B. C. KEYS.

Hon. WILLIAM M. STEWART,
Washington, D. C.

WEST MILFORD, W. VA., *October 5, 1893.*

DEAR SIR: * * * The people of West Virginia are for free coinage, and will hereafter send men who shall represent their views in Congress.

Truly, yours,

THOS. J. WEST.

Hon. WILLIAM M. STEWART,
United States Senate, Washington, D. C.

COLUMBUS, OHIO, *September 11, 1893.*

DEAR SIR: If there ever was a time since the days of Joshua of old when the sun should stand still and your hands be upheld while you and your compatriots fight the battles of the toiling millions against an aristocratic oligarchy intrenched behind their bags of gold it is now, when they are attempting to pull down the last barrier between their selfish greed of a single gold standard and drive the last nail in the coffin of our legal-tender silver dollar. God grant that you may have strength and endurance to head off the damnable scheme, unparalleled in legislative councils since the perfidious atrocity of 1873, when the silver dollar was clandestinely struck from our list of coins.

Yours, truly,

S. S. BURROWS.

Senator STEWART, *Washington, D. C.*

NEW YORK CITY, N. Y., *September 16, 1893.*

DEAR SIR: Your action in working for the people of the whole country is greatly appreciated by thousands in this city, all reports in the subsidized gold-bug press to the contrary notwithstanding. I can see considerable change in the sentiment of the people. Very many of those who were for unconditional repeal of the Sherman law are now coming out boldly for the free coinage of silver at the ratio of 16 to 1.

* * * * * * *

If you can possibly prevent repeal until after the November elections, I believe you will find that the people will sustain you.

If this bill goes through there can be no hope for the people during the reign of Cleveland. We must have more money. Do not allow the lies in the subsidized press to deceive you. The people are with you. You are gaining converts every day. Wall street and Rothschild must be suppressed.

Yours for justice,

RUFUS BATCHELER.

Senator STEWART.

LINCOLN, NEBR., *September 27, 1893.*

DEAR SIR: * * * In your fight for silver the people are with you. I believe this is true of the people of the East as well as of the West and South. The gold-bug press is making a great hue and cry, but it does not represent the people.

* * * * * * *

I want to emphasize a fact which you well know. You only hear from a few of the people. The gold bugs through their boards of trade and their vilely corrupted hireling press are making a great noise. But the people are behind you in irresistible strength and will prove it at the ballot box. The assertions of such sheets as the New York Times that the people demand unconditional repeal is unconditional rot.

Fight, fight till you die in your tracks, but never surrender, and God bless you.

Yours, very respectfully,

J. BURROWS,
Editor the Alliance Leader.

Hon. WILLIAM M. STEWART.
United States Senate, Washington, D. C.

[The Arena. Editorial department. B. O. Flower, editor. Pierce Building, Copley Square.]

BOSTON, MASS., *August 10, 1893*

MY DEAR SENATOR STEWART: I am delighted to see by the morning papers that you propose to stand by the guns and not allow a subsidized press and a conscienceless band of usurers, who are bent on further reducing the industrial millions to a condition of absolute servitude, to frighten you into anything like a stampede. I hope that the friends of free silver will stand solidly against the infamous proposal made by Congressman HARTER, published in yesterday's dispatches, in which he fully discloses the hand of the gold conspiracy. They aim to deal a final deathblow to silver. But in order to do this they will try to win over some weak-kneed persons by holding out alluring prospects for the future, such, for example, as HILL holds out in his hot-and-cold bill, the absurdity of which is only equaled by the surprising lack of common sense on his part in imagining that he can deceive anybody by trying to ride two horses going in opposite directions.

HARTER, as you have doubtless seen, declares that the repeal of the Sherman bill would not help matters materially, unless—and then he displays the full hand of the gold party when he says: "Unless the issue of bank notes be increased to the par value of the bonds held, and furthermore, unless additional bonds be issued," or something to that effect.

It seems almost incredible that the patriotism and conscience of the metropolitan press could be so debauched by gold as for one moment to applaud a proposition to resort to the war measure of borrowing money and issuing bonds in a time of profound peace, when the nation is richer in money's worth than ever before. I do not remember in the history of republics since the time when Rome fell into the hands of the patricians, of an attempt to perpetrate such a monstrous crime against the people as the measure proposed by the gold power through their talking machine.

I am thoroughly convinced that if the debate can be prolonged so that the public may be further educated on the subject, the enemy will be forced to accept some compromise which will be more favorable than the Sherman bill to silver. That they recognize this fact is shown in the extreme anxiety on the part of the Administration and its representatives in Congress to hasten a settlement.

I wish it were possible for indignation meetings to be held throughout the country some week within the next few weeks to come, wherein resolutions could be passed, and they could be poured into Congress, to the Senate, and to the President, together with individual letters.

I trust you received the August Arena. I mail you to-day a copy of the September issue. By it you will see that we have some strong articles on silver in the body of the magazine; also Mr. St. John's letter to Congress and other items of interest in our notes and announcements department.

Cordially yours,

B. O. FLOWER.

Hon. W. M. STEWART,
Washington, D. C.

ESOPUS, N. Y., *August 27, 1893.*

SIR: * * * If an issue of debtor and creditor is forced on the people, the debtor class, though half in amount, are five times the number and voting power. They will not stand idle when their debts are doubled on them and their homes taken from them.

To you and the sharers of your opinion the attention of the country is directed. If victory crowns your efforts the plaudits of a grateful majority of the people will place you among the famed.

Yours, truly,

R. P. LIVINGSTON.

Hon. WILLIAM M. STEWART,
United States Senate.

WILBER, NEBR., *August 25, 1893.*

HONORED SIR: We all feel the most intense anxiety about the final result of the great silver battle in Congress. No language can express the gratitude we feel toward you. TELLER, WOLCOTT, VEST, BRYAN, and others working with you. But the most annoying thing about this business is the condensed reports of speeches which are dished out by wooden-headed reporters to us. All of the fascination and charm of language is eliminated from your speeches (I mean you and your colleagues), and we get the skeleton with the flesh torn off.

Yours, respectfully,

GEO. H. HAMMOND,

Hon. WM. M. STEWART,

NEW YORK CITY, N. Y., *August 2, 1893.*

DEAR SIR: * * * Be firm. By every lawful means in your power strive to prevent the repeal of the Sherman act of 1890 unless a better one can be enacted in its place. There never has been such a conspiracy to enslave the masses since monetary laws were first enacted. This is a battle for the rights of humanity. The whole race is interested.

Yours, respectfully,

J. C. BRIGGS.

Hon. WM. M. STEWART,
Washington, D. C.

EUREKA, KANS., *August 22, 1893.*

DEAR SIR: * * * I thank Providence for such men as yourself, BLAND, PENCE, BRYAN, and a host of others in Congress, who stand firmly for the people's interests, regardless of party affiliations.

I am not interested in silver mines to the extent of 1 cent, but, like other farmers and stockmen here, believe that the demonetization of silver will cause our people (and the great mass of farmers, laborers, and business men) untold loss and suffering. We are in favor of the free coinage of silver at the ratio of 16 to 1.

Yours truly,

FRANK DIBERT.

Senator WM. M. STEWART,
Washington, D. C.

CONTINENTAL, OHIO, *October 12, 1893.*

Senator STEWART, *Washington:*

Don't give up the "ship." "Boards of Trade" may pass half-hearted resolutions under the bank influence, but the millions are with you. I know because I travel over these States.

Can't something be done to compel the purchase of 4,500,000 ounces of silver monthly, as the law commands.

Yours truly,

L. E. BILLOU,
331 Crawford, Cleveland, O.

PRICHARD, LUZERNE CO., PA., *October 12, 1893.*

Senator STEWART:

"Hold the fort." Thousands of Pennsylvanians are watching with bated breath. "Hold the fort."

WM. W. PRICHARD.

HAMILTON, OHIO, *October 12, 1893.*

DEAR SIR: You and your compatriots are to be congratulated for your devotion to the people's cause; and future generations will, in my judgment, honor your memories for the grand fight you have so ably conducted in defense of honest money and constitutional government.

Trusting that your voice will always defend the rights of man against the greed of the few, I am,

DAVID PIERCE.

Hon. W. M. STEWART,
Washington, D. C.

MORGANTOWN, KY., *October 10, 1893.*

DEAR SIR: I want to say that I am satisfied that the great mass of the people indorse the determined stand taken by the silver Senators in opposition to unconditional repeal and that the most extreme action that can be legally taken to defeat the measure will be heartily indorsed by the people. I am satisfied that the Admin stration is much weaker with the people than it was a few weeks ago. The Republicans of this county almost unanimously condemn the action of Republican Senators who advocate repeal.

Of course you understand how easy it is for bosses to suppress the voice of the people. Don't give up the ship.

Postpone repeal till 15th November if not forever.

Yours, truly,

B. L. D. GUFFY.

NEW YORK, *October 11, 1893.*

DEAR SIR: We, the undersigned, beg leave to tender to you and the other true friends of bimetallism in Congress our hearty congratulations upon the brilliant success which has attended your efforts to protect the interests of the people of the United States against the vicious policy of gold monometallism, a policy which had its origin among foreign money changers who have no sentiments in sympathy with American institutions.

The heroic and patriotic action of those true representatives of the people who have stood out against the unconditional repeal of the Sherman law and voiced the popular will for the continuation of the use of the money of the Constitution elicits enthusiastic expressions of approval from a large majority of those of our own fellow-citizens with whom we daily come in contact.

We have the honor to be, sir, sincerely and gratefully yours,

HENRY NICHOLS.
EDWIN V. WRIGHT.
JOHN W. KEOGH.

Hon. WILLIAM M. STEWART.

ELKHART, IND., *September 6, 1893.*

DEAR SIR: * * * We get but one side of the question in the metropolitan press, but if the expressions one hears from farmers and the rest of the laboring classes is of any use in forming an opinion as to their wishes, they are entirely in sympathy with the Senators who are acting with you in their effort to prevent the banishment of silver from the markets of the world as a medium of circulation.

HENRY C. WRIGHT.

Hon. W. M. STEWART,
United States Senate, Washington, D. C.

NORTH PLATTE, NEBR., *September 7, 1893.*

DEAR SIR: I congratulate you on your fight in Congress in favor of free coinage. The people in the West and South are with you, and will be heard from at the next election.

Yours, truly,

WM. WOODHURST.

Hon. WM. M. STEWART,
Washington, D. C.

INDEPENDENCE, IOWA, *September 4, 1893.*

DEAR SIR: The great Northwest, the West, and a part of the South are now looking to you and your coworkers—PEFFER, WOLCOTT, TELLER, and other equally honest, fearless, intelligent, patriotic, and humanity-loving United States Senators—as the only hope of relief for the mass of the people. May the Almighty God bless you with continuing courage, foresight, and power to keep the House repeal bill from coming to a vote for sixty to ninety days yet, because the British money kings can not hold the millions of gold they drew out of our country for that length of time on any pretext whatever.

* * * * * * *

God Almighty help you in this critical hour. Win for the people and humanity, and the people and humanity will forever bless you and your memory.

Yours truly,

H. I. WASSON.

Hon. WILLIAM M. STEWART, *United States Senate.*

COLUMBUS, OHIO, *September 15, 1893.*

DEAR SIR: In order that you and other friends of the people in Congress may correctly know where the laborers and producers of Ohio stand on the silver and banking questions now before Congress, I mail you resolutions passed by Phœnix Assembly, Knights of Labor, of this city.

A few evenings later the same resolutions were taken up by the Columbus Trades and Labor Assembly, a body composed of representatives from all the organized labor societies in the city, and were unanimously adopted.

These are the sentiments of three-fourths of the organized labor and of the farmers of Ohio.

Copies were mailed early in August to Representative J. H. OUTHWAITE and Senators SHERMAN and BRICE, but we have no positive knowledge that the resolutions were given publicity in House or Senate.

Yours respectfully,

P. J. FISHBACK.

Hon. WILLIAM M. STEWART, *Washington, D. C.*

FREE AND UNLIMITED COINAGE.

The following resolutions were unanimously adopted by Phœnix Assembly, No. 2960, Columbus, Ohio, at its last regular meeting:

"Whereas silver and gold have both been equally the money of the United States from the formation of the Government until 1873, when silver was secretly demonetized through the conspiracy of English and American bankers and capitalists; and

"Whereas silver, equally with gold, is the money of the Constitution, and no Congress has the right or the power to in any way abridge its free use as money without directly violating the plain provisions of the Constitution; and

"Whereas the present deplorable financial and industrial conditions of the country are largely the results of unwarranted, unnecessary, and unpatriotic attacks upon our silver currency by foreign and American bankers and money-lenders, and from purely selfish motives, in that they may unjustly and greatly enhance the value of their securities at the expense of the already overburdened and oppressed laboring and producing classes of this country; and

"Whereas the organized labor of the country placed itself emphatically on record as favoring the money of the poor man and the people, the silver dollar, by the efforts of its accredited representative, Ralph Beaumont, esq., in his zealous and successful work to have the Bland silver bill passed in 1878, thereby partially restoring silver to the people and temporarily relieving the financial and labor distress then prevailing in the country: Therefore

"*Resolved*, That we demand from Congress that from now and hereafter the laboring and producing classes of this country shall receive equal consideration in all financial and other legislation with the banking and fund-holding classes.

"We further demand a financial policy distinctively American and for the interests of Americans, independent of the dictation of the tyrannical and despotic monarchies of Europe, and that no longer shall a system of finance be tolerated by Americans which permits the social, industrial, and commercial interests of our people to be dominated by foreign governments and foreign capitalists for selfish ends.

"To partially further this purpose, we demand that the full and unlimited coinage of silver be restored to the people and to our monetary system as it existed prior to 1873, and on the basis of the ratio of 16 to 1 with gold.

"We further demand that under no conditions shall Congress permit the issue of any more bonds that may be used to continue the present national-bank system.

"The power to issue or control the money of a country is too great a power and too dangerous to be placed in the hands of private individuals or corporations.

"We therefore demand that the present national-bank system be abolished at the earliest possible moment, and that thereafter banks of issue, whether national, State, or private, shall forever be prohibited; and the issue of money, which is a sovereign prerogative only, be exercised exclusively by the General Government, to whom it only legally belongs.

"*Resolved further*, That we pledge our united votes and efforts, irrespective of party affiliations, to hereafter defeat for any office any member of Congress, be he a Democrat, Republican, or Populist, who by his vote refuses to give the relief demanded.

"*Resolved*, That a copy of these resolutions be at once forwarded to our representatives in Congress."

OSCAR FREER,
Recording Secretary, Columbus, Ohio.

Now, when people are talking about public sentiment I defy them to present a petition from any labor organization in the United States. They have not been heard from through these papers. But one class has been heard from; that is the money class and its dependents.

We saw in the papers a few days ago that the Democratic convention in Nebraska had declared in favor of the gold standard, and that Mr. Morton's views had been fully indorsed by the Democrats of his State. I read from a communication in the Atlanta Constitution on that subject, October 10, 1893:

STOCKED THE CARDS—NEBRASKA'S STATE CONVENTION WAS PACKED WITH CANDIDATES—MR. MORTON'S SCHEME WAS SMART—APPLICANTS FOR FEDERAL OFFICES WERE CLUBBED INTO SUBMISSION—EACH MAN RECEIVED WARNING—HE HAD TO GIVE HIS VOTE OR GET NO OFFICE—DELEGATES BULLDOZED BY PATRONAGE—THE PEOPLE FOR SILVER.

This is very interesting. I wish more Senators were in the Chamber to hear it.

[At this point the honorable Senator yielded to Mr. ALLEN.]

Mr. STEWART. I consented to the call for a quorum on account of the interesting document that I have here. It has been published perhaps sufficiently to prevent anybody from copyrighting it and checking its circulation, but I want to make it perfectly sure that its circulation shall be free, because it is a unique way of promulgating and advancing sound financial gold views.

[Special.]

LINCOLN, NEBR., *October 9.*

This is from the Atlanta Constitution that I read—

Naturally, the Democracy of the West and South was surprised last week when the Nebraska State Democratic convention declared against the free coinage of silver and for unconditional repeal. The sentiment of the State is overwhelmingly in favor of silver, but the convention was packed through the manipulation of Secretary Morton, who pulled the wires from Washington, whence came the word that BRYAN must be downed.

In order that you may know what influences were brought to bear upon the convention, I copy some letters sent out by the secretary of the State central committee:

"OMAHA, NEBR., *September 1, 1893.*

"DEAR SIR: You were sometime ago indorsed by the State central committee for the post-office at ——. Circumstances may arise which may cause a revision of that action. You are earnestly urged to be at the Democratic State convention October 4 as a delegate. Be sure and have your delegation composed of Democrats whom you know can be relied upon.

Yours truly,

"J. B. SHEEAN, *Secretary.*"

Shortly after that the following letter was sent to each one of the 2,000 candidates who had applications before the State central committee:

"OMAHA, NEBR., *September 14, 1893.*

"DEAR SIR: The officers of the State committee desire to communicate with you respecting the indorsement which they gave for postmaster. The delay in making the desired changes in this State necessitates vigorous action on the part of the committee and applicant, and you are requested to meet the officers of the committee at Lincoln on the 3d or 4th of October. The State convention will be held there at that time, and you are urged to be present as a delegate from your county.

"In order that there may be a full representation you are especially requested to be present in person. It is important that you be present, representing the best interests of Democracy and coöperating with the committee for the welfare of the party. Trusting that this may receive your serious consideration.

"I am yours, respectfully,

"J. B. SHEEAN, *Secretary.*"

The above letters are samples of the way the Democratic convention was packed and the sentiment of nine-tenths of the Democratic voters of this State was smothered by the votes of 300 applicants for post-offices, who were delegates to the State convention, and whose instructions were to see to it that the Administration was indorsed; that its financial policy was indorsed, and that the executive branch of the Government should use Nebraska as a club to aid it in coercing a coördinate branch of the Government into submission to its wishes. Of these applicants who were delegates, nearly all were free-silver men, but they had a club held over their heads and were compelled to vote as they did, or lose the indorsement of the State committee, which meant the loss of the post-offices.

I write this in order that you may know what the Administration and its representative, the State central committee, are doing in the way of buying and bulldozing with patronage the voters of the State. I know what I am talking about when I say that nine-tenths of the Democratic voters of Nebraska are in favor of the free coinage of silver, and the expression in the Democratic platform recently adopted in this State does not represent the views held by Democrats here.

W. D. TIFFANY,
Vice-President Democratic State League of Clubs.

I will not take up more of the time of the Senate in reading these letters and reading evidences of the misrepresentation of the people by the press. I have thousands of them, and all the silver Senators have thousands of them. Is it a supposable case that if we did not know the people are with us, not only as expressed at the ballot box in every election since silver was demonetized, but expressed daily and hourly by the people of every State in earnest letters, telling us the truth and showing us how these dispatches that come here are manufactured, and how public opinion is misrepresented by the gold press—is it supposable, however just we believe the cause to be, if we thought the people were against us that we would press it here?

But knowing as we do that nine-tenths of the people of the United States are for the coinage of silver upon the same terms and conditions which apply to gold, we feel sure that we are representing the majority, and that the obstruction comes from interested parties, parties interested in robbing the masses, interested in changing contracts, interested in increasing their property by transferring the property of others to themselves. We know that there are hundreds, yea, thousands of millions of property against us, property that was obtained by fraudulent legislation. We know that the world is mortgaged to our enemies. We know we are here for the toiling masses pleading for justice; and knowing that, the scoffs and sneers of the agents and minions of the ring have no effect upon us. Go on with your abuse; tell all the falsehoods you please; bring all the power to bear to intimidate that you like; but we shall stand here and voice the sentiments of the people. Seventy million people pleading for justice can not be intimidated.

William Mutchler.

REMARKS

OF

HON. CLIFTON R. BRECKINRIDGE,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, October 19, 1893.

The House having under consideration resolutions of respect to the memory of William Mutchler, late a Representative from the State of Pennsylvania—

Mr. BRECKINRIDGE of Arkansas said:

Mr. SPEAKER: I have no formal remarks to submit upon the death of my friend, and our former associate, Mr. Mutchler of Pennsylvania. But for one who knew him during a considerable portion of his Congressional life, and who was associated with him in the close and intimate work of committee labor, it

is not difficult to say a few words, though they be impromptu and wholly informal.

My acquaintance with Mr. Mutchler was as a member of this House. Living as we did in distantly separated portions of our vast country, it was never my pleasure to meet him except when we were thrown together in public life. But he was not a man to meet, to know, and to be forgotten. He was a man of that true and strong type of character, of that clearness and soundness of judgment, and of that kindliness of nature which made a lasting impression upon those who were intimately thrown with him. I know of no one who has served in this House during the course of my service here who brought to the discharge of his public duties more earnestness of purpose, sounder judgment, more conscientious labor, or a higher sense of patriotism and honor than did the gentleman whose memory we seek to honor to-day.

He was not one of our associates who figured frequently in the proceedings of the House as published and spread broadcast over the country, but his influence was out of all proportion to what may be called his visible activities. His associates learned to trust his judgment, particularly in all things especially intrusted to his care. Not a few of the most important steps taken in this House were taken upon his advice. It became the desire, the increasing desire, of those who knew him to know what he thought, whenever it was understood that he had given attention to any branch of public affairs. We listened always with respect to his clear and impressive statements, and he was beyond doubt, from confidence in his ability and accuracy and confidence in his character, one of the most influential members of this body.

As a public man, he was, in the very best sense of the term, a statesman. He loved his whole country. While a strong partisan, he was in no sense a narrow one. With his frank and generous heart there was free play for all the kindly sentiments of human nature; and with his fearless spirit there was the courage, under all circumstances, to do what he conceived to be his duty. I have often thought that there was no position in public life that he could not have filled with credit and honor.

During the many years that he served with us, often taking decided ground both upon questions within the party of which he was a member, and upon which there were strong differences of opinion, and upon such questions between the two great parties upon this floor, yet it can be said of him, as it can be said of few, that he so deported himself, he so addressed himself to all public questions, as never to have his motives called in question from any quarter, and to meet in all of his associations, both in and outside of his party, with unbroken and supreme public and personal respect.

I do not know that in the whole of his positive career there has ever passed between him and any of his associates upon this floor any colloquy that was calculated to leave a sting behind it. When contemplating the quiet demeanor of my friend and the great influence that he exercised, when I have considered the increasing confidence which I myself have always had in his judgment and conclusions, I have often thought how much he was indebted in his reasoning processes, not only to the soundness of judgment which he possessed, but to the excellencies of his personal character. He showed as clearly as any man of whom I have known that "out of the heart proceedeth the issues of life." And I believe that out of his pure, kind, and brave heart there never proceeded a sentiment that was unjust toward any living being.

It was my duty, Mr. Chairman, in common with other members of this House, to attend the final exercises upon the occasion of his burial. It is the only occasion when I have ever attended the burial of a deceased member of this body; and I will say that if we are to judge by the respect that was shown to his memory, by the deference and regard that marked all those who participated in what was associated with his burial, we must conclude that these final exercises on our part in connection with those with whom we have been associated here are not idle ceremonies.

And when I went to the old town of Easton where and about which he had passed his whole life, I could see some of the reasons why Mr. Mutchler was the man that he was. An old, quiet, and established place, where the people have homes, and the homes have cherished traditions. There was comfort, there was intelligence, there were all the vital sentiments and substantial elements most cherished in our American civilization, the whole illumined by the ancient and eminent seat of learning that presides upon a hilltop over the city about it. There, with that people, in the shadow of that college, with its vine-covered walls, we could see the associations that could give us such a product as William Mutchler.

I consider that he was a model as a Representative; that he was a model as a gentleman; and it makes me realize how closely our people are allied when I say that he was in my estimation a perfect type of a Southern gentleman. I can wish nothing better to our country, I can wish nothing better to these Halls, than that among our people and here among our Representatives we may never lack for men like unto him. And when we come to pass over the river, may we rest in as sweet and as beautiful a place as where his body now lies, and be the recipients of that profound respect which all classes of his people united with his Representative associates in bestowing at his burial.

Gold, Silver, and Paper for Money.

SPEECH

OF

HON. WILLIAM A. PEFFER,

OF KANSAS.

IN THE SENATE OF THE UNITED STATES,

October 13, 16, 19, 20, and 21, 1893.

The Senate having under consideration the bill (H. R. 1) to repeal a part of an act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. PEFFER said:

Mr. PRESIDENT: The situation in which we find ourselves placed is a very peculiar one. Perhaps at no time in the history of the country, except possibly once, has there been such interest manifested among the people generally concerning the action of either of the branches of Congress as there is at this time. When the present session was called there was a good deal of attention paid to it because of the unusual time at which it was called, and because of the further fact that generally the people had not expected that Congress would be called together before about the middle of September.

There was not much anxiety as to what would be done at the meeting in September; but suddenly, and almost without warning, the President's proclamation was issued, and the indications in the proclamation pointing to the probable policy of the President, were that the doctrines which had been taught by both of the great parties during the last campaign would be ignored, and instead of the tariff and its relations being made the chief topic, it appeared that finance and questions turning upon the general subject of money would be presented to the extraordinary session for its consideration.

When Congress met and the message was read at the desk it was discovered that not only were we to have the financial question to discuss and to consider, but that so far as the Administration is concerned we should have submitted to us but one particular subject; that it had been predetermined in the Executive mind that the financial legislation of the past years relating to the purchase of silver and the coinage of silver money, having been injurious to the country, ought to be repealed; putting it in more narrow words, that those clauses in the act of July 14, 1890, providing for the purchase and coinage of silver should be repealed—that, and that alone.

Immediately thereafter the members of this body were besieged by individual persons in their correspondence and were flooded by papers purporting to be petitions coming from commercial bodies in different parts of the country; and acts which seemed to many of the members here and to a large portion of the newspaper press of the country to be impertinence had the effect very soon to array the people of the country in two classes, and to mark the lines between them more plainly than they had ever been before. From that time until the present there has been a constant besiegeing of this body from these two classes of people, one representing the commercial and the speculative portions of the community; the other representing the producing classes, the farmers, the mechanics, the wage-workers and the people who are living within narrow pecuniary limits.

Out of that alignment of the people grew a great deal of ugly feeling. The newspaper press, representing the different sides of the contest, grew more and more outspoken in their advice to this body, increasing in intensity from day to day and from week to week, until finally the whole country seemed to be aroused, the nerves of the people drawn to their utmost tension. And now recurring to the thought with which I began, it appears that the eyes of our people and of the reading people in all parts of the world are attracted to what this body is doing.

We have been working hard and faithfully, as it appeared to us to be our duty. Upon the side of the Administration there has been until recently at least what they regard upon their part as forbearance and patience, and upon our part there has been

quite as constant resistance. To say that both parties to the contest in this Chamber have not been equally honest, or equally earnest, or equally resolute and determined, would be to state that which all of us who are here at least understand to be an incorrect statement of the situation.

In the first address which I had the honor to deliver upon the pending bill I took occasion to speak for myself and for the people whom I have the honor, in connection with my colleague, to represent. I stated to the Senate then very frankly that with us the issue pending before this body is one that is broader and deeper than the mere matter of coining a few dollars, or of mining silver or gold, or of building up or maintaining particular industries or particular communities; that with us it is a matter of principle. We look at the subject from a broader standpoint. We go down deeper into the constitution of society, into the forces of government. We regard the whole country as interested in this matter—the whole world of mankind interested as we are. We believe that there is a principle at issue which we can not afford to surrender, which we have no intention of surrendering, which we expect to uphold and maintain to the end: and therefore, speaking in the name of that splendid people, I announced that whatever I could do within the range of parliamentary law and within the limits of the rules of this body to defeat the pending bill would be done.

At the conclusion of the last speech I delivered upon the subject I took occasion then to state that this work is not agreeable to me. It is not to me a pleasant duty, any more than it was during the time of the great war to join in deadly conflict upon the battlefield with an armed enemy. It is not pleasant to a timid man at any time to stand up in the face of a great and determined opposition and oppose his feeble effort against the array on the other side. It is not an agreeable task to stand in this Chamber and talk to vacant seats. It is not a pleasant effort to speak to a body of tired men, nor to a body of men who do not care to listen.

But there is a larger body than this. The horizon surrounding the atmosphere in which the Senate of the United States is acting to-day is as wide as civilization, using that word in the modern sense. Every word that we utter here, every movement that is made, every impulse and intent of the actors which appear upon the surface of things, is seen and examined. Every act performed is scanned with an eagerness and avidity never before known in our history.

This long-continued labor is fatiguing, but we are charged with grave and responsible duties, Mr. President, and when men are called upon to perform a duty, a sacred duty, one that they themselves feel in every fiber of their being, it has behind it an impelling force greater than an army of banners.

I remember once hearing an old Quaker friend refer to a speech of Grattan in the Irish Parliament when there was such a body in existence, and there was a great and spontaneous applause upon the part of a large number of listeners, someone wondered what it meant. The orator's reply was that it was the power of truth acting upon the consciences of men. And in this great contest, while it appears to some persons who look upon the surface of things to be a mere play, on words to be an idle waste of time, and while we are commanded in an insolent, petulant, peevish manner to vote, to vote, we who are resisting this measures are impelled by a sense of duty that we dare not resist. So far as I am concerned, Mr. President, I do not want to resist it.

The man who in this trying time deserts his colors or abandons his friends or swerves from the path of duty marked out to him by a people with whom he is in sympathy and whose commission he bears, is not deserving the confidence of a free people.

We come to the task every time with a feeling that is peculiar in its nature—a feeling that gives us renewed energy. I have often observed that when men are actuated by a high sense of duty there is a moral heroism moving them, leading them, impelling them, and supporting them that they themselves can not understand; and that while the tension is upon them, while the influence of this great supporting power is with them, they know not how to surrender. And so it is now.

Mr. President, there is another feature about the contest which inspires us with a spirit of resistance that makes our defense offensive. We feel—and when I use the word "we" I refer to the people whom we represent, and not only to the people locally, our own immediate constituency, but to a still larger body of people scattered broadcast over the country who are in sympathy with us—we believe that this issue has been forced upon us without any reasonable excuse, without any proper reason, without any discussion among the masses, without any previous preparation, without any instructions to us on that point; we believe it has been forced upon us by a class of people consisting of comparatively a very few persons, and their interests are opposed to our interests.

[At this point the honorable Senator yielded to Mr. POWER, who suggested the lack of a quorum.]

Mr. PEFFER. When I was interrupted by a call of the Senate I was referring to one great overpowering and resistless impulse, moving those of us who are opposing the passage of this measure. I stated that we regard the situation as being forced upon us; that the peculiar form in which the subject is presented to us comes through lawful agencies, of course, but comes from a very small class of people comparatively, composed in part by men whose livelihood and whose fortunes are acquired at the public expense; that the inspiring force which operates through the boards of trade and stock exchanges and brokerage establishments and other commercial organizations upon us, has its origin, its nurture, and its habitation in the brains of men whose wealth is made up of the losses of their fellow-men—the speculators, the men who play with the markets as boys on the green play with the football—men who have no more regard for the welfare of their neighbors than they have for the success of a polar expedition—men who in matters of business (this class of business, I mean) have no consciences, men who care not about the poverty of the poor, who regard not the toil of workmen, who care not how many hours of toil the farmer spends in his fields, who care nothing about the wages of the men and the women who produce all that there is of wealth in this or in any other country; men who trade in the fortunes of communities; men who speculate upon the rise and the fall of securities a month, sixty days, or a year hence; men who discount the future and gamble in crops produced by the farmers; men who engineer great schemes and introduce them to the fostering care of the Government; men who in times of peril would risk the honor, the glory, the destiny of their country that their avarice might be satisfied; men who charge exorbitant rates of interest for the use of money, not only to their neighbors, but to their country; men who, when the test comes, are devoid of patriotism and of every high and noble impulse which usually impels honorable men to sacrifice something for the land they profess to love.

We believe this great issue is forced upon the country very largely by that class of men. We believe those men are our enemies. We believe that they are forcing a policy upon the country which when brought into practice through legislative action will inure to their benefit and to our injury, that will assist them in the acquisition of property that they are not entitled to, which will aid them in gathering in the profits of other men's toil, which will reduce the profits upon our labor, which will eventually make us a nation of tenants, which will absorb our lands, which will turn us adrift when the end comes, as merely wage-earners, taking away from us the heritage that came to us from our fathers.

The farmers of the country about two hundred and seventy years ago began to work on American soil. They pledged their honor in a little assemblage that they would govern themselves according to their own views of rectitude between man and man. They set about to clear away the forests and to reclaim the waste lands. They opened up farms; they raised produce to feed and to clothe themselves.

[At this point the honorable Senator yielded to Mr. DUBOIS.]

Mr. PEFFER. Mr. President, the early farmers, divided as they were between two social bodies, one of them engaged in the great forest region of Virginia, the other upon the bleak shores of New England, set about a conquest of the natural conditions which they found existing, and while they were opening farms and maintaining their families by their own unaided labor, they opened highways of travel from neighborhood to neighborhood. In the eastern portion of the country they soon organized themselves into towns, small communities, little democracies, where they governed themselves in their own way. They nurtured the town meeting.

After awhile they organized counties and States, and in the southern portion of the country, as the farmers penetrated the forests, they builded up a civilization of their kind. In time the neighborhood highways extended until all the colonies became connected. Ninety-five per cent of the people of this country, when the Revolutionary war began and when it ended, were farmers. After a time the ordinary highway was lengthened into government mail routes. Succeeding them came great national highways, and steam was called in to carry the traffic of these busy farmers.

Up to that time the manufacturing interests of the country had not been sufficiently developed to amount to great industries, and the carrying trade, so far as manufactures were concerned, was very limited.

Now the farmers who have sprung from so small a beginning are scattered about from their original footing to the Pacific, to the Great Lakes, and to the Gulf. Looking back over the work that they and their neighbors have done they find that together they have builded up the grandest, the most magnificent civilization upon the earth. They find that our carrying trade exceeds in mileage—perhaps I put it too strongly when I say "exceeds"—they find that our carrying mileage is nearly, if not quite, equal

to one-half of the carrying inland mileage of the entire world. They find that the tonnage which passes over our different routes, and the value of that tonnage, exceeds by many times our foreign commerce both ways with all the nations of the world.

They find further that, whether we measure our carrying trade by tons or by dollars, our internal commerce exceeds that of all the great nations of Europe combined—I do not say all the nations, but all the great nations of Europe combined—and that much the larger proportion of this immense commerce is that which is either grown upon the farms and harvested by our farmers, or produced by their neighbors in the manufacturing establishments of the country in order to supply the families of the farmers.

Looking at the pending contest in this body from that standpoint, do you wonder, Mr. President, that the farmers are earnest in their resistance and that their representatives here speak with positiveness and that they do not apologize for speaking frequently. Indeed it would be idle to talk about men situated as our farmers are, speaking of them generally, who would not resist and resent, and oppose and continue to oppose a measure which they regard will eventuate to their irreparable injury.

There is another class of people aside from the farmers who believe just as do their neighbors who till the soil; that the proceedings which brought about the proclamation of the President and the forcing of this issue upon us were conceived and brought forth in sin and iniquity. They believe that the proposed legislation, when effectuated in practice, will tend to destroy the profits upon their labor; that it will tend to still further concentrate the wealth of the country in the hands of men and women who never earned it; in the hands of people who expect to continue their business of throwing out their drag-nets upon the common industry of the people, and gathering in the profits of labor. I mean the wage-worker, whether he be in the factory, on the farm, in the salesroom, in the warehouse, or along the public highway.

[At this point the honorable Senator yielded to Mr. KYLE.]

Mr. PEFFER. The wage-workers, as a class, Mr. President, are vastly more interested in the pending proceedings than any other class of people can be, excepting only their neighbors who live upon the farms.

Manufacturing has become an art as it once was not. The little custom mills which we had in our boyhood days along in the early history of the country have been to a very great extent crowded out of business, and we have the great merchant mills at the centers of trade.

The old-fashioned butcher has given way to the great packing houses, and the smokehouses of the farmers of to-day, to a very great extent, more especially in the region west of the Mississippi River, are in the great cities instead of on the farms. The little wagon-maker shops by the wayside, at which our fathers had their wagons and their sleds manufactured, have given way to great establishments where men are employed by the thousand. The old-style shoemaker has given way to great concerns, where shoes are made by hundreds, thousands, and millions, and the cheaper grades of them laid down in boxes and packed ready for shipment at 33½ cents a pair. The carpenter, who was near the old farm, and who made his sash and his blinds and his panel-doors for the next year's work in his shop during the long, snowy, cold days of winter, now sends 500 or a thousand miles away for his sash, which are made by machinery and turned out by the carload. So it is in every department of mechanical and manufacturing industry where workmen are employed in producing movable property.

The modern wage-worker, Mr. President—and this is the reason that I speak of him as I do in this connection—under present conditions is compelled to live the life of a machine. Muscles are made of iron to-day, and nerves are made of steel. To that extent the man is but the attendant.

One day during the last summer I stopped a few minutes at a great sawmill, and while standing there reflected upon the change which had come over the country in sixty years. There was a sawmill in the neighborhood where I was born, three or four of them, indeed, one of which comes to my mind now, where a farmer conducted his mill in connection with his farm operations.

[At this point Mr. KYLE raised the question of the want of a quorum.]

Mr. PEFFER. I submit, Mr. President, with all due deference to the Senator from South Dakota, who called my associates to the Chamber, that it was unusual, and I think somewhat indecorous, to break the thread of a good story for such a purpose. I was bringing to the attention of those who were kind enough to listen, to the contrast between the sawmill of our fathers and the sawmill of to-day. The particular rural domestic mill to which I referred was situated upon the banks of a small stream in the neighborhood. It was said the farmer who owned it put on a log before breakfast, harnessed up his team, and as he rode by the mill on his way to the field started the saw to going, and it was so timed that when he returned at noon from the field, passing by the mill, the saw had gone through the log once and one piece of lumber was thrown off.

A similar proceeding was conducted after dinner. But in this great modern sawmill the logs were drawn up a gangway from the water, in which they had been floated probably a hundred or two hundred or more miles. The logs were landed upon a truck with rollers, and immediately on arriving at a certain point, were rolled off onto a platform made of more rollers. From that they were moved forward on a line parallel with the log-truck, and within the space of ten seconds from the time the last board from the last log was removed, one of these great logs was turned over upon the carriage and clasped by machinery under the hands of two men, and started forward against a saw, which was an endless band.

I watched the proceeding with intense interest, and one particular log, which measured about 2 feet when it was squared, turned out into inch plank, all except the last piece, which was 2 inches in thickness, in order to be held steadily by the clamps, occupied just an even five minutes.

In every department of manufacture and industry we see, if not so great a change, at least substantially as great a change, and the wage-workers, the men who attend the machines and do nothing else, just as the men of the sawmill did, operate in other lines of manufacture with the same precision as the machinery itself. If they did not, many of them would be torn to pieces. Men fly backward and forward on the log carriage with a speed which pains the eye to follow them. It is necessary they should move according to the machine.

The wage-workers interest in this question lies in the fact that it is part of the great plan which has brought together these masses of toiling men under one rule, and making of them, socially as well as mechanically, virtually machines.

In some places, more especially in mining regions, where there are great iron-manufacturing establishments and machines for raising and carrying coal and cleaning it, workmen are sometimes voted at the polls as well as worked by the machines in the shops. So general in our large towns and cities has this system become, that the wage-worker of to-day looks upon the whole system with terror, while he sees no other avenue of employment, no other means by which he can earn a livelihood for himself and his family, and yet he sees from year to year the coils which are gathering about him growing tighter, and bringing him and his neighbors closer and closer together. Looking back to the large liberty of his boyhood, he wonders what the end will be, and he believes that the proposed legislation is in line with conditions which are oppressing him beyond his power to endure with patience.

Putting that class of people with the farmers, we have more than two-thirds, yes, we have 75 per cent to 80 per cent of the entire population vitally interested in this proceeding. The farmer and the wage-worker look forward to the outcome with fear and trembling. No wonder that they feel as if the powers behind this movement were powers operated by their enemies.

Mr. ALDRICH. Will the Senator from Kansas allow me to ask him a question?

Mr. PEFFER. Yes, sir.

Mr. ALDRICH. Do I understand the Senator to claim that the wage-workers of the United States are voted in gangs and voted as their employers dictate?

Mr. PEFFER. I did not say so, and do not wish to be so understood.

Mr. ALDRICH. Then I do not understand the application of the story.

Mr. HAWLEY. I am sure the Senator from Kansas said so substantially about the lumbermen. I do not know why there should be an exception.

Mr. PEFFER. Mr. President, Senators are very sensitive upon this point.

Mr. HAWLEY. Certainly.

Mr. PEFFER. And they ought to be. It is very proper they should. They are not more so than I am. Since I have been talking, the Senate has been called three or four times. I have tried very hard to keep my mind in line with the thought which I intended to pursue, but lest Senators insist that I have not stated the position correctly, I will repeat it as nearly as I can. I do not wish to be understood as having committed a speech to memory. I will substantially repeat the point which I have made upon this particular phase of the subject.

I was comparing the present condition of the wage-worker with that of his ancestors of fifty or more years ago. I spoke of the little mechanical establishments and the manufacturing houses in rural communities, where we had carpenters and blacksmiths and wagon-makers and shoemakers and others among us,

and stated that the large liberty which those men enjoyed then has passed away from them, for the reason that under modern conditions that class of men are massed in great establishments, where persons by the thousand go to their work and come away from it by certain signs; and that in some instances, especially in mining regions, where there are iron manufacturing establishments, where there is machinery for the raising of coal and the cleaning of it and the carrying of it, I stated that men were voted as well as worked.

I do not mean to say that in the great cities where there are large manufacturing establishments engaged in the manufacture of cloth, for example, or in the manufacture of steel goods or in any of the large manufacturing enterprises, speaking generally, that the men are voted as they are in the coal mines over in Pennsylvania, where I have been reliably informed there are instances or have been where men are voted by number, men who do not speak our own language.

Mr. QUAY. Will the Senator allow me to correct him?

Mr. PEFFER. Yes, sir.

Mr. QUAY. On what occasion, I will ask the Senator, were men voted in that way in the State of Pennsylvania? I never heard any such thing as that, though something of that kind was charged in the State of Montana, as I recollect. In the State of Montana it was charged that at the Presidential election—and I think it was the last Presidential election or the election previous—Italians were brought from the mines and voted. They were unable to speak the English language and they came in with placards upon them, on which was printed, "This man votes the Democratic ticket."

Mr. PEFFER. I was referring to the mining regions of Pennsylvania, and I have no doubt the Senator from Pennsylvania is well informed in the politics of the old State, which he and I both love so well. I had the honor to come into this world very near the place where the Senator from Pennsylvania first saw the light, and we are friends; we both love the grand old Commonwealth which gave us birth. I was speaking of certain mining regions in that section. I am not able at this moment—for I had not thought about referring to it specially—to recall the particular locality or the particular occasion.

Mr. QUAY. If the Senator from Kansas will permit me to interrupt him, I will say that he is certainly misinformed as to any occurrence of that kind in the State of Pennsylvania.

Mr. PEFFER. My impression is that the reports which have been made either to this or the other branch of Congress upon this subject will show that I am correct. Whether that be true or not I do not now wish to state positively, but I have seen statements made by perfectly reliable men, and I have heard statements made by perfectly reliable men upon the public platform, and have seen other statements in the public press to the effect that, as it now comes to my mind, I believe in the region of Scranton, Pa., men not Italians either, or at least not generally so, but Poles and Bohemians, were voted by number; and when they went to the store and dealt at the store or when they received their pay they were known by number. While I may be mistaken as to their voting, yet I state the fact as being true, and will take my chances, to use a vulgar phrase, as to its correctness.

There is an additional reason why persons belonging to the class I have referred to are, as they should be, interested in this proceeding. The reasons assigned for the calling of Congress together and the forcing of this issue upon the country are unfounded, and the classes to which I have referred understand very well that these reasons are unfounded. The reasons suggested are that the people of the country are afraid of the public faith, that the honor of the American people is about to be sullied, that the Government of the United States is not able to pay its honest debts, and that our currency is being depreciated through the fear that it will not be honored when presented at the Treasury for payment.

We all understand very well, Mr. President, that there is no truth in this assertion, that the people are not afraid of their Government's failure to pay its debts. The people taken as a mass, have unlimited confidene in the integrity of the whole country. They understand very well that we are abundantly able to pay everything which we have agreed to pay, and just as we agreed to pay it. There could be no better evidence of that fact than that the persons who pretend to believe this thing have no objection to receiving the credit money of the Government.

No banker, no speculator, no merchant, no manufacturer, any more than a farmer or a tradesman, an artisan or a wage-worker, has been at any time, or is now unwilling to receive any of the Government obligations either in the payment of debt or for property or for labor. Indeed, the distrust of the ability of banking institutions to pay their depositors aroused the suspicion of a great many people and their money was withdrawn from the banks not because the depositor doubted the ability of the Government to pay, but because he doubted the honesty of the banker and the safety of the bank.

That was the reason the depositors withdrew their money. They did not ask whether it was a silver certificate or a hundred of them, or whether they were to be paid in Treasury notes, or in greenbacks, or in gold, or in silver. A member of this body who is connected with a banking institution told me one day in a conversation upon this subject that a run, as it was termed, was made upon the institution with which he was connected, and that in order to show to the depositors the ridiculousness, as well as the uselessness and needlessness of their clamoring in long lines upon the street for their money, the officers of the bank determined on the second day of the run that they would pay out silver dollars to the depositors. They did so.

The bank was closed at 4 o'clock, as usual, the end of banking hours, and opened again the next morning at 10. The cashier began to pay out silver dollars, and in a little time the bystanders on the streets began to laugh at the depositors carrying away their large bundles and sacks of silver money, and some of them were cumbered with the weight. It set the depositors themselves to thinking, the run was soon suspended, the bank came through all right, and I have been informed the depositors have returned their money, and that everything is going along smoothly.

Those men represented the depositors in all parts of the country. They did not care anything about whether their money was in paper, or, if it was in paper, what kind of paper; one was just as good to them as another, and probably in ninety-nine cases out of every one hundred not a man or a woman of the entire number stopped to look at what kind of paper he was getting. To them it was all money. Hence we all know the people understand very well that this panic was not brought about because of any lack of confidence upon the part of the people concerning the currency or the money of the Government.

I need not go further in order to show that the Administration does not believe that the people are afraid of their Government. There is not a Senator who has yet spoken who says he believes it—not one; and the Senator from Indiana [Mr. VOORHEES], the distinguished chairman of the Committee on Finance—and I wish to avail myself of the present opportunity to say I have very great respect for him, and I appreciate, I think as fully as any one man can, the hard and trying position which he fills and the difficulties which are in his path, the annoyances, the embarrassments, and the many confusing influences which are constantly trying to affect his course—the Senator from Indiana in opening the discussion upon this bill took occasion to impress upon the Senate and upon the country the great underlying fact, that whatever might have been the cause of the panic, it was not the want of confidence on the part of the people in the honor of their country and in the ability of their Government to pay its debts. The Senator used this clear, forcible language, which I find on page 390 of the CONGRESSIONAL RECORD, under date of August 23, 1893:

> For the last five months and a little more, the cry of the pessimist, the voice of the prophet of financial evil, and the wail of the apostle of national bankruptcy have all been heard in the land. These sounds of warning and menace against the authorities of this Government have gone up from all those financial centers where money, its gains and its power, constitute the chief objects of human worship, and from those centers have also emanated the cruel edicts of great financial corporations, commanding a stern contraction of the currency, a sudden and harsh shrinkage in its circulation, and the consequent inauguration of a panic, a distress period in the public mind.
>
> Sir, no candid observer of existing public facts can believe that this attempted panic and business distress has been inspired by any real fear, or genuine want of confidence in the credit of the Government or in the soundness and stability of its various kinds of currency.

Mr. President, I will add here, parenthetically, that a large part of our currency is not legal tender. A silver certificate is not legal tender, nor is a national-bank note legal tender. Yet both of them, in one sense at least, are Government obligations. A national-bank note is redeemable, at the counter of the bank that issued it, in United States notes; United States notes, when in quantities of $50 and upwards, are redeemable in coin, and under the practice of our Government, redeemable in gold. The silver certificate is simply a promise on the part of the Government to deliver to the bearer as many silver dollars as the certificate calls for. So that in either case, whether of the national-bank note or the silver certificate, there is, to a greater or less extent, an obligation upon the part of the Government. Yet, as has been very properly said by the distinguished Senator whose words I have been reading, the people had perfect confidence in all the different classes of our Government paper.

I proceed to read from the same speech:

> It is true that amongst the ugly assets of a former Administration which came over on the 4th of last March were an empty Treasury and the record of a billion-dollar Congress in its expenditures, but despite so heavy a handicap the public credit of the United States has not faltered for a single moment, nor has the faith of the civilized world been lessened by the breadth

of a hair in American honor and American resources, in this year of 1893, and in the custody of the Administration now in power.

The national credit of the American Republic, tried by every test which can be applied, is better and stronger to-day than the credit of any other government on the globe. Her bonds, her promissory notes to pay her debts, as they may be called, bearing a low rate of interest, stand at a premium in the money markets of the whole earth, and even the cold, cowardly instinct of hoarded, inactive, interest-hunting capital, in its cautious search for permanent investments, seizes upon them with swift greed wherever they can be found. The safety of the security appeases somewhat even the usurer's highly-seasoned appetite for richer profits.

Not only do the traffickers in money and the permanent investors of capital hunger and thirst after all the Government bonds now in existence, but their chief complaint against the present Administration is that the President and his very able Secretary of the Treasury have refused their demand to issue at least three hundred millions more. This additional block of national indebtedness, increasing in a time of profound peace the interest-eating burdens of American labor, would be hailed with the keenest delight and swept with miser enjoyment and avidity into unpatriotic vaults by the very parties who have most loudly and continuously declared, ever since the present Administration came into power, that the credit of the Government was in deadly peril and its Treasury practically bankrupt.

Sir, there are many and powerful reasons, plain to the thoughtful mind, why at this time our financial credit as a nation is stronger, more permanent, and freer from future danger than ever before, and far safer than that of any other of the great powers of the world. The mighty rock on which American credit now rests is the absolute unity of purpose on the part of the American people that it shall be upheld. For the first time since 1820, when sectional discord startled the country like a fire bell ringing in the night, there is a perfect union of design and of patriotic effort between the people of all the States in behalf of the honor, the power, the dignity, and the glory of the Republic. Peace, content, repose, and fraternal confidence have taken the place of sectional strife and distrust forever.

[At this point the honorable Senator yielded to Mr. TELLER.]

Mr. PEFFER. Mr. President, thus has spoken that eminent statesman whom the good people of Indiana have kept so long in the public service. No man probably in the Republic knows better what the feeling of the common people is than the Senator from Indiana.

He gives, in the concluding remarks which I have read, an additional reason why the credit of the people is good. He refers to the unification of the American people. He alludes to the fact, that was once so well stated in the national Republican platform—almost a paraphrase of the language of the men who planted the Republic—that the people of the United States constitute a nation. He mentions the fact that though once our people were divided and submitted their differences to the arbitrament of war, now all that separated us then has passed, and passed forever; that there is now no strife in any section of the country against the people of another section; that the men who wore gray uniforms in the Southern States and the men who wore blue uniforms in the Northern States have buried their quarrel, and they and their neighbors, they and their children and their children's children, are with us a united people, patriotic, and devoted to the best interests of the Republic.

The Senator from Indiana calls attention to this one of the reasons why our own people, as well as the people of other nations, have perfect faith in the honor of the Government and in its ability to pay its debts.

[At this point the honorable Senator yielded to Mr. KYLE.]

Mr. PEFFER. Mr. President, so many Senators have expressed themselves in substantially the same way the Senator from Indiana did that it would require a great deal of time to read even brief extracts from all of them. It is common for Senators to refer to the fact that they themselves do not believe, and have not believed, that there was any foundation for the statement that the people of the country, or any portion of them, did in fact believe that there was any danger of failure of credit upon the part of the Government. In view of that fact it is strange, exceeding strange to me, that Senators have found it to be their duty to at least appear to swerve from the line of a lifetime.

Senators who have grown gray in the public service, here and elsewhere, have been heard time and time again, with an eloquence and power that swayed multitudes, arguing in favor of the money of the people, opposing all propositions to change our bimetallic to a monometallic standard. Men have availed themselves of every appropriate opportunity to express their conviction that among the things necessary to perpetuate the Republic and to protect the people and their interests, and to hand our institutions properly down to posterity, are the maintenance of our silver money and the continuance of the coinage of silver.

It seems almost unaccountable to me how men can for so many years have followed that line of argument and have kept so many of their countrymen in line till now, when we are called together to do a thing which a few years ago (and probably only a few months ago) some of them would not have done, and for a reason which they themselves do not believe. It is no wonder that under such circumstances, when the influences which have brought this issue are so strong as to swerve men of this character to the right or to the left from the lines which they have long years followed, it is not to be wondered at that the newspapers become frantic over the delay in this body. It is no wonder that even the Chief Magistrate of the United States expresses publicly his astonishment at what seems to him to be an unreasonable delay in passing this bill. Nor is it any wonder that we sometimes become impatient and rebel against the assaults that are made upon us.

They tell us that the great body of the people are suffering from the operations of the Sherman law, and that it is our duty, without any further consideration, without any examination of the subject, to bow at the bidding of some great power to repeal this law, and to be done with it.

Who are the people that these men talk about? Are they the great working masses who have made for us all the wealth that there is in this country; or are they the traders and traffickers in what we produce, or the speculators who prey upon our commerce, and the gamblers who dally and gamble with the most sacred interests of mankind? Mr. President, when we come to examine who are demanding action upon this question, and prompt and immediate action, it is surprising to find how few people are included.

I have here Senate Miscellaneous Document No. 24, of the Fifty-first Congress, second session, which will show the kind of people who then became affrighted at a shadow and demanded action on the part of Congress. It is a memorial from a convention purporting to be composed of the representatives of commercial bodies of the United States, in session at St. Louis, Mo., on the 11th day of December, 1890. The memorial was forwarded to a member of this body, the Senator from Missouri [Mr. VEST]. It was presented to the Senate on the 11th day of December, 1890, and ordered to lie on the table and be printed.

Mr. Vest submitted the following memorial of the national convention of the representatives of the commercial bodies of the United States calling attention to the present depressed financial condition of the country, the inadequacy of State laws, the provisions of the Torrey bankrupt bill, and petitioning the Senate to consider at once and pass that measure.

Then follows a list of the officers, as follows:

President, Jay L. Torrey, St. Louis; treasurer, Peter F. Nicholson, St. Louis; secretary, James T. Wyman, Minneapolis; assistant secretary, Francis J. McMaster, St. Louis.

Committees.—Presidential, James O. Broadhead, St. Louis; Congressional, Lowe Emerson, Cincinnati; finance, William T. Baker, Chicago; bankruptcy literature, Breedlove Smith, New Orleans; executive, William E. Schweppe, St. Louis.

I ask that the Secretary read the memorial.

The VICE-PRESIDENT. The Secretary will read, as requested.

The Secretary proceeded to read the memorial, when Mr. TELLER raised a question as to the right of a Senator to have such a paper read at the desk. After debate (see current proceedings) the Senate decided the reading to be in order.

The memorial as subsequently read is as follows:

[Senate Miscellaneous Document No. 24, Fifty-first Congress, second session.]

IN THE SENATE OF THE UNITED STATES.

December 13, 1890.—Ordered to lie on the table and be printed.

Mr. VEST submitted the following memorial of the national convention of the representatives of the commercial bodies of the United States calling attention to the present depressed financial condition of the country, the inadequacy of State laws, the provisions of the Torrey bankrupt bill, and petitioning the Senate to consider at once and pass that measure.

Officers and chairmen of committees of the national convention of the representatives of commercial bodies of the United States.

Officers.—President, Jay L. Torrey, St. Louis; treasurer, Peter Nicholson, St. Louis; secretary, James T. Wyman, Minneapolis; assistant secretary, Francis J. McMaster, St. Louis.

Committees.—Presidential, James O. Broadhead, St. Louis; Congressional, Lowe Emerson, Cincinnati; finance, William T. Baker, Chicago; bankruptcy literature, Breedlove Smith, New Orleans; executive, William E. Schweppe, St. Louis.

ST. LOUIS, *December 11, 1890.*

To the United States Senate:

Your memorialist, the national convention of the representatives of the commercial bodies of the United States, respectfully calls the attention of your honorable body to facts as follows:

The financial affairs of the country are in a perilous condition. Business men in all the States of the Union are apprehensive that there will be a panic. Citizens in general are alarmed at the outlook. Values of property are decreasing. Persons, firms, and corporations are daily failing, whose assets are largely in excess of their liabilities. There is but a single cause for all of the above conditions, and that is a want of confidence. As a result of that single cause, money is being withdrawn from circulation and the evils which are following, and are likely to continue to follow are innumerable. There is but a single certain remedy for such single cause. The putting into circulation of more money may or may not avert the danger: as there is no limit to the amount of money that can and will be hoarded so long as the single cause, want of confidence, continues. Such single remedy is the enactment of a law by Congress as provided by the Constitution pursuant to the provisions of which the property rights of every citizen, in every condition in life and irrespective of the State in which he resides, will be preserved and may be enforced.

Your memorialist further respectfully represents that confidence can not be readily restored under existing laws, because they do not contain adequate provisions pursuant to which the creditors of a common debtor may meet, counsel together, and render to him the assistance he needs, and extend him such favors as may be in his and their best interests. State laws encourage the selfish instinct of self-preservation, and as a result creditors seek preferences and, failing therein, endeavor to secure them by compulsory process without regard to whether the debtor's conduct has warranted it, whether he is or is not solvent, and in absolute disregard of the equities of other creditors.

In consideration of the possible wrongs which may be perpetuated under

such laws property rights are insecure at all times, and especially when there is, as now, a prevailing want of confidence.

The debtor's property is in peril under the circumstances above recited, because real or pretended creditors may attach it with impunity in any State where found, other than where he lives, irrespective of the bona fides of their claims. More than enough property is always levied upon under compulsory process to pay the amount claimed and costs, and is sold at sacrifice sales, so that no man can safely say that he is solvent if he but becomes the subject of attack from his creditors who are contending, not for the preservation of his property and the enforcement of their rights in the quickest possible manner and at the least possible expense, but to secure the payment of their claims in full without regard to his or their costs.

The creditor's claim against a debtor is not secure and will not yield a normal revenue under the conditions above stated, because his debtor may, by any one of innumerable fraudulent methods, become execution proof; even if the debtor, in anticipation of commercial disaster, gives him a preference it may prove necessary to expend its value in litigation in an endeavor to retain it; if the preference be given to another creditor he must lose the amount of his claim or fight for it, with the knowledge that whether he wins or loses he will have wasted his time and incurred costs and counsel fees.

In the event of a commercial failure the difficulties encountered in the settlement of the rights of parties, when they are all honest, are perplexing under the laws of a single State, but when you add the element of a dishonest debtor and dishonest and rapacious creditors and consider the variance of statutory procedure in the different States, and contemplate the chaotic condition incident to the determination of the rights of parties in interest by the several State courts, having jurisdiction of parts of an estate, it is a wonder that men without property do not refuse to become debtors, and men with property do not hoard it and thereby stop the wheels of commerce.

Your memorialist further represents that on July 24, 1890, there was passed by the House of Representatives a bill known as the Torrey bankrupt bill, and that thereafter and on August 26, 1890, the Committee on the Judiciary of your honorable body reported it with amendments and recommended its passage; that it makes ample and explicit provisions for the meeting of creditors of a common debtor to make a fair compromise, arrange an honorable extension of the time within which he may pay his debts, or appoint a trustee to make an equitable division of the assets; the discharge of honest insolvents who have made a full disclosure of their affairs and a complete surrender of their property; the adjustment by arbitration of matters in controversy; the dissolving of enforced liens in the event of an adjudication in bankruptcy is had within four months thereafter; the allowance to bankruptcy officers of moderate fees for their services and the payment of them in such manner as to expedite the administration of bankrupt estates; the restoration of confidence at present and the prevention of the loss of confidence in the future by the proper administration of justice and the perpetuation of integrity in the transactions between debtors and creditors, the grand aggregate of which constitutes the commerce of the world.

Your memorialist, in view of the foregoing, respectfully petitions for the immediate consideration and passage of that measure, on behalf of two hundred and sixty-five commercial, industrial, and other bodies of all parts of the country; hundreds of thousands of men whose capital consists in part of credit justly founded upon confidence, and whose prospects are likely to be blighted, and property swept away as a result of a continuance of the present condition and a million or more of United States citizens who have been beggared and are now compelled to labor in menial places because there is not a bankrupt law in force providing for their relief as contemplated by the Constitution of their country.

The national convention of representatives of the commercial bodies of the United States, by its executive committee, as follows: Wm. E. Schweppe, chairman, St. Louis, Mo.; Isaac Atwater, Minneapolis, Minn.; Herbert P. Bissell, Buffalo, N. Y.; Mortimer N. Burchard, Chicago, Ill.; Richard D. Cougnanour, Dallas, Tex.; J. Frank Fort, Newark, N. J.; Joseph Fahys, New York City, N. Y.; Henry A. Fry, Philadelphia, Pa.; Frank Gaiennie, St. Louis, Mo.; Joseph W. Goddard, St. Louis, Mo.; Justus Goebel, Cincinnati, Ohio; David Hirsch, New York City, N. Y.; John J. Hornor, Helena, Ark.; Anthony Ittner, St. Louis, Mo.; John A. Lee, St. Louis, Mo.; Henry M. Mendel, Milwaukee, Wis.; Beverly K. Moore, Boston, Mass.; Fred F. Myles, New Orleans, La.; James M. Nave, Kansas City, Mo.; Peter Nicholson, St. Louis, Mo.; Ferdinand W. Risque, St. Louis, Mo.; Channing Seabury, St. Paul, Minn.; Daniel M. Thomas, Columbia, Pa.; Francis B. Thurber, New York City, N. Y.; Rozel Weissinger, Louisville, Ky.

[After the reading of the memorial, the honorable Senator yielded to Mr. JONES of Nevada.]

Monday, October 16, 1893.

Mr. PEFFER. Mr. President, the longer this discussion continues the more interesting it becomes to me and the more instructive as well. It has taken a very wide range, covering all departments of economics and a great many matters not necessarily tributary thereto, all in all constituting a volume of information that will be of inestimable benefit to those who come after us.

The discussion has developed two important facts, or rather one important fact and one important suggestive proposition. The fact developed is that the financial disasters which have overtaken the country recently have not been the result of a want of confidence on the part of the people in the Government promises or its ability to make good its promises, but that they have come to us in the direct line of speculation. The suggestive proposition is that in the constitution of the Senate the will of the people may be thwarted, that the doctrine of majority rule may be set aside and held for naught. Of both this fact and the suggestion I expect to speak somewhat at length this evening, not because they have not been discussed heretofore, but the developments that are coming to us from day to day show the great importance of the fact and the suggestion.

When I was interrupted I had sent to the desk a paper to be read. It was a paper purporting to determine in the name of a few interested individuals that the then condition of the country indicated great distress among the people, a distress which could not be relieved except by the enactment of certain legislation. This memorial from persons styling themselves business men and representatives of business men in the city of St. Louis, purports to show that the business interests of the country were in a critical condition; that failures were occuring every day; that small traders, merchants, bankers, and large concerns alike, were failing in business. The memorialists asserted that there was but one remedy, and that was the enactment of the Torrey bankrupt law. A Mr. Torrey, I presume the author of the bill, was president of that convention.

At all events, those gentlemen (whether honestly or not, it is not my purpose either to discuss or to suggest) assumed that the country was in peril; that the business interests of the people were in jeopardy, and that nothing save the passage of a particular act then pending in Congress would save the people from ruin.

Now, we have at this time similar communications coming to this body, and they all insist that the repeal of the Sherman law is all that is needed to set the wheels of commerce in motion.

I will say, Mr. President, that it is the speculative interest in the country that is preying on the credit of the people and on the profits of their industries; that it is not want of confidence upon the part of business men or of laboring men, manufacturers or any class of our people concerning the credit of the country.

It has been assumed in this discussion from the beginning up to the present time on the part of Senators who favor the passage of the pending bill that the people of the United States almost en masse are clamoring for the immediate repeal of the Sherman silver law, as it is called; whereas, on the other hand, those of us who oppose the passage of the bill deny the proposition. We appeal to every Senator's own personal knowledge of the feeling of his constituents; we appeal to the demands which are made upon us by the common people of the country, by which I mean the farmers, the wage-workers, the mechanics and those who toil with their hands.

Every few days we see notices in the press of public meetings commending the course of silver Senators and condemning the course of certain self-appointed individuals who hold what they call mass meetings and pass resolutions condemning certain Senators. Then we have innumerable letters from individual correspondents, asking us to hold fast to the position which we have assumed and to make haste to capture other ones.

Only a few days ago we had read in the Senate at the request of the senior Senator from Tennessee [Mr. HARRIS] some resolutions which had been adopted by persons purporting to be business men in the city of Memphis, who took occasion to criticise and denounce the conduct of the two Senators from that State. The action of that convention aroused the people of Memphis and the surrounding country, and on the 12th day of October they held a meeting a report of which was given to the press. I quote a telegraphic note from the Evening Star, of Washington, of the 12th instant, as follows:

MEMPHIS, TENN., *October 12.*

The action of the merchants and cotton exchanges last week in denouncing Senators HARRIS and BATE for their course and the Senate for its failure to pass the bill repealing the purchasing clause of the Sherman act, met with so much criticism that a largely attended mass meeting was held last night for the purpose of indorsing the Tennessee Senators in the stand they have taken in favor of silver. The meeting was addressed by ex-Congressman Casey Young, E. W. Carmack, editor of the Commercial, and a number of others, some of the speakers being especially bitter in their denunciations of President Cleveland, who was characterized as a "slave-driver," cracking his whip over the backs of Senators and Representatives in Congress. The meeting was composed almost exclusively of Democrats.

The Senator from Tennessee [Mr. HARRIS] kindly hands me a copy of the resolutions to which the dispatch refers. I will read them:

THE RESOLUTIONS.

At a mass meeting of the citizens of Memphis, representing all classes, the following preamble and resolutions were adopted:

"Whereas the sudden and apparently concerted withdrawal of a large volume of money from general circulation through the ordinary channels of trade and commerce, has produced a widespread and disastrous financial disturbance and monetary panic throughout the entire country, which afflicts all the laboring and producing classes of our people and threatens serious loss, if not total ruin, to all their varied industries and business pursuits. A condition so grave and so hurtful to the vast interests upon which the public welfare and prosperity is so largely dependent, appeals to the people of every locality for vigorous but considerate action, and to Congress for wise and patriotic legislation, in order to remove as speedily as possible this oppressive evil which has brought stagnation and blight upon the business and prosperity of the whole country.

"One of the unquestioned prerogatives of civil government is the power to coin or create money for use and circulation among its people in the prosecution and conduct of their various trades and business vocations, and this attribute of sovereignty, when justly and wisely used, gives strength and beneficence to governments and prosperity and happiness to their citizens, but when guided by selfish or corrupt agencies it becomes destructive of both national and individual prosperity. It is, therefore, among the first and highest duties of every government to provide a financial system which will meet the business needs and promote the prosperity of all its people, having it so guarded and adjusted as to place it beyond the power of individual or corporate combinations to convert it into an agency of wrong and

oppression. Gold and silver have been recognized, adopted, and used by all mankind as the primary representatives and emblems of money in every country of the world in all the ages of civilization, and the statesmen and patriots who founded our Government and shaped our laws and institutions declared in the Constitution which they adopted that gold and silver should be the money of our people, and as money the two metals were kept and held together by a bond as strong and indissoluble as the Union of States, both in peace and war, through every political change and convulsion, for nearly a hundred years.

"During all this period of time gold and silver were considered and treated both in commerce and legislation, as the basis and standard of all money values; and silver, even more than gold, became so strongly lodged in popular confidence and affection that it was recognized and held to be the favorite money of the people—the toilers in the field and factories—and they never lost confidence in its value and usefulness as money. When in 1873, without their knowledge and against their interest, silver was demonetized through influences thought to be venal and at war with honest legislation, the act was denounced by distinguished men of every political party as the greatest crime of all the ages, until public indignation compelled the passage of a law reclothing silver with the dignity of a money metal. Following the lead of public thought and yielding to an unmistakable public demand, all the political parties of the country embraced in their political platforms of 1892 an explicit and unequivocal declaration in favor of the continued coinage of silver, under such conditions as would keep it in equal value with gold, and they and their representatives stand solemnly pledged to enact such laws as will secure that result; and

"Whereas, in view of these facts in our political history, the people who believed the party and personal promises of those now controlling national legislation, and, therefore, had a right to expect and demand that these promises should be faithfully and honestly fulfilled, were alarmed and disappointed by the action of such of them as have disregarded their pledges and are aiding in the absolute and unconditional repeal of the only law which recognizes the money quality and value of silver, without even the promise of any sort of legislation providing for its future coinage or retaining it as a factor in our monetary system; and

"Whereas the two Senators in Congress from Tennessee, Hon. ISHAM G. HARRIS and Hon. WILLIAM B. BATE, have been harshly and unjustly criticised in a series of resolutions recently presented to the Senate of the United States for the sturdy adherence to principle, fearless independence and unshaken fidelity to party and personal pledges which prompted their action in opposing a measure of legislation which in their judgment would have wholly changed a financial system which during a long period of honorable public service they have commended to the favor and confidence of the people of Tennessee, and which they have often promised them to uphold and maintain: Therefore,

"*Be it resolved by the people of Memphis and Shelby County, in mass meeting assembled*, That while we do not believe the present financial situation can be justly or logically attributed alone to the operation of the Sherman law, yet this theory has been so industriously advocated that it has come to be generally accepted as true, and we therefore favor the repeal of that measure, but not without some accompanying legislation which will meet the repeated promises of all political parties and the just expectations of a large majority of the American people.

"2. That we hold to the use of both gold and silver without discrimination against either metal, and in the present condition of our people, a large majority of whom are debtors, we favor the coinage of the largest amounts of American silver that can be kept equal in purchasing power and monetary value with gold, and therefore respectfully appeal to the Senate of the United States to enact such legislation as will attain these ends, and thus ensure the prompt repeal of the Sherman act and the speedy restoration of financial confidence and public credit.

"3. That we have the utmost confidence in the wisdom and patriotism of the American Senate, and therefore entertain the belief and expectation that that honorable body will soon relieve the people of the financial distress which now afflicts them, and restore waning public prosperity by the enactment of some legislation based upon a fair and just compromise of existing differences in respect to the financial theory best calculated to promote the public interest and secure the welfare of the people, and in which the integrity of silver as a money will be recognized and assured of full protection.

"4. That we approve the actions of Senators HARRIS and BATE in opposing the repal of the Sherman act without some accompanying provision for the protection of silver from being degraded in the scale of money values, and that we honor them for their vigilant and fearless devotion to the public interests, their scrupulous regard for their pledges to the people, and their manly defiance of all efforts to influence their action contrary to their convictions and the wishes of an overwhelming majority of their constituents.

"5. That we here assure these honored citizens of our State and distinguished public representatives that we have unabated confidence in their sterling integrity and high capacity for public service, and that the masses—the honest yeomanry of Tennessee—stand ready, as they have always done, to defend them against any imputation upon their ability and willingness to uphold and maintain in any station the honor of their State and to guard the interests of their people.

"6. That the secretary of this meeting be instructed to forward an official copy of these resolutions to Senators HARRIS and BATE and to the presiding officer of the Senate with a request that he lay them before that body."

M. C. GALLAWAY,
E. W. CARMACK,
CASEY YOUNG,
HOLMES CUMMINS,
TOM HOLMAN,
H. D. GREER,
J. J. DUPUY,
Committee.

JERE HORN,
Secretary of the Meeting.

This is in accord with the proposition I was discussing, that when the masses of the people come to speak those people who are spread all about the country, doing here a little and there a little to build up this great Republic, to develop our hidden resources, to make us the great and strong, wealthy and powerful people that we are, when they are heard from, they do not come to us in the tone assumed by the board of trade, the stock exchanges, and the speculators of great cities, but they come to us to hold up our hands while we fight this battle for them.

This morning I find a dispatch in the Washington Post from Anniston, Ala., a rapidly growing city surrounded by a magnificent mining region, people with a sturdy yeomanry like those the Memphis resolutions speak of as living in Tennessee. The telegraph reads:

SENATORS MORGAN AND PUGH UPHELD.

ANNISTON, ALA., *October 14.*

At a meeting yesterday of the citizens of Anniston, resolutions were unanimously adopted approving the course of the Senators from Alabama, which had been severely criticised by some of the newspapers in Alabama and in the East in the debate on the silver repeal bill. "While deploring the dissensions which have arisen between our honored President and the Democratic Senators from the South," the resolutions continue, "we renew our allegiance to silver and bimetallism—that bimetallism which is founded on works and not on faith, on present fruition and not on unrealized hope."

I happen to know that in Alabama, in Mississippi, in Georgia, in the Carolinas, and in Texas a very large majority of the farmers there are silver men; that it is a part of their political and social creed. I happen to know that a very large number, I am satisfied 75 per cent of the practical farmers in all those States were two years ago active members of the organization known as the Farmers' Alliance and Industrial Union, an organization of farmers, originally and primarily social, which now numbers among its membership all classes of working people whose business permits them to attend the country meetings.

It is unusual for the Farmers' Alliance to hold their meetings in towns or cities. They are usually held at their voting places, their schoolhouses, or their churches in the rural districts; but there is not only no objection to the initiation of mechanics and wage-workers generally, they are invited to come in. Hence, in 1887 the words "Industrial Union" were added to the original name of the organization, making it the Farmers' Alliance and Industrial Union. I know further that from the beginning of that organization a part of their creed which relates to public affairs was a demand for the free and unlimited coinage of silver money, and that it has been put forward constantly until the present time.

I am quite well satisfied that had it not been for the promises made to the people in those States by their political leaders that when elected to office they would do what they could to bring about legislation in favor of the restoration of silver to its old standard as one of the money metals in this country, every one of those States would have voted for the Populist candidate for the Presidency last year. I am confirmed in this belief by the remarks made by the junior Senator from South Carolina [Mr. IRBY] a few days ago, who knows whereof he speaks by reason of his official relation to the farmers of his State. I am well acquainted personally with many men in the Southern States who were officially connected, and some of them are still, with the Farmers' Alliance, and the story is the same among them all.

Here we have in the two States of Tennessee and Alabama this substantial and encouraging response from the working people of those two States, and I am well satisfied that if a vote could be taken next Monday throughout the United States upon the proposition made by the silver Senators in this body—repeal the Sherman law and in connection with that repeal, in the same act, making it one and the same legislative transaction, provide that the old act of 1837 shall be restored or even the laws as they were when the act of 1873 was passed—that the people would say yea and amen, go ahead, do that very thing, and the majority would be in the proportion of 5 to 3.

Up to this time there has been no demand made upon the part of this class of people for the unconditional repeal of the Sherman law. One or two petitions, I believe, have been presented purporting to come from wage-workers in some of the cities, asking for the repeal of the act. I have no doubt that there are many persons tied to their employment by bonds which would be broken by any act upon their part which would seem to be a suspicion as to the right of their employers to dictate the financial policy of this country. I have no doubt that petitions may yet be sent to this body, coming from persons who are influenced thereunto by the prospect of continued employment and by fear of loss of employment in case they should hesitate when their employers demand a sacrifice at their hands.

The animus, if that is the proper word, of the majority in urging the passage of this bill appears to me to be unusual, to say the least. There is a forceful and hasty air about it, as if every opportunity, even though it be a temporary lull in the proceedings, must be availed of in order to press the bill to a vote, or an amendment to the bill to a vote; while every member who favors the bill knows as well as he knows anything that the opposition have not yet exhausted their resources of appeal and of argument. They know that the country has not demanded this action. They know further that there has been no discussion of it before the great jury of the people.

One day, perhaps two weeks ago, when there was a brief respite while one Senator was leaving the floor and another Senator was making ready to assume it, the chairman of the Committee on Finance, in charge of the bill, immediately rose and moved to lay the pending amendment on the table. I had the honor to pro-

pose that amendment. It embodied not only the desires but the hopes of 90 per cent of the American people, and not only their desires and hopes, Mr. President, but their fears as well, for while the people are hoping, and while their hopes are bound up in that amendment, they are fearing its defeat. It proposed to restore the old act of 1837, with the single exception that it omitted reference to the half dime. It proposed to coin silver just as it had been coined many years before, to make it full legal tender, not only the dollar, but the dime as well, making the dimes, the quarters, and the half dollars full weight along with the dollar.

That amendment proposed to reënact what was taken away from us by the coinage act of 1873, which the people have so generally and so severely condemned; and yet at the very first opportunity the Senator in charge of the bill rises and asks that it may be laid on the table. This unseemly haste, this constant pressure to bring this great body to a vote against its will, I was going to say, culminated; it has not done that, but it has brought about a condition of things in this Chamber of which we are all most heartily ashamed; yet there is no other way for the friends of silver money to oppose the enactment of this proposed legislation but to resort to the use of all the powers, the rights, and the privileges that the Constitution of our country gives to us, compelling us (and we range in age from 49 to about 79 years) to remain in session all night, as if we were an army in bivouac expecting the approach of an enemy in the early dawn.

Old men bowed by years, feeble with age, are compelled to set all through the long hours of the night, losing sleep that they need, depriving them of rest that they ought to have. It is a proceeding which does seem to me without propriety and without anything to command it. Suppose a few disconcerted men in the country do commend us to vote—vote and stop debate—are they to determine the rules of this body? Are they to despise and to trample upon and cast aside the Constitution of the country which authorizes us to make our own rules? Are they to force the friends of this measure into a frenzy, and is the lashing of the press and the clamor of the spectators to control the proceedings of this, which we are all pleased to regard as the most august deliberative body in the world? We shall see who rules in the Senate before this question is determined.

[At this point the honorable Senator yielded to Mr. PALMER.]

Mr. PEFFER. When interrupted by this late proceeding, the Senator from Illinois [Mr. PALMER] was submitting questions to me as to whether or not by our proceeding here we are not violating the Constitution, whether we are not thwarting or trying to thwart the will of the majority of the members of this body, and that, therefore, whether our conduct does not tend to revolution. In answer to the Senator I said that we who are opposed to the passage of this bill dispute the proposition of the Senator from Illinois, dispute his premises, and that we are not trying to thwart the will of the majority, but are trying to execute the will of the majority; and that in making that effort, defending ourselves against the friends of the bill in this Chamber, who, we insist, do not represent the will of a majority, we are using every privilege, every power, which the Constitution gives to us under the rules of the Senate.

I will go further and say that I believe a large number of men now in public office were elected because of their promises and pledges to the people that when they got into official place they would favor the continued coinage and use of silver as money. There is no reasonable doubt in the mind of any well-informed person but that a majority of the gentlemen who were elected last fall as members of the National House of Representatives were in favor of the continued coinage and use of silver as money.

We know, however, that a bill has been sent to us from the other House of Congress, proposing to repeal the purchasing clause of the Sherman act, without any conditions attached to it proposing to recognize the further use and the further coinage of silver as money; that the only thing which does come to us in connection with the proposition to repeal is a declaratory statement which ought to have a letter of explanation with it; and we know that every effort we have made in this body to attach to the bill any provision recognizing the further use of silver as money has been unceremoniously set aside whenever an opportunity offered.

From that, and from many other things now being done in the National Congress by men charged with legislative powers who have assumed to represent the will of a majority of the American people that they do not so represent the majority, I will say further that, in my humble opinion, the Senator from Illinois does not represent the wishes of a majority of the people of his own State; and still further—and this I wish the Senator to hear—from the newspaper dispatches, from current rumor in the public press, and through all the different avenues of communication of public intelligence, at the time of the Senator's election to this body the people believed that the gentleman who was Mr. Palmer then—who is now junior Senator from Illinois—was in favor, just as we silver men now are, of restoring to our monetary system silver as it had been in former years. I am sure that was my impression, and I am sure it was the general impression, and if the Senator after his election ever took occasion or availed himself of any opportunity to deny that general belief, and to deny that he had permitted himself to be so understood, the notice did not come under my observation.

Mr. PALMER. Whenever it will suit the convenience of the Senator from Kansas that I should interrupt him, I shall do so purely with reference to the point he makes.

The VICE-PRESIDENT. Does the Senator from Kansas yield to the Senator from Illinois.

Mr. PEFFER. Yes, sir.

Mr. PALMER. I made speeches in forty-five counties of the State of Illinois during my canvass for Senator. At Fairfield, in Wayne County, I was asked if I was in favor of the free coinage of silver. I said distinctly, "I am in favor of the free coinage of silver to the extent that it can be absorbed in the business of the country without depreciation—not beyond that." But I submit to my friend from Kansas if he is quite fair. He knows that on the night of my election I was waited upon by Dr. Moore and Mr. Cockerill with a view to a formal conversation in regard to my opinions.

Then, in order that there should be no misunderstanding, Mr. Alexander Jones, a stenographer of great skill, was invited to be present. Mr. Jones made a verbatim report of the whole conversation, and it was published in the newspapers. Some days ago my friend from Kansas asked me the question, and I tendered to him the use of that verbatim report. I ask is it fair, after declining to ask me for that report, for him to repeat an imputation of that sort? Every word which took place at that interview was reported, and it is now at the service of the Senator.

In all the conversations I have ever had I have said that I was in favor of bimetallism and the coinage of silver to the extent that it could be absorbed in the business of the country without depreciation. That is the language I have used everywhere, and I maintain it still.

I repeat, now, to my friend from Kansas—because we are friends—I will furnish him with a copy of the report of that interview which led those gentlemen to vote for me. I will mention to him one thing that was said by Mr. Cockerill at the conclusion. Said he: "Governor, you have not given yourself away; you have declared if elected you are a Democrat and that you will act with the Democratic party."

I will state to my friend that he ought not, even by insinuation, to place me in a false position. I will furnish him with an absolutely complete copy of that interview between Mr. Cockerill, Dr. Moore, and myself, and I will consent to his reading in the Senate anything which he thinks inconsistent with my present position.

In a speech which I had the honor to make to the Senate—a very brief speech of twenty minutes, early in the session—I stated my opinions and my views. They are just such as I have always entertained. I have never believed that Congress had the right to buy silver for any other purpose than to coin it, and I am opposed to its continued purchase, because it is not associated with coinage, nor would I probably approve of it if it were. I submit to my friend from Kansas that he ought to take the pains to examine this interview; and he ought to confine himself to such expressions as I used in that interview between Dr. Moore, Mr. Cockerill, and myself.

I have nothing else to add, Mr. President. The Senator from Kansas has given me a fair opportunity to make the statement, and the typewritten copy is at his service.

Mr. PEFFER. Mr. President, I remember very distinctly calling the attention of the Senator from Illinois to this matter some days ago, and I remember his answer, and any reference I now make to the same subject is not for the sake of harrowing up any uncomfortable feelings.

Mr. PALMER. I acquit the Senator of any such purpose.

Mr. PEFFER. Nor for the purpose of in any manner offending the venerable Senator from Illinois. Our personal relations are most happy, and they have been from our first acquaintance.

JOHN M. PALMER, at the time this country was in peril, was one of the strongest and best men, and, so far as I am aware, no imputation was ever made upon his loyalty or his personal integrity; but what I want to call to the attention of the Senate is the fact that from what was being currently reported in the newspaper press and through the different avenues of obtaining public information, the country was given to understand that the new Senator from Illinois, whose election turned upon the votes of one or two men, after a long private interview among three or four persons, with himself as one of them, the impression left upon the public mind, which the Senator has never contradicted so far as I know, was that the silver men, and to that extent the

Populists, had one more recruit; not that the Senator had changed his opinion, because up to that time none of the old silver patriots had ever changed their opinions, so far as I knew, and I understood, and I believe every Populist in the country understood, and the great mass of the people understood, that the new Senator from Illinois was for silver.

But now, when the Senator from Illinois and the Senator from Indiana [Mr. VOORHEES] and the Senator from Georgia [Mr. GORDON] and other Senators whose former record upon this question we all admire, and quoted it time and time again, present to us a bill asking for the unconditional repeal of the only law which connects the monetary system of the country with silver——

Mr. PALMER rose.

Mr. PEFFER. I hope the Senator will wait a moment.

Mr. PALMER. Very well.

Mr. PEFFER. Without permitting the friends of silver to even tack a free-coinage amendment to it, or any kind of amendment recognizing silver, we wonder why this change has come over the dream of these distinguished men; we wonder more than that, whether the same sort of change has come over the public mind; whether all the men and women of the country have met with a like conversion, and whether the people insist upon cutting the tie which binds them to the money of their fathers.

It is for that reason I would have my excellent friend from Illinois to understand that I am bringing this matter into view. I insist that these gentlemen do not represent the will of the people, that they are not representing a majority of the people. I insist, further, that a majority of the members of this body do not favor the unconditional repeal of the purchasing clause of the Sherman law.

Mr. PALMER. Whenever it suits the convenience of the Senator I shall be glad to make a single remark.

The VICE-PRESIDENT. Does the Senator from Kansas yield?

Mr. PEFFER. I do.

Mr. PALMER. I have no doubt that to-day the policy I favor, the policy of the Administration, the policy of this supposed majority, is more in the interest of the ultimate remonetization of silver than is the policy of those who demand its free coinage. I have no doubt that the limited coinage of silver is more likely to produce the result of its free use hereafter than that of free coinage. Upon that ground I stand.

Mr. PEFFER. Then, Mr. President, the Senator and his coadjutors in this body are all bimetallists—so they say—and yet, when we ask them to let us put a bimetallic section in this bill, they lay it on the table; when we ask them to put on such an amendment, they say "We will hear you upon that at a more convenient season; we propose to repeal the Sherman law; that and nothing else." Then the Senator comes to me and says "You are trying to defeat the will of the majority," and he charges us with a wilful and deliberate use of the time of the Senate in speeches which are not intended as arguments but only to consume time.

If I have been unfair to the Senator from Illinois in referring to him among others—I submit that I am at least as fair as the Senator was in the charges he makes against us. Now, I admit—I see the Senator proposes to rise upon that point.

Mr. PALMER. I ask pardon.

Mr. PEFFER. I did say, and say again, that we have done some things, I have done some things, for the very purpose of delay; but I have not talked one minute nor one second in order to delay the proceedings. I have not presented an argument nor a point in which I did not believe. This is the fourth time I have addressed the Senate on the pending bill, and if the discussion continues, increasing in interest from day to day, as it has been doing, I have no doubt that in forty-eight hours from the time this speech shall have been concluded, I will be ready to deliver another upon new points not yet touched upon. Senators, the field is illimitable in extent.

I have here a paragraph from one of the newspapers under a somewhat peculiar heading, and if the Senator from Nebraska [Mr. ALLEN] is present I call his attention to it. It is an article from the New York World, I think (though I do not see that it is marked), of last Sunday, and it is headed, "A fifteen hours' blow." I will read a portion of it:

Senator ALLEN of Nebraska stands at this moment head and shoulders above any Senator known to American history. He has made a speech lasting fifteen hours.

The country will never know what the speech was about.

But it will, Mr. President; the country will know what it was about.

Nobody but the proof-reader of the CONGRESSIONAL RECORD has been weighted with the inhuman duty of paying any attention to it. The Senate dozed and the country slept while it was going on. But Nebraska, with a fine sense of physical endurance, will doubtless refer to it for years to come as a most magnificent proof of the superiority of Nebraskan brawn to Eastern intelligence.

It would be a most interesting proceeding in this Chamber to have an Eastern Senator take up that speech of the Senator from Nebraska and answer his propositions. The Senator from Nebraska called attention to the contraction of our monetary volume and to the enormous decline of values because of it. He might have gone into details to a much greater extent than he did at that time if he had had more time. Before I get through I shall probably have occasion to call attention to some facts which the Senator omitted, because he had not time to refer to them.

The Senator called attention to the fact that a large part of our currency had been exchanged for coin bonds running a long time at a high rate of interest, and that the payment of the bonds would cost the people twice or thrice as much as they had promised to pay when the paper money was issued.

I might illustrate by stating that a hundred dollars' worth of bonds were purchased with $60—that is about a fair average of the price which was paid for our bonds, $60 for a hundred—but by the time the bonds were to be paid, by reason of the depreciation of property values and by reason of the appreciation of gold coin, dollars which had been worth but 60 cents when the bonds were purchased, and had risen to $1.40 when the bonds were paid, the people were required to pay $80 on every hundred more than they had agreed to pay. That was one of the things which the Senator from Nebraska brought out in his able speech, in this "fifteen hours' blow."

Another point the Senator from Nebraska brought out, and supported not only by elaborate logic of his own, but with the concurrence of a multitude of authorities upon political economy, was that the doctrine of intrinsic value in money has no force in fact, but only in imagination; that it does not matter whether our money is made out of gold or of silver or of platinum or of aluminium or of nickel or of tin or of copper or of paper; that, as the Senator from Nevada [Mr. JONES] to-day stated, it is money, not metal, which the people want. I can go out into the open markets and for 10 cents buy as much copper as will make $2 worth of cents. I can take those 200 cents to any merchant who is engaged in selling goods that he advertises, and I can purchase 30 cents' worth at a time until I have bought 180 cents' worth, and compel him to take 30 of those copper cents and another 30 and another, until I have paid out six times 30, leaving me two-thirds of 30 cents not expended; yet the market value of the material that is in the 200 copper coins is only 10 cents.

So it is with nickel. A five-cent piece is not worth more than about one-half of a cent, and yet these nickel pieces are legal tender to a certain amount.

The truth is, Mr. President, as the Senator from Nevada said to day, all money is fiat money. That was one point which the Senator from Nebraska brought out in his argument. Indeed, he covered a wide field in a continuous argument, and nothing like it has ever occurred, I am told, in this Chamber as to the length of time that the Senator was discussing great propositions logically and in order, his desk piled up with authorities, showing that the Senator from Nebraska had been studying the matter in hand and that he was talking about what was worth listening to. When the country comes to read that speech, the words of the Senator from Nebraska will be food among the common people.

We do not fear the effect of these long speeches, Mr. President. They are all doing good, every one of them. They give the people a little longer time to reflect.

But now I come back to the constitutional question about majority rule in the Senate. I respect the doctrine of majority rule, and if I believed that the friends of the bill in the Senate represented a majority of the people, after having duly considered the subject, I should speak for my own people, representing their views to the best of my ability, and then patiently and reverently submit; but I do not believe it. On the contrary, I am in favor of submitting the question to the people in order to test the matter. So firmly do I believe that we are on the majority side that I would favor a postponement of the further consideration of this bill. Postpone it, Mr. President, until after the next Congressional election, which comes off in 1894, postpone it until the first Monday in December following that election, or until the Fifty-fourth Congress is called to order. I believe in letting the people be heard upon this great question.

When the demonetization act of 1873 was before Congress the people at large knew nothing at all about it; only a few interested persons paid any attention to it, and it was not known by the people at large until their attention was called to it by proceedings in Congress some three or four years afterwards. If that matter had been submitted to a popular vote and the people had sanctioned it, then there would have been no quarrel afterwards and we should not be fighting about it here now. But,

Mr. President, like a clap of thunder in a clear sky, came the proclamation of the President calling Congress together on the 7th of August for the purpose of repealing a certain act, upon which the advice of the people had not been taken.

Mr. President, I believe in majority rule, but how shall we determine the will of the majority? How shall the majority assert itself? There is only one lawful way, and that is according to the forms and requirements of law. A majority, whether in a deliberative assembly or in the great body of the people, has no right to assert itself in anyway except according to law. So a majority in this—a legislative—body must assert itself according to law.

The right of the majority to rule applies, first, to a majority of the people at large, expressed by the results of popular elections; and second, to legislative or deliberative bodies, expressed by the record of a vote. In every case, however, the vote of the majority can be ascertained only after the voting has been done, after the vote has taken place and the result made known.

Now, let us apply this doctrine to the people at large. Will it be contended that a majority of the voters in a school district may meet at a time and a place other than that provided in the law, transact certain business, and set their acts into motion under the machinery of the school district, and contend that that is a legal proceeding and have it enforced in the courts? Will not the courts restrain the majority in the district from carrying out their will expressed in this illegal way? Every lawyer understands that, upon the fact being made known to any court of competent jurisdiction, the whole proceeding would be set aside as irregular and unlawful.

Take the case of a county. Suppose a majority of all the voters in a particular county were to meet at their respective voting places, if you please, upon a day different from that prescribed in the law, and without the usual legal notices being given they should come to a certain conclusion by their vote, and then undertake, through the machinery already provided, to enforce their will. Do you not understand, Mr. President, that the court would set aside such a proceeding by a writ of injunction and punish every man who refused to obey the order of the court?

Take a whole State, if you please, or an actual majority of the people of that entire State, who by ways and means other than those provided in the law should vote upon a particular course of procedure, and undertake to enforce their will expressed at this illegal time and in this illegal way. Unless the courts were overpowered and the judges driven from the bench, with the scales of justice torn down, with the laws trampled upon, and revolution inaugurated, such a proceeding even in a State would be suppressed by the strong arm of the court.

You may apply the same rule to the whole country. Suppose that a majority of the actual voters of the United States should meet upon a day other than that provided in the law, and undertake to elect members of Congress. Suppose a majority of the members of the Legislatures of the different States should meet at a time and place other than those prescribed in the law, and undertake to elect members of this body. Unless the majority were bent upon revolution and should succeed in overturning the Government such a proceeding would be set aside by the court and held for naught. We all understand how that is.

Applying the rule generally we come to this conclusion, Mr. President: That majorities must assert their power according to law, and according to law previously enacted, according to laws and regulations that were in force at the time the revolutionary proceeding was undertaken.

So it must be in this body. The majority of the Senate must assert itself before we know what the majority wishes done. And that answers the question of the Senator from Illinois, without being specific, without naming a day or an hour, as to the time when a vote anywhere can be taken. In any body that has a right to vote. It shall be taken at a time named in the law, and at the hour of the day, which the law prescribes—that, and that only. In this body the time for voting, as I will show in a little while, is fixed in the Constitution of the United States. There is a time when we shall vote, and it will be named at the proper time.

Mr. President, the time when the first elections in any great political body, like a State or a nation, are to be held is provided by a decree of the temporary ruler, or, in case of a Government like ours, by the framers of the Constitution. There are preliminary arrangements made by which the first elections shall be held, and after that time the times, the places, and the means for holding elections are all provided for in regular order. That has been done in this country. It is the rule now. We are acting under a government of law. Everything of a public character that is required to be done is provided for in the law.

So far as I know, there has been only one great instance in our history where the question arose as to the matter of having previously provided by law for the particular emergency. I refer to the late war and to the dilemma of the Government in reference to it. It was a great question among men of great minds, it was a doubtful question among the strongest jurists of the country, as to what the Government of the United States ought to do, or could constitutionally do, under the circumstances. Those of us who are here present all remember very well the discussions of that day, the efforts at compromise, in order to avoid any violation of the Constitution of our country.

But we remember also that, day by day, week by week, and month by month, difficulties multiplied, and the feelings of the people were wrought up until the country was involved in war—actual, open, flagrant war. There was no longer any question upon the part of the Congress of the United States as to the power to proceed. The Government proceeded at once to collect armies and to equip them to carry on the war; and the struggle continued until muster rolls showed we had collected nearly three million men in the Union army.

There are times, Mr. President, when this question of constitutional construction must be laid aside for the time being, upon the principle that a man may strike when he is attacked, and he will be excused in law even though death results from the stroke.

But in cases of proceedings in legislation, so far as the time of voting is concerned, there need be no difficulty of construction at all, because everything is made perfectly plain.

In deliberative bodies the time for voting is reached according to the provisions of a code of rules sanctioned by long usage, and known as parliamentary law. A popular assembly, having no prearranged code of rules to govern it, meets for the transaction of business; it may be religious in its nature, or social or political. Immediately the members proceed according to recognized rules of procedure. The usual parliamentary law, as it is termed, applies in all such cases.

There never is any difficulty in a popular assembly, where men are disposed to be reasonable and law-abiding in their conduct, so far as concerns the enforcement of these pre existing and prerecognized parliamentary customs. In legislative bodies the business is transacted and the time for voting is brought about in accordance with rules which are adopted by the body itself. Those rules must be in accord either with legislative provisions or constitutional provisions then in force, except only in cases where the bodies themselves are permitted to make their own rules, and when such rules are once in force they govern until they expire by limitation or are changed in a lawful way.

The Senate and House of Representatives of the United States Congress are both authorized to make their own rules. The second paragraph of section 5 of Article I of the Constitution of the United States provides that—

Each House may determine the rules of its proceedings—

Making the rules of this body a part of the Constitution of the United States. When a new Senator comes to this Chamber, marches down the aisle on the arm of his colleague, and holds up his hand before the Presiding Officer and swears, in the presence of God and these members, that he will support the Constitution of the United States, he does so with the knowledge that the rules of the Senate then existing are a part and parcel of that Constitution. The authority to make these rules comes from the constitutional provision which I have read.

But the clause goes further than that. I read again:

Each House may determine the rules of its proceedings, punish its members for disorderly behavior, and, with the concurrence of two-thirds, expel a member.

It has been frequently argued in this body that the Senate has no authority to expel a member for any offense other than disorderly conduct and for violation of the rules of the body, such a violation amounting to disorderly conduct. I emphasize the point that the Constitution, having provided that each House may make its own rules, may determine the law for its own government, the power sprang up from the people themselves through the written words of the Constitution.

[The honorable Senator here yielded to Mr. PUGH.]

Mr. PEFFER. Mr. President, this body, like all other legislative bodies, has its own code of rules. I have shown that they are made in pursuance of constitutional provision, so that the rules governing the Senate of the United States are as binding and as forceful as any statute passed by the concurrence of both Houses and approved by the President of the United States. The rules of this body are, in fact, as much a part of the Constitution of the United States while they are in force as any provisions which are specifically included within the articles and sections of that instrument.

It may be interesting to review briefly the history of the rules of the Senate to show how they came to be adopted, when, and under what circumstances. In order to do that it is necessary to refer to the Constitution and the history of the body itself.

In the Convention that organized at Philadelphia on the 25th day of May, 1787, to frame a Constitution for the United States, four separate drafts were presented. In each of three of them

provision was made for two branches of the National Legislature, a lower House and an upper House.

While it was intended to establish a popular government, it was deemed wise to provide for one legislative body, whose members would probably be selected with more care than would likely be done by popular elections, and who would be less susceptible to the influences of sudden popular changes than men chosen directly by the people.

Discussing this subject in the Convention, Mr. Madison said that the use of the Senate is to consist in its proceeding with more coolness, with more system, and with more wisdom than the popular branch. We are accused here now, those of us who oppose the passage of the pending bill, with resorting to revolutionary methods to prevent action. Yet it is true that one of the governing motives operating in the final adoption of provisions relating to the organization of this body was that of securing deliberation, coolness, system, and wisdom.

Mr. Randolph, continuing the discussion, observed that the general object in establishing a Senate was to provide a cure for the evils under which the people of the United States labored; that in tracing these evils to their origin every man found it in the turbulence and follies of democracy; that some check, therefore, was to be sought for against this tendency of our Government: and that a good Senate seemed most likely to answer this purpose.

Mr. Dickinson, of Delaware, wished the Senate to consist of the most distinguished characters, distinguished for their rank in life and their weight of property, that it might bear as strong a likeness as possible to the upper house of the British Parliament. He thought that in the formation of the Senate we ought to carry it through such a refining process as will assimilate it as nearly as may be to the House of Lords in England.

Col. Mason, of Virginia, was of opinion that one important object in constituting the Senate was to secure the rights of property. He favored a property qualification for members of the Senate and a long tenure of office.

Touching the qualifications of members of this body, the discussion brought out many suggestions, relating mostly to age and citizenship. It was the unanimous judgment of the delegates that only men of mature years, men of experience and fixed character, should occupy seats in the Senate, and that a long residence in the country ought to be required in every case.

Concerning the manner of their selection differences of opinion were numerous, and the discussion was long and frequently animated.

Mr. Pierce, of Georgia, was for an election by the States.

Mr. Pinckney, of South Carolina, thought that members of the upper House should be chosen in the lower House from residents of the several States.

Mr. Hamilton thought they ought to be chosen by electors chosen by the people in election districts.

Mr. Randolph said the lower House was the proper body to select the membership of the upper House, and that the selection should be made from a proper number of persons nominated by the State Legislatures.

There were three other plans of selection discussed:

1. Choice by the National Executive out of nominations by the Legislatures of the several States.
2. Election by the people.
3. Choice by the State Legislatures.

The last mentioned was finally ageeed upon. The name to be adopted by the upper House was not finally determined until the 4th day of September, more than three months after the session began its work.

The Senate is a peculiar body, Mr. President; peculiar in its make-up, peculiar in its origin, in its history, and in its duties and powers. No change has ever been made in its jurisdiction, except one. By an amendment to the Constitution in 1804 the Senate was authorized to choose the Vice-President in case of a failure to elect by the Presidential electors.

The Constitution of the United States, in section 3, Article I, after providing for the election of Senators, requires that—

> Immediately after they shall be assembled in consequence of the first election, they shall be divided as equally as may be into three classes. The seats of the Senators of the first class shall be vacated at the expiration of the second year; of the second class at the expiration of the fourth year; and of the third class at the expiration of the sixth year; so that one-third may be chosen every second year.

[At this point the honorable Senator yielded to Mr. KYLE.]

Mr. PEFFER. In pursuance of the provision requiring that the Senators be divided into three classes, the Senate at its first meeting divided its members by lot into three classes, and that classification has been strictly followed from that day to this. Every Senator chosen since has followed in the class of his first predecessor in line. When a new State is admitted its first Senators are assigned to their proper classes by lot, just as it was done in the first place.

In a recent case, where the Senators from three new States presented themselves at the same time, the mode of their assignment is described in the following words of the Senate Journal:

> The Senate proceeded by unanimous consent to consider the resolution; and the resolution was agreed to, as follows:
>
> *Resolved*, That the Senate proceed to ascertain the classes to which the Senators from North Dakota, South Dakota, and Washington shall be assigned in conformity with the resolution of the 14th of May, 1789, and as the Constitution requires.

You will observe that in this resolution, adopted only a few years ago—I have not the exact date in my notes—reference is made to the original resolution adopted on the 14th day of May, 1789; that in accordance with that resolution the Senate will proceed to assign the new Senators from the new States to their appropriate classes:

> *Ordered*, That the Secretary put into the ballot box three papers of equal size, one of which shall be numbered 1, one of which shall be numbered 2, and one of which shall be numbered 3. The Senator from each of said States whose name comes first in alphabetical order shall thereupon, in the presence of the Senate, draw one of said papers from the box in behalf of his State. The Senators from the States drawing the paper numbered 1 shall thereupon first be assigned to their respective classes. The Senators from the State drawing paper numbered 2 shall next be assigned to their respective classes. The Senators from the State drawing paper numbered 3 shall next be assigned to their respective classes.

This classification makes of the Senate a continuing body. Two-thirds of its members are always in office. The Senate is always organized.

The House of Representatives is composed of members selected for two years. Their terms begin on the same day, and end on the same day two years afterwards. An entirely new House is elected every second year, and a new organization follows as matter of course.

But the Senate never goes out. There is never less than a quorum ready for duty on call of the President.

[At this point the honorable Senator yielded to Mr. KYLE.]

Mr. PEFFER. In view of the facts just recited, this Senate now in session is, in theory, the same body that counted its first quorum on the 6th day of April, 1789. The object of this continuity of the upper House seems to have been chiefly to add stability to our governmental structure, to give character and weight to the deliberations of the body, to inspire confidence at home, and to insure respect abroad. Such a body, clothed as it is with the power of ratifying treaties, renders complications with foreign nations less probable and our obligations more likely to be observed. The Senate has the sole power of trying impeachments. It is the judge of the elections, returns, and qualifications of its members; determines the rules of its proceedings; may punish a member for disorderly behavior; and, with the concurrence of two-thirds, may expel a member; it considers treaties made by the Executive; its advice and consent are necessary to the ratification thereof; it advises and consents to the appointment of ambassadors, other public ministers, and consuls, judges of the Supreme Court, and a large number of other officers.

[At this point the honorable Senator yielded to Mr. POWER.]

Mr. PEFFER. Mr. President, it may not be out of place (seeing that so long a time has elapsed since I last addressed this body) to remind the Senate where we were at that time. I had been reciting the history of the organization of the Senate, and had reached the point where a code of rules was adopted. They were nineteen in number, and I shall now read them. They were adopted on the 16th day of April, 1789.

[At this point the honorable Senator yielded to Mr. KYLE.]

Mr. PEFFER. Of the original code of rules adopted for the government of the Senate, I read No. 1:

> I. The President having taken the chair, and a quorum being present, the Journal of the preceding day shall be read, to the end that any mistake may be corrected that shall have been made in the entries.
>
> II. No member shall speak to another, or otherwise interrupt the business of the Senate, or read any printed paper while the Journals or public papers are reading, or when any member is speaking in any debate.
>
> III. Every member, when he speaks, shall address the Chair, standing in his place, and when he has finished shall sit down.
>
> IV. No member shall speak more than twice in any one debate on the same day without leave of the Senate.
>
> V. When two members rise at the same time the President shall name the person to speak, but in all cases the member first rising shall speak first.

Mr. HILL. Mr. President, I rise to present to the consideration of the Chair a question of order, which is this: The question under consideration is the propriety of the passage of the repeal bill. The Senator from Kansas is not debating that question. He is talking about an entirely different question, in no way concerned with the passage of the pending bill. I desire, in order that it may go upon the record, so that whatever ruling may be made may show the propriety or impropriety, the strength or the weakness, or the absurdity of the present rules of the Senate. I raise that point of order.

The PRESIDING OFFICER (Mr. FAULKNER in the chair). The Chair is of the opinion that there is no power, under the rules of the Senate, to pass upon the relevancy of the remarks of the Senator from Kansas to the question now before the Senate.

Mr. HILL. No matter how foreign the remarks may be to the question involved?

The PRESIDING OFFICER. No matter how foreign they may be to the question before the Senate. The Chair recognizes the Senator from Kansas.

Mr. DOLPH. Do I understand, Mr. President——

The PRESIDING OFFICER. Does the Senator from Oregon rise to a question of order?

Mr. DOLPH. I do. Do I understand that if all the books the Senator has on the desk before him and on the adjoining desk are to be read, the Chair has no right to interfere?

The PRESIDING OFFICER. The Chair will state to the Senator from Oregon that his question is not a question of order. The Chair recognizes the Senator from Kansas.

Mr. PEFFER. I had before me when I began a number of articles which I had clipped from some of the metropolitan newspapers, in which they raise the very question which I am now discussing before the Senate, as to the rules of this body, the powers of the minority under those rules, and the power of the majority under those rules. I am now discussing that question. It has been raised repeatedly in this debate, and has been, I was going to say, dinned into our ears—that is not a proper expression and I do not wish to use it—but it has been repeated time and time again that the minority was resorting to tactics for the purpose of delay, that they were acting in violation of the rules of the body, that they were acting in violation of their oaths to support the Constitution of the United States, and I am endeavoring to show what, if Senators had been here all the the time, they would have understood.

I am trying to show that the rules of the Senate, as they have come down to us from the fathers, are a part of the Constitution of the United States, and that when one of us holds up his hand before God and swears in the presence of these witnesses that he will support the Constitution of the United States, included in that oath, are the rules of the Senate by which our proceedings shall be governed. I am tracing the history of the Senate and the history of the rules of this body in order to make that point as clear as I can. I am entirely in order, Mr. President, and am discussing the proposition before the Senate.

I now resume the reading of the rules, beginning with Rule VI:

VI. No motion shall be debated until the same shall be seconded.

VII. When a motion shall be made and seconded, it shall be reduced to writing, if desired by the President or any member, delivered in at the table, and read by the President before the same shall be debated.

VIII. While a question is before the Senate, no motion shall be received, unless for an amendment, for the previous question, or for postponing the main question, or to commit it, or to adjourn.

IX. The previous question being moved and seconded, the question from the Chair shall be: "Shall the main question be now put?" And if the nays prevail, the main question shall not then be put.

X. If a question in debate contain several points, any member may have the same divided.

XI. When the yeas and nays shall be called for by one-fifth of the members present, each member called upon shall, unless for special reasons he be excused by the Senate, declare, openly and without debate, his assent or dissent to the question. In taking the yeas and nays, and upon the call of the House, the names of the members shall be taken alphabetically.

XII. One day's notice at least shall be given of an intended motion for leave to bring in a bill.

XIII. Every bill shall receive three readings previous to its being passed; and the President shall give notice at each, whether it be the first, second, or third; which readings shall be on three different days, unless the Senate unanimously direct otherwise.

XIV. No bill shall be committed or amended until it shall have been twice read, after which it may be referred to a committee.

XV. All committees shall be appointed by ballot, and a plurality of votes shall make a choice.

XVI. When a member shall be called to order, he shall sit down until the President shall have determined whether he is in order or not, and every question of order shall be decided by the President, without debate; but, if there be a doubt in his mind, he may call for the sense of the Senate.

XVII. If a member be called to order for words spoken, the exceptionable words shall be immediately taken down in writing, that the President may be better enabled to judge of the matter.

XVIII. When a blank is to be filled, and different sums shall be proposed, the question shall be taken on the highest sum first.

XIX. No member shall absent himself from the service of the Senate without leave of the Senate first obtained.

That is the first code of rules which was adopted for the government of this body.

The rules were revised several times during the earlier sessions of the Senate, and in 1806 a new code containing forty rules was adopted, the same number that are now in force. The most important modification which has ever been made of the rules originally adopted is that which, in the revision of 1806, appears in the omission of the old Rule No. 8, and in making no reference to what is known in parliamentary law as the "previous question," which, as used in the British Parliament, was intended to get rid of a disagreeable subject, but as used in this country, intended to stop debate. The rule was not popular even while it was in force. It was invoked but four times from its adoption in 1789 to its omission from the code in 1806, and on one of these occasions it was ruled out of order because the subject under discussion was a preamble.

There have been several attempts since to restore the old rule or its substance. Among the notable instances are those of Henry Clay in 1841, Stephen A. Douglas in 1850, Hannibal Hamlin and Henry Wilson in 1870. The last attempt was made in 1890, when the force bill was pending.

The Senate has thus been without a rule to stop debate, except by unanimous consent, for a period of eighty-seven years.

Mr. President, a great deal of importance was attached under the original code to the matter of orderly behavior in the body, so much so that at one time a rule was adopted prescribing what was regarded as decorous and orderly behavior in the body, and was suspended in a particular place in the Hall for the convenient reading and continued observation of the Senators present. Decorum was regarded as one of the most important matters in the deliberations of the body—the proper addressing of the Chair, sitting down after one had concluded his discourse; when a member was called to order that he should immediately take his seat; no conversation in the Hall during the time of proceedings; and, as before stated, it is believed by many persons that under the provision in the Constitution authorizing the two bodies of Congress to determine their own rules and to expel a member for disorderly behavior, the power to expel does not extend beyond an infraction of the rules of the Senate in the matter of orderly behavior.

Another rule regarded as especially important was that growing out of the one just mentioned, that as to the conduct of the members toward one another—the phrase now used, "the courtesy of the Senate." As I understand the meaning of that phrase, "courtesy of the Senate," it is simply the politeness of manhood, that politeness which comes from good breeding, that respect which one man having arrived at the plane of a gentleman has, for his peer in any body, that decorous respect to our neighbors because they are our neighbors, which arises from the belief in all men, or at least in many men, that their neighbors are their peers. That is what is meant by the "courtesy of the Senate," and that is courtesy anywhere and everywhere. The fact that a man happens to be elected a member of this body neither gives to him nor takes from him any reason for added or for less respect to his fellow-men. A gentleman coming into this body is a gentleman still, and a boor coming into this body will be a boor still. But the fathers paid particular attention to this matter of politeness, of manliness, and out of it grew the term "courtesy of the Senate."

The next rule of importance was that providing for the stoppage of debate. The "previous question," called into operation but three times during its existence as one of the rules of the body, after mature consideration, after its having been thought over, gone over, weighed and deliberated upon time and time again, finally was dropped out of the code, and, I think, for the reason that with its omission the original spirit actuating the framers of the Constitution in providing for this body could be the better realized. How much better it would be now, how much more decorous before the eyes of the world, how much more respectful, and decent, and orderly, in our own eyes, if we were permitted to go along in ordinary hours, say from 12 o'clock until 5 or 6, and discuss the subject with coolness and decorum until every member of the body who wishes to speak has been heard.

Then that assertion of manhood, which comes to all men sometimes, would come to each and all of us, and when that time should come, after we had all said everything that we wished to say, after we had presented to this body, and through this body to the country and to the world, all the arguments on one side or the other that we wished to present, then we should be all ready to vote on the passage of the bill. But coming, as it is now coming to us, in the form, I will not say of an edict or a decree, but coming to us, in effect, in the form of a demand by the Administration, representing what we who oppose the bill regard as the most dangerous concentration of power in the world, insisting that we shall pass this particular bill without any amendment, without any change, and without being able to show our side of the question, we propose under the rules, as a part of the Constitution of our country, to oppose our strength to your strength, to resist every encroachment until we are overpowered under the rules of this Senate, and in no other way.

After this matter has been determined by the great people, who are behind us, then it will be time enough for members of this body so say who here represent the majority and who represent the minority; then it will be time enough to determine where a majority in this Chamber is, and who are the members of the majority.

Mr. President, we have a right to interpret our own rules by contemporaneous customs and by customs of a like character, which have decended to us from our fathers and from their fathers. In this volume which I hold before the Senate [exhibiting] we have incorporated the Constitution of the United States,

the rules of the Senate, Jefferson's Manual, and other matters; and after we have resorted to Jefferson's Manual, in aid of the construction of our own rules, it is quite common for us to go beyond Jefferson to Cushing, and to parliamentary records beyond that, in order to assist us in determining what are and what are not correct constructions of the rules of this body.

There are terms and phrases used in our statutes which the ordinary reader does not understand. For example, where a provision in the code is inserted relating to the writ of mandamus, the ordinary reader does not know what "mandamus" means; no statute law has defined it. It is a term which has descended to us from the jurisprudence of the past. So in relation to the writ of injunction or the writ of *scire facias*, or any of the other writs, which are familiar to the lawyers. None of them are defined by statute, and the person who would make a lawyer of himself by simply reading a codification of laws, would find at the end that he knew after all but very little about the law, for the reason that he had not been schooled in definitions and in interpretations, which have been agreed upon in the years which are gone and are buried. We are not only permitted to make our own rules, but those rules have been based upon other rules which preceded them; and when any dispute arises about their construction, we may go back to the rules which were in existence when our rules were framed.

We come down to the present condition. There is nothing in our rules, absolutely nothing, which limits debate. We go back to the rules of the fathers and rely upon the manliness of the Senators, after they have completed what they wish to say. Senators upon the other side of this question ought not to be impatient with us. They are not moved by the same impulses which move us; they are moved by the clamor of a particular class of people, and they all acknowledge it. That clamor comes through the powers that be.

The President of the United States honestly and conscientiously, as I have no doubt, feels it to be his duty to respect this clamor of a class. He believes that those men have a right, by virtue of their vocation, to dictate the financial policy of the country. He believes that those men, being skilled, as he thinks and as they think, in finance, and concerned in great business transactions from day to day and from year to year, are more competent to discuss financial questions and to propose financial measures than is the average man. We do not believe in that doctrine. We believe that the people, the great mass of the people, the hard-working, toiling people, know just as much about this question as the most experienced financiers in Wall street.

There is nothing simpler, Mr. President, than this question of money; there is nothing simpler than the question of finance. All that there is of mist and of obscurity thrown about the question comes from the senseless philosophy of the money-changers, who believe that they, and they alone, ought to be saved in the day of final retribution—men who have no respect either for the feelings or the property of their neighbors, whose only care is to amass wealth for their own comfort and their own convenience. There are men to-day by the thousand on the farms of the South and the farms of the West who know quite as much about finance as a great many men who are high in public life.

I have been surprised, listening to the discussions which have gone on in this body, to see how far back most of us are on this great question; that some of us preach the old doctrine of equivalency, which was accepted two or three thousand years ago, that what little gold and silver there was in the world was equivalent in value to all the rest of the property, and that it was sufficient for the transaction of all the business of all the people. Notwithstanding the fact that we find to-day the property values of the United States are estimated to be but little short of $100,000,000,000, and notwithstanding the fact that we only have about—I will say within bounds—$900,000,000 of money in circulation, we are told that we not only have plenty of money, but that we have too much money, and that it is this plethora, this redundancy of money which has brought on the panic.

We do not believe that doctrine, Mr. President. We believe that the people ought to have all the money that they need in the transaction of their business. I believe that the farmer and the wage-worker ought to have his money given him in the best money of the world—small quantities, I mean—in coin of small value, so that in the transaction of his daily business, in the settlement of his little accounts from time to time, he may always have ready change about him, and not be compelled to deal through the banks or to deal with checks or with any kind of paper which is not money in itself. Hence there is a wide difference between us and the Senators who represent the other side of this question.

They believe in a limited circulation—I mean by "limited" growing smaller and smaller in proportion to the amount of business which is done and to the increase in the population. They believe in dear money, as my excellent friend from Delaware [Mr. GRAY] told us the other day. They want dollars which will buy a great deal of wheat, a great deal of corn, a great deal of cotton; not thinking, Mr. President, that every time you add to the value of that dollar you take away from the farmer part of the value of his wheat, his corn, his cattle, and his cotton. That is what we are complaining about; that is the reason why we are urging our views upon the attention of this body day after day and night after night.

Our insistence is born of a passion, if I may use the word; and I do not use it in the sense of excitement and ill-feeling, but our belief in the importance of this matter has grown to be almost a passion with us. We believe in it as sacredly as we do in the religion which our mothers taught us. Hence, we come before the American Senate, appealing to Senators to be patient with us at least until they have heard all we have to say.

I am satisfied that in the matter which I have laid out for this discussion, if I am not stopped by the passage of a good and satisfactory bill, I have material enough laid out now, well considered, well digested, to occupy one full day's debate; and, Mr. President, every thought which comes along is pregnant with other thoughts; they divide and subdivide, going out in almost endless ramifications, because it is true, as the distinguished Senator from Ohio [Mr. SHERMAN] years ago in this Chamber declared, all legislation concerning finance touches the whole people; that when any of our enactments have the effect to increase the value of our money in comparison with commodities it reaches out into the homes of the people, touching every heart and every hearthstone, entering into the cabins of the poor as well as into the palatial residences of the rich; it permeates all classes, phases, and conditions of society, affecting the values of their property.

The home of the family is one of those things around which the most cherished relations of life are twined. Go out into the open prairies of the West, where there is but little timber, and in immense areas no timber; where the little building, one story high, made of plain boards, occupying a space of 10 or 15 feet square, in which the little family nestles; children are born there, the sacred relations of husband and wife exist there; family ties are nurtured, and all the sweetness of home clusters about that little shanty on the open prairie. When the wind comes, it moves and creaks, and the rain, when it beats, pours in the cracks between the planks; but still it is home—

Be it ever so humble, there's no place like home.

Mr. President, the legislation of this body of the American Congress, wherein it touches finance in the direction of raising the value of money, touches that little home on the prairie.

Again I say to Senators who are urging the passage of the pending bill, that they ought not to become impatient. As to the time when Senators will be ready to vote upon it, that must be determined by each Senator for himself. Mr. President, in making that statement I have the utmost respect for the doctrine that majorities shall rule.

I do not mean to say that persons representing or pretending to represent a majority of the membership of this body shall rise and say, "Here we are, a majority, and we are going to do this or that." That would be revolution upon the part of a majority; and as I took occasion to say early in my remarks, every majority out in the country at large, in the State, in the county, in the township, or in the school district, and in this body, must be governed by laws preëxisting.

A time will come, if the majority is patient and hears what we have to say, when we shall be ready to vote, but not until then. So long as the majority persists in forcing this bill upon us, refusing all propositions for amendment, just so long we shall insist that we are the majority, that we represent a majority, and that we have the right to give expression to the will of the majority; and we shall "fight it out on that line if it takes all summer."

Mr. PALMER. Will my friend from Kansas allow me to ask him a question now?

Mr. PEFFER. Yes.

Mr. PALMER. Does the Senator mean that the majority, as he terms those who favor the passage of the pending bill, shall never be allowed to vote until a proposition is tendered which will be acceptable to the minority?

Mr. PEFFER. No; I did not say that.

Mr. PALMER. Will the Senator then explain what he does mean?

Mr. PEFFER. It would take me a good while to do it.

Mr. PALMER. I can wait.

Mr. FRYE. There is time enough.

Mr. PALMER. The Senator said, in substance, when a proposition was made that should be satisfactory to the minority, we might vote, and not until then. Is that what he means?

Mr. PEFFER. The Senators who are urging the passage of

the pending bill, without exception, claim to be bimetallists. If you will prove your faith by your works, we are ready to vote now.

Mr. PALMER. Does the Senator mean to say——

The PRESIDING OFFICER. Does the Senator from Kansas yield to the Senator from Illinois?

Mr. PEFFER. Yes.

Mr. PALMER. Does the Senator mean to say we never shall vote until we prove our faith by our works?

Mr. PEFFER. If we can help it, you shall not.

Mr. PALMER. I am very glad to hear the Senator say frankly what he means. Will the Senator pardon me for asking him another question?

Mr. PEFFER. Yes, sir.

Mr. PALMER. Does the Senator mean to say that until we do that, we shall not vote with his consent?

Mr. PEFFER. I have answered the Senator's question, that if we can help it they shall not.

Mr. PALMER. That is plain. I am satisfied. Is that right?

Mr. PEFFER. That is right; so am I satisfied. If we did not think so, we should not say so.

Mr. President, we are accused of talking for delay. Suppose we are doing so, have we not a right to delay this proceeding as long as we can if, in our judgment and in our conscience before God and our country, it is our duty to do so? The rules of this body—and I have been trying very hard to make that point clear—are a part of the Constitution of the United States. There is where we get the authority to make these rules. Having them, we swear to support them. We have a right to avail ourselves of every privilege, every power which the rules give us, to defeat what we regard as the most nefarious measure which has been brought before this body.

Mr. PALMER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Kansas yield to the Senator from Illinois?

Mr. PEFFER. Yes, sir.

Mr. PALMER. I have no desire to interrupt the Senator.

Mr. PEFFER. It is not embarrassing at all.

Mr. PALMER. But, if I understand, the Senator disregards the rule of the Constitution that each Senator shall have one vote. I understand him to claim, when he judges a measure to be nefarious, to use his own language, that he may resist, not the passage of a measure, but resist a vote by any means not expressly forbidden by the rules. Am I to understand that to be the view of the Senator?

Mr. PEFFER. I did not quite understand the Senator from Illinois if his question is different from the one he asked me a moment ago.

Mr. PALMER. I do not intend that it shall be different. Does the Senator mean to say, when he shall judge that a measure is nefarious, to use his term, that it is legitimate and within the limit of Senatorial duty to resist, and it is his purpose to resist a vote by every means not forbidden by the Constitution?

Mr. PEFFER. Mr. President, I will answer the Senator's question in my own way, and I think so plainly that a wayfaring man need not err. [Laughter.]

We believe that at least 75 per cent of the people of the United States are opposed to this bill. We believe that 95 per cent of the farmers of the country, those who are engaged in practical agriculture, doing the work themselves with their own hands, are opposed to the passage of this bill. We believe that 95 per cent of the workingmen of the country are opposed to the passage of this bill. We believe that fully 75 per cent of the little tradesmen, the merchants, and the mechanics are opposed to the passage of this bill; and, so far as I am personally concerned, I believe that 95 per cent of the people of Kansas are opposed to it. The Senator from Colorado [Mr. WOLCOTT], who is honoring me with his attention, represents a people 95 per cent of whom——

Mr. WOLCOTT. All of them.

Mr. PEFFER. One hundred per cent of whom are opposed to the passage of this bill. Go through that magnificent region in the Northwest, and you can hardly find a man, unless he is a postmaster [laughter], who is not opposed to the passage of this bill. Go down through the Southern States; start out on the old Mason and Dixon's line, Mr. President; make a canvass from house to house among all the people of that delightful region, extending to Mexico, and you will find 90 per cent of that noble people opposed to the passage of this bill. Go through the Carolinas—to specify two or three States—go to Tennessee, go to Mississippi, go to Texas, and visit those little bodies among the farmers, known as the Farmers' Alliance there, and you will find them unanimous in opposition to the passage of this bill.

Mr. President, these things being true, as we see them—it may be possible that we are looking through glasses darkly; but we think we see them, and our sight is so perfect that the belief is a faith—it is our duty to oppose this measure, our duty before our country and before our God, and, for my part, I shall oppose it unto the bitter end.

We should be traitors to our people, Mr. President, unworthy their confidence, did we not stand up here in the face of this clamor, and oppose all the powers which are brought against us. The time has come not only for fair dealing, but for plain speech; and I say to you now that I speak the voice of millions when I say in the presence of this body that the time is not far distant when there will be a tidal wave moving over this country, a revolution which will sweep all the influences of Wall street away from the face of the earth, unless this business is stopped at once. [Applause in the galleries.]

The PRESIDING OFFICER. The Chair will remind the galleries that under the rules of the Senate no manifestations of approval or disapproval are permitted, and should it be repeated the Chair will feel it to be his duty to have the galleries cleared. The Senator from Kansas will proceed.

Mr. PALMER. With great respect for the Senator from Kansas, I understand him that there is no limit to the resistance which he will employ against the pending bill or against a vote, but his own will, he being instructed, as he says he is, by so many people?

Mr. PEFFER. The Senator ought to have understood by this time that our power of resistance is very strong. [Laughter.]

Mr. PALMER. I did not ask the Senator what his power was, but what his will is.

Mr. PEFFER. The Senator ought to have understood from the manner in which this resistance has operated, that there is a power behind us which knows no surrender.

Mr. PALMER. I know of no affectation more unfounded than that of those who oppose this bill to represent the agricultural and laboring interests of this country. It has no just foundation whatever. These gentlemen give to labor and to agriculture words.

Mr. PEFFER. The Senator from Illinois ranks me a little in title and in age, yet, Mr. President, with all due respect to that Senator, I know more about the farmers of this country than he does. I am a member of the largest farmers' organization which ever existed upon the earth.

Mr. PALMER. Will the Senator allow me to say one word?

The PRESIDING OFFICER. Does the Senator from Kansas yield to the Senator from Illinois?

Mr. PEFFER. If the Senator can make his statement in one word, I shall cheerfully hear it.

Mr. PALMER. I am one of the practical farmers, not a professional farmer. [Laughter.]

Mr. PEFFER. The Senator belongs to the 10 per cent class, which I omitted from my calculation. [Laughter.] The other 90 per cent are with me. The Farmers' Alliance and Industrial Union numbered about 4,000,000 in their membership a couple of years ago. They were not all voters. In Texas last year the Populists, who had grown out of the Alliance movement, polled a vote of over 100,000, about 25 per cent of the total vote of that State, and if it had not been, as I have before said, for the promises made by political leaders of the Southern States, at least half of these people would have voted the Populist ticket in 1892. All of that vote sprung from the Farmers' Alliance. Three out of every four farmers, perhaps more than that, in some places all of them, but at least three out of four of the Southern farmers, those who are practical farmers, were members of the Farmers' Alliance. In Kansas we had in the neighborhood of 100,000 voters at one time in the Farmers' Alliance. Then we had a large number of members of the Grange and the Farmers' Mutual Benefit Association.

I say to the Senator from Illinois, that I have been studying this subject from the farmer's standpoint a dozen years or more, and have finally come to the conclusion that the farmer should have his voice heard in this Senate Chamber; and now there are at least three Senators here who are ready to speak for him. I have been sent here, Mr. President, specially charged to represent farmers. Does the Senator from Illinois suppose that we could have changed 100,000 votes in three months in Kansas if we had not an organization at our back? Does the Senator suppose that we could have sent five Populist Congressmen and one Senator to the National Congress by the work of a sixty-day campaign if there had not been behind it some stupendous power moving the people? And I say to him that every man of that number was a free-coinage man. Every Republican, except perhaps one or two, within the entire boundaries of the State, every Democrat, not excepting more than half a dozen men, every Populist and every Prohibitionist was a free-coinage man. It has been a part of Kansas history, and 70 per cent of the people of Kansas are farmers.

Mr. PALMER. Will the Senator allow me to ask him a single question?

Mr. PEFFER. Certainly.

Mr. PALMER. The Senator says the farmers have three rep-

resentatives in this body. I ask him with great respect which of the three ever raised a crop of corn within five years?

Mr. PEFFER. I do not know how that is. I can only speak for myself. This I do know, that the farmers whom these three gentlemen represent are free-coinage men, and I believe when the Senator of Illinois was elected a member of this body the farmers of his State believed that he was a free-coinage man. But the Senator having denied that he was such, we know he is not now. I, of course, am ready and willing to accept his version from his own standpoint.

Mr. PALMER. Will the Senator allow me to say that I have denied nothing. I have offered him the shorthand notes of the conference; they are at his command. I deny nothing, because nothing has been charged or proven against me.

Mr. PEFFER. I only refer to the matter because the Senator from Illinois is so persistent in his questions. I am certain I believed he was with us upon this question, and I never, until recently, heard any person discuss the subject at all who did not believe just as I did, and obtain his information in the same way.

Mr. President, delay is often the nearest route to justice, and if we, by delaying a vote upon the passage of this bill until we are ready to vote, can save to our people what they ask us to save for them we have done a great deal. No person will be injured by continuing in force the Sherman law, but a great many people will be benefited by it. I believe with the Senator from Indiana [Mr. VOORHEES] that the money which has gone out among the people by the operation of the Sherman law has been one of the things that has saved us from trouble thus far; and the other thing that has saved us is the large expenditure and distribution of pension money.

I have frequently given it as my belief that had it not been for the distribution of vast amounts of pension money in little sums here and there and yonder, and everywhere about the country, this panic would have come long ago. Throw money out among the people and you will never have a panic. Keep money in circulation and there is no danger of business disturbance. It is when money is withdrawn from circulation, when money is hoarded, when speculators get control of the money market, as it is termed, and work up a corner on gold that panic comes. We are pleading for more money, not less money, and we want to distribute it among the people. If by this delay we can assist the masses in grasping the magnitude of the troubles that are in our way, if we can assist the people in coming to a conclusion concerning what ails them, and who it is that manufactures panics, we shall have done a great service not only to them but to all men.

If it will be any encouragement to the gentlemen on the other side I will say to them that every day the leaven we are planting in this Chamber is working, and it will not be long, in my opinion, until it will have leavened the whole lump. Day by day our mails are incumbered with letters from our constituents, "Hold the fort," "Do not surrender;" "Fight it out;" "Stand your ground"—all such expressions, not as uniform as those of our friend from Pennsylvania [Mr. QUAY] last spring, but they are powerful in their encouragement and they are forceful in their impulsiveness. Out of all the vast correspondence I have received upon the subject but one solitary letter has come asking me to support the pending bill, and among other things the writer said that this panic was causeless, but he did not believe in a fifty-cent dollar.

The public mind is being educated in two directions. The gentlemen who manufactured this panic, to use the language of the eminent Senator from Indiana [Mr. VOORHEES], are beginning to learn that the Senate can not be frightened. They can put wheat down and they can put cotton up, and they do both in the same day. The men who are at the bottom of this panic manufacturing business are speculators, and their business ought to be suppressed by some means. I believe it will come some day.

We are teaching those men that we are not to be frightened into feeding them either with more bonds or by stopping the purchases of silver in order that they may take gold out of our Treasury, and while we are doing that we are showing to the people behind us that what we told them in our canvass is the truth. Nearly ten thousand million dollars were borrowed by the people of this country on the security of their homes during the ten years from 1880 to 1890. One-half of that vast amount was paid, leaving, on the 1st day of January 1890, about $5,000,000,000 yet due, and it was bearing an average interest rate of at least 8 per cent. In the Western part of the country the average cost to the people was about 10 per cent.

Every day a constant drain away from the labor of those people, money getting tighter all the time by reason of the increase in the value of gold, and corn and wheat and horses and cattle and cotton and tobacco constantly going down, until now, take a great State like Kansas that produced in a single year 75,000,000 bushels of wheat and upward of 150,000,000 bushels of corn, with a large number of live stock for sale, and a great many little odds and ends from the farm, amounting to a vast aggregate of wealth in the end in property, but when they come to sell it, pay their taxes, pay the interest on their indebtedness, support their families, they have little left, and in many instances what their crops have brought them is not sufficient to meet these outlays. It requires close economy, saving, and self-denial from the beginning of the year to the end for the average farmer in the great West to keep ahead of his necessary outlays.

I state it as a proposition that in the Southern and Western States—indeed I would be willing to take the farmers of all the States, excepting perhaps those of Ohio, Pennsylvania, and New York—if you will take all of the surplus crops of the farmers and sell them at the market price, just as the farmers themselves have sold them, and then if you will allow to each of the farmers and each member of their families and their hired help as much money daily or yearly to keep them as it costs to keep a convict in the prisons, you will find that there is no profit left from the sales.

Make the calculation for yourselves. I spent a good deal of time during the last summer in investigations under the order of the Senate concerning the condition of agriculture and talked with a great many farmers about their business. The universal testimony is that farming as a business is not profitable; that some of the farmers, a great many of them, are making a little more than their expenses, yet their gains are not sufficient to make the business profitable.

But there is no depreciation in the values of salaries of public officers. There is no decrease in the value of dollars that farmers are compelled to pay their taxes with. There is no depreciation in the value of the dollars that they must pay for the interest and for the principal upon what indebtedness they may owe. There is no depreciation in the value of their outlays where they have to pay dollars, but with here and there a little fluctuation, speaking generally, there is a steady fall in the market values of property out of which they have to pay these demands.

Considering these things, Mr. President, these heavy weights that are upon the people, these oppressive burdens that are placed upon them by reason of our financial legislation, we appeal, we resist, and we oppose.

If by a little delay we can show to the people as we are doing every day that this panic was manufactured just as other panics have been manufactured, and that the people are right when they demand more money, that they have a right to demand free and unlimited coinage of silver, and that it is our duty to give it to them, they will take care of the next Congress and the next Senators who are sent here.

I repeat, Mr. President, that I am in favor of delaying this proceeding until the people can be heard in their own defense at their own voting precincts. I have no fears of the result; and I predict now, if this repeal bill is put through the Senate without any conditions recognizing the present and the future coinage of silver as money, the next House of Representatives will give the people a bill that they want.

Mr. President, if the proposition in 1873 to drop the silver dollar out of our list of coins had been submitted to the people, we would not now have this trouble on our hands. If the matter had been discussed in the preceding election, shall we discontinue the coinage of the silver dollar, shall we coin only subsidiary silver, and shall we make it legal tender only to the extent of $5, shall we to that extent, increase the power of wealthy men, who have their investments in mortgages, and in bonds, and in other interest-bearing securities, do you suppose that the people would have answered yea? Do you suppose that the farmers and the working people of the country would have been willing to have their peculiarly favored money stricken down?

Do you not know, Mr. President, that with an almost unanimous voice they would have said, "You shall not do this thing?" But it was not discussed by the people. The great masses knew nothing whatever about it. Even well-read men, learned men, many men high in public station, knew nothing whatever about it until their attention was called to it several years afterwards. No matter how it came to be done—I am not discussing the criminality of it, if with any propriety such a word may be used—I am calling attention to the fact that the people knew nothing about it; that they were not consulted about it. Hence, now I insist that the people ought to know something about this proposed legislation. Let us submit it to them. If we are not willing to delay that long, then prove to the country you did not want silver demonetized in 1873, by placing upon your bill a silver-coinage measure of some kind. Let us put the two together. I do not like the Sherman law; I do not believe in purchasing silver unless we purchase gold. Let us coin both metals for their owners. In that way the metal will be distributed among the people by the people themselves. There will be no responsibility attaching on the part of the Government for the

payment of Treasury notes such as we are now issuing for the purchase of silver. But until you give us something that is as good, or, what we would rather have, something better, we are not ready to vote.

The Populists are the only people who have gone before the country with a clear-cut platform on this question. Democrats and Republicans quarreled with one another and tried very hard to have us assist them in the quarrel over the tariff. One insisted that high protection was ruining the people. The other insisted that going to a low range of duties, establishing a revenue basis, or going to free trade, would ruin the people; and between the two a quarrel was kept up, while the people were blinded. The Populists early foresaw the shallowness of this spectacular performance that was being played before the people, and we said so plainly.

It is the speculators and the gamblers in the products and in the profits of our labor who are to blame for the condition of things which now confront us. It is our legislation protecting this class of business that has encouraged their trade. We said to the people our legislation needs overhauling, we need more money, and as the first step toward the acquisition of more money we must have silver restored to its old place; for the reason that not only is gold being appreciated in value, but there is not gold enough to transact the business of the people without depreciating the values of other property to the level of starvation prices.

We said to the people that by a restoration of the coinage of silver we will to that extent bring down the value of gold, to that extent we will raise the value of silver, and to that extent we will raise the general level of prices, which will be to our benefit. That will give us more for the property out of which we have to pay our indebtedness and supply our families. The people to whom we spoke believed us. We are here preaching the same doctrine, representing the same views, and the believers in the doctrine we preach are multiplying rapidly—so rapidly, that in a little while many men now blind will be surprised at the change.

This subject, as it is presented before the Senate, has never been put in issue before the people except by Populists. If the Democratic party and the Republican party, two great and stupendous organizations, will make an issue upon the money question and go to the country with it, they would be discussing a living and vital issue upon which the people would take sides. But there is a disposition manifest upon the part of the leaders of both of those great parties to unite in this Chamber to oppose the submission of the subject to the people. They intend to force a vote upon it here before the people can be heard.

Mr. President, if this bill passes without conditions, without any recognition of silver as money, I believe the revolution will be quick and decisive. The end no man knows. Every day or two we see in the public press what seem to be indications of a compromise, but the next morning through the same columns we see what purports to come from headquarters that no compromise will either be offered or accepted in any form. The great newspapers of Sunday were unanimous in asserting that any sort of a compromise coming from the Administration side would be a surrender.

[At this point the honorable Senator yielded to Mr. VOORHEES for a motion to adjourn.]

Thursday, October 19, 1893.

Mr. PEFFER. Mr. President, the proceedings of the last three calendar days have been fruitful in good results. A discussion of the rules of this body is at all times an interesting subject, but it is especially so at this particular time.

In the discussion of the pending bill we have been permitted to take a very wide range. That has been the custom of the Senate from the time of its first organization. Nothing could be more appropriate, no line of policy could be more fruitful in good effects. Perhaps the most memorable debate in the history of this body, one that at least up to the present time will be regarded as the most powerful, the most far-reaching in its effects, the widest in its scope, the most dignified in its bearing, was that between a distinguished Senator from the State of South Carolina and another from the State of Massachusetts, and yet the great debate between Hayne and Webster grew out of a short resolution asking the Committee on Public Lands to inquire whether the sales of public lands might not be dispensed with for a time, and whether, in connection with that stoppage, several land offices might not be discontinued.

The resolution, as I now remember the record, was introduced by a Senator from the State of Connecticut, Mr. Foot, whereupon a Senator from the State of Missouri, Mr. Benton, undertook a criticism, not so much of the resolution as what he deemed to be an unwarrantable interference with Western interests on the part of the people of New England. In answer to Mr. Benton's attack, if attack it may be called, upon the Eastern people and their customs, Mr. Webster took occasion to retort somewhat scornfully; but, instead of continuing his retort upon the Senator from Missouri and his people, the great Massachusetts lawyer turned his attention upon the people of the Southern States and their customs, their habits and their institutions. In reply, Mr. Hayne undertook to defend his own people against the attack of Mr. Webster, and it was in rejoinder that the great speech which has become historic was delivered. Hardly a word, certainly but a very small portion of all those speeches, except only that of Mr. Benton, was devoted to the consideration of the resolution before the Senate.

So we have had here a very wide range of thought and of discussion, and I do not know how we could have spent our time more profitably. Had this bill been taken up and disposed of in twenty-four hours or in forty-eight hours the country would hardly have known what had been done; there would have been no effect on the financial condition of the country; there would have been no effect upon the permanent and material interests of the people. It would have passed into history quietly and without any present friction and without any good results; but, because of the determined resistance to the bill, attention has been called to its object, to its theories, to its scope, to its probable effects, and the whole country is to-day discussing the bill with the Senate. We are all at work together considering this measure.

In connection with the consideration of the bill, for the last three days we have been considering how we can change our rules. Why is it, Mr. President, that these considerations are injected into the discussion? Is it because the friends of the bill are becoming impatient, because, in their judgment, the opponents of the bill are unnecessarily prolonging debate and postponing action upon it?

In the discussion upon the rules I have discovered with a great deal of interest, as well as pleasure, that the line of argument from our side of the question—I mean that side with which I concur—that the same views have been entertained and pushed with wonderful vigor and force, which were presented in the remarks I had the honor to submit to the Senate the last time I was on the floor, that is to say, that majorities are bound by rules as well as minorities.

We insist that the majority of this body, the same as the majority of the people at large, in a county, in a township, in a school district, are alike bound by the law in their procedure.

That is the only way we can safely act. If a majority are delayed for sometime, and if they can not come to a conclusion in a short time by reason of the enforcement of rules for the protection of the minority, they ought not to complain.

I think there are times, or at least there may be times, when a Cromwell or a Napoleon or a Grant is needed; but, Mr. President, there never has been a time in human history when those men did not come at the proper moment. We are not ready in this body yet for any *coup d'état*; we are not ready here for an open and direct revolution. Let us proceed orderly, Mr. President, not only with the debate, but proceed orderly in the change of rules and we shall find in the end that we have acted wisely.

The time will come—I believe it is not very far distant—after this excitement has passed, after the strain of the debate has become eased and we have settled down in an orderly method of procedure, when we can take up the question of amending the rules. Let that subject be discussed day after day, week after week, month after month; aye, Mr. President, if need be, year after year, before a conclusion is reached, if so much time be necessary.

The most important question we have had to deal with in a generation is before this body now. It is not a matter that concerns but a few people; it is not a matter that concerns the people of to-day or of to-morrow, but of all time to come. It is one of the most vital issues that concerns human kind. We could get along for a little time without wheat, because we can use corn; we could get along for a time without cotton, because we have wool; we could get along for a time without new clothing, we could wear our old; we could get along for a little time if a portion of our transportation facilities were clogged; we could get along without a great many different things because we should have so many other things still left; but we can not get along without money; and modern conditions of society are so different from those of the past, that it is only needed to instance a few illustrations in order that this fact may be impressed upon our memories.

Suppose that a barrier be drawn around a city to prevent the people on the outside from entering within and to prevent the people from the inside going outward, preventing all communication between the town and the country, within thirty days one-half the people in the city would be starving, and the other half would be upon the verge of starvation. It is agreed upon careful estimation, as I understand it, that the provisioning of the best situated cities in the world is not more than would last the people about thirty days. Take the people upon the outside

and keep them away from the cities, and while the farmers could live for a time, yet by reason of the changes that have come about within thirty or forty years, in twelve months or eighteen months the farmers would be in distress for want of clothing, in distress for want of shoes, in distress for want of implements, in distress in the regions where there is no coal for want of fuel, and for a thousand and one family and individual comforts.

The people there would be in distress for the reason that our trade centers are in the cities. The places where our supplies are collected, where the farm products are brought for distribution, is in the town, not in the country. We are interdependent one upon the other, the town and the country, the farmer and the merchant, the mechanic, the manufacturer, the banker, and the railroad man. We are all interdependent one on the other, bound one to the other by ties that we can not with safety break; and as one of the most necessary and vitalizing agencies in this great interdependent relation among the people is the circulation of money. It is like the lifeblood of the animal system; it keeps everything lively and in a healthy condition. Hence the great question which is pending in this body is broader than this Chamber, broader than the District of Columbia, broader than any one State, broader than the American Nation, great as it is, broad as the world. Every man, woman, and child everywhere, under all circumstances, except only a savage condition, is interested in this question of money.

Now, we are proposing here to discontinue the further use and coinage of silver money. We are not proposing at this time to take away what we have on hand, but it is, as we conceive, the first step to get rid of utterly and for all time to come the use of silver money except for purely subsidiary purposes, and that silver must be measured by gold, just the same as cotton and corn and wheat and cattle are. That is going to the gold standard; that is gold monometallism, and that is what we are opposing. Mr. President, if this position be correct, we are proposing to change our system. Do Senators tell me that I misstate the fact? Do they say to me they are bimetallists, and their party platforms promise and propose bimetallism? In answer I say away with your party platforms; you do not believe in your party platforms; you do not maintain your party platforms; you do not even maintain your party record, and yet you ask us to believe that you are bimetallists.

What do the American people understand by bimetallism? The old system, which was taken away from us without our consent, without our knowledge twenty years ago, is what we understand by bimetallism; the coinage of gold and silver in unlimited quantities at the ratio of 16 to 1, that is the ratio to-day; the old ratio established by the act of 1837. Our proposition to reënact the old law of 1837 was unceremoniously laid upon the table here the other day without a vote, and without the courtesy being extended to its mover to explain its provisions to the members of the Senate.

The people understand this thing, and they are in no hurry; the great masses are in no hurry to have this matter disposed of until it is disposed of properly. One of the ablest, and in many respects one of the clearest, most forceful, and, in at least one respect, the most remarkable speech which has been delivered during this debate, we heard the day before yesterday from the honorable Senator from Ohio [Mr. SHERMAN], in which he belabored Senators on the Democratic side of the Chamber. After chiding them, if I may use that expression, for their failure to agree, in that powerful manner so common to the distinguished Senator, he said, "You must agree," and he gave the reasons for the necessity for agreement. "Your party," he said, "is charged with legislation now; your party has control of the Government; your party has control of the machinery of Congress; your party is held responsible, and if you can not agree, turn the case over to us Republicans, and we will arrange some kind of a plan and submit it to you."

Mr. President, my criticism, if criticism it may be called, is not of the eloquence or the force of the great Senator's language, but of the principle involved, that the party is higher than the country, that the interests of the party must stand higher in the consciences of Senators than the great country for which we are expected to legislate, and that because Senators differ upon a vital question they must be lashed by the party whip and made to stand by a party because the leaders say so. Away with such doctrine, Mr. President! It is the men who are not regarded as the party that are right; they are the men who represent the Democracy of the fathers.

It is the men who are ready, and have been ready from the beginning, to hold out the olive branch to us who are called radical, those men of the South, God bless them, whose loyalty is now unquestioned. The leaders of the party have gone astray from the bimetallism of the men at whose feet the Senators of to-day learned their party creed. Mr. President, it is time that men should rise above party when the party is going in the wrong direction. The nominating conventions and the platforms of the parties have been controlled by class interests, I believe full twenty-five years, and it is only in recent years that the people have learned than great truth. Let the people's voice be heard, let this great question be submitted to the jury of the country, and then we shall learn whether the friends of this bill are in the majority or not. No great interests will suffer. We are ready at any moment to test the judgment of the people.

Mr. President, notwithstanding this strong language and the influence of the powerful appeal of the Senator from Ohio, Senators on the Democratic side of the Chamber have not agreed; they are as wide apart as Dives and Lazarus were. There is an impassable gulf between them; they can not agree permanently. The men who are not voting with the Administration upon that side of the Chamber are standing for a great principle, and they will not surrender it.

Let me ask what Senator upon either side, Republican or Democrat, a friend of this bill, has urged or argued one great underlying principle of finance in the discussion of the measure? Everyone of them spoke in favor of bimetallism; and yet he follows the creed of men who would take us the other way.

The only argument which is given to us is one in favor of what we believe to be the correct policy for this country—bimetallism, the bimetallism of the fathers, what the people understand by bimetallism, not to stop the coinage of silver, not to stop the use of silver as standard money; not to go to other nations and ask them for a policy; not to go to Great Britain, or Germany, or France, and ask them to dictate to us what our financial policy shall be, nor ask an international conference to decide what we shall do.

Mr. President, I saw to-day in the New York Press a most excellent editorial article on this question which handles the subject very well, and expresses the thought so much better than I can do that I want to call attention to it. It is an article entitled "The best money." One paragraph reads this way:

> The whole matter turns upon the question, What is "the best money"?

Then, by way of explanation, the editor says:

> The answer depends upon the response to the further question, For what use do you want money?

This is all in answer to a question of a correspondent who is insisting upon the best money, and that the best money is gold, so that we must have a gold standard and measure everything by gold. The editorial proceeds:

> For what use do you want money? Coal is the best fuel for some purposes; wood for others; petroleum, gas, coke for still others. Milk is the best food for infants and invalids; meat is the best food for strong men. Wool makes the best clothing for cold climates and cotton the best for the tropics. Gold is the best measure of exchanges in our traffic with Europe and in our larger commerce at home. But for the vast retail traffic upon which wholesale business absolutely depends for its existence, silver is the best money.

Silver is the best money in the multitudinous little transactions, from day to day, of the farmers, and wage-workers, and mechanics, while gold is better money in larger transactions. And we insist that there is not silver enough now in use to supply this demand for the money of the people. We insist that we ought to continue to coin all the silver that comes to our mints in order to supply the continuous and pressing demand of the common people of the country for ready money.

Mr. PALMER. Will it interrupt the Senator if I ask him a question?

The PRESIDING OFFICER. Does the Senator from Kansas yield to the Senator from Illinois?

Mr. PEFFER. Yes, sir.

Mr. PALMER. Mr. President, I agree with the Senator so fully and absolutely that I desire to make that prefatory remark. I desire to state that the Government has been offering to pay the expense of the transportation of silver to all parts of the country in order to meet the very demand which the Senator suggests. I am so delighted to agree with the Senator on that point that I beg to mention the fact that to-day silver is in the Treasury ready to be sent to all parts of the country to meet the very wants that the Senator suggests.

Mr. PEFFER. Now, what does the Senator from Illinois wish to ask me, if anything?

Mr. PALMER. I mean to ask if the Senator regards the existing laws as being entirely sufficient to meet the demands?

Mr. PEFFER. Mr. President, I took occasion a few days ago to express my belief in positive terms that the Secretary of the Treasury, with the consent and under the direction of the Chief Magistrate of the Union, has purposely and deliberately kept the silver coins out of circulation; that they do not want to circulate the coins; that they have never tried to circulate the coins. Why do they not pay them out? Go to your stores here in the city of Washington; go into any of the mercantile firms in any of the great cities of the country, and if they happen to be under the necessity of handing you a silver dollar they will apologize for it. Why do you not try to circulate the money? Why do you

not bring your silver up to the disbursing clerks here and have him pay it out to Senators and to members of Congress? Why do you not try in some way to send the silver money out in payment of debts? Why do you not redeem these Treasury notes in silver as the law requires? You do not want to circulate the silver money.

Mr. PALMER. I beg the Senator's pardon. I shall at some time in the future, not in his time, state what I conceive to be the policy of the Treasury.

Mr. PEFFER. I know what the policy of the Treasury is.

Mr. PALMER. I shall defend it in my own time, but I know this to be the fact: That by a deposit made in Springfield, Ill., of $100 in silver certificates, silver was sent to the depositor at that point, the express charges being paid by the Government. So that in point of fact, if any citizen anywhere is desirous of having silver money, if he will make a deposit in a bank, the silver is sent to him free of expense. That is a fact I beg to state now. So that whenever it is believed by any citizen that silver dollars can better serve his purposes than any other form of currency, silver will be sent to him upon the deposit of Treasury notes.

Mr. PEFFER. Yes, I know, Mr. President, that if a man can get as much as $50 in greenbacks he can forward that amount to a bank, and pay the freight on it to the subtreasury at New York and have it redeemed in gold. Almost any citizen willing to go through this circumlocution, playing all around Robin Hood's barn, and paying somebody a little freight and somebody a little commission in order to be accommodated, can have that done, whereas he ought to be accommodated at home in the first instance. The money ought to be in circulation in the country, and if we had free coinage of silver, which we are demanding, there would be no accumulation of silver dollars, or silver money of any kind, in the Treasury of the United States. It would go out in the first instance among the people, and it would stay there. Under a system of free coinage the Senator from Illinois and I could go together to the mint, each with $100 worth of silver bullion in condition ready for mintage. He hands his bullion over to the Director of the Mint, or to the proper officer; it is coined for him, and he takes away with him his $100 in coin.

I do the same thing. I turn over my silver bullion, and it is coined for me. I take the coin away with me. The Government has no further responsibility about it. I put it in circulation myself and it is not collected here and stored in the Treasury vaults at Washington or anywhere else. It stays out among the people. None of it goes beyond the village or the town or city where he and I do our trading. That is free coinage, and that is the way to get silver coins into the circulation.

The trouble about parity—the disparity, or disarrangement of parity, between the two metals—has all come about because we have been purchasing silver bullion and piling it up in the Treasury Department, whereas the original law says that whenever the holder of ten silver dollars desires, he may deposit them in the Treasury, and the Treasury will issue a certificate for them.

That is the language of the law. The practice has been that certificates were paid out in the first instance and that there was no deposit of dollars at all; that the individual citizen did not have the silver dollars in his hands at any time, but asked for a certificate in the first instance rather than the silver; that a certificate was handed to him in payment of the Government debt, and in that way the silver certificates get into circulation. I suppose that when we have received our pay from the financial clerk from month to month, two-thirds of it has been in silver certificates. They certify that we have deposited silver dollars in the Treasury, when we have not even seen the silver dollars.

We have not deposited any silver dollars. If those silver dollars were paid to us and the law permitted us to deposit them, I have no doubt we should do so. But what I insist upon is that the Government has not been trying to circulate these silver dollars. It has been trying to prevent their circulation, and then say, as an argument before the country, "We can not circulate the silver money." I do not believe a word of it, and never did.

Mr. President, recurring to the remarkable speech of the Senator from Ohio, to which I referred a moment ago, before I was led into this digression by reason of the question of the Senator from Illinois, I want to say to my colleagues upon the other side of the Chamber, the men who are opposing the passage of this bill, that there is time for another coalition than the one which was referred to by the venerable Senator from Alabama [Mr. MORGAN] a few days ago.

If it be true—and it is true—that the interests of the people of the Eastern portion of this country are very much the same in the six New England States and the four or five old Middle States, by reason of their large manufacturing interests, and by reason of the fact that the great railroads center there, that the money centers are there, that the traffic of a continent converges there; that by reason of these things the interests of those people are so much alike as that upon questions of local importance to them their Senators and Representatives vote in a body without respect to party lines—it is equally true, Mr. President, that the interests of the South and of the great West are one. If the time has come—and it seems that it has come—when the people of the Eastern section, with their friends in other parts of the country, are united and form one great political body, the time has come for us to unite, and then we shall see where the majority is.

Mr. President, the States of New England—and I shall have occasion to refer to the fact more at length after a while—do not raise grain enough nor cattle enough, nor any sort of food for either man or beast, sufficient to supply the people, except possibly of hay for animals and of potatoes for men. They get all of their food supplies, all of their clothing supplies—I mean the raw material—from the West and the South. There are no great wheat fields nor corn fields in that part of the country; no cotton fields at all; the peach does not grow there, nor do any of the luscious fruits, except apples. Add to the New England States New York, Pennsylvania, New Jersey, and Delaware, and they do not raise wheat enough to supply the local demand.

In what I shall say concerning that part of the country I do not want it to be understood that there is any feeling in the matter. I am simply talking plain, practical, common sense, stating facts, and reasoning from them. You may take the great body of land east of the Mississippi River and compare the surplus agricultural products there with what is needed by the people, and you will find that there is no more, or at least but very little more, produced even that far west than is needed by the people for their home use. Notwithstanding that agricultural products form about 80 per cent of our export trade, the great body of that surplus comes from the Southern States and the States west of the Mississippi River.

Kansas alone, almost limitless in her productive powers, produced in 1891 75,000,000 bushels of wheat; in 1889 the farmers there gathered 250,000,000 bushels of corn, and sent abroad more of their wheat than is produced in Great Britain. We sent away all but about 10,000,000 bushels; a little more, perhaps, even than that of wheat, and vast quantities of corn, innumerable head of cattle, swine, and sheep. So it is in Iowa; so it is in the Dakotas; so it is in Missouri. That region is almost a limitless farm. Nearly all the surplus wheat, corn, flour and cotton that go across the water are produced there.

The trade of that country has been fattening the people of the East. We are not complaining about it; but, Senators, when the time comes that your material interests are at stake, you blot out your party lines and join hands, standing together like men united in a common cause. Men of the South and of the West, let us do likewise, and together we shall save this Republic and pass it down to posterity as the fathers gave it to us; but as certainly as there is a God in Israel if we fritter away our forces at the behest of the power that up to this time has been stronger than ourselves, if we stand divided in the face of the concentrated wealth of that part of the country and quarrel over tariffs and other nonessentials, the rule of gold will go on, the drain of interest will continue, and we shall remain hewers of wood and drawers of water for men who live off of our cowardice.

Mr. GALLINGER. A moment ago, Mr. President, the Senator from Kansas, with a good deal of declamation, asserted that the New England people were being fattened by the great State of Kansas and others of the great States of the West; that they were raising wheat and corn and other produce, and sending it to New England to be consumed. I simply want to ask the Senator if his people are not paid for all that they send to New England, and if they do not desire a market for their products?

Mr. PEFFER. Yes, Mr. President, we are paid for what we send to New England. The farmers in Kansas to-day are getting about 40 cents a bushel for their wheat, and it costs them 10 cents more than that to raise it. I have known our people to pile up their corn and their wheat on the open prairie, without covering, because prices were so low they could not afford to ship it away.

I shall recur to these things after a while. I want to say again to all, and especially to my most excellent neighbor from New Hampshire [Mr. GALLINGER], whom I have learned to think a great deal of personally as well as in his official capacity, that I would not if I could strike out from the history of this country one foot of the rugged hills of New England. The brightest pages in American history are written in the blood of New England men. When I pass over the Boston Common, when I go over the ground of the great events which occurred there during the times that tried men's souls; when I look upon that rock-bound coast and think of the things that have occurred there in the past, I am proud that New England forms a part of our com-

mon country; I am proud that your people are mindful, sensitive of their interests; I am pleased to see you standing hand in hand, shoulder to shoulder, man to man, in defense of your interests. That is natural.

All that I am complaining of now is that my people and the Southern people, knowing this solidarity of the people of New England, who are so largely dependent upon us for their wealth, should be so divided while you are united, and that we should help you to fight your battles, neglecting to fight our own.

[At this point the honorable Senator yielded to Mr. VOORHEES for a motion for a recess.]

Friday, October 20, 1893.

Mr. PEFFER. When the Senate took a recess last evening, Mr. President, I was discussing the relations existing between the Government of the people and their interests in different sections of the Union, referring to our material interests in that connection, and also to our political interests; and by reason of the question which was submitted to me by the Senator from New Hampshire [Mr. GALLINGER], it occurred to me after the recess that possibly my motives were not properly understood. With a view of making the matter clear I wish to devote a very short time to expressing my views upon that point.

In the first place, Mr. President, I do not wish to arouse nor to encourage anything savoring of sectional prejudices or sectional animosity. We had enough of that in the past years. Those things brought the people into a great war, and that war determined that the American people will not submit to any forceful division of their territory, nor to any peaceable division of it. We are a nation broad-gauged, liberal-minded, enterprising, progressive, indomitable, and courageous. In what I am about to say to-day, and in what I expect to say hereafter, if I am permitted to conclude the remarks which are now jotted down and foreshadowed in the notes before me, I have no reference whatever to any natural differences between the people of the Eastern States and the people of the Southern and the Western States.

We are all one people. We are all kin. We speak the same language. We have the same religion. We worship the same God. We cherish the same memories. We are proud of our glorious history. We are proud of our common ancestry, and our hopes for the future are in common.

A great deal has been said concerning conditions existing in certain sections of the country, but under like circumstances men in the South and men in the West would have done what the men in the Eastern States have done. The people inhabiting the States to the east of us are neither better nor worse than we are; but I want to draw a line between conditions existing in different parts of the country that will be so plain that all of us may look at what is included within those lines.

The New England States, to begin with, are small in area. The six States of New England altogether are but little more than two-thirds the size of Kansas. Put them with New York, Pennsylvania, New Jersey, and Delaware all in one and their combined area is very small in comparison with that of the whole country; yet, while that is true, it is a fact of very great importance that all the great arteries of American commerce center in the city of New York. Most of the heavy owners of all our great railway lines reside and transact business in either New York, Philadelphia, or Boston. The great manufacturing industries of the country are centered within that territorial area. While there are vast manufacturing enterprises in other parts of the country, the headquarters of the manufacturing industries are within the States I have named.

There is nothing unreasonable or unnatural about those facts. They have come to us in the logical order of things, and I am making no complaint about it. I am calling attention to the fact for the purpose of using it in argument hereafter.

This great concentration of wealth creates power and influence in all directions. The railroad interest is a powerful one. It extends throughout the entire country. There is hardly a county in the Union that has not one or more railway lines running through it, and there is not a mile of that vast system that is not represented locally by at least one of the best lawyers to be found in the region.

If all the lawyers who are in the employ or retained in the interests of one great railway system in the country were marshaled together they would form an army as large as Gen. Jackson had at New Orleans, larger than Gen. Scott had at Lundy's Lane. If you put together the different armies made up of lawyers representing the different great railway systems of the country you will find that the influence of the railway system reaches out into every county in the United States. The headquarters of the railway system are in New York City, Boston, and Philadelphia. Take the manufacturing interests and the persons through whom the manufacturers sell their wares, the wholesale men, the jobbers, and the retailers, and we find that the whole country is honeycombed with manufacturing interest and its influences.

There is still a greater power than all of these combined centered in New York City; that is the power which we usually designate as the money power. It reaches out not only into the towns and cities, but it reaches into the homes of the people. It is the greatest of all powers in this country and in the world.

Here, then, we have the headquarters of the three most important of all powers concentrating their influence in the Eastern States. One of the things which follows from that is that a different manner of life is encouraged there; another thing which follows from it is that political influences center there. Every important meeting of great committees is held in New York. I mean committees having charge of either political or financial interests. When the executive committees of either of the great political parties confer for the purpose of raising revenues to conduct a national campaign, they meet in New York City, and it is not too much to say that by far the largest contributions which go into the campaign funds for national purposes come from the city of New York, joined by Boston and Philadelphia, and it is not going too far to say that many of the same men who contribute to the funds of one party, likewise contribute an equal amount to the funds of the other party. They care not which of the two parties succeed, because they have the control of both.

This gives to those men a tremendous political leverage over the people of the country and their business interests. Through that kind of political engineering men of great distinction and oratorical powers are sent to different States, where their services can be made most valuable from a party standpoint, as a general distributes his army, sending Gen. Brown to this point and Gen. Smith to that point and Gen. Thompson to another point those points which need the presence of a skillful commander.

We have this great influence to contend with in every part of the country. It is from that sort of influence that come the "blocks of five" and similar proceedings, which have disgraced the country, and it is against those combined influences that my argument is directed.

Hence in my remarks yesterday I spoke of the difference between the conditions existing in the eastern part of the country and those existing in others, and, to illustrate it, I referred to our territorial area, our population, the fertility of our soil, and our great rivers. The Ohio River between Pittsburg and Cairo has as much navigable length as the Danube in Europe; the Arkansas River has more navigable length than any river in Europe. If all the lakes in Europe were put into one they would not be equal to one-half the area of Lake Erie.

We have mines of coal, of iron, of silver, and of gold, very few, if any, of which are to be found in the Eastern States. Those States are peculiarly manufacturing States; they are adapted to the great business vitality which has been nurtured there, and an enterprising, earnest, intelligent people have grown up. No wonder that they have been able to amass so much wealth and to exhibit such energy, because the whole country has been paying tribute to them.

The Senator from New Hampshire [Mr. GALLINGER] asked me yesterday if the people of New England did not pay for everything they receive. Yes, Mr. President, they do pay for everything they get.

I took occasion last evening to refer to the great amount of surplus products which are poured out from our region of country and what a vast amount of commerce, foreign as well as inland, the States west of the Mississippi furnish in their wheat, their corn, their cotton, their cattle, and other live stock of different kinds.

Resulting from all these conditions comes the final one, namely, a unity of interests so great in its influence and its power that it overrides the prejudices of party and of religion. The strongest social and political ties are not strong enough to separate that busy people when a contest of local interests is brought before them. When the amendment which I had the honor to propose some time ago to the pending bill was voted upon, and all through this discussion, we have found that party lines among our Eastern neighbors are wholly obliterated with a single exception.

The Senator from Pennsylvania [Mr. CAMERON] has voted with the silver men in all our different votes up to the present time, and will doubtless continue so to vote to the end. With that exception all of the Senators representing the States of which I have been speaking, have voted one way, and that against all propositions providing for the future coinage of silver money. They have all voted on the side of the pending measure. The

reason they do so is not because they are dishonest, not because they want to rob anybody, but because they think their interests lie in that direction.

That being true, it lays the best foundation possible for a union of people whose interests are alike in other directions; and there is nothing sectional in that. While the people of New England and of the Eastern States join together in the protection of their own interests in their own way, they make no war upon the American Republic, they make no war upon American institutions, they simply say in this body to the country "our interests lie in that direction, and we follow our interests."

It so happens that they have friends, many friends, who sympathize with them in other parts of the country. While in some States the feeling is almost unanimous against them, yet in others they have a larger following. So there can be no sectional feeling charged against us.

But the point I present to Senators from the South and from the West is that, in the face of this combined opposition, having no higher or better purpose than the serving of their own local material interests, the time is at hand when our votes should be united. I think our interests should be made common cause, and we should bring our votes, our voices, and our influence, whether private our public, to bear along the line of our own interests. That will not be unpatriotic; there will be nothing sectional about it; but it will tend to build this country faster than it has ever been builded before; it will tend to develop our resources faster than they have ever been developed before; it will in every way tend to the building up and perpetuation of this great nation of people. We shall have greater respect among ourselves, and we shall have greater respect abroad by taking this course.

It has become perfectly evident within the last year or two, more especially within the last ninety days, that it is utterly impracticable for this money question to be disposed of on party lines as they are now drawn. It is not practicable to do so, for the division is too great.

I am in favor of postponing the further consideration of the bill until we can go before the people upon a clean-cut issue and let it be determined by them. Then we can come back and act upon it in harmony with the people's will.

Those newspapers which have been so clamorous for hasty action, declaring that the country was going to the bow-wows unless the Senate acted immediately, now that they see it is impossible to rush the bill through, are going so far as to say it is better to wait two years or five years, if need be, in order to demonstrate whether or not the majority shall rule; that there is still something greater than this question, though thirty days ago this was the greatest of all questions, and everything was going to destruction unless the Senate acted immediately.

I ask the Senate to bear with me while I talk about this matter of party disintegration, not for the purpose of making a stump speech in the Senate, but for the purpose of emphasizing a great truth. For example, we find that the Senator from Ohio [Mr. SHERMAN], perhaps the most distinguished Republican of his day, and the chairman of the Committee on Finance [Mr. VOORHEES], who has charge of this bill, and other Republican and Democratic Senators, the President of the United States, the Secretary of the Treasury, and other members of the Cabinet are in hearty accord urging the passage of the bill.

In order to bring before the Senate the thought which is in my mind, let me trace the public history of the Senator from Ohio, beginning with 1867, when he attended a conference of financiers in the city of Paris. From what he learned there, from what he saw, or believed he saw, he became convinced, if he had not been before that time, that the best thing for the people of the United States to do in their financial affairs was to adopt a gold standard. He believed, from what he saw and learned there, that in a little while Germany, and possibly France, would go to the gold standard; at any rate, that the feeling was strong in Germany. Coming home with that view of the matter, very naturally the Senator from Ohio took a leading part in our financial legislation—for he is one of that class of men who can not follow—his natural gifts and acquirements make him just like his great brother, Gen. Sherman, a leader of men and not a follower. His counsel was in the direction of a gold standard in the United States, and from that time until the present the Senator has consistently followed that line.

In 1869 the Senator advocated the proposition that all of our paper obligations were payable in the end in coin—gold and silver coin.

In 1870 the Senator advocated the funding bill, which made a provision that all of our outstanding indebtedness, with the exception of the United States notes and fractional currency, should be put into long-time bonds, and the debt funded in that way, payable in coin.

Then, when 1873 came along, the Senator favored the act of that year revising the mintage laws—the act which omitted the silver dollar from our coinage.

The Senator advocated the resumption act of 1875, and as Secretary of the Treasury collected the $100,000,000 gold reserve. He has all along—since 1867—favored the single gold basis. The Senator has not been in favor of the free and unlimited coinage of silver at any time since 1867. The Senator from Ohio and a majority of Republican Senators, with the gentlemen who are in the leadership of the Democratic party, are in perfect accord upon the propositions contained in the pending bill. On the other hand, there has been a gradual falling off of Republicans, a gradual falling off of Democrats, a falling away and a loosening of party ties, and a new combination has been formed in the Senate, made up of Senators representing the three parties—Republican, Democrat, and Populist—a combination agreed in favor of free coinage of gold and silver at the present ratio and opposing monometallism.

A large number of Republican and Democratic Senators are agreed on the other side. We are arrayed in two great bodies; and that is why it is claimed that the Government is paralyzed. But there is no truth in that statement; it is nonsense, the mere vaporing of morbid imagination. There is no paralysis in the Government. The Government was never so lively as at this hour; there has never been so much spirit in the legislative body as there is now; there has not been in a quarter of a century as much life in the Senate as there has been in the last sixty days.

It is proposed, I see in the press, which seems to be legislating for us, that we are to pass the bill and let it take effect at some time in the future. You will begin to strangle the people and complete the work four years from to-day; so that during all that time we are to understand we shall be dead at the end of four or five years; they will let us live and linger along, while their power grows stronger and stronger; and, if it can be so arranged, the two old parties will be kept together, with the nominating powers in New York, with the sinews of war in New York, with all the great social, political, and material influences in the Eastern States, to keep the rest of the country in subservience.

There has been a consistency in the methods of the gold monometallists from the time we went to the gold standard down to the present hour. It was largely confined to the Republican party in the beginning, but now the Democratic party, having the power of government in its hands, is quite as strongly for the gold basis as its old enemy. Populists have been insisting ever since we have been organized that the money question is at the front, and now when the brute test is being made, we find Democrats who favor the passage of the bill and Republicans of like mind join hands to force the measure through.

Mr. President, our newspaper critics insist that a new issue is coming to the front, and perhaps it is, because in the discussion of what is involved in this bill a great many new questions will rise. I have something here from the New York Herald under date of the 13th instant, headed, "It is now a conflict between democracy and oligarchy," in which this language is used:

> Vitally important to the prosperity of the country as the issue of repeal is, it has sunk to a minor place in the scandalous spectacle presented in the Senate Chamber at Washington.
>
> It is overshadowed by a far higher and broader issue—one which involves a fundamental principle of republican government.
>
> That issue is whether under the American Constitution the edict of the few or the rule of the many is supreme; whether in short, this Government is a democracy or an oligarchy.
>
> The attitude of the few mining-camp Senators is not the attitude of a minority asserting its constitutional rights. However plausible their pretense hitherto may have been, they now stand by their own acts unmasked and pilloried before the nation as obstructionists, pure and simple, bent on preventing a vote in order to override the will of the majority, paralyze the functions of the Senate, and block the way to legislation demanded by the people and essential to the welfare of the country.
>
> To this end, they have not scrupled to force a spectacle at once scandalous to the Senate and revolting to the country—the spectacle of a great legislative forum turned into an arena for a trial of brute force and animal endurance.

I ask, who precipitated this trial of brute force upon the Senate? Who imported it here? Not the silver Senators.

> To wield the power of oligarchs, they have not hesitated to resort to constitutional rebellion and parliamentary anarchy.

We have brought to our ears from the outside of the Chamber sounds purporting to be echoes of the public voice; allegations that Senators, honorable men, actuated by the highest and purest motives, are governed in their conduct here by a disposition to obstruct the business of the Government and to paralyze the industries of the country. Furthermore, it is charged that our conduct is rebellious, and partakes of the nature of rebellion and revolution.

On the 15th day of the month, last Sunday, the New York World said:

> Is it seriously proposed to compromise the right of the majority to rule? Who dares to propose or to make a surrender of the essence of popular government?

So asks the World. I ask, in response, who is asking anything of the kind? Who is here proposing to overturn the law and the usages and the customs of this body or to violate any provision of the Constitution?

There are some things—

Says the World—

There are some things that do not admit of compromise. The integrity of the Union was one of them. The right of the majority to rule is another. The honor and credit of the nation are in the same category.

The majority of the Senate should stand, to the end of this Congress if necessary, upon its right to vote, and for the right of the people to have their will embodied in law. In refusing compromise it is resisting revolution.

The same point which the Herald brings out. Here we have the great center of political influence saying to the country, "Here is a little faction of mining-camp Senators, men coming from the sage-brush region, who, by reason of long customs and usages"—which they forget to say are the law of the land—"are permitted to stand between the majority of the people and the majority of this body, defeating the popular will and paralyzing the energies of the Government." We are not so able, we are not so strong in mental endowments, not so well equipped in parliamentary knowledge, and in all of the great agencies adapted for the work as our fathers were, but we are waging battle as best we can in the name of the people. We are not traitors nor rebels, and we do not intend that our position shall be misconstrued either now or when the end comes.

I read again from the same paper—the World—dated the same day, October 18:

There is much more at stake now than financial relief.

They can easily pass over what was announced a little while ago in trumpet tones as necessary to the vital interests of the country!

There is the burning question of the right of the American people to have their will recorded in law. There can be no compromise with those who essay to deny that right.

We have insisted from the beginning that when the time comes—and we have as much right to determine that time as anybody—we will be ready to vote. Personally, I think that time is not very far distant; and I will say, furthermore, that personally I have been ready to vote at any time since this discussion began. I should much have preferred to speak for my people and to give the reasons governing my conduct here, and for the vote which I shall give; but I have been ready to vote at any time had the majority forced the issue, as it might have done if the rules had permitted it to do so in spite of our opposition. It was, however, because these rules, which have been so frequently quoted by Senators as a part of the Constitution, were interposed that the friends of the bill could not force their will upon the rest of us. There is a time for all things, Mr. President, and there will be a time to vote on this bill.

A little further. The World on the 19th instant said:

REPEAL IS INEVITABLE.

The repeal of the silver-purchase clause is inevitable if the majority holds its ground, as it must do or cover itself with contempt.

The result may be delayed. It may even fail to be achieved at this session. But the bill will stand as unfinished business to the end of this Congress unless repealers give up repeal.

It is worth a struggle to March 4, 1895, if need be, to establish again the right of the majority to rule and to affirm the power of the Senate to legislate.

There is no revolution in that, Mr. President. Even this loud-mouthed organ of the gold party in New York, that has been insisting that we have been guilty of treason, and rebellion, and revolution in delaying the vote, when we only asked that the vote be delayed until we could be heard, is willing to postpone the matter for a year or two years, and let the country drift along as best it may.

But there is more to follow. I now come to a peculiar and alarming feature of this outside discussion, this alleged expression of the public will. I have an article from the New York Times of last Sunday, from which I will read a paragraph:

It is of no consequence what the compromise may be. Any compromise now is surrender of the rights of the people in one branch of Congress. A measure that might have been accepted with honor when the session opened—

That is to say, a compromise proposition which might have been accepted with honor when the session began—

would now be as bad, as fatally bad, as free coinage itself, because any concession to the minority is a proclamation to the American people that on finance the Democratic party is in the hands and at the mercy of the little squad of revolutionists who are by this step allowed to dictate terms to the party.

* * * * * * * *

Even if it could be carried through a Senate caucus, we do not believe that the House would throw away the reward of the splendid courage and fidelity by which it responded to the people's wishes in August. And if political insanity could so far prevail in the House, Mr. Cleveland must be relied upon to interpose the people's veto to the attempted betrayal of their rights.

The Times, advocating the Democratic policy, urging the Democratic majority to get itself together and frame a bill and pass it, now insists, when it discovers that the particular bill which it wants passed can not be passed just now, that if the Democratic party gets itself together and proposes any sort of a compromise, the House must not disgrace itself and agree to the amendment; but that if it should go so far in the way of political lunacy, the President of the United States must interpose his veto in order to prevent the consummation of the outrage. The very thing that the Times and papers of its kind advocated in the first place, they now condemn in the party that is held responsible for the legislation of the country, as the Senator from Ohio [Mr. SHERMAN] said the other day; they condemn the act of a majority in case that party shall agree upon a compromise measure. It is not a majority measure these violent papers want; it is a repeal bill they want, and they care not how revolutionary the proceeding may be.

The spirit which instigates such articles as that is the spirit which foments revolution, rebellion, and anarchy. This same New York Times sent one of its reporters out to interview an eminent lawyer of New York City, and to procure the views of that lawyer concerning the rules of this body and the rights of the majority under the rules; whether or not some means within the rules or within the power of the Senate could not be devised by which to suppress this irrepressible minority, to get rid of these revolutionists and their rebellious conduct.

Mr. President, pause long enough, if you please, to think of the enormity of such a proceeding, that a great newspaper, and especially one founded by Henry J. Raymond and his compatriots, should send out upon the street to a lawyer and ask his views, for the purpose of publishing them to the world, as to what the Senate can do in certain emergencies. The lawyer asked as to the practicability of some plan to force a vote in the Senate. His suggestion is a heroic one, but, as he said, the situation is one which demands heroic treatment. Think of a great newspaper taking the advice of its lawyer as to how heroic treatment may be administered in the Senate of the United States for the purpose of manufacturing a false and pernicious public sentiment against delay in reaching a vote in this body. The very thing—revolution—that those papers condemned they are trying to foster and encourage.

The obstruction in the Senate can be overcome at any time—

Said this eminent lawyer—

and whenever the Presiding Officer, Vice-President STEVENSON, sees fit to boldly meet it.

Assuming there is a clear majority in favor of the repeal of the purchasing clause of the Sherman silver law, Mr. STEVENSON can press a vote, with the consent of that majority, although there is no rule recognized of cloture or call for the previous question. The method is perfectly simple.

Undoubtedly, Mr. President, it is a perfectly simple thing, in a lawyer's office in the city of New York, to prescribe rules for the conduct of this great body, a body that was organized in 1789, and is the same body to-day that it was then—always ready for duty, two-thirds of its members always in office, always organized, ready upon the call of the President. "The method is perfectly simple," says this lawyer.

The Presiding Officer declines to entertain dilatory motions, and on appeals from his decision the majority sustains him. He then puts a vote on the main question, after disposing of the various amendments then before the House, without recognizing any further motions to amend, has the vote and majority recorded, certifies the bill to the President, which, with his signature, becomes a law, although half the rules and customs of the Senate may have been violated in enacting it.

He then goes on in that style to the end of the interview. This article appeared in the Sunday issue of the New York Times. On the next day, Monday, was a dispatch in the Washington Post, headed "Equal to Revolution." It is a dispatch from Ann Arbor, Mich.:

Judge Thomas M. Cooley said to-day with reference to his recent statement to ex-Mayor Hodges, of Baltimore, that the action of the Senate in permitting the minority to defeat the silver bill by avowedly dilatory tactics was subversive of the Constitution.

It is a parliamentary principle of representative government that the majority shall rule. It was the intention of the founders of our Constitution, and embodied in the Constitution, that the majority in each House of Congress should control the deliberations of that House, any exception to this rule being specifically stated. Now, for a majority of the Senate to concede for any reason that a rule of practice in debate, or of Senatorial courtesy, makes it possible for a minority to prevent legislation by indefinitely prolonging debate, is equal to revolution. It is as much revolution as though accomplished with arms and violence.

I call attention to these facts in order that the country may understand how it is being attempted to manufacture a public sentiment to place those of us who are opposed to the passage of the bill in the catalogue of revolutionists and rebels. Thomas

M. Cooley, a respected jurist, now in the employ of a great corporation, is going to lecture to the country upon the rules of the Senate and upon the action of this body with special reference to our present conduct in relation to the pending bill. Mr. President, this is a most dangerous proceeding. Although there is nothing wrong, but everything right, in the people of the country discussing what we do in this body, yet when it comes to a great corporation, whether a newspaper corporation or a railway company, or what not, asking the opinions of a lawyer, and having those opinions published to the world for the purpose of arousing discontent and ill f eling against this body, it is a proceeding that can not be characterized in too strong language. All I desire to say about it is, let not a Cæsar come into this body and then there will be no need of a Brutus.

I wish to state my concurrence in the opinion of the President of the United States when he stated, if public rumor can be relied upon, that any compromise with the silver men, as he termed them, would be a surrender of the principle involved.

The President sees the situation with perfect clearness, and he has the hon sty and the courage to say boldly to the American people, "I do not believe in free coinage; I do not want any free coinage." He goes on to state, in his letter to Governor Northen, what he wants and what he does not want. The President sees clearly that any compromise which will delay or postpone or which will yield in any manner to the silver Senators is a surrender to that extent.

On the other hand, we believe that any compromise which does not give to us what we asked from the beginning, namely, the free and unlimited coinage of silver, is a surrender upon our part. So I give notice once more that, so far as I am concerned, and so far as are concerned those with whom I act politically, we do not propose to accept or to offer any other compromise than that, because we believe, just as the President of the United States believes, that anything more than that is a surrender of the principle involved. It is the principle for which we contend.

We believe more. We believe that any surrender of the principle at this time will, to that extent, strengthen the hands of the other side, so that when the contest shall come again, as it will come, until the people's will is respected, we shall have just that much more to oppose. We intend to hold what we have, and get all we can.

It is currently reported, too, Mr. President, that among the only possible conditions by which this discussion may be bridged over for a time is that the Secretary of the Treasury shall be armed with the power and authority to increase the interest-bearing debt of the country to the extent of from $200,000,000 to $300,000,000. The people do not want any more bonds issued. If a vote were taken upon that question—and it will be after a while—there would be an overwhelming majority against it. I believe that fully 90 per cent of the people of this country, upon a square issue, would vote against the proposition to issue bonds.

Why issue bonds? If our bonds are good they are good because the credit of the people is good. If our bonds are good for that reason, our notes are good for the same reason. Why issue bonds in order that a few people may have a permanent investment in our interest-bearing securities, rather than to issue our promissory notes? If our creditors are not willing to accept our notes, let them accept our wheat, our corn, our silver, or our gold—anything we have to sell, if they prefer them to our notes. No more bonds for us, Mr. President, no more bonds for us.

If we need more money, and if we issue Treasury notes to supply the need, the notes will all go into circulation and do the work of money. If we issue bonds, and buy gold with them, we will put the gold into the Treasury as a reserve fund, and we shall have that much more money lying idle; and if our present policy shall be pursued, the Secretary of the Treasury will not be permitted to touch it for the payment of a dollar of our indebtedness.

This delay, Mr. President, is a very hopeful one. Every day of delay is giving the people that much more time to study the subject for themselves, and they will be the better able to take a hand in the debate when the question comes before them. The bankers will scold, of course, and the newspapers will threaten; politicians, who have misled and betrayed the people that they should represent, will rave and storm. But, Mr. President, as we say in the West, let them howl; the Government still lives. If we shall be able to defeat the passage of this bill and thus destroy the unholy alliance of the Administration with Wall street, the struggle will become memorable in parliamentary history, for the Senate of the United States will have proved itself to be the refuge of constitutional liberty.

Avarice, and the wealth, influence, and power that come from its gratification, have destroyed every great nation that has gone down in the past. Landed aristocracy is incompatible with individual liberty. With the rapid accumulation of wealth by a few men, they become arbitrary, insolent, and in the end, unless they are successfully resisted, take away from the people their political and individual liberty.

Mr. President, after this debate had been under way ten days, or thereabouts, I had the honor to offer a resolution, which I will read:

Resolved, That the Secretary of the Treasury be directed to inform the Senate—

First. Whether, and in what respect, the national banks, or any of them, in the cities of Boston, New York, and Philadelphia, are being now conducted in violation of law.

Second. Whether said banks are paying depositors' checks promptly in lawful money.

Third. Whether said banks, or any of them, are demanding rates of interest higher than those provided by law for the loan of money or in discounting notes and bills.

That resolution was referred to the Committee on Finance on the 31st day of August. It was reported to the Senate but a few days ago. It required about forty-five days for the Committee on Finance to determine whether or not it should report the resolution favorably. No great principle was involved; no great question was at issue; nothing upon which the welfare of the country immediately depended. Yet it required about forty-five days for a committee of this body to report such a resolution. In the meantime we have been discussing this great question only about five days longer than that, and we have not yet reached a vote. I submit the two facts in order that in this matter of delay there may be a comparison drawn not to our injury.

Mr. President, a little while ago, perhaps a week ago, the senior Senator from New Jersey [Mr. MCPHERSON] addressed the Senate in a very able argument from his standpoint. Speaking at that time, and under the circumstances, the Senator was regarded as speaking for the Administration; so that what he said we may assume to be in harmony with the views of the powers that be. Among the first things to which the Senator called attention was the subject of bimetallism, and he defined it substantially in the following language: That bimetallism is opening the mints to the free mintage of both metals at the legal ratio. I was anxious to ask the Senator a question just at that point, but was denied the privilege in the Senator's usual courteous way. The question was this, whether the Senator would vote for such a bill as would be drawn in case bimetallism, as he defined it, were to be provided for—enacted, the opening of the mints to the free mintage of both metals at a legal ratio.

There is a legal ratio, Mr. President, and there is only one, and it has been in existence ever since the year 1837, that is, the ratio of 16 of silver to 1 of gold. That is the legal ratio between the two metals at this hour. This thing of parity between the metals is, with due respect, mere moonshine. The way to establish parity between the two metals for coin purposes is to name the parity in the law. The way to maintain it is to enforce the law.

The Senator says that bimetallism is opening the mints to the free mintage of both metals at the legal ratio. On the contrary, the Senator is not willing to incorporate in this bill any recognition whatever of the future mintage of silver. That has been tested, not only by question and answer by and from individual Senators, but by a direct vote on a call of the names of Senators, and the Senator from New Jersey votes loudly against a proposition to carry into effect the doctrine that he preaches in his address.

One of the strange things in this discussion is the position of some Senators upon the point to which I am calling the attention of the Senate. They insist that they are now and always have been bimetallists, and yet every time we undertake to test them they show to us that they are not bimetallists. They may be in the sweet by and by.

The Senator from Indiana, Mr. VOORHEES, and the Senator from Georgia, Mr. GORDON, and a number of others that I might name have all along——

Mr. TURPIE. Mr. President, I rise to a point of order.

The PRESIDING OFFICER (Mr. PERKINS in the chair). The Senator from Indiana will state his point of order.

Mr. TURPIE. My point of order is that a Senator can not be named on this floor.

The PRESIDING OFFICER. The Chair decides that the point of order is well taken. One Senator must refer to another as the senior or the junior Senator from his State.

Mr. PEFFER. I do not understand what the point of order is.

The PRESIDING OFFICER. The point of order is that it is discourteous to call a Senator by name. The Chair decides that a Senator in referring to another Senator should not address him by name, but as the senior Senator or junior Senator from his State.

Mr. STEWART. I move that the Senator from Kansas be allowed to proceed in order.

The PRESIDING OFFICER. The Chair does not think a motion is necessary. The Senator from Kansas will proceed.

Mr. PEFFER. I was about to say that the doctrine taught during the past years by Senators who favor the passage of this bill has been the same as we who oppose the bill are teaching at this time, but they are changing th ir course of action while they insist that they have not changed their opinions.

It is well known that the opinions of the gentleman who is now the President of the United States have been frequently pronounced in opposition to further silver coinage. He was elected with the knowledge of what his opinions on that subject were. He has never recanted; he does not recant now. He has built up an administration around him intended to carry into execution his views of public policy as he had expressed them time and ag in upon this question.

If Senators would come out boldly and say what seems to the rest of us to be so apparent, it would give more consistency, if I may use the word in that connection, or at least coherency to their remarks. Then we would understand that it is not a change of opinion, but it is a change of action in the interest of a political party.

There is another point to which I wish to call attention, but which has been so frequently and so elaborately argued that but a word is necessary. It concerns the remarks of the Senator from New Jersey, that under the provisions of the Sherman law the Treasury Department is required to pay in gold the Treasury notes issued in the purchase of silver bullion.

Mr. President, there is no such requirement in the Sherman law. On the contrary, the Secretary is required to coin of the silver purchased under the provisions of the act enough silver dollars to redeem the notes that are issued. It is alleged that in the law the Secretary shall redeem all notes in coin; and if there were nothing more than that there would be no question about what kind of coin was meant, but in connection with this requirement to redeem the notes in coin is a declaratory statement that it is the policy of the United States to maintain a parity between the two metals. Nobody has ever yet been able to explain the meaning of the word "parity" in the connection in which it is used in this paragraph.

If it is meant to maintain a parity between two metals—and that is what it says—it must be two metals that have the same opportunity in the open market, two metals that are bought and sold as commodities, like corn, wheat, cotton, rice, and tobacco. But to say that it can apply to two metals when the price of one of them is regulated by law and the other by competition in the market, is to cast suspicion on the intelligence of the framers of the measure; and that would be a very improper thing to do.

The law has already established the relation between the two metals, and the act refers to that fact, the legal ratio as now established or as may be established by law. If the present Secretary of the Treasury had redeemed the Treasury notes with silvercoin, as he was in the beginning inclined to do, there would have been no trouble about the parity.

If we had a system of free coinage like that I propose in the amendment which I offered this afternoon, the coins would go out at once among the people. The first hands in which the coins come would be the hands of the people, where they would stay. Then there would be no question raised about parity.

When we have a system of coinage—and I think coinage is much better than the purchase of bullion and coining in limited amounts—when we have a system of coinage that will supply the demands of the common people of the country, put it into their hands in the first instance, we will find that it will always circulate among the people and will never get further away than to the banks in the immediate vicinity; it will be always out there, and the Treasury will not be disturbed about it.

Notwithstanding the fact that in 1873 our unit was changed from the silver dollar to the gold dollar, the value of the unit was not changed. The silver and the gold in these coins is not the standard of value. The standard of value is what is included in the word dollar. How that is to be ascertained and how it was ascertained originally is a curious matter and one full of interest. It was simply by the division of the values as compared with the labor represented in the surplus products of the people—that which went out into commerce. One or two articles were singled out originally, and the one article selected which more nearly would divide all the rest either as a common divisor or by being subdivided itself. As time passed on gold and silver took the place of everything else, and when we came to determine the unit of our value the word "dollar" was used.

Now, Mr. President, mark this language, the value of the dollar or unit was to be the same as the value of the Spanish milled dollar. What was that value? It has never been determined. It has never been defined in the law. The only thing that has been done about it was that 1,000 Spanish milled dollars were melted up, if I have correctly read, and the mass was divided by 1,000, and it was found that the one-thousandth part of the $1,000 in mass contained just 371¼ grains of pure silver. So we have been in the habit of calling the value of the dollar 371¼ grains of silver, while in truth and in fact that is not the value of it at all, but the value of it is what the 371¼ grains of silver will purchase in the open market of articles the people want to use. That is the way to determine the value of the dollar.

If you will trace the history of the coinage of this dollar from 1792 down through the different acts to the present, you will find that in all cases the same quantity of pure silver has been retained in the coin all the way through. In the old coin of 1795, one of which I have in my pocket, 371¼ grains of silver were placed. The silver coin of 1892, one of which I have also in my pocket, contains the same quantity of silver. We are in the habit of speaking of the value of the silver coin as being 371¼ grains of silver when in point of fact, while that is weighed out and counted as the silver dollar, it is not its value, but the value is what it will purchase in the market.

In the act of 1873, while the unit was changed from the silver dollar to the gold dollar, the value of the dollar itself was not changed. In the strict construction of law the value of our unit to-day, the dollar, is just what 371¼ grains of silver will buy in the open market. That is the value of the dollar. We find that other property has fallen just about as fast as silver has fallen, and that this particular quantity of pure silver will purchase about as much of wheat and corn and oats and rye and cotton in the open market as it did in 1873, when it was worth 3 per cent more than what was regarded as a dollar's worth of gold. This is an added reason in favor of our side of this question. Notwithstanding the change of our coin unit from silver to gold, the value of the dollar remains the same.

Speaking of a very large class of people who are scattered all over the country in immense numbers, whose homes are isolated and whose business requires them to live far apart in their neighborhoods—I mean farmers—I call attention to the fact that their situation is changed quite as much as the situation in which other classes of people are placed. The manufacturing classes, for example, are living under conditions so different now as compared with thirty, forty, and fifty years ago as to amount to a transformation. With the multiplicity of invention, with the addition of improved machinery and labor-saving implements, the efficiency of the workman has been increased on the general average about fourfold or fivefold.

It is so in our carrying trade. We can all remember the old-fashioned stage coach and the freight wagon. A day or two ago the senior Senator from Massachusetts [Mr. HOAR] was kind enough to distribute among a few Western Senators a lecture delivered a short time ago before the American Antiquarian Society, giving a history of the old Santa Fe trade, a large part of which passed through the State of Kansas. The old trail over which the wagons and the ox teams and the riders wended their way with freight is still visible. Some of the old landmarks, the old watering places, and the camping grounds are still there visible. All that has passed as a dream. Our children know nothing of it except what they read in history, and yet they are perfectly fresh in our memory.

During the last Congress a bill was introduced proposing to appropriate money for certain parties for compensation to certain freight-carriers who went over the plains in 1857 during the Mormon rebellion. Now our freight is carried as rapidly as a bird flies. In every department of industry these changes have taken place.

In 1790 the cost of carrying our mails and of running the entire machinery of the post-office business of the country was only about $22,000, and the income was about $28,000. On the 30th of June, 1890, the number of post-offices in the country was 62,401; the number of mail routes was over 26,000, and their aggregate length was over 428,000 miles. The total aggregate of all the trips made on all the routes, both ways daily, is equal to a line that would encircle the earth at the equator forty-one times. Packages sent through the mails during the year, all told, amounted to over 4,000,000,000, more than half of which were letters, and the total expense of the business of the Department was $66,000,000 in round numbers. The total revenue was about $58,000,000. The estimated cost of carrying the mails on railroads alone for the year 1891 was $22,000,000 in round numbers.

One hundred years ago 90 per cent of our population lived on farms—indeed the latest estimate is about 95 per cent—and transportation was so expensive that the surplus wheat and corn had no market value whatever 50 miles away from a town. Transportation 50 miles ate up the cost of the grain. We have now about five million farms, and they are valued at something

over $11,000,000,000. Ten years ago the value of farm machinery was $406,000,000, in round numbers, and our farm live stock was worth fifteen hundred million. Our average annual production of wheat in the last twelve years has been a little upward of 500,000,000 bushels, and of corn we have raised nearly four times as much.

The opening of the Suez Canal has shortened the distance between Bombay to Liverpool about 10,000 miles and cheapened the transportation 50 per cent. Wheat grown in India may be landed in Britain now at 50 cents a bushel total cost. One man and three horses now plow as much ground with one plow as two men and four horses did with two plows formerly. One man with a seed drill will sow seed on twice as much ground as he could by sowing broadcast by hand. One man with a binder will put in sheaf as much wheat as twelve persons did before the reaper was invented. On the whole one man does as much work on the farm as two men did under the old régime, and more in some lines of work.

[At this point the honorable Senator yielded to Mr. FAULKNER for a motion to take a recess.]

Saturday, October 21, 1893.

Mr. PEFFER. Mr. President, there is no better way to estimate the general condition of the people of the United States than to measure it by the condition of the farmers, and I was talking upon that subject when the recess was taken yesterday. I had occasion to speak about the progress of agricultural methods, improvements in farm machinery, and in other respects, resulting in a greatly increased efficiency of farm labor, intending to show thereby that farmers have been improving in their methods as well as manufacturers and railroad builders and men in other departments of industry.

This morning I wish to call attention to the falling off in the profits of the farmer's business, and to trace as nearly as may be from contemporaneous conditions what have been measurably, at least, the causes of this falling off.

The American farmer of to-day is altogether a different sort of a man from his ancestor of fifty or a hundred years ago. A great many men and women now living remember when farmers were largely manufacturers; that is to say, they made a great many implements for their own use. Every farmer had an assortment of tools with which he made wooden implements, as forks and rakes, handles for his hoes and plows, spokes for his wagon, and various other implements made wholly out of wood. Then the farmer produced flax and hemp and wool and cotton. These fibers were prepared upon the farm; they were spun into yarn, woven into cloth, made into garments, and worn at home. Every farm had upon it a little shop for wood and iron work, and in the dwelling were cards and looms; carpets were woven, bedclothing of different sorts were prepared; upon every farm geese were kept, their feathers used for supplying the home demand with beds and pillows, the surplus being disposed of at the nearest market town.

During the winter season wheat and flour and corn meal were carried in large wagons drawn by teams of six to eight horses a hundred or two hundred miles to market and traded for farm supplies for the next year—groceries and dry goods. Besides this, mechanics were scattered among the farmers. The farm wagon was in process of building a year or two; the material was found near the shop; the character of the timber to be used was stated in the contract; it had to be procured in a certain season and kept in the drying process a length of time specified, so that when the material was brought together in proper form and the wagon made both parties to the contract knew where every stick of it came from and how long it had been in seasoning. During winter time the neighborhood carpenter prepared sashes and blinds and doors and molding and cornices for the next season's building. When the frosts of autumn came the shoemaker repaired to the dwellings of the farmers, and there, in a corner set apart to him, he made up shoes for the family during the winter.

All these things were done among the farmers, and a large part of the expense was paid with products of the farm. When winter approached the butchering season was at hand; meat for family use during the next year was prepared and preserved in the smokehouse. The orchard supplied fruit for cider, for apple-butter, and for preserves of different kinds, amply sufficient to supply the wants of the family during the year, with some to spare. Wheat was thrashed, a little at a time, just enough to supply the needs of the family for ready money, and not enough to make it necessary to waste one stalk of straw. Everything was saved and put to use.

One of the results of that sort of economy was that comparatively a very small amount of money was required to conduct the business of farming. A hundred dollars average probably was as much as the largest farmers of that day needed in the way of cash to meet the demands of their farm work, paying for hired help, repairs of tools, and all other incidental expenses, because so much was paid for in produce.

Coming from that time to the present we find that everything nearly has been changed. All over the West particularly the farmer thrashes his wheat all at one time; he disposes of it all at one time, and in a great many instances the straw is wasted. He sells his hogs and buys bacon and pork; he sells his cattle and buys fresh beef and canned beef or corned beef, as the case may be; he sells his fruit and buys it back in cans. If he raises flax at all, instead of putting it into yarn and making gowns for his children, as he did fifty years or more ago, he thrashes his flax, sells the seed, and burns the straw. Not more than one farmer in fifty now keeps sheep at all; he relies upon the large sheep farmer for the wool, which is put into cloth or clothing ready for his use.

Instead of having clothing made up on the farm in his own house or by a neighbor woman or country tailor a mile away, he either purchases his clothing ready made at the nearest town or he buys the cloth and has a city tailor make it up for him. Instead of making implements which he uses about the farm—forks, rakes, etc.—he goes to town to purchase even a handle for his ax or his mallet; he purchases twine and rope and all sorts of needed material made of fibers; he buys his cloth and his clothing; he buys his canned fruit and preserved fruit; he buys hams and shoulders and mess pork and mess beef; indeed, he buys nearly everything now that he produced at one time himself, and these things all cost money.

Now, I wish to refer to some statistical information, which I collected three years ago with a great deal of time and labor, and as far as it was possible to procure accuracy it was done. I prepared a tabulated statement showing the number of farms and the value of farm implements and of live stock, the number of horses and of mules and asses, and of work oxen, of milch cows and other cattle, of sheep, of swine, and of the number of pounds of butter, cheese, and of the bushels of corn, and oats, and wheat, and rye, and the number of pounds of wool, and of bales of cotton and tons of hay, and pounds of hops, of rice, and of tobacco, and of bushels of Irish potatoes and of sweet potatoes, in the years 1850, 1860, 1870, and 1880.

All of the figures relating to these different items for the year 1890 have not yet been brought under my observation, and I have not been able to bring them together in connection with those for the other four years. It appears from this tabulated statement that the average value of farms in 1850 was $2,257. In 1880 it was $2,543, and the average size of farms had decreased from 202 acres in 1850 to 134 acres in 1880. It will be observed that the size of our farms is decreasing; that whereas the number of acres in an average farm in 1850 was 202 acres, in 1880 it had diminished to 134 acres. I have no doubt that when the final summary of the Eleventh Census is given to us we will discover that the average farm has decreased to 120, or perhaps less than that number of acres.

The average value of the acres included in farms in 1850 was $11; in 1880 it had increased to $19, an increase of $8 per acre, or 73 per cent in the whole period from 1850 to 1880. The increase in value of live stock during the thirty-year period was 176 per cent; of farm implements, 170 per cent; increase in pounds of butter, 148 per cent; bushels of corn, 196 per cent; oats, 178 per cent; wheat, 357 per cent; rye, 40 per cent; pounds of wool, 196 per cent; cotton, 133 per cent; tons of hay, 154 per cent; pounds of hops, 651 per cent—the largest increase in the entire list; tobacco, 137 per cent; Irish potatoes, 158 per cent; making a general average increase on all these different items of personal property equal to about 200 per cent.

Comparing these figures and analyzing their meaning, it would appear that the increase, including the rise in the value of land, and the increase in the productive force of machinery, together with the fall in cost of transportation, the general average development and growth of agriculture during the period beginning with the year 1850 and ending with the year 1880 did not exceed 200 per cent.

This, Mr. President, is a very important matter. It appears from estimates made by our best statisticians, standard economists, both in this country and in Europe, that, comparing four great departments of our business, agriculture has made the least progress, the railroad interest taking the lead, the banking interest coming next in order, manufactures third, agriculture fourth, running over a period of about forty years, ending in, say, 1890.

The figures which represent the proportional development of those four great departments of business are about these: For railroading, the figures 15; for banking, the figure 8; for manufactures, the figure 4; for agriculture, the figure 2. Every other great line of business takes the lead of the greatest of all industries, that of agriculture. What is the particular and the

immediate cause of this disparity is matter for the profoundest thought, and probably no one man could feel himself large enough to state the cause in a single term or a single sentence.

From the reports of our Department of Agriculture and from the reports of great commercial bodies, like the board of trade at Chicago, for example, some very interesting developments are found.

The average price of No. 2 red wheat in Chicago, during the five years ending with 1883, was $1.11 a bushel, while in the next period of five years, ending in 1888, the average price of the same grade of wheat in the same market was 81 cents a bushel, a drop of 28½ per cent, although the wheat consumption of the country had fallen off 2½ per cent and the population had increased 15 per cent in the same time. Corn and live stock, cotton and wool, are about 40 per cent lower than they were twelve years ago. The annual average production of wheat in the United States in the years from 1871 to 1881, inclusive (eleven years), was 342,224,776 bushels. The average for the years 1880 to 1887 was 448,150,757 bushels, an increase of 30 per cent—just about equal to the increase of population during the same time. The annual average export of wheat during the years 1871 to 1882, inclusive (twelve years), was 95,345,889 bushels, and during the years 1881 to 1887 (seven years) the average was 135,500,076 bushels, an increase of 42 per cent. This shows that our consumption of wheat during all the years from 1871 to 1889 did not increase as fast as the population by about 3 per cent, and the market reports show that the average price of wheat during the years from 1871 to 1881 was $1.05 a bushel, while the average since that time has been about 75 cents, a drop of 30 cents a bushel—equal to 21½ per cent.

I have prepared also from the same sources a tabulated statement showing the average export value of wheat in 1875 and also in 1887, giving the reduction, and another statement showing the average farm value of wheat in 1875 and in 1887, with the reduction, and showing the price of No. 2 spring wheat in Chicago in the same two years and of the average farm value in New York, and in Ohio, and in Illinois, and in Nebraska. I will not repeat these figures, but will have them incorporated with my remarks.

	1875.	1887.	Reduction.
Average export value	$1.124	$0.89	$0.234
Average farm value, United States	1.00	.681	.319
No. 2 spring, Chicago	$0.99 to 1.04	$0.75⅞ to .78½	.25
Average farm value, New York	1.31	.82	.49
Average farm value, Ohio	1.09	.75	.34
Average farm value, Illinois	.91	.70	.21
Average farm value, Nebraska	.64	.53	.11

Wheat was lower in the United States in 1885 than it had been in forty years prior thereto, and in England it was lower in 1886 than it had been in a hundred years. The average value of our wheat crops by the acre during the four years, 1880 to 1883, was $11.77, and during the next four years it was $8.30½, a drop of 29½ per cent. Values of other grains and field products fell in about the same proportion during the same years.

While it is a little better with live stock, yet the drop has been almost as great and just about as uniform.

During the four years, 1880 to 1883, inclusive, there were 6,446,637 head of cattle and calves, 24,992,328 hogs, 2,208,238 sheep, and 52,418 horses received at the stock yards in Chicago, and their aggregate value, as appears from a careful computation, was $723,938,329. During the next four years, without going into details as to the particular number of cattle and sheep and other classes of animals, the aggregate value was $704,372,033. The average value per animal during the first period was $20.98, and during the second period it was $19. The increase in number was 7 per cent, decrease in value 10 per cent, though the population of the country had increased 22 per cent during the eight years. These last percentages would be varied somewhat if the values of the different classes of animals were given, but they were not given in the reports, and hence can not be given in this compilation.

On pages 304 to 314, inclusive, of the Statistical Abstract of the United States for 1889, figures are found from which this table was compiled, showing the average price of good and choice native steers per 100 pounds in the Chicago cattle market for each of the years named:

	1884.	1885.	1886.	1887.	1888.	1889.
Steers	$6.02	$5.25	$4.67½	$4.29	$4.70	$3.95

Another table, showing the average price of No. 2 red wheat, No. 2 corn mixed, and No. 2 oats in the Chicago market for the years from 1881 to 1889, inclusive:

Year.	Wheat.	Corn.	Oats.	Year.	Wheat.	Corn.	Oats.
1881	$1.318	$0.631	$0.459	1886	$0.885	$0.484	$0.351
1882	1.278	.801	.519	1887	.889	.506	.343
1883	1.175	.651	.429	1888	.971	.573	.355
1884	.975	.606	.360	1889	.883	.430	.288
1885	.964	.531	.359				

It is found that the general dropping of about 28 to 30 per cent has occurred in all those articles.

Still another table, showing the average price of medium wool per pound for the month of January of each year, the average price per pound of middling cotton, the average price per barrel of mess pork, and leaf tobacco per pound in the New York market for the years written:

Year.	Medium wool.	Middling cotton.	Mess pork.	Tobacco leaf.
	Cents.	*Cents.*		*Cents.*
1881	49	12.03	$16.94	8.3
1882	46	11.56	19.79	8.5
1883	43	11.88	16.59	8.6
1884	40	10.88	16.48	9.1
1885	33	10.45	11.58	9.9
1886	36	9.28	10.63	7.8
1887	38	10.21	15.00	8.7
1888	35	10.03	15.10	8.3
1889	38		12.57	8.8

It may be well to call attention at this point to the fact that while for a long period of years there has been a great fall in prices, yet the decline has not been continuous, steady, and regular from year to year. It will appear that taking the two years 1867 and 1887, for example, there has been a very great decline, almost if not quite 50 per cent. Yet along during the years from 1879 up to 1883 there was a rise, and there was a very general fall from year to year from 1867 to 1878. Then a steady rise, well maintained, from that price until 1882, 1883, or 1884, and the last decline has been from that period to the present. So it will not do for us to say that any one cause has operated to effect this remarkable depreciation. If it were true that there was but one cause operating then the decline should have been steady and uniform from year to year, but of that more after a time.

Now, I call attention to a compilation which is taken from page 290 of the Statistical Abstract of the United States for 1889, showing the total production of all the cereals—wheat, corn, oats, rye, barley, buckwheat—for all the years from 1867 to 1888. One remarkable feature of this table is the following: that in 1867 the total production of all the cereals, taken as one, was 1,329,929,400 bushels, and that the total products of the same articles in the year 1887 was almost exactly twice as much, and yet the value of the total crop in 1867 was $1,284,037,300, while with twice as much produced on twice as many acres in 1887, the price was $80,000,000 less than it was twenty years before, for one-half as much grown, upon one-half the acreage; but, as stated a few minutes ago, the decline was not uniform and steady from year to year, but there was a rise along about the middle of the period, occasioned from whatever cause.

Table showing the total production, acreage, and value of all the cereal crops—corn, wheat, rye, oats, barley, and buckwheat—in the United States from 1867 to 1888.

[Taken from page 290 of Statistical Abstract of the United States for 1889.]

Calendar year.	Total production.	Total area of crops.	Total value of crops.
	Bushels.	*Acres.*	
1867	1,329,729,400	65,636,444	$1,284,037,300
1868	1,450,789,000	66,715,926	1,110,500,583
1869	1,491,612,100	69,457,762	1,101,884,188
1870	1,629,027,600	69,254,016	997,423,018
1871	1,528,776,100	65,061,951	911,845,441
1872	1,664,331,600	68,280,197	874,594,459
1873	1,538,892,891	74,112,137	919,217,273
1874	1,454,180,200	80,051,289	1,015,580,570
1875	2,032,235,300	86,863,178	1,030,277,099
1876	1,963,422,100	93,930,619	935,008,844
1877	2,178,934,646	93,150,286	1,035,571,078
1878	2,302,254,950	100,956,260	913,975,920
1879	2,437,482,300	102,260,950	1,245,127,719
1880	2,718,193,501	120,926,286	1,361,497,704
1881	2,066,029,570	123,388,070	1,470,957,200
1882	2,699,394,496	126,568,529	1,469,693,393
1883	2,629,319,088	130,633,556	1,280,765,937
1884	2,992,880,000	136,292,766	1,184,311,520
1885	3,015,439,000	135,876,080	1,143,146,759
1886	2,842,579,000	141,859,656	1,162,161,910
1887	2,660,457,000	141,821,315	1,204,289,370
1888	3,209,742,000	146,281,000	1,320,225,398

I have made a combination of these figures in four different periods of three years each in order to emphasize the point made that the decline has not been uniform, and, therefore, must be attributable to more causes than one.

TABLE XI.

Periods.	Total production.	Total area of crops.	Total value of crops.
	Bushels.	*Acres.*	
Three years, 1867, 1868, 1869	4,272,130,500	201,810,132	$3,496,422,071
Three years, 1876, 1877, 1878	6,444,611,396	288,027,165	2,884,555,842
Three years, 1879, 1880, 1881	7,221,705,371	346,575,306	4,077,562,623
Three years, 1886, 1887, 1888	8,712,778,000	429,961,971	3,696,706,678

I have compiled the aggregate production of the cereals and the number of acres upon which they were grown, first for the three years 1867, 1868, and 1869; second, 1876, 1877, 1878; third, 1879, 1880, 1881; fourth, 1886, 1887, 1888, and it appears that the average price per bushel of these combined crops in the first period was 81¼ cents; for the second period, 44¼ cents; for the third period, 56½ cents; and for the fourth period, 42½ cents. It appears that the second period and the fourth period are very nearly alike in their averages of price. From the first period to the third period there was a drop from 81¼ cents to 56½ cents, showing that the fall during that period was greater than it has been during the last-named period.

In connection with these tables, I will submit three others which have been referred to before during this debate by other Senators, for they are pertinent here.

The first of the three tables is one showing in parallel columns the average value of a large number of articles in common, every-day use among the people, about forty-five in number, taking 102 as the index number, comparing it with the fall in the price of silver from 1874 to 1892; and the same thought is brought out in another table by two classes of economists, American and European, and they are placed side by side in order that they may be compared:

Table showing fall of wheat, etc., and silver.

TABLE 1.

The following table gives in parallel columns for the years 1874-1892 (1) the index numbers for the forty-five commodities and (2) the index numbers of silver for the same year:

Mr. Sauerbeck's index numbers.

Year.	Index numbers of 45 principal commodities.	Index number of silver.	Year.	Index numbers of 45 principal commodities.	Index number of silver.
1874	102	95.8	1884	76	83.3
1875	96	93.3	1885	72	79.9
1876	95	86.7	1886	69	74.6
1877	94	90.2	1887	68	73.3
1878	87	86.4	1888	70	70.4
1879	88	84.2	1889	72	70.2
1880	88	85.9	1890	72	78.4
1881	85	85.0	1891	72	74.1
1882	84	84.9	1892	68	65.4
1883	82	83.1			

TABLE 2.

Year.	American computation, price of—			European computation—Mr. Sauerbeck's index numbers.	
	Silver.	Wheat.	Cotton.	Index number of 45 principal commodities.	Index number of silver.
1872	1.32	1.47	19.3		99.2
1873	1.29	1.31	18.8		97.4
1874	1.27	1.43	15.4	102	95.8
1875	1.24	1.12	15.0	96	93.3
1876	1.15	1.24	12.9	95	86.7
1877	1.20	1.17	11.8	94	90.2
1878	1.15	1.34	11.1	87	86.4
1879	1.12	1.07	9.9	83	84.2
1880	1.14	1.25	11.5	88	85.9
1881	1.13	1.11	11.4	85	85.0
1882	1.13	1.19	11.4	84	84.9
1883	1.11	1.13	10.8	82	83.1
1884	1.01	1.07	10.5	76	83.3
1885	1.06	.86	10.6	72	79.9
1886	.99	.87	9.9	69	74.6
1887	.97	.89	9.5	68	73.3
1888	.93	.85	9.8	70	70.4
1889	.93	.90	9.9	72	70.2
1890	1.04	.83	10.1	72	78.4
1891	.90	.85	10.0	72	74.1
1892	.86	.80	8.7	68	65.4
1893	.75	.68	7.2		

The third table is one showing how prices of transportation have fallen since 1873 down to 1891.

Table showing how prices fell in the United States from 1873 to 1891, and comparing these prices with the depreciation of silver.

Starting at 100 cents in 1873 the price of each article in the table fell gradually to the number of cents in 1891, shown below:

Freights on New York Central Railroad	48
Freights on Pennsylvania Railroad	42
Freights on Illinois Central Railroad	43
Freights on lake and canal from Chicago to New York	30
Freights on canal from Buffalo to New York	39
Price middling cotton	42
Price wool, average	49
Price mess pork	70
Price pig iron	41
Price cut nails	38
Price corn, export	81
Price wheat, export	74
Price flour, export	64
Price cotton, export	53
Price leather, export	65
Price illuminating oils, export	50
Price bacon and hams, export	86
Price lard, export	75
Price salted pork, export	76
Price beef, export	73
Price butter, export	70
Price cheese, export	69
Price tobacco, export	80
Price silver	76
The average of these twenty-three items, excluding silver, is	57

NOTE—The export price is more than is paid the farmer.

Putting all of these different tables and individual statement of facts together, we are better enabled to arrive at a reasonable and just conclusion as to what has occasioned the fall in the price of farm products.

Now, I want to compare agricultural conditions in different parts of the country. I will start first with New England. I quote information from a work by a Mr. J. R. Elliott, entitled American Farms, printed a few years ago and published in one of the Eastern cities.

Mr. Elliott shows that the property of New England farmers fell in value from $707,942,439 in 1870 to $671,846,058 in 1880. In forty-five agricultural towns in Connecticut the decrease of wealth in eleven years, 1865 to 1876, amounted to $1,893,172; between 1876 and 1886, the decrease ran up to $2,741,520. Out of 603 farmers interviewed, 378 show a yearly loss. He gives it as his opinion that at least 33⅓ per cent of the New England farms, taking them as a mass, are mortgaged for a greater or less amount. In Connecticut, out of 603 farms recently visited by an investigating committee, so says Mr. Elliott, 241, or 40 per cent, valued at $1,008,350, were mortgaged to the extent of $451,109, and he calls attention to the fact that many of the New England farms had been abandoned by their owners.

Mr. President, I will take occasion now to refer to that subject again, for it seems that there is a misunderstanding, or at least a misapprehension upon the part of a great many persons concerning these alleged facts. It is not meant that New England is becoming depopulated, although, if I have correctly read such of the census reports on the subject as have yet been given to the world, the uphill towns, as they are called in Massachusetts, that noble old Commonwealth that every American loves, the number of farmers living in that region is less to-day than it was a hundred years ago, and all through New England, speaking generally, while it is true that many of the farms are tenantless, and some of them absolutely abandoned, it is not because of the fact that the people of that region are all moving away to some other part of the world.

I spent a few days in that romantic region known as the Berkshire Hills, in Western Massachusetts, a couple of years ago, and I found that where there had once been productive farms, where families had been reared and educated, where a grand civilization had grown up, farms had been abandoned by their owners, because they had sold them to men of wealth and leisure, who were beautifying them with splendid buildings and adorning them with shrubbery and all manner of floral decorations; the grounds were graded and drained, beautiful walks had been prepared round about the buildings, and that instead of the value of the land having depreciated, so far as those particular farms were concerned, they have greatly advanced.

It is a fact, nevertheless, that during the same visit to which I have referred I repeatedly saw little signboards by the roadside, with an inscription like this upon them: "This farm for sale." I inquired of my companion, "What does this mean? Why are there so many farms in Massachusetts for sale?" "Why," he said, "the reason is plain; farming does not pay here. Your people in the West have destroyed our agricultural interests to a very great extent. We can not compete with you. You can raise wheat cheaper than we can. Your lands are less valuable than ours. New men, young men, strong and vigorous, go out to your splendid region, and they open farms and raise crops in

competition with old New England. We never were able to raise a very large amount upon an acre of ground, because we have so many hills and rocks; a large part of our country is rugged and rocky, and therefore not so well adapted to agriculture, and especially to grain, as yours is, and that is the principal reason why our farms are being abandoned. The owners can do better in the city or at something else."

So, Mr. President, when I am calling attention to these things, I again wish to emphasize that I am not asserting the poverty of all the people there. I am simply calling attention to the fact; after awhile I expect to show that while agriculture is going down as a business in New England, manufacturing, railroading, banking, money-lending, etc., are increasing at a wonderful ratio; that, taking it all in all, while agriculture is declining in New England yet New England, itself is growing richer and richer all the time. I do not agree that conditions there are favorable for the farmer; I do not agree that the conditions are favorable for the average poor man; but they are good for the manufacturer, for the railroad-builder, for the banker, and for the money-lender.

I had some correspondence about this matter a few years ago with the commissioner of agriculture of the State of Vermont, and also with the officer in charge of the agricultural interests of the State of New Hampshire. They had sent out official communications advertising to the world that there were a great many farms in those two States for sale, lands which could be purchased on very reasonable terms by persons who would come and settle upon them. With those statements was the further statement that nearly, if not quite, all of the farms so advertised were good for dairy purposes, and some of them were good for the raising of grain; that all they required was the hand of a husbandman who would be satisfied with a reasonable compensation for his labor. I am informed that a large number of persons from foreign countries, more especially from Canada, have settled upon many of those vacant lands, and that there are not now so many abandoned farms there as there were a few years ago, the persons settling upon the lands now being content with less income, less yearly profit, than the men who opened the farms. The New Englander, "native" and "to the manner born," does not want to work for low wages, and will go where he can get better wages than he can at home, provided he can find such a place.

The New York Tribune, first in 1888, if my memory serves me, published a statement to the effect that the real-estate assessors in the State of New York had reported to the Legislature that the farm values were falling. In the State of New York real estate is assessed every two years, one-half in the even-numbered years and the other half in the odd-numbered years, thus alternating; and I remember very well reading in the issue of the New York Tribune of March 24, 1890, that the State assessors had reported in language which I shall now read:

There continues to be marked depreciation in the value of farm lands in nearly every county, and the depression among the farmers continues, while the prospect for improvement is not good. Many assert that, after paying expenses, they can not realize from their farms sufficient to pay the interest on mortgages, and consequently thousands of farms are falling into the hands of mortgagees.

On the 5th day of April, 1890, the following dispatch was published in the daily papers:

MAYS LANDING, N. J., *April 4.*

The misfortune which has come upon the farmers of the town of Germania causes intense excitement all over southern New Jersey. Over forty families are now homeless. Sheriff Johnson, of Atlantic County, has sold within the last two days two hundred farms to satisfy mortgages which had been foreclosed.

Mr. W. F. Mappin, in the Political Science Quarterly for September, 1889, published this statement:

Boston numbers more than fifty agencies of farm-mortgage companies. It is computed that Philadelphia alone negotiates yearly more than $15,000,000 on Western loans. Kansas and Nebraska have one hundred and thirty-four incorporated mortgage companies. The companies organized under the laws of other States but operating in these two States increase the number at least two hundred.

In this reckoning—

The same writer says—

no account is taken of firms and individuals, although a large amount of money is directly invested by lenders of this class.

Prof. Gleed, in the Forum for March, 1890, uses this language:

It is impossible to say how much has been invested in the West in real estate securities, but the amount is enormous. Five mortgage companies at Topeka, Kans., report that the loans made by them, and still outstanding, amount to $22,000,000. Of this sum 90 per cent has been invested in Kansas. Five companies at Kansas City report $65,000,000 outstanding. This amount has been placed in a dozen Western States.

Whether this mortgage indebtedness is an evidence of prosperity, or whether it is an evidence of adversity, is disputed by economists; one class insisting that a mortgage represents an investment, and sometimes doubtless it does; another class holding that when mortgage indebtedness becames very general, more especially when it is found to exist in old settled rural communities, it is an evidence of decline, that the business in which the people there are engaged is not profitable. In the newer States, where we are constantly taking in new lands, where, by reason of increasing population and increasing facilities for the transportation of our produce, the values of lands are rising, the influx of population brings with it more or less money, increasing our local valuations. While that is all true, the business of farming as such—speaking of it in a general way—is not profitable in any part of the United States nor in any part of the world.

I know very well, as we all know, that some farmers are making some profit, and I have now in my mind Pennsylvania farmers especially. As far as the price of corn is concerned, they have no special cause for complaint. A short time ago, conferring with an old farmer in the Cumberland Valley, from whom I once earned 10 cents a day dropping corn, that if the price of all other farm products had maintained itself as well as that of corn, the Pennsylvania farmer would not have any great reason to complain; that while the price has fallen, yet the prices of farm machinery have fallen, and the prices of a great many other articles, and particularly since the passage of the McKinley act, the price of sugar has fallen; that, measurably, the outlay of the farmer is not so great as it was in former years; and, taking these things into account, if the fall in wheat and in hay and other farm products had not been greater than that of corn, there would not be any just reason for much complaint about it.

I want to call attention to a local authority in Massachusetts as to the condition of agriculture there. I have here a printed report of the proceedings of the Massachusetts State Grange, an organization of farmers, and one, speaking of it in its national character, which will go down into history as the pioneer in the movement of farmers to take care of their own interests. The Patrons of Husbandry is the name of the order. It was organized in this city in 1867, and grew at one time to a membership which was very large—upwards of 500,000.

At a meeting in Worcester, in December, on the 16th, 17th, and 18th days of that month, in 1890, the committee on unequal taxation made a report to the body, which is full of interest. They speak of unequal taxation and refer to the fact that a large amount of personal property in Massachusetts wholly, or at least to a large extent, escapes taxation. They say that the farmer's property is visible, it is exposed before the eyes of the world, and there is no danger of the assessor missing it; but when it comes to the personal property of men of wealth and of corporations, vast amounts of it wholly escape the eye and the ear and the pen of the assessor, and therefore the farmers are subjected to unequal taxation and they are compelled to bear more than their proper share of the public burdens. They say in paragraph 2:

There is a feeling of uneasiness abroad in all the civilized countries of the world, caused by the belief that legislation either directly or indirectly favors those who are wealthy, at the expense of those with little of this world's goods. The agitation among the workingmen and small property holders of Germany, has caused their young emperor to propose reforms in their system of taxation. In his last speech from the throne he proposes to have taxes so adjusted as to reach more of the funded property of the country, and thus relieve the burden of the communes, the taxes on land and visible property.

Then the committee refer to the course of the Farmers' Alliance in the Southern and the Western States, and add in another paragraph that—

The Patrons of Husbandry—

They are the Grange—

represent better than any other organization the great middle class of citizens of this State, the farmers, home owners, and men of small means. This class of citizens feel the burdens of taxes.

This is in harmony with the proposition with which I set out this morning, that there is no better criterion by which to judge of the general condition of the people than that which is furnished us by the condition of the farmers.

Proceeding, the committee say:

Whatever may be put forward to cloud the issue, the fact is clear and plain that hundreds of thousands of dollars worth of personal property in this Commonwealth entirely escapes taxation. Most of this is the property of rich men, men of assured income, who can well afford their full share of taxes.

But what these men escape must be borne by the owners of property that is in sight and so can not escape taxation.

Mr. President, we suffer from the same trouble in the West, and if there is any portion of the country where the people do not suffer from it, I do not know where it is. The beginning of our tax year is the 1st of March. A very large part of our personal property is not visible on that day, and this refers to the property of stockmen, bankers, money-lenders, real-estate agents, and persons whose property consists of movable material which can be shifted from place to place. Besides that, while money is taxable and while the word money is entered on the blanks which the assessor takes from house to house, yet, under our monetary system national-bank notes are not taxable, silver certificates are not taxable, United States notes, commonly called "greenbacks," are not taxable; there is no kind of money now

in use, excepting gold and silver coin, which is taxable, and there is so small an amount of gold and silver coin at one time in the hands of any particular person, that while he may have in bank or he may have somewhere else, a large amount of what serves his purpose the same as money, yet it utterly and wholly escapes taxation.

I have found in examining this subject in the different States of the Union that the value of personal property is decreasing relatively from year to year, as it appears upon the tax rolls, not that, as a matter of fact, there is any decrease in the amount or value of personal property, but that in some way it escapes the eyes of the assessor and therefore escapes the hands of the tax collector.

But, as this committee so justly say, whatever amount of taxes ought to be raised by an assessment of the property which escapes assessment is placed upon the burdens of the men whose property is visible, and that is one reason why they complain. This condition of things, as the committee go on to say, is brought about largely by the extravagant accumulations of a few wealthy men. The committee proceed:

Those suffering most are those owning houses, farms, and farm stock, and the proprietors of small manufacturing establishments. I should not forget to mention the fact that everyone who rents a tenement also pays a share of the increased tax, indirectly, in his rent. The man who desires to better his condition by buying a farm, farm stock, a team, a home, or starting a mechanical business feels the burden at once, for the first dollar he invests, whether borrowed or from his savings, comes into view and must be taxed, while the capitalist can invest his income in mortgages within the State that are not taxable, or in mortgages on property outside the State, or in stock or bonds of foreign corporations, all paying big interest, but on which the taxes can be shirked or dodged. In this way the man starting in life is handicapped by an unequal share of the burdens of government.

The committee go on to show how that affects the poorer class of the people:

The consequence is that the rich holder of personal property is helped to grow richer at the expense of those whose all, be it little or much, is in plain sight of the assessor.

This is one of the misfortunes, if it may be so called, of which the people are complaining; that because a comparatively few persons, by draining the substance of the people, become fabulously rich; whatever goes to them to make them rich comes from the people, who earn the things out of which the riches come. It is estimated that some of our extremely wealthy men run up even into the hundreds of millions of dollars in their accumulations. Mr. President, do you know that no human being ever earned a million dollars? No mortal was ever able to earn a million dollars. There might be such a thing as that a grateful people would bestow upon some man, who had exhibited heroic qualities in time of need, a fortune, so that he and his family in years to come might be secured from want.

My mind now rests upon a character in our own history who so endeared himself to his countrymen by reason of his great services on the field of war that there would have been no complaint on the part of the people had the Government given to him a rich material endowment; but in that case the man would not have earned it in the ordinary sense of the word "earned"; it would have been an evidence of the country's gratitude and their esteem, a mark of their affection, in order to show that they appreciated the great work done by this distinguished American. But it is a mistake to talk about men earning such vast sums by their labor. The profits which a man receives upon the labor of other men are not earned by him; but he manages to get hold of them and to keep them. The members of this body each receive as their salary $5,000 a year. If we were to save every dollar of it year after year we should have to continue in office and live two hundred years before we would have saved a million dollars.

The point I make, Mr. President, is that by the labor of no human being can so vast a sum of money be earned. Whatever he does accumulate, then, over and above what he earns, is taken from the labor of other men, women, or children, and that is what these farmers of Massachusetts are complaining about in the report of their committee—that the accumulation of wealth in the hands of a few persons is a process of drainage upon their toil and the products and profits of their little farms. The committee give a few figures in order to emphasize the thought. They say:

We do not wish to shirk or dodge, neither are we willing to bear the burdens of those who are able to bear their own. If one-third of the property in the State escapes taxation—

One-third of the property of the State escapes taxation in the way before described, thus putting the taxes necessary to be raised upon two-thirds of the property value of the State.

If one-third of the property in the State escapes taxation, it is certain that the remaining two-thirds must pay its own share of taxation and in addition the honest share of the one-third that escapes. Some authorities claim that the personal property in Massachusetts is four times the value of the real estate. Those who claim to be very conservative, estimate it to be at least double. We have no doubt that the latter estimate is low. The real property of the State was valued for taxation in 1889, at $1,530,000,000, and the personal should have been not less than $3,060,000,000, but only $1,050,000,000 worth of personal property was taxed in 1888. (I have not the figures for 1889.)

Says the chairman of the committee:

Thus more than $2,000,000,000 worth of personal property escape taxation. The average rate of taxation in the State is about $15 on $1,000. If the $2,000,000,000 that escaped taxation had borne its share, the average rate would have been reduced from $15 on a $1,000 to $8.44; a handsome saving to every taxpayer.

Almost 50 per cent would be taken from the taxes of the poor if all the property in Massachusetts, even at a low estimate, were gathered upon the assessor's books and made to pay its just share of taxation. Do you wonder, then, that the farmers are beginning to talk about an income tax or about a tax on large estates of land, when they see upon every hand immense values of personal property wholly escaping taxation and the burden thrust back upon their shoulders?

Then, the committee come back in an appeal mingled with a patriotic devotion which must attract our admiration. They say:

It was in the homes of our fathers, the farmers, poor in this world's goods, who first settled this State, that the principles of civil and religious liberty were first taught. It was there that equal taxation was first preached and first enacted into law. We still have nearly the same law in theory, but in practice it is sadly degenerated. It was founded on the principle that "every man should bear his share according to his strength," expressed by the general court of the Colony of Massachusetts on September 6, 1648, which ordered that every inhabitant "who shall not voluntarily contribute proportional to his ability with other freemen of the same town to all common charges, as well for upholding the ordinances in the churches as otherwise, shall be compelled thereto by assessment and distress." More than one hundred years later the same principle was incorporated into our constitutional law as follows:

"To impose and levy proportional and reasonable assessments, rates, and taxes upon all the inhabitants of and persons resident and estates lying within said Commonwealth."

That provision is still in the constitution of the State.

So these good poople go on, and towards the close of their report they propose—

A plan for having all taxes on credit property paid into the State treasury, and from thence paid out for school expenses and perhaps for repairs of county roads throughout the State, would greatly equalize the burdens of taxation, helping poor towns and taking from those only which have so much property that the taxes assessed are no burden. There are towns in the State whose rate is not more than $5 per thousand, and others where it is $25 per thousand. Many believe that large amounts of money are deposited by capitalists in savings banks, and for that reason think savings-bank deposits should pay a rate more nearly equal to the average rate of assessment in the State.

So they go on suggesting methods of relief from this unjust system, and you observe that the minds of these Massachusetts farmers are running in the same direction in which the minds of other farmers are running, to get at the property which is concealed in one way or another from taxation. They believe that every man and every woman who has savings laid away, or who has the profits of the labor upon other men's toil gathered and garnered in his own coffers, should be subjected to a searching rule of taxation. It is because of these inequalities, brought to light through the pinching pain of depreciating values, that the farmers are being stirred to their depths, asking for remedial legislation, to the end that they may not be required to pay any more than their proper share of the burden of taxation.

Then, in the last paragraph of the report, they come to the means of enforcing their doctrines:

Your committee recommend that every patron—

That, is, every member of the Grange—

inform himself on this whole question of taxation. Discuss it in your meetings. Agitate for reform. See to it that men are nominated by the political parties you affiliate with, who will give conscientious attention to this subject.

Then support the men elected by an enlightened sentiment for tax reform, and by numerous petitions from the people. The owners of railroad stock, bank stock, shares in manufacturing corporations, as well as all owners of real estate of whatever character, and all owners of stocks of goods, are your natural allies, and will be with you unless they own a larger amount of credit property that escapes taxation than of property of the other named kinds that now pays a tax.

The central thought in their concluding argument and suggestion is one drawn from conditions which have been frequently suggested in this Chamber within the last sixty days, that the business of the country is being largely conducted upon credit. Ninety-five per cent of the business of the country, it is said, is being conducted upon credit—not the business of the farmer, not the business of the wage-earner, not the business of the common man who does the manual toil of the country, but it is the business of the banker and the railroad man and the great manufacturer and merchant; they are the men who transact 95 per cent of their business on paper—credit.

The statement of the Comptroller of the Currency for the last year, I believe it was, or perhaps the year before, to the effect that the $20,000,000,000 worth of exchanges which had passed through the banks of the country, the cost of making the exchange was only about eight-tenths of 1 per cent, all of it done by paper, and only here and there an infinitesimal sum by way of settling balances at the clearing houses. Indeed, the estimate

made by the Comptroller does not include the transactions in the clearing houses, but there is always more or less cash required even in the matter of effecting exchanges through the country banks. The farmers see that this sort of business wholly escapes taxation. The credit business, credit property, as the farmers call it, escapes what they regard, and what every fair-minded man, regards their honest share of the public burdens, and to the extent, as the committee well argue, of the accumulation of this credit-wealth, the poor people who own visible property must have increased burdens thrown upon them.

I have some very interesting statements in my possession as to the production of farmers. I shall go into that but very briefly, and shall take my own State as an example. Kansas is an agricultural State, 70 to 75 per cent of our people are farmers. Our land is peculiarly well adapted to the growth of all the cereals, and we are so near to the dividing line between the temperate and the semitropic zones as that the pine and the live oak are brought together at our southern border. Our climate is salubrious. We have one of the most delightful climatic regions in the world. Our atmosphere is mobile. There is scarcely any time when there is not such a movement of Kansas air as to keep the atmosphere pure.

We have currents from the west, coming over the great mountain ranges, cooled by the snows which have fallen there. From the south we have air currents coming up from the Gulf, across Texas, and over the plains of the Indian Territory. Often they come to us warmed and heated; but the two currents coming together, one cooler and the other warmer, give us a very uniform temperature. It is seldom indeed in our winter season that the mercury drops below zero. I do not remember ever to have known it to go farther than 26° below; and it is rare indeed in the summer time that it goes to 100°. Our average temperture during the summer is between 75° and 85°; and in the winter the average temperature during the three months of December, January, and February is above zero.

Our native grasses are nutritious, furnishing beef and mutton that can not be excelled in any part of the world, except only where it is finished by corn, and we make our best product that way; but during the summer season our cattle and our sheep are at all times ready for the slaughterhouse.

In 1888 the total assessed valuation of the different classes of property in Kansas, as shown by the abstracts of the county clerks and tabulated by the State board of agriculture is as follows: Lands, $169,000,000 in round numbers; personal property, $56,000,000; city lots, $74,000,000, and railroad property, $53,000,000, making a total of $352,000,000 in round numbers; most of that we have managed to get upon the tax rolls since 1860; there was very little there before that time.

By referring to the report of the State board of agriculture for the years 1889 and 1890, I find a table showing the aggregate production of the different cereal crops for a number of years, beginning with 1890 and coming on down to 1890. In the year 1889 we produced about 75,000,000 bushels. The value of our lives tock in 1890 was $113,000,000. The value of live stock and the products of live stock, beef, milk, cheese butter, eggs, etc., sold during the year amounted to $39,000,000, giving us a total in ten years, from 1880 to 1890, of $366,000,000, in round numbers, of the surplus of live stock and their products which we have sent away from our farms.

As to the different crops, it is astonishing when one comes to estimate the amount in the aggregate; and yet take all of the agricultural States of the country together and we find that notwithstanding this enormous production and the enormous surplus that we have every year to dispose of, and do dispose of, still farming as a business is not profitable.

I have here one of the most remarkable little books which ever came under my observation. It is entitled Bondholders and Bread Winners. It was printed and published about the beginning of the year 1892, at Kansas City, in the State of Kansas. In this book the author presents the subject which I am now discussing in a peculiarly forceful manner. He draws maps of the different States of the Union, and he compares them as to size in order that the eye of the mind may grasp the contrast from a territorial standpoint. For example, he compares the State of Massachusetts, which contains about 8,300 square miles, with nine of the great agricultural States of the Union in other sections. He presents them so that the eye can make the comparison and witness the contrast. The nine States have an area equal to fifty-eight times that of the State of Massachusetts; they had about two and one-half times as large a population in 1880 as Massachusetts had, and they had nearly as much wealth; yet during the ten census years he shows that there was an actual saving of permanent wealth in the State of Massachusetts exceeding by some $10,000,000 all that was saved in the other nine States.

Then the author compares the New England States with other States. He compares Pennsylvania and New York with other States, the object of the writer being to present in a way that will strike the eye of the mind as well as the eye of the body, the proposition which I have been trying to elaborate, that concentration of the energies of people in a small part of the country, territorially speaking, results in a drainage from all the other sections of the country through absorption of profits on our labor.

We are making no complaint because our neighbors are doing well. It is the effect on us that hurts. It is costing us too much. We want nothing that we do not earn, but we demand all that we do earn.

I will not go through this little book, nor will I call attention further to its details, but it would form an interesting evening's reading to any member of this body if he would get a copy of it and study its interesting pages. While there may be a little political coloring in it, while there is at times a slight betrayal of sentiment, yet the foundation facts upon which the author builds his doctrine are, I believe, impregnable, and more of the people ought to understand them.

As particularly pertinent at this point, I wish to present a statement which was compiled by a very competent gentleman, who has been giving constant attention to this and kindred subjects for many years, Mr. George O. Jones. He has been naturally very much interested in the discussions going on here, and was kind enough to collect a number of important facts for my use. I will ask that the paper which I send to the desk may be read. It is not very long nor very difficult to read.

The PRESIDING OFFICER. In the absence of objection, the paper will be read as requested.

The Secretary read as follows:

The following statements and figures have been prepared to show why American Senators who represent its agricultural and mining interests are the ones most interested in sustaining the price of silver bullion and the continued use of silver money in this country, and why those who represent States that raise the least of its wealth-creading products and whose public press and legislation are now so largely controlled by railroads, banks, chambers of commerce, boards of trade, and other moneyed corporations, all of which are opposed to any measure favoring an advance in the price or the farther use of silver.

According to the report of the Agricultural Department for December, 1892, showing the amounts of certain crops and the States that produced them, it will be seen that the wheat crop for that year was given as 514,949,000 bushels and the corn crop at 1,628,364,000 bushels.

Toward these amounts the State of Maine is credited with raising 75,000 bushels, New Hampshire 38,000 bushels, and Vermont 151,000 bushels of wheat, while the States of Massachusetts, Rhode Island, and Connecticut are not mentioned as having raised a bushel of wheat for that year. This 264,000 bushels of wheat raised in the six New England States shows a total of only about one-half of 1 per cent of the entire wheat crop raised in this country in 1892. Add to this total amount raised in New England, 1,787,000 bushels raised in New Jersey, 1,231,000 bushels raised in Delaware, 6,992,000 bushels raised in Maryland, and 8,405,000 bushels raised in New York, and we have a total of 18,479,000 bushels of wheat raised in these ten States in 1892, or about one-twenty-seventh part of all the wheat raised in this country during that year.

Out of the 1,628,000,000 bushels of corn raised in this country in 1892, the six New England States contributed 6,445,000 bushels, or about one-third of 1 per cent of the entire crop of that year; add to this amount 17,414,000 bushels raised in New York, 9,124,000 bushels raised in New Jersey, 3,775,000 bushels raised in Delaware, and 12,965,000 bushels raised in Maryland, and we find a total of 49,724,000 bushels raised in these ten States in 1892, or less than 4 per cent of the whole corn crop for that year.

Of course, none of these Eastern States produce a pound of cotton nor an ounce of the precious metals; therefore, not $1 is added to the wealth of the country by them from these sources.

That prices for wheat, cotton, and most other products of American labor have followed the price of silver bullion ever since silver was demonetized in 1873 are facts so well known and thoroughly established in every intelligent mind that no honest man will dispute them.

Mr. DOLPH. I interrupt the reading to ask the Senator from Kansas who is the author of this communication?

Mr. PEFFER. Mr. George O. Jones.

The PRESIDING OFFICER. The Secretary will continue the reading.

The Secretary resumed and concluded the reading of the paper as follows:

Therefore, no statement, figures, or arguments are now required beyond those that will show the average prices of silver, wheat, and cotton in this country and England for a long period before our late war, and before silver was demonetized, as compared with their present prices, the losses sustained by their producers, and the States and sections from which most of them come.

Average market price of silver bullion, 1835 to 1873, $1.29¼ per ounce.

Average market price of wheat in England, 1835 to 1873, $1.59¼ per bushel.

Average market price of cotton in England, 1835 to 1873, 11¼ cents per pound.

Average export price of wheat from United States, 1835 to 1873, $1.20 per bushel.

Average export price of cotton from United States, 1835 to 1873, 11 cents per pound.

Average market price of silver bullion, 1893, 75 cents per ounce.

Average export price of wheat from United States, 1893, 73 cents per bushel.

Average export price of cotton from United States, 1893, 8 cents per pound.

This loss of 47 cents per bushel on about the yearly average quantity of wheat raised in this country would amount to about $188,000,000 per year, and to over $3,760,000,000 during the twenty years since silver was demon-

etized in 1873. The loss of 3 cents per pound on cotton, according to its average price before the war as applied to its present price and production, would amount to about $105,000,000 a year, or $2,100,000,000 in twenty years.

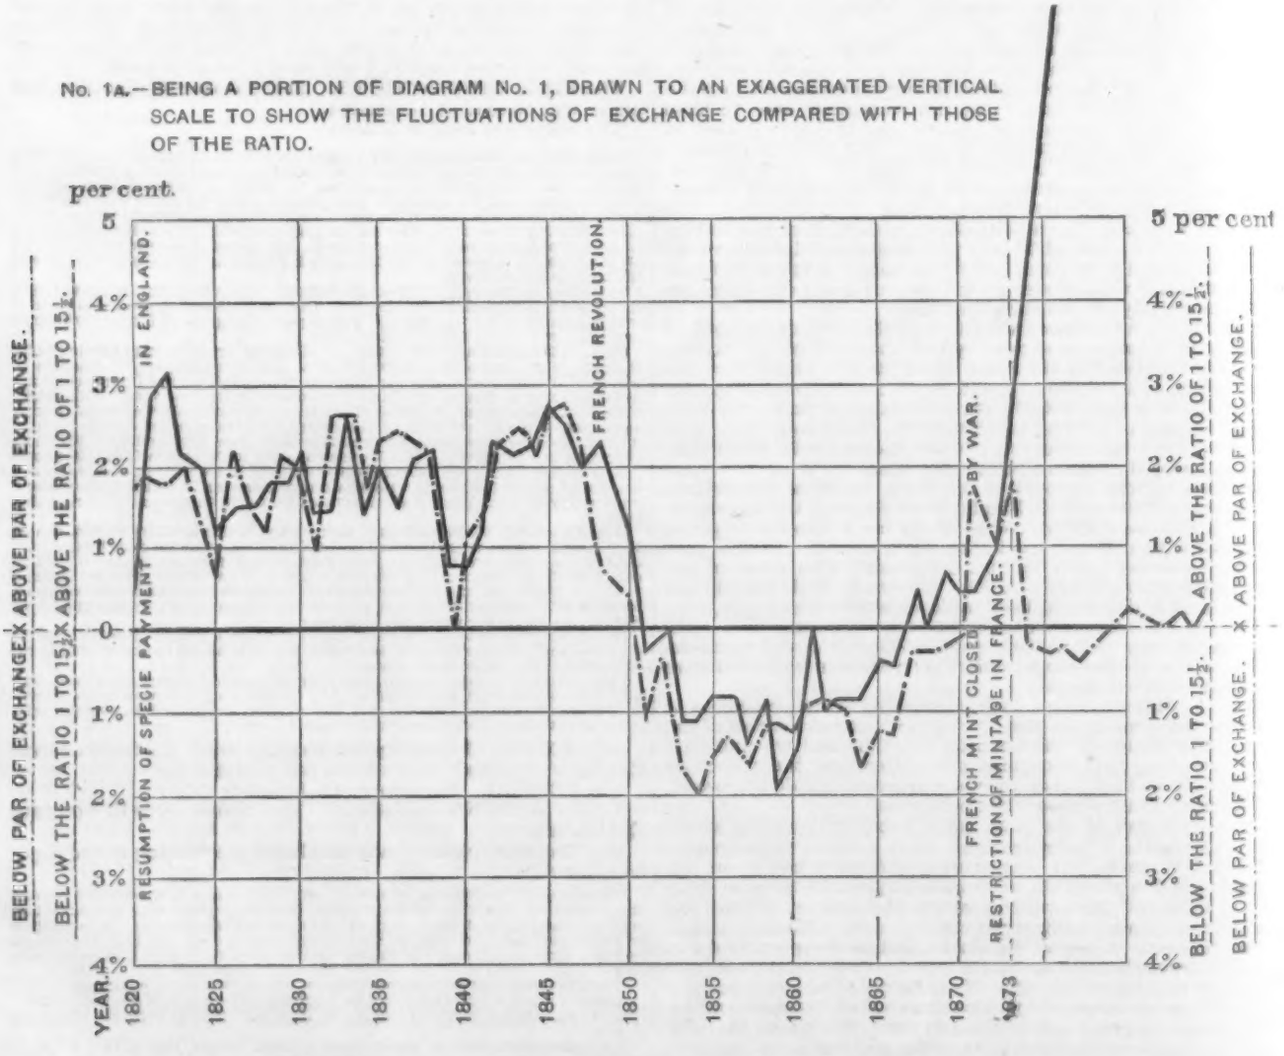
The loss of 54 cents per ounce on silver bullion between 1873 and 1893, according to its present average production, would amount to $32,400,000 a year, or $648,000,000 in twenty years.

These totals represent less than the losses sustained by American farmers on their corn, oats, butter, cheese, provisions, fruit, tobacco, and other products, which, combined with silver, wheat, and cotton, would amount to about $13,000,000,000 during twenty years. This enormous aggregate loss to farmers amounts to more than the actual cost of all the railroads, telegraphs, bank capital, and the combined private wealth of all those who constitute our boards of trade, chambers of commerce, and other so-called exchanges that dictate prices for American farm products in the interest of England and those who live on fixed incomes in this country.

According to the last report of the Statistical Bureau over three-quarters of our foreign exports come directly from American farms, and nearly all of our domestic commerce from our farms, mines, forests, and the workshops which prepare them for market.

Now, it seems strange that the twelve Senators from the New England States, which contribute such a very insignificant portion towards the yearly wealth-producing industries of our country, and the eight Senators from New York, New Jersey, Delaware, and Maryland, which add so little to the products of New England as to make their aggregate hardly worth mentioning when compared to the whole country, should all be arrayed against silver when the very life of the mining States and Territories, and the future prosperity of all agricultural sections depend on an advance from the present low commercial value of silver bullion.

This action demonstrates that this is a contest between the moneyed classes and the wealth-producing classes; between those who live on fixed incomes and those who pay such incomes; between those whose interests will be benefited by a small volume of money and those whose welfare depends on a liberal volume of money, and between those whose fixed incomes are written in their bonds and between prices for farm products that are governed by the market price of silver bullion.



Mr. PEFFER. Mr. President, I ask that certain diagrams which are already in plate matter at the Government Printing Office, and have once appeared in the RECORD, may follow the paper which has just been read. They are diagrams which illustrate the fluctuations of property value and of the value of silver in the market.

The PRESIDING OFFICER. Is there any objection to the request made by the Senator from Kansas? The Chair hears none.

Mr. PEFFER. It has been frequently alleged during the discussion that the farmers demand a larger volume of circulating money. Some time during the early part of last year I had the honor to submit some remarks upon the general subject of agriculture and money in that connection, and among other things presented to the Senate the doctrines and recommendations of the Patrons of Husbandry in their national capacity. I will now call attention briefly to two paragraphs in a letter which was prepared by the national lecturer of the Patrons under date of December 20, 1890, in which he uses the following language:

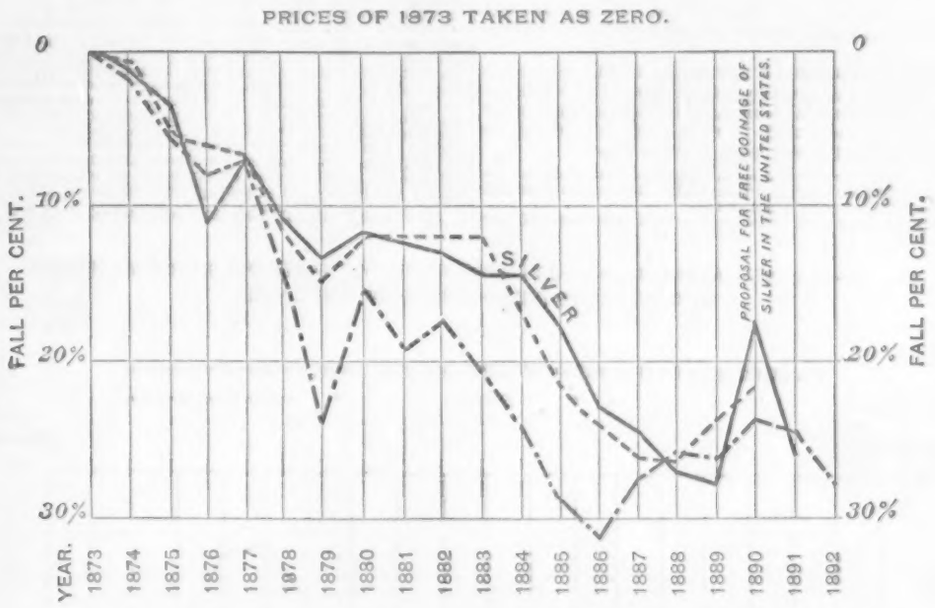
The National Grange is on record through all the years of its history in favor of a plentiful supply of money for the use of all the people of our

No. 1A.—BEING A PORTION OF DIAGRAM No. 1, DRAWN TO AN EXAGGERATED VERTICAL SCALE TO SHOW THE FLUCTUATIONS OF EXCHANGE COMPARED WITH THOSE OF THE RATIO.

Fluctuations in the London prices of Gold above or below the ratio 1 to 15½ ——————

Fluctuations in exchange between London and Paris denoted thus — · — · — · —

The vertical distance apart of these two lines year by year represents the divergence from the ratio of 1 to 15½ after correction for exchange.



No correction has been made for other factors which would make the coincidence of two lines still more remarkable.

country, and against the control of money by a few special classes who have it in their power to depress the price of land and all its products, and the products of other labor as well.

However much farmers, in their several organizations, and laboring men in theirs, may differ upon other matters, it is a good sign that, without exception, all the farmers, laborers, and workingmen's societies in the United States have placed the demand for the free coinage of silver in their national platforms, and have recorded themselves squarely on the side of more money and no middlemen to control its supply. All agree that at least $50 per capita should be the limit, and that the supply of currency should increase in proportion to the increase in population.

Thirty-four States and Territories were represented in the body that gave utterance to the last enunciation of principles by the National Grange, and the language which I have just read is the language of the national lecturer in correspondence therewith.

In the same speech I presented a memorial to the Senate, a memorial coming from the executive committee of the National Farmers' Alliance and Industrial Union, by far the largest body of organized farmers in the world, in which the memorialists used these words in the first paragraph of their paper:

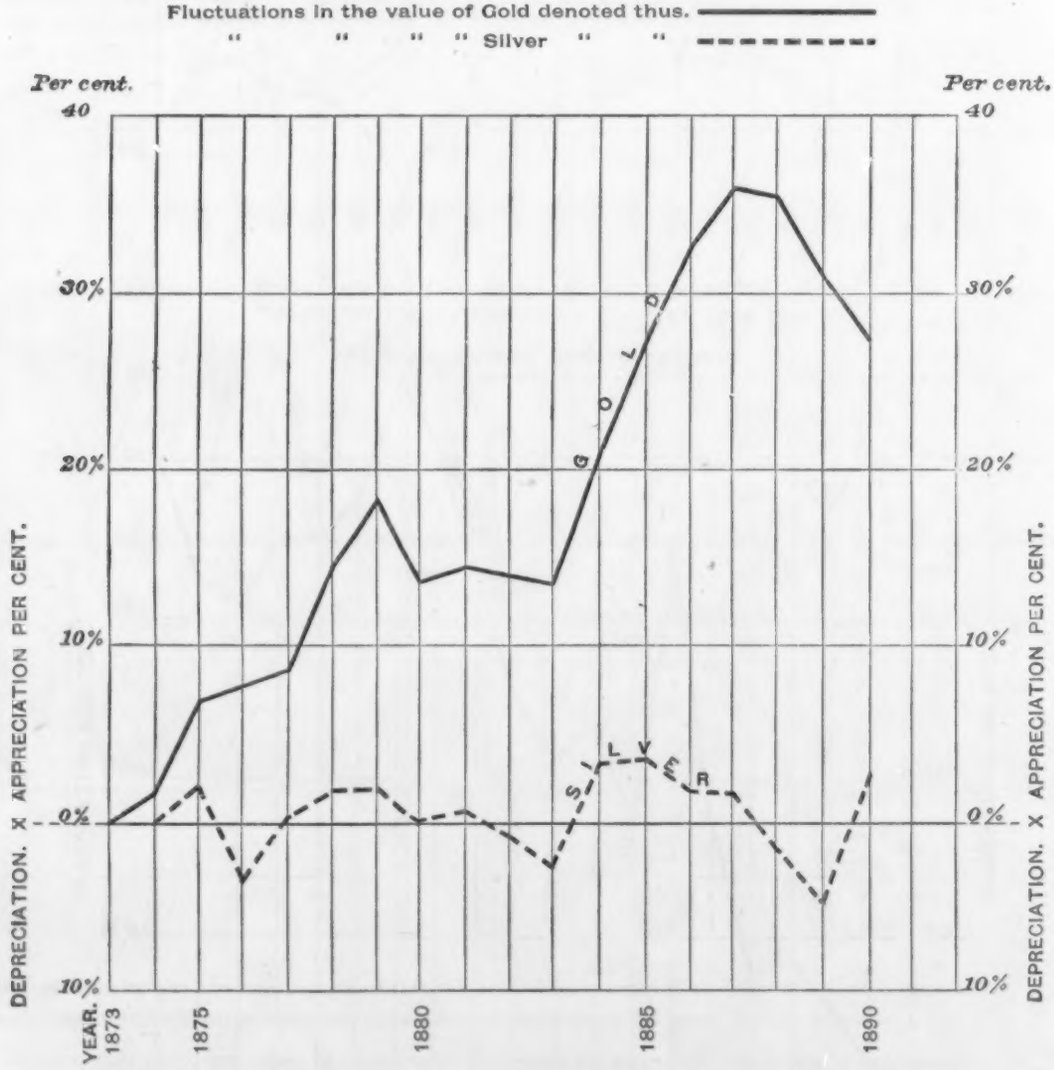
Your memorialists, a committee elected by the supreme council of the National Farmers' Alliance and Industrial Union, under its instructions and on its behalf, would most respectfully represent:

That the universal and unparalleled depression in all departments of our great agricultural industry has impressed the farmers of the United States with gravest concern and alarm.

After referring at some length to the general condition of the farming industry, they represent further—

That they are specially charged—

This executive committee is specially charged—



to ask the attention of your honorable bodies—

Referring to the Senate and House of Representatives—

to the great and urgent necessity for immediate legislative action for the financial relief of the industrial and business interests of the country. That they believe that the present financial system of the country is not only inherently defective but that it is incompatible with the genius and spirit of our institutions and is in conflict with the fundamental principles of our Government. That they believe that the system, born of the terrible exigencies of a mighty civil war, purely as a military expedient and necessity, which, while it doubtless saved the life of the nation in war, has been demonstrated, under the test of experience, not to be the system for preserving and perpetuating that life in peace. That they believe that a sacred and steadfast observance and maintenance of the powers and functions conferred upon the Government by the Constitution, for making, issuing, and controlling the money of the people, is absolutely essential to healthful and symmetrical development in our material progress, and that these powers and functions can not in any manner be relinquished or transferred without violence to equity and justice and gravest peril to the safety and liberties of the people.

In the meeting of the last council of that body of which I have

No. 3A.—RELATIVE APPRECIATION OR DEPRECIATION OF GOLD AND SILVER MEASURED BY SOETBEER'S INDEX-NUMBERS* SINCE 1873.

* Soetbeer's Index-Numbers give the wholesale prices of 100 Hamburg Articles, and 14 Articles from England—viz., Agricultural Produce, Animal Produce, Foreign Fruits, Colonial Produce, Mineral Produce, Textiles, and Miscellaneous.

official knowledge there were thirty-six States represented. Their membership at that time was between three million and four million, and this is the language of their declaration of principles in paragraph 3:

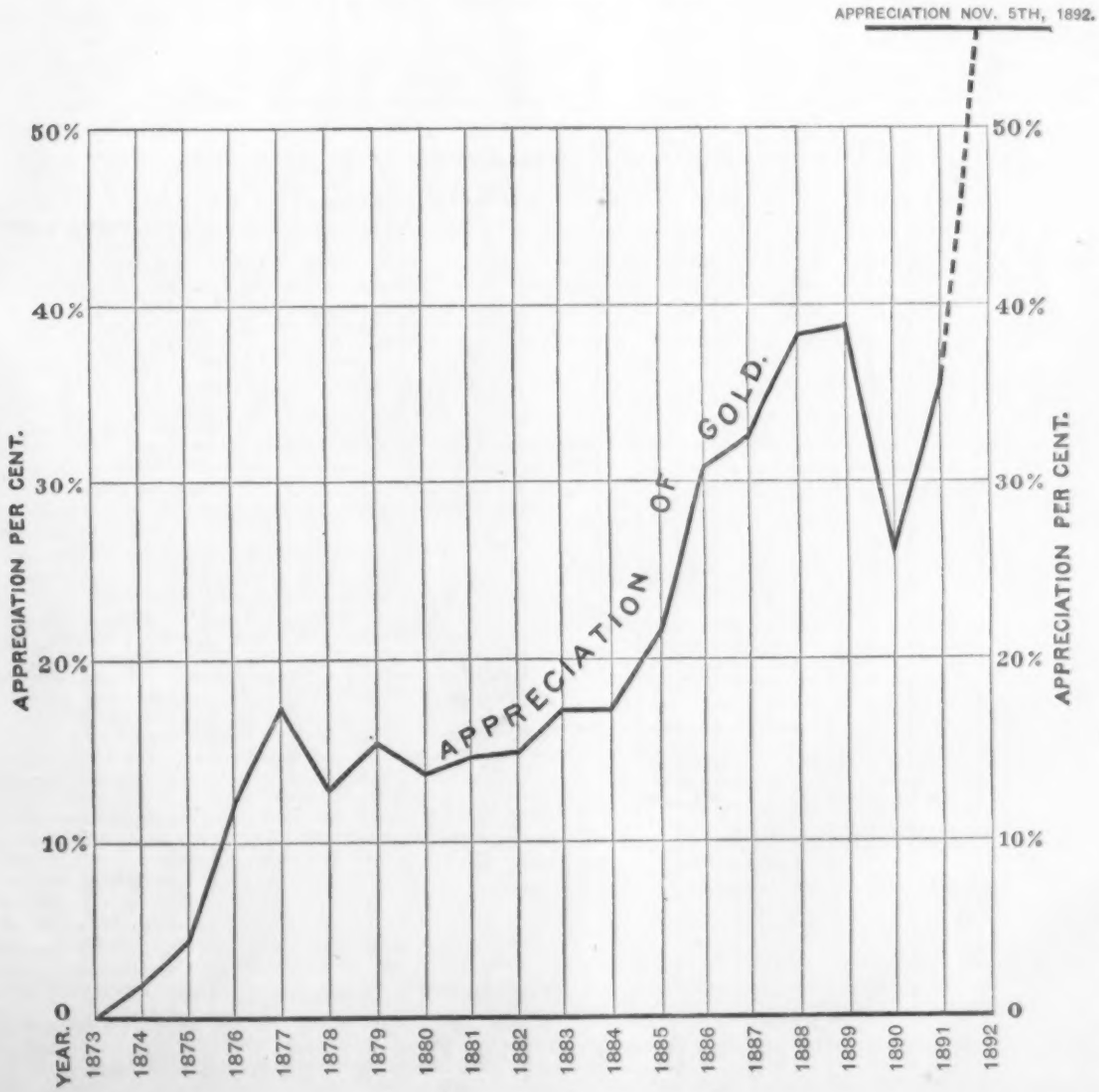
3. We condemn the silver bill—

That is, the Sherman law—

3. We condemn the silver bill recently passed by Congress, and demand in lieu thereof the free and unlimited coinage of silver.

I need not go further on that line. It is with substantial unanimity the doctrine of the farmers in all parts of the country that instead of purchasing silver bullion and piling it in the Treasury or in the subtreasury, or anywhere else, and issuing paper money upon it, in the first instance the silver ought to be coined for the people and issued to them in their own hands directly from the mint, relieving the Government from all responsibility for the redemption of any sort of Treasury notes. If then it be desirable, the holders of silver dollars, or silver coins of any kind, may be authorized to deposit the same in a bank, or in any legal depository, and receive certificates in place thereof. At any time the silver would be ready to redeem those certificates, but there would be no obligation upon the part of the Government to pay gold for them.

There is no obligation upon the part of the Government to redeem them otherwise than to pay out the silver which is held on deposit to be delivered upon the surrender of the certificates, and in that way these good farmers believe that there would be no question of parity or disparity between gold and silver raised on the part of any class of our people; that the silver and the silver certificates would circulate as the people wished.



Mr. President, at this place it becomes proper that I should state what are the views of the Populist party touching money. By way of introducing the subject I call attention to remarks submitted a few days ago by the junior Senator from Texas [Mr. MILLS], who is not now in his seat, printed in the RECORD under date of October 19, at page 2824. That Senator was answering some remarks that had fallen from the lips of the senior Senator from Alabama [Mr. MORGAN] a day or two before, in which that distinguished gentleman took occasion to criticise the position assumed by the Senator from Texas in a speech which he had delivered in this body some three weeks ago. In answering the Senator from Alabama the Senator from Texas used these words:

There was a time when I would have listened to compromises; there was a time when I wanted to compromise; there was a time when I talked compromise on this question; but, Mr. President, when Congress first convened and the guns were opened on a Democratic Administration and the chief of that Administration was charged with infidelity to his party, his Secretary of the Treasury arraigned, his Comptroller of the Currency arraigned, and the beginning of an anti-Administration party started on this floor, I cut down my bridges and burned my boats behind me on the subject of compromise.

I am a Democrat and stand by the organized administration of my party, and the Democratic people all over the United States are going to do the same thing. A great many people have told what the people of the country are going to do, and there have been various prophecies. They do not in-

NOTE.—Between 1800 and 1834 the United States Mint ratio was 3 per cent. lower, and between 1834 and 1873 3¼ per cent. higher than the French ratio.

RELATIVE PRODUCTION OF GOLD (IN VALUE) MEASURED BY THE PRODUCTION OF SILVER.

tend to abandon that organization, nor do they intend to see the chief of that Administration shot down. They will stand by him when the battle is on, and they will carry him through in triumph, too.

I do not intend to be deterred by taunts that I am serving with the Senator from Ohio [Mr. SHERMAN]; that he is my chief. Politics makes strange bedfellows, Mr. President, and the present condition of the country throws me and a number of my brethren on this side in company with the distinguished Senator from Ohio. But where does it throw the other gentlemen? Under the leadership of the distinguished Senator from Kansas [Mr. PEFFER].

Let everyone go wherever it suits him. The Senator from Ohio and those who are acting with him on his side of the Chamber are standing for the old Democratic doctrine of sound currency, gold, silver, and paper at par all over the country. I give him my hand in this contest. The Senator from Kansas is contending for overturning the whole system of finance, issuing paper money, and lifting the business of the country in the air on paper money, bidding adieu to the basis of gold and silver. He is for Government ownership of railroads, and telegraphs, and perhaps every other thing that it can find laying loose around about in the country.

If there is more affinity, if there is more of attachment and kinship for the doctrine of the Senator from Kansas, I say to my friend, go as you like. I shall stand with those who stand for a sound and stable currency, and nothing short of that. I will not knowingly vote for anything that banishes either of the metals out of the circulation of this country. I will not vote for any measure that banishes both metals out of circulation in this country and puts its finances on a paper standard.

In answer to the suggestions of the Senator from Texas, I wish first to refer to one portion at least of the record of that Senator, which may have some bearing upon the subject.

By reference to the CONGRESSIONAL RECORD of June 19, 1879, it will be found that there were various propositions before the House of Representatives in relation to the discontinuance of trade dollars, their recall, and the taking away of their legal-tender quality, etc. Among the various propositions which were offered, was the following amendment offered by the gentleman from Texas, Mr. MILLS. I find this on page 2193:

In line 5 strike out the words "silver dollars;" and insert "Treasury notes;" so if amended the bill will read:

"That the Secretary of the Treasury shall cause to be exchanged at the Treasury, and at all subtreasuries of the United States, legal-tender Treasury notes for trade dollars, at par."

It had been proposed to exchange silver dollars, standard dollars, for the trade dollars. The silver dollars were as they always had been, legal tender for any amount whatever, but the gentleman from Texas, now the Senator from that State, was in favor of substituting for silver dollars legal-tender United States Treasury notes.

Mr. President, I do not refer to this for the sake of criticising the Senator from Texas, but for the purpose of showing that the doctrines which I preach in this body and out of it are none other than the doctrines which the Senator from Texas preached at that time and preaches now, but that the difference between that Senator and the Senator from Kansas is, I have maintained my attitude before the people and before this body, that I am preaching for and defending the same doctrines here that I have taught before the people, and that the party to which I belong have published to the country as their doctrines.

In the national convention of the Populist party at Omaha, July 4, 1892, a platform was adopted. It has become common in this Chamber to refer to party platforms. This is the first time, I believe, that I have undertaken to read ours, and the contrast presented between it and that of either of the other parties upon this money question is very marked.

We demand a national currency—

Just such a currency as we have now. I am reading a paragraph from our platform—

We demand a national currency safe, sound, and flexible.

Just the sort of currency that has been advocated by every Secretary of the Treasury for the last fifteen or twenty years. I do not remember to have read a single report of one of the Secretaries of the Treasury since 1873 that does not refer to this matter of flexibility, a currency that can be expanded according to the needs of the people. It was because of this want of flexibility in our currency that the Farmers' Alliance was formed. When the time came for moving the crops of the country money was scarce; it had to be borrowed through the banks; advances had to be made, credit used with merchants, and property warehoused at great expense, all for want of money in the community with which to move the crops. In order to avoid that difficulty, which grows more apparent and more troublesome every year, this great organization of the farmers was brought about. So in the platform of the Populists we refer to that.

We demand a national currency, safe, sound, and flexible—

And we demand that it shall be—

issued by the General Government only—

Not through banks, not through corporations, not through any kind of an interest-charging concern—

by the General Government only, a full legal tender for all debts, public and private.

That is the kind of money the Senator from Texas was in favor of a few years ago when he was a member of the lower House. I understand that that distinguished gentleman is in favor of the same kind of currency to-day, but that what he opposes is silver money. He says that the party to which the Senator from Kansas belongs is opposed to the use of gold and silver. Now we will see. In paragraph 5 of our platform I read:

We demand the free and unlimited coinage of silver and gold at the present legal ratio of 16 to 1.

Anybody can understand that. The Senator from Kansas has been urging that doctrine with all the force he could bring to bear. So have his colleagues in this body. We do not want to discard gold and silver as long as the people of the country want to use metallic money. Nothing is so well adapted to money uses in the way of metals as gold and silver, unless it may be the new metal, which is becoming popular recently and proving to be useful in many ways—aluminium. Aluminium is lighter in weight, it is of a beautiful, bright color, and its ductility, I am informed, is very great. It might properly be used for money to greater advantage than nickel or copper. Indeed the time may come when it will be largely used as money, but we do not want to discard either gold or silver; we want to use both of them, but we are resolutely opposed to cutting off one of them unless you cut off both.

That is where the Senator from Texas and the Senator from Kansas part company upon this question. Let us have all the gold and silver money that we can get, gold to be used in the payment of large amounts and silver to be used in the payment of smaller amounts, and let one circulate among that class of people who deal in large transactions and the other circulate among the people whose dealings are in small transactions, so that we may all have first class basic money—full legal tender.

That is what the Populist party wants; but we do not want one money for the rich and one money for the poor, nor do we want to strike down the legal-tender quality of one-half of our money and put all the burdens of exchange upon the other half, making it more valuable and our property less valuable. The Populists believe in the very best money. Nor do we belive in an illimitable amount of money. What we do believe in is what both of the old parties say they believe in, but what they are using all their organized energies to defeat; that is, that the people shall have enough of money so that all classes shall be able to procure money in abundance whenever they are able either to afford sufficient security or to afford sufficient labor to procure it.

I repudiate, as we all do, the suggestion that we propose to grind out money the same as a sausage grinder turns out sausage to the poor on the street, to be given to everybody who comes and grabs a morsel. We are not wild men, nor fanatics, nor fools. We want the very best kind of money that is obtainable, based upon whatever the people see proper to use as a basis; and over and above all we have still greater faith in the property, the labor, the credit of the American people, and in the honor and integrity of our Government. We believe that the credit of the nation is at all times sufficient to justify the confidence of all mankind.

I have deemed it proper to say this much, for the metropolitan press and the press of great influence in all the large cities is against the Populist party and against the promulgation of our doctrines. The telegraph facilities are against us; all the great organized forces of the country are against us. We are left to get our doctrines before the people as best we may.

It is not our purpose, Mr. President, to overturn the Government. It is not our purpose to create a revolution. It is not our purpose to either foster or to encourage anarchy. Indeed, one of our strongest arguments in opposition to the present condition of things is that the conduct of organized power is breeding anarchy.

We avail ourselves of every appropriate opportunity to impress upon the people the loyalty and the patriotism, not only of our conduct, but of our views. We would have all the gold that comes to our mints coined; we would have all the silver that is or may be brought to our mints coined likewise. If the coins of the two metals are not sufficient to afford to the people an ample currency, then we would issue Treasury notes, and we would not only issue them in the proportion of three dollars to one of coin, nor would we permit them to be measured by gold, but we would have them prepared and issued in any quantity that the people in their business need; for we know, as all men know, that there is not enough of gold and silver accessible to effect all the exchanges of the people.

We have to-day about $7 of paper money in circulation for every $1 of gold that we have in existence, and we could float three times as much paper if we were disposed so to do; aye, five times as much, for then we would not have any more in proportion to our business and our population than we did have during the closing years of the great war; and our paper currency—that part of it that was recognized as the permanent currency of the country, the greenbacks—maintained its relative parity with the products of the country with remarkable uniformity.

Mr. President, before concluding I wish to present a thought

about that paper currency of the war period. My position is that we can float as much paper money as the business of the people requires. I have said several times that in recent years the Treasury Department has been misleading the people. A few evenings ago we had some discussion here upon that subject. It is represented in all of the recent reports that we have upward of $2,000,000,000 of money of all kinds in the country, but that, as I took occasion to state when the discussion was on, includes duplicates of about $500,000,000; that is to say, it includes silver and gold coin and silver and gold certificates which are based upon that coin. The actual amount of money in the country when you exclude one or the other of those items—coins or the certificate—is about $1,600,000,000 and not $2,000,000,000.

In addition to that this $1,600,000,000 is presented to the country as being in circulation, and that is a proposition which we deny. It is not all in circulation. I have here a fair statement from the Acting Secretary of the Treasury, in a letter to the Senate under date of February 19, 1891, in answer to a resolution of this body inquiring about the amount of the different kinds of money then in circulation. The Secretary takes the close of the calendar year 1890 as the basis. He gives the amount of the different kinds of money that have been issued and that were in the Treasury, showing that there were then about $1,528,935,943. That is the amount of money at the close of the calendar year 1890 which was in the country all told, estimating the gold and silver of course.

Mr. PLATT. In circulation?

Mr. PEFFER. No, not in circulation. That is the amount that was in the country. Then he proceeds to show the amount of gold, silver, and paper held by national banks and by the other banks of the country. He shows in another table the amount held by the Treasury. Then he estimates the amount of mutilated paper, of lost paper which may properly be deducted, and he finally comes down to the table on page 5 of his report, and I will quote his language in introducing the table:

The following table, which is the final one of the series herewith submitted, shows approximately the various kinds of money in actual circulation among the people, after deducting the estimated amounts of each held in national banks and other banking institutions and the estimated loss through destruction of paper money:

Then follows the table. I will give the total, and let the table be incorporated with my remarks. The amount of money in the country at the end of the year 1890 was $1,528,935,943.

Cash in national banks and other banking institutions, $478,571,115.

Estimated loss of paper money, $12,452,100.

Deducting these several items from the aggregate, the balance is $1,037,912,728.

Amounts of money in circulation after deducting the cash in national banks and other banking institutions, and the estimated loss on paper money.

Kind of money.	Reported circulation Jan. 1, 1891.	Cash in national banks and other banking institutions.	Estimated loss of paper money.	Estimated net circulation.
Gold coin	$411,080,597	$167,029,692	----------	$244,050,905
Standard silver dollars	67,547,023	11,373,314	----------	56,173,709
Subsidiary silver	58,051,154	7,001,666	----------	51,049,488
Gold certificates	144,047,279	118,182,687	$200,000	25,664,592
Silver certificates	308,289,463	22,163,077	447,004	285,679,382
Treasury notes, act July 14, 1890	21,896,783	125,860,702	5,410,541	234,110,925
United States notes	343,485,385			
National-bank notes	173,938,250	26,959,977	6,394,555	140,583,727
Total	1,528,935,943	478,571,115	12,452,100	1,037,912,728

This is the amount of money then estimated to be in actual circulation doing duty as money. It excludes all the money that is in the banks, all the money that is in the Treasury, counting only that which was not then locked up in the banks and in the Treasury, amounting, as I said, to $1,000,000,000 in round numbers. By dividing that sum by the population of the country in 1890 we have a per capita circulation of $16 instead of $21 and some cents, as was given in the usual reports as the circulation of the country at that time. The per capita circulation was $16 instead of $21.

By reference to page 23 of the Statistical Abstract of the United States for 1886 we shall find a statement of the different classes of money in the country in circulation at that time, from 1865 down to 1886. It shows that the amount of gold and of silver, of bank notes, United States notes, and other classes of currency at the end of the year 1865 was $1,180,197,147.76. Taking the total amount as given and the estimated population at that time (34,748,000), we had a per capita circulation of $34. That is, according to this summary, the amount of money in circulation in 1865, and it excludes the seven-thirty notes, but it includes all the other classes of paper which were then circulating to a greater or less extent from hand to hand among the people, was equal to $34 per capita, an amount twice as great as we had in 1890, according to the report of the Secretary, just referred to, and twice as much as we have in circulation at this time. Yet it is being hammered into our ears from year to year and from month to month that we have a larger circulation now than we ever had, when the truth is, that excluding the seven-thirty notes altogether, we still had a circulation of $34 per head in 1865.

I asserted in our discussion a few days ago that our average per capita circulation in 1865, at the conclusion of the war, was upward of $52, and I proved it. I included the seven-thirty notes, the compound-interest notes, and the one, two, and three year notes, and the demand notes.

Mr. President, coming down to last year and taking the record as it is given to us, we have an aggregate amount of money in the country now (estimating the gold to a very large extent and the silver to some extent) of $1,601,347,187. The bank reserves and what is in the Treasury amount to an aggregate of $652,305,747. Deducting these reserves, the amount that is not in circulation at all and not intended to be, from the aggregate amount of money in the country, and we have a balance of $949,041,440. If you divide that by our population, which on the 30th of June last year was about 66,000,000, you will find that it gives us a per capita circulation of only $14.40, instead of $24, as is being published to the world.

Mr. President, what the Populists are trying to do is to put before the country its condition honestly, in order that after we have compared notes one with another, representative men from the East, the South, the West, and the North, meeting together, as we are met in this great body, conferring about our common interests, we may evolve something better than we have. We do not want to abolish all the things we have; we want to improve them. We do not want to destroy; we want to create. Nor do we wish to tear down, Mr. President; we want to build up. We believe that our monetary system and our financial methods are fatally defective. We believe that in their progress the great mass of the people are being impoverished, while a very small number are being enriched. What we want is a better system. If we are not able to suggest what meets the approbation of our fellow-men, let them suggest something better, unless they are quite satisfied with what we now have.

This extraordinary session of Congress is evidence that at least one portion of our people are not satisfied. There are few men in the country who believe that our financial system is what it ought to be. I have conferred during the last six months with a great many men handling large business, and invariably they say to me, "Our system is imperfect; our methods are defective; but we have not given our attention to these things; we do not know what to suggest; we expect our public men to devise better methods." That, Mr. President, is what we men of the Populist party are honestly, earnestly, and sincerely trying to accomplish. It is to improve conditions, and not to make them worse.

Now, Mr. President, I have said all that I wish to say to-day. Perhaps I have already occupied more of the time of the Senate than I ought to have devoted to this question. But the subject has no boundary lines. It is one that concerns not only the present generation, but the future through all the ages and the cycles to come, because in the progress of human society our industries are not only growing more and more diversified, but with that endless and continuous diversification will come a closer association of the people under coöperative methods, and the thing that we call money, with its wonderful functions vitalizing all the avenues of trade, will be more and more useful to the end of time. That is the thing that we are talking about, the most sublet agency that is known in human affairs.

Amendment to our Naturalization Laws.

SPEECH
OF
HON. THOMAS M. PASCHAL,
OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, October 31, 1893,

On the bill (H. R. 3299) to amend the naturalization laws of the United States.

Mr. PASCHAL said:

Mr. SPEAKER: The wisdom and policy of adopting the proposed amendments depends upon the following propositions: First, whether existing laws meet the ends for which they were designed in all material respects; second, whether conditions are so changed in the last quarter of a century as to necessitate

a change in order to free our republican institutions from the danger of ultimate fundamental subversion.

I submit to the intelligence and patriotism of this House that the man who approaches the consideration of this grave question in any spirit of partisanship, far less with a view to promote his political fortunes, or in fact in any other than is legitimately embraced in the above propositions, is untrue to himself, to his country, and her best institutions. Nero's occupation when Rome was in conflagration correctly typifies the man who would willfully seek to make political capital when the very foundation stones of the Republic were quaking beneath his feet.

Mr. Speaker, I denounce as a baseless fear the intimation that our serious and candid attention to our defective naturalization laws in a spirit of broad, earnest desire to prevent the flagrant abuse of those laws and consequent hurt to our country and its institutions will bring down upon our offending heads the anger and political proscriptions of any considerable and respectable number of our foreign-born citizens.

The very allegation, to my mind, carries its own refutation, and were I, Mr. Speaker, a foreign-born instead of a native American citizen and was a true and devoted son of my adopted country, loving alike its starry flags as the symbol of those priceless and deathless principles of civil liberty that have come down to us since Runnymeade, I would hurl back the insinuation as a reflection upon my patriotism, my intelligence, and my love for the land of my birth; and in fact, Mr. Speaker, such will be the response of the great mass of that splendid naturalized citizenship the great Aryan race has given to this country.

If, however, this problem ever resolves itself into the alternative that some gentlemen on this floor have expressed to me privately, then, Mr. Speaker, I for one would not hesitate an instant to so amend our laws as to preserve and transmit intact to future generations the great fundamental principles of civil liberty. Further notice of argument proceeding from such a low plane is unnecessary.

The time allowed me precludes the possibility of entering upon details to show that our laws do not meet the design for which they were enacted, whatever may have been originally true in respect to them. A glance at the loosely worded law itself, the purely *ex parte* character of the evidence offered under it, the machinery and mode of its execution, the gristlike manner of turning out citizens, the total lack of anything in the process that inspires the applicant with either respect, love, or appreciation of the great change he is undergoing and functions he is about to assume in this republic of republics, the numberless frauds daily practiced under it, all alike testify to its insufficiency.

I yield, Mr. Speaker, to no man in my admiration of and hearty welcome to the honest, industrious foreign-born citizen, who assimilates with our institutions and is indoctrinated with our fundamental ideas of government and liberty. To them America owes much that has swelled its wealth, its culture, and prosperity; in music, painting, sculpture, literature, science, and government, the imprint of their genius is indelibly stamped in our history. The fires of patriotism have burned as brightly on their altars as on those of us "to the manor born."

Why then, Mr. Speaker, in the name of our common country and its heritage to mankind this outcry and protest when the manifest weakness of our naturalization law is pointed out, and America seeks to elevate its citizenship to a higher plane? I answer, Mr. Speaker, the triple curses of the day, ignorance, demagoguism, and un-American tendencies and modes of thought, intensified by wild visionary schemes for the amelioration of society and government, which, if successful, would destroy that splendid individuality of man to which alone the triumphs of our civilization is indebted, and erect thereon that Dead Sea level of nationalism, in which man the unit is nothing, and whose very identity is swallowed up in an iron-bound social paternalism, where skill, talents, knowledge, genius, science, art are no longer factors in the development of civilization for want of that encouraging admiration, that fostering care, and rich guerdon that all ages and people have bestowed upon them. It is the physical against the metaphysical, mind against muscle, individualism against socialism, paternalism, and centralization.

Whatever form or phase, Mr. Speaker, the struggle may take, when resolved into its constituent elements it will come to this. There! are the forces, my brothers, that with ominous leer demand that the American Congress shall not legislate to perpetuate American citizenship and American institutions, and that the patriotic foreign-born citizens will deprecate and scorn as truly as his native-born countrymen.

My district is largely composed of foreign-born citizens. I know their loyalty to American institutions, their devotion to the principles of the Constitution, I know they view with alarm those methods and practices that permit the high standard of citizenship they have attained to be lowered and adulterated; the oath of "attachment to the principles of the Constitution," with them is pregnant with meaning, and, Mr. Speaker, I declare now, here in my place on this floor, that the naturalized citizens of my district hurl back the base imputations from whatever source it comes—Jew or Gentile—that they are opposed to the enactment of laws that will permit the degredation of American citizenship, or that they favor the retention of those under the cover of which that oath may become a meaningless mockery.

History and experience teach us that the imperishable principles of political and civil liberty become lost to a people just in proportion as a long and uninterrupted enjoyment lull them into fancied security. The preservation and transmission of free institutions and not their achievement is the problem that presses for solution to-day in this country. An American interviewer said to that profound philosopher, Herbert Spencer:

"We Americans think it involves too much loss of time and temper, and does not pay, to make ourselves disagreeable by resenting every trifling aggression." "Exactly," responded Mr. Spencer, "that is what I meant by character. It is their easy-going readiness to permit small trespasses, because it would be troublesome, or profitless, or unpopular, to resist, which leads to the habit of acquiescence in wrong and the decay of free institutions."

It is axiomatic that a nation has the right to prescribe the conditions upon which they will admit an alien to citizenship. Have the United States done so? Section 2165, Revised Statutes United States, prescribes that—

An alien may be admitted to become a citizen of the United States in the following manner, and not otherwise.

There are six subdivisions of this section. The third provides that—

During that time—

That is, five years—

it shall appear to the satisfaction of the court that he has behaved as a man of good moral character, attached to the principles of the Constitution of the United States, and well-disposed to the good order and happiness of the same.

Construing this clause the Supreme Court of the United States (in the matter of Clark, 18 Barb., 444) say:

The powers conferred upon the courts to naturalize aliens are judicial and not ministerial, and require an examination into each case, sufficient to satisfy the court.

The converse of the proposition is undeniable that if the court be not so satisfied it shall deny him citizenship, and to become satisfied the court may question the applicant, and when deemed advisable hear proof *aliunde;* these are legal corollaries to the proposition laid down, and no trained legal mind would ever think of invoking the doctrine or principle of free speech to avoid them, but which it is now proposed to engraft upon our laws.

Let us analyze for a moment the oft-repeated assertion that however radical a man's views on fundamental principles of government, they do not militate against his right to be naturalized, even though he takes the oath of attachment to those principles in one breath and breathes destruction of them in the next, for if the contention be well founded and no real inconsistency or antagonisms be apparent, then we need not amend our laws to guard against the admission to citizanship of such persons, however much they may despise the Constitution they are swearing their attachment to.

We take the well-known case of a man who avowed a belief (and purpose to attempt to carry it out) in the power and duty of the Government to forcibly take or confiscate a man's real property over a certain amount and give it to his neighbors who owned none. The question arises, what fundamental principle of free institutions is this belief antagonistic to? It is a principle that lies back of the Constitution itself. The right of property is before and higher than any constitutional sanction. It means the taking by the Government of private property for private use. This right was first secured in that great fundamental bill of rights, Magna Charta, which in these days, when there is much prating and little knowledge about the fundamental rights of property and persons, it may not be amiss to quote:

No freeman shall be taken or imprisoned or disseized or outlawed or banished or anyway destroyed, nor will the king pass upon him nor commit him to prison unless by the judgment of his peers or the law of the land.

The latter phrase has received a settled judicial interpretation in this country. In the Dartmouth College case Mr. Webster defines it to be—

The general law; a law which hears before it condemns; which proceeds upon inquiry and renders judgment only after trial. The meaning is that every citizen shall hold his life, liberty, property, and immunities under the protection of the general rules which govern society. Everything which may pass under the form of an enactment is not, therefore, to be considered the law of the land. If this were so acts of attainder, penalties, confiscation, reversing judgments, and acts directly transferring one man's estate to another, decrees and forfeiture would be the law of the land. There would be no general permanent law for men to live under or courts to administer. The administration of justice would be an idle ceremony.

That great American jurist Thomas Cooley, in his work on

Constitutional Limitations, in speaking of certain fundamental rights of persons and property lying behind all constitutions, uses the following language:

It—

The Constitution—

is not the cause but the consequence of personal and political freedom; it grants no rights to the people, but is the creature of their power, the instrument of their convenience. Designed for their protection in the enjoyment of the rights and powers which they possessed before the Constitution was made, it is but the framework of the political government, and necessarily based upon the preexisting conditions of laws, rights, habits, and modes of thought. There is nothing primitive in it; it is all derived from a known source. It presupposes an organized society, law, order, property, personal liberty, and enough of cultivated intelligence to know how to guard it against the encroachments of tyranny. A written constitution is in every instance a limitation upon the powers of government in the hands of agents, for there never was a written republican constitution which delega ted to functionaries all the latent powers which lie dormant in every nation, and are boundless in extent and incapable of definition.

When an alien applies to an American court and is required to prove to the satisfaction of that court that he is "attached to (*i. e.* loves) the principles of the Constitution and is well-disposed to the good order and happiness of the same," and in one breath avows his belief in the right of the Government (and his determination if admitted to seek to empower the Government to enforce that right) to strike from our free institutions, the very keystone of the arch on which depends the whole superstructure, duty, wisdom, and patriotism alike demand that he be not allowed to invest himself with the insignia of American citizenship by the mockery of an oath.

Laws framed during the early years of the Republic, when the great bulk of immigrants sought our shores as an asylum from political oppression, and left their native land with a love of our country, its flag and free institutions, did not need a rigid enforcement, so far as the likelihood of error in admitting unfit persons was concerned.

But the experiment or neglect of yesterday becomes precedent to day, and is vigorously contended for as a correct guide to-morrow.

Now that changed conditions confront the American people, and thoughtful citizens are startled by the steady and insidious attacks upon our free institutions, these laws no longer suffice to protect the country from that class of people.

There is no sufficient procedure whereby the court can determine the existence of the prerequisites of naturalization; an intelligent conception of the fundamental principles on which this Government rests should be required; the right to cancel or vacate the judgment of naturalization on account of fraud, misrepresentation, or mistake should be given the courts upon proper proceedings and proof. And to keep alive that waning knowledge of the principles of our free institutions, which to a certain extent has been driven from the minds of our people in their mad rush after wealth and by contact with large masses of unassimilated citizens, who instead of adopting the laws, customs, and language of the country they have sworn allegiance to, have literally, in many instances, bodily transplanted those of their native land.

I believe the proper remedy to counteract these causes would be the teaching or explaining of those principles in our public schools. Will the Congress take a firm, patriotic stand, or will indifference, demagogy, or, worse still, unwise partisanship triumph and defeat the aspirations of every native and naturalized patriot in the land? This session will tell the story. Six distinguished American statesmen from each of the great political parties could, if they would, lift this great question from the mire of party partisanship, and make it as safe from that character of assault as the ark of the covenant.

Brave words were those of Mr. Cleveland which fell from the lips of that distinguished American on the occasion of his address in December, 1891, before the New England Society. Like the tones of a silver bell upon a frosty night, there is no mistaking their ring of true Americanism:

This certainly do s not mean that a spirit of narrowness or proscription should be encouraged, nor that there should be created or kept alive a fear concerning such additions to our population from other lands as promise assimilation with our conditions and coöperation in our aims and purposes. It does, however, mean the insistence that every transfer of allegiance from another government to our own should signify the taking on at the same time of an aggressive and affirmative devotion to the spirit of American institutions. It means that with us a love of our Government for its own sake and for what it is is an essential factor of citizenship, and that it is only made full and complete by the adoption of the ideas and habits of thought which underlie our plan of popular rule. It means that one fills a place in our citizenship unworthily who regards it solely as vantage ground where he may fill his purse and better his condition. It means that our Government is not suited to a selfish, sordid people, and that in their hands it is not safe.

In his admirable address in commemoration of the inaugural of George Washington, Chief Justice Fuller, of the Supreme Court, says:

What Washington desired, as Lodge's fine biography makes entirely clear, was that the people should become saturated with the principles of national unity and love of country; should possess an American character; should never forget that they were Americans. Hence he opposed education abroad, lest our youth might contract principles unfriendly to republican government, and discouraged immigration, except of those who, by an intermixture with our people, could themselves, or their descendents, get assimilated to our customs, measures, and laws; in a word, soon become one people.

To be an American was to be part and parcel of American ideas, institutions, prosperity, and progress. It was to be like-minded with the patriotic leaders who served the cause of their native or adopted land from Washington to Lincoln. It was to be wedded to the virtues of republican government as the bulwark of the true and genuine liberties of mankind.

What some, at least, of those principles are we trust we have shown elsewhere; whether the existing naturalization laws and the usual mode of administering them is likely to preserve and transmit them are questions concerning which every intelligent and patriotic American, whether native or naturalized, must entertain grave doubts.

I have not, nor can I within the limits assigned, touched upon the questions of ethics involved in this question; suffice it to say that as now or heretofore administered, with a uniformity that was absolutely startling, an alien might declare to an American court, I propose to vote (when admitted to citizenship) to abolish your Constitution that recognizes your elective franchise, your right of trial by jury, your writ of habeas corpus, your rights of person and property, but I demand and claim citizenship by virtue of that Constitution which guarantees the right of free speech. Was ever sophistry carried to a greater extreme. Was ever a nation called on to surrender the fundamental principles of its existence with more shameless effrontery.

It will be apparent that while the proper interpretation and enforcement of our naturalization laws will do much towards lessening the evils alluded to, yet it will be equally clear that no adequate remedy exists short of a thorough revision upon the lines indicated.

It will not suffice to respond that the ignorant and those of lawless instincts alone constitute a menace to our institutions, and that rigidly enforced immigration laws will afford an adequate remedy. Fleeing from tyranny, unequal laws, and unjust social conditions in the Old World, his mind filled with the visionary and impracticable schemes of writers honestly seeking to ameliorate the conditions of humanity, yet totally unable to grasp that vast problem in all its intricacies, finding in this land of plenty and of freedom thousands who have failed to learn that great lesson of the race, "In the sweat of thy face shalt thou eat bread," and ready in consequence to decry the institutions of the country, and demagogues ever ready to pander to his narrow and distorted views of society and government. Is it any wonder, then, that under these favorable conditions many immigrants of to-day mistake liberty for license, and under the sacred garb of free speech, with his oath of allegiance to American institutions fresh upon his lips, proceeds by word and deed to assault the very foundations on which rests the superstructure of the Republic? No Aladdin's lamp enables him to at once command the genii of a fabulous wealth his dreams and literature have depicted as awaiting all in this free and favored land who have the nerve to summon it. A "sovereign" among "public servants," his dull perception can see no reason why existing institutions, however venerable and tried in the crucible of experience, which stand between him and that alone for which he has sought these shores, should not be removed without ceremony.

Knowing little if anything concerning the history of Anglo-Saxon liberty and their legitimate outcome, constitutional Government in the United States, a stranger to its language, laws, and customs, it can not rationally be expected that his sensibilities would experience a shock over any change in the fundamental laws of the country, however radical, or subversive of its institutions and form of government.

It is not contended that radical reforms by our people are unnecessary, or that a constitution framed to meet the exigencies and wants of three millions of people a century ago is sufficient for all the requirements of sixty-five millions to-day, under the new and extraordinary conditions that now confront us. Neither do we hold it to be an unreasonable contention that our fundamental law should be sufficiently elastic to meet the changed conditions of society. But it is respectfully submitted that the guidance of the great ship of state should be intrusted to those alone who are familiar with its history, attached to the original purposes of its creation, experienced in its management, and having an abiding faith in its manifest destiny, whether native or naturalized.

Any effort to deflect the vessel from her course thus early in her journey will as surely land her in a different port as the slightly erring aim of the marksman is sure to cause the bullet to speed wide of its mark. It matters but little to those interested in the preservation and transmission of free institutions

whether the hands that wrecked them did so through ignorance or design; it is the paramount duty of the hour faithfully to guard against either contingency.

Touching the clause relating to reading the Constitution in the applicant's language, I question both its sufficiency, wisdom, or policy; but I do insist, for the reasons given, that the court should be required to furnish a printed slip attached to his oath which should contain the vital and fundamental principles of the Constitution and Government, and of civil liberty, and that the same should be fully explained to him and his signature attached thereto if accepted by him; and if gentlemen are wise in their day and generation they will not resist a demand so just, reasonable, and patriotic.

Remonetization of Silver.

SPEECH
OF
HON. JOHN MARTIN,
OF KANSAS,

IN THE SENATE OF THE UNITED STATES,

Wednesday, October 11, 1893.

The Senate having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. MARTIN said:

Mr. PRESIDENT: Heretofore I have refrained from taking any part in the great controversy that for the past two months and more has engaged the anxious attention of the Senate and country, to the exclusion of all other matters. I have chosen to pursue this policy of silence, hoping that the wisdom and patriotism of the more experienced members of this body would suggest some plan or method by which all conflicting interests might be finally reconciled and a policy adopted that would at least command the united support of the Democratic majority in the Senate; a policy that would meet the approval of the country and be of permanent public advantage. And I have felt disinclined to add a word that might postpone these results or tend to make them more difficult of attainment. So far, this desirable and important result has not been reached, nor are the prospects for such settlement hopeful or promising.

In my judgment the time has now come when every Senator should boldly and clearly announce his position respecting the pending measure and his purposes in relation to the same.

Mr. President, I have not and do not share or sympathize with the opinion so frequently expressed in this Chamber in the last ten weeks that we were or are confronted by a serious financial disaster or a fearful national peril. That there has been and still is a condition of unrest, a series of financial disorders, and, if you please, a money panic, I concede. But that there ever existed or now exists any just or legitimate cause or causes for these conditions I deny. Nor do I believe that the so-called Sherman law has had the slighest influence, naturally or legitimately, in producing these conditions. That the law in question has been by bad, selfish, and unpatriotic men made a pretext for these disorders is, to my mind, a palpable and incontrovertible fact.

A few days ago the Senator from Missouri [Mr. COCKRELL], in addressing the Senate, made the declaration that it is a "bankers' panic, and made to order for the shameful and wicked purpose of destroying silver as a part of the national currency." I believe this statement to be absolutely true. A few days later the Senator from South Carolina [Mr. BUTLER] declared that the "panic," as it is called, was largely the result of dishonest and reckless business methods by bankers, stockbrokers, and their associate classes, and I thoroughly concur in this opinion. Entertaining these views, I have favored a policy of making haste slowly. Experience and observation have led me to believe that periods of excitement and panic are not conducive or favorable to wise, prudent, and useful legislation on any subject. And those who are charged with the high and responsible duty of formulating policies and conducting public affairs should be the last to yield to public excitement or unreasoning clamor of any description.

It is the highest duty of public men to be guided by wisdom, courage, and cool deliberation, by prudent action to quiet excitement, and by reason and courage to dispel and conquer panics. The highest test of the great soldier is his ability to inspire confidence and courage in a panic-stricken army, and by prudent action to convert apparent defeat into splendid victory. He is the great commander who remains cool and collected amid the perils of threatened shipwreck; who can quiet the fears of those subject to his command, dispel panics, restore confidence, and save his charge from disaster and death. And if we courageously resist the arrogant and selfish demands of panic-stricken money-changers, reckless stock-gamblers, and their associated agencies, our ship of state will successfully ride the storm that they have wickedly provoked, and very soon we shall enter into calm and quiet seas and in the end reach a friendly, safe, and profitable harbor.

Mr. President, I have said that I have not shared in or sympathized with the "calamity howl" that has been indulged in in this Chamber in regard to the financial condition of the country and in the agency of the Sherman act in producing this supposed fearful situation. On the 15th day of June last I expressed my opinion in regard to this matter in a telegram to the New York Times, which I shall read to the Senate. It is as follows:

NEW YORK, *June 9, 1893.*

Hon. JOHN MARTIN, *Topeka, Kans.:*

On equally good security money now loans in England at one-quarter the current rate in the United States. In the opinion of prominent financiers, if the Sherman act is to be repealed immediate relief will result from prompt assurance thereof, and resulting in a flow of cheap money from London to America. Will you oblige the Times by writing briefly, at our expense, whether you favor repeal of Sherman law, and what plan of currency issue you favor?

NEW YORK TIMES.

TOPEKA, KANS., *June 15, 1893.*

To the Editor of the New York Times, New York City, N. Y.:

I answer your telegram of June 9 as follows:

First. Your statement as to the relative rates of interest in England and the United States is not true.

Second. I have no confidence whatever in the opinions of your "prominent financiers." They were never known to be right.

Third. The Sherman law has not caused the present financial troubles, and its repeal will have no such result as they assume.

Fourth. We neither want or need "cheap" money from London or elsewhere.

Fifth. The Sherman law is and was intended as a trick and scheme to destroy silver as money, and should be immediately repealed, provided proper silver legislation is substituted.

Sixth. I am in favor of a currency of gold, silver, and Treasury notes agreeably with the demands of the Democratic national platform.

Seventh. If the Secretary of the Treasury firmly resists the dictation of your "prominent financiers" and their associate conspirators in Europe and elsewhere the present financial flurry will be brief and harmless.

JOHN MARTIN.

This telegram to the New York Times clearly expressed my views on the 15th of June; and I have neither seen nor heard of any substantial reason since then that would justify or require a change of any opinion then expressed. That we are confronted, however, Mr. President, by a condition of public disturbance affecting to some extent the business interests and industries of the country is a fact, however much we may differ as to the causes that have led to these results, and later on I shall endeavor to establish by conclusive proofs the main causes that have produced the present distress and business disorders. In my judgment the real issue involved in this controversy is whether we shall eliminate silver from our currency, and establish an exclusively gold standard. Evade and explain as we may, the fact remains that the present controversy is a war against silver as a part of the money of the country.

It is largely a contention between the creditor and the debtor classes. It is to a very great extent a conflict of interest between the West and the South on the one part and Eastern interests upon the other. In this aspect of the case it becomes more of a sectional than a party question. Eastern Democrats and Eastern Republicans are arrayed upon the one side in opposition to silver and in favor of the gold standard. Upon the other hand Western and Southern Democrats, Republicans, and Populists are in favor of both gold and silver. Under these circumstances the public interest demands a settlement of the controversy by mutual concession and compromise. And upon this point I heartily concur in the eloquent declarations of the Senator from Kentucky [Mr. BLACKBURN] submitted to the Senate a few days ago. I believe with him that this controversy ought to have been adjusted at the very outset by a Democratic caucus; a settlement that would alike have been fair and just to all interests and to all sections of the country.

The interests of the Democratic party demanded this action. That party is in absolute control of every department of the Government having to do with the enactment of legislation, and it will be held to the strictest responsibility by the country upon this and all other questions of public policy that may be formulated during the present Administration. And the country will not and ought not to tolerate any evasion or pretense for nonaction. Nor will the country look to the Republican party for relief, nor will it hold the Republican party responsible for any results that may come, whatever they may be. And where differences are so radical, compromise and concession in the public interest and upon an honorable basis are always just and right. Human society exists upon the basis of concession and compromise. Social organization is a compromise. Government itself

is the result of a series of compromises. The business relations of life are adjusted upon the theory of mutual concession and compromise. And, as a general rule, all great and useful legislation has been and will ever continue to be based upon the theory of compromise.

It was concession and compromise that united the thirteen colonies against Great Britain, in the beginning of our history, and that led to our freedom and independence. Without compromise and concession the government under which we live, and of which we are all so proud, could not have been formed. It was the spirit of concession and compromise that controlled and governed the action of the statesmen and patriots who formed our present constitution. And without this spirit of compromise our present form of government would never have existed, and the perils, hardships, and sacrifices of our revolutionary ancestors would have been in vain. In 1819–'20 compromise averted threatened serious national disaster and the probable disruption of the republic. In 1850 this same spirit of compromise preserved us from civil strife and possible disunion. And in 1860–'61 it was for the lack of this spirit of concession and compromise that the civil war was brought on, which drenched the country in fraternal blood and afflicted our people with all the horrors of civil war. And those of us who believe in the use of silver as a part of the constitutional currency of the country are of the opinion that it is a matter of such grave and vital importance that patriotism and public interest, present and future, emphatically demand that this controversy shall be settled by such compromise and concession as will be fair and just to all.

Mr. President, it has been said of us by our political opponents that the Democratic party is incapable of self-government and unequal to the task of managing public affairs. And I am frank to say that it does seem to me that the Democratic majority in this Senate is doing all in its power to demonstrate to the country the truth of these Republican charges. The Democratic party has a clear majority in the membership of this body. At the very outset of our legislative career we are torn and rent by factional and conflicting interests. The integrity of the party is threatened, business enterprises and the public interests imperiled because of selfish local demands. Are we dead to the dictates of reason and patriotism?

Is not the preservation of the Democratic party of sufficient importance to the present and future welfare of this country as to justify and even demand the exercise of such mutual concession in the formation of some definite policy as will relieve the party and the country from the present dangerous environments and utterly disarm our Republican friends of their unfriendly criticism? Is it true that we are not capable of formulating and executing public policies that will bring peace, happiness, and prosperity to the country? Or are we to verify the predictions of our friends on the other side of the Chamber, that if we were intrusted with power we would prove incapable of exercising it for the public good? I fear, Mr. President, that the experience of the last sixty days is rapidly tending to verify such predictions.

Mr. President, I have said, and repeat, that in my judgment the so-called Sherman law has had but little if anything to do with producing the present disturbed condition of financial affairs. Upon the contrary, I believe that these results have been produced by dishonest and bad business methods, at home and abroad; that one of the chief factors is the stock-gambling operations in our large cities. Another cause is the dangerous centralization of the money power in our commercial centers. Another cause is the uncertainty respecting the character and modification of our tariff laws. And I am very much inclined to agree with our Republican friends that the latter has much more to do with our present unfortunate condition than has the Sherman law. I am in favor of radical tariff reform and reduction. And however wise and fair this policy may be, it must for the time being naturally be productive of anxiety and uneasiness in the minds of the manufacturers of the country. And so whatever action may finally be taken with respect to the tariff, we must reasonably expect a season of anxiety and partial distress.

Mr. President, I am not a friend of the Sherman law. I think it essentially bad in every respect. It is a deliberate attempt to legislate a part of the Constitution of our country out of existence. Instead of treating silver as money and as a money metal, as required by the Constitution, it has converted it into an article of commerce; and the common experience of mankind has taught us that the destruction of the monetary quality of either gold or silver will always impair its value and limit the circle of its influence and usefulness. I do not believe that the coinage of 4,500,000 ounces of silver per month, or the issuance of silver certificates to that amount, could or would create an excess of currency or have any influence in producing, in and of itself, the financial panic and disturbance that we have witnessed. And as a matter of fact, statistics that have been read in the Senate demonstrate the fact that within the last six months there has been no great disparity between the imports and exports of gold to and from the United States. And when we take into consideration the additional fact of the accumulation of gold from our own mines, there can be no just cause for the apprehension of danger from any exportation of gold.

But, Mr. President, I believe the real cause of our present trouble was a deliberately formed plan upon the part of our great bankers and their allied interests in the city of New York and elsewhere to take advantage of the disquietude in manufacturing circles already noted and to bring about the present condition of affairs for two purposes: First, to compel the Federal Government to issue its bonds in order that they might control them for investment and speculative purposes; and second, to discredit silver and prevent its further use as a part of the currency of the country. And, while it is impossible, in the nature of things, to establish this proposition by direct evidence, the circumstantial evidence is so clear and satisfactory as to leave but little if any room for doubt in the minds of careful and impartial judges.

The Senate will remember that toward the close of the Administration of Mr. Harrison, the subject of issuing the bonds of the Government was seriously considered by that Administration, and strongly pressed by the bankers of New York and elsewhere. And I believe it is a part of the unwritten history of that Administration that an opinion had been obtained from the then Attorney-General confirming the power of the Secretary of the Treasury to issue such bonds; and that in addition to this, the then Secretary of the Treasury went so far as to prepare dies and plates for these bonds; that upon consultation it was concluded to abandon the plan and throw the responsibility for such action upon the present Democratic Administration. It is also a well-known fact that the present Secretary of the Treasury had been frequently urged to issue bonds at various times since March 4 last.

But, to his credit, he has steadily refused to do so. At the several times when the issuance of bonds was being pressed the subject of the repeal of the purchasing clause of the Sherman law was also considered and urged. And these importunities were invariably instigated by Eastern bankers and their associates. In other words, it was clearly and manifestly the Wall-street policy to issue bonds and to stop the coinage and use of silver. To justify this policy there was no pretense on the part of any one that there was too much money in the country. Upon the contrary, the proposition was almost universally conceded that there was an insufficient supply of money in the country to transact our constantly increasing trade and commerce.

If this be true, the inquiry naturally arises why the money-changers of the country should be so solicitous for the issuance of Government bonds and the demonetization of silver. It will hardly be contended that these gentlemen were influenced in making their demands by considerations of public interest. On the contrary it is quite clear that these people were considering their own interests alone. Large volumes of money had accumulated in the cities of New York, of Boston, and Philadelphia, and elsewhere in the East, that was unemployed. Investment was refused because safe and remunerative returns were not absolutely assured, hence the object and purpose of the money-changers was to secure an issue of United States bonds in which to invest their surplus earnings. And secondly, they proposed to decrease and limit the amount of circulating medium in order that it might be more convenient for them to control it. And thirdly, these bonds were desirable and necessary for the perpetuation of the national banking system.

These are the three material considerations that lie at the base of this entire monetary conspiracy. The parties to this conspiracy finally concluded to renew their operations in the city of New York; and, as preliminary to thi' contemplated action, the banks in New York, Boston, and elsewhere were extremely busy in proffering advice and assistance to the Secretary of the Treasury, on terms altogether favorable to themselves, of course, to meet any possible reduction of gold in the Treasury. They were free and profuse in their offers of assistance, as well as in their prophecies of an impending panic. In proof of this proposition we have seen that letters were addressed to the Secretary of the Treasury from various quarters, tendering to him the use of large amounts of gold. And the following is the text of Secretary Carlisle's letter of thanks to the Boston bankers:

TREASURY DEPARTMENT,
April 25, 1893.

MY DEAR SIR: I desire you to convey to the associated banks of Boston my sincere thanks for their generous and patriotic action in tendering gold to the Treasury. If all the banks in the country which now hold gold would imitate the example of Boston, the financial situation would soon be changed and there would be no doubt hereafter as to the ability of the Government, with the patriotic assistance of the people, to maintain its credit, even under the most unfavorable circumstances.

Very truly, yours,

J. G. CARLISLE.

MR. PHINEAS PIERCE,
Chairman Clearing-House Committee, Boston, Mass.

It will be observed that this letter is dated April 25. On the 26th of April the following notice was published in the Boston papers:

BOSTON, *April 26.*

Secretary of the Treasury Carlisle has returned his thanks to the associated banks of Boston for their tender of gold coin, and has accepted the offer. Phineas Pierce, chairman of the Clearing-House Committee, has so notified the banks. The action of the Boston banks will place at the disposal of the Government between $5,000,000 and $6,000,000 in gold.

The Senate will remember that on the 27th of April a naval parade was to occur in the harbor of New York. On the 26th of April, the following Washington dispatch appeared in the New York papers:

WASHINGTON, *April 26.*

The President to-day designated Assistant Secretary Hamlin to act as Secretary of the Treasury in the absence of Secretary Carlisle, who left this afternoon with the President and other members of the Cabinet for New York, to be absent one week. Mr. Hamlin had a conference with Secretary Carlisle this morning and was made acquainted with the general policy of the Treasury Department, especially as regards the present gold question. The situation to-day shows improvement. Gold in small quantities was offered from several points this morning and accepted. The policy of the Treasury Department will be to accept all gold offered, unless the conditions imposed are disadvantageous to the Government.

The President and Secretary Carlisle show by their action in leaving the capital at this time plainer than words can make it their entire confidence in the financial situation. Gold will be paid out as demanded for Treasury notes, without inquiring whether the gold reserve is thereby invaded or kept intact. It has been practically turned into the Treasury's available cash since the President's announcement that gold would be paid for all Treasury notes.

Secretary Carlisle said this morning that there was nothing new to say of the situation, except that he was daily receiving offers of gold which he was accepting.

One important fact to be noted in this dispatch is that at that time there was no fear or apprehension, so far as the President and Secretary of the Treasury were concerned, respecting the financial situation of the country. If this dispatch was authoritative, the policy of the Administration was clearly defined; and it is equally clear that there was no indication or intimation of any financial troubles existing or likely to exist by reason of the operations of the Sherman law. And, in the language of the dispatch, "The President and Secretary Carlisle showed by their actions in leaving the capital at that time, plainer than words could make it, their confidence in the entire financial situation."

But, unfortunately, the matter was not to be left in that shape; and the further device was adopted by the New York bankers of obtaining an interview with the Secretary of the Treasury at the earliest possible moment for the purpose of impressing upon him their views of the situation. Hence it was arranged that upon the arrival of the Secretary of the Treasury in New York, or as soon thereafter as possible, he should be accorded an opportunity of meeting and conversing with the "financiers" of New York: and the result of that scheme is to be found in the New York Sun of April 27, 1893, which reads as follows:

TO CONFER WITH CARLISLE—BANKERS EXPECT TO MEET HIM TO-DAY OR TO-MORROW.

It is the opinion of financiers who have talked with the President that he will do nothing tending to defer final action toward the repeal of the Sherman law.

Secretary Carlisle arrived in town last night. Early in the day Assistant Treasurer Jordan received word from him that he would be in town and would remain over to-morrow. Mr. Jordan immediately conferred with bank presidents and private bankers to ascertain when it would be most convenient for them to meet the Secretary.

To-day is a legal holiday, and many of the bankers are on the various Columbian committees. The majority believed that they could not get away from their duties until late this afternoon, and even then the festivities of the evening would prevent them from giving the time necessary to talk over the financial situation with the Secretary.

It was suggested that the bankers meet the Secretary to-morrow morning at 11 o'clock. Secretary Carlisle is booked to accompany President Cleveland to Chicago to-morrow morning, but he is suffering from a severe cold and may not be able to go. Mr. Jordan visited the Secretary last night and told him of the situation. If the Secretary decides that he will be only able to see the bankers late this afternoon telegrams will be sent to them. Any conference held to-day will doubtless be at either the Fifth Avenue or the Victoria Hotel.

A number of the bankers had an impression that no material results concerning a bond issue would come from any talk with Secretary Carlisle. An influential New York Democratic Congressman recently had a talk with President Cleveland concerning the repeal of the Sherman law. This Congressman told the President that the best way to have the Sherman law repealed would be to demonstrate the evil effects on the business community of the country. The President seemed to agree with the Congressman. Several financiers of repute in New York came from Washington yesterday, and they had gathered the opinion that it is the purpose of the Administration not to take any steps that in anyway would tide over the results of the Sherman law. In other words, so far as they could learn, President Cleveland had ascertained that there was no alternative, and that to step in now and issue bonds would only defer final and conclusive action toward the repeal of the Sherman law.

The Washington people were strong in this belief. They pointed out that in the President's manifesto he had said that he would continue to pay the Government's obligations in gold. Since that declaration the great supply of gold all over the country has been demonstrated, and Secretary Carlisle has been daily in receipt of offers of gold. Should these offers be discontinued there would be only one thing to do, and that would be to dip further into the reserve. However, nothing certain concerning the Government's policy will be known until President Cleveland returns from Chicago.

In the meantime Secretary Carlisle will talk with the bankers and ascertain their views. President J. Edward Simmons, of the Fourth National Bank, said that the talks with the Secretary would be free and frank, and that there was every disposition to get along pleasantly and harmoniously. The bankers will do everything reasonable, but they can not be expected to turn in their gold to the Treasury and injure their reserves at a time like this.

No gold has been engaged for shipment on Saturday, the decline in sterling exchange having temporarily interfered with shipments.

It will be noted that this article outlines a plan of meeting with the Secretary of the Treasury, and that the matter of issuing bonds and the repeal of the purchasing clause of the Sherman act was to be the subject of that conversation is conclusive; and it is so important in demonstrating the truth of the proposition that I advanced in the outset that I again call the attention of the Senate to that part of it referring to the issuance of bonds and the repeal of the purchasing clause of the Sherman law:

A number of the bankers had an impression that no material results concerning a bond issue would come from any talk with Secretary Carlisle.

This paragraph clearly demonstrates that one of the important elements to be considered in that meeting was the issuance of Government bonds; but the parties interested in it had little hope of its success, because of the fact, generally known, that Mr. Carlisle had resolutely set his face against any operation of the sort. The article further states:

An influential New York Democratic Congressman recently had a talk with President Cleveland concerning the repeal of the Sherman law. This Congressman told the President that the best way to have the Sherman law repealed was to demonstrate the evil effects on the business community of the country.

As to who this Congressman was, I have no knowledge. That he was a representative of the banking interests in New York is quite clear; that he was authorized by them to suggest to the President the idea of an "object lesson," which they subsequently adopted and enforced, is conclusive. And the suggestion thus made is in absolute harmony with subsequent events. The article further says:

The President seemed to agree with the Congressman.

Now, Mr. President, that part of the story that seeks to implicate the President as seeming to agree with the Congressman I do not believe. I do not believe that either the President of the United States or the Secretary of the Treasury had any connection whatever with these suggested plans and schemes. My knowledge of the men and their well-earned reputations for integrity and justice, utterly forbids the idea that either the President of the United States or the Secretary of the Treasury would by word or deed be a party, directly or indirectly, to the wicked, corrupt, and dishonest methods of procedure suggested by these banking associations. The article further says:

Several financiers of repute in New York came from Washington yesterday, and they had gathered the opinion that it is the purpose of the Administration not to take any steps that in anyway would tide over the results of the Sherman law.

In other words, so far as they could learn, President Cleveland had concluded that to step in now and issue bonds would only defer final and conclusive action toward the repeal of the Sherman law. In other words, the President had settled in his mind that the then existing condition of public affairs would not warrant an issuance of bonds, nor was it apparent to him that any conditions were likely to exist that would authorize it. Thus we find, Mr. President, that the preliminary steps to this conspiracy were formed, and were to be put in operation, if at all practicable, upon the occasion of the visit of the Secretary of the Treasury to New York. And what further occurred will plainly appear later on. On the next day an article appeared in the same journal, the Sun, April 28, 1893, headed:

BANKERS MEET CARLISLE—AN HOUR'S TALK AT THE HOUSE OF PRESIDENT WILLIAMS—THE SECRETARY REPEATS HIS DECLARATION THAT THE REPEAL OF THE SHERMAN LAW WAS THE PRIME DUTY OF THE ADMINISTRATION—NO NEW BONDS EXCEPT AS A LAST RESORT.

No new bonds except as a last resort. That was exactly the statement that these gentlemen did not wish to hear from the Secretary of the Treasury. The unquestioned object of the meeting, as suggested in the article of the 27th, was, if possible, to induce the Secretary and the President to issue bonds, and that policy is clearly outlined in the article to which I have just called the attention of the Senate. It was suggested in that article that on the next day there would be a meeting of the bankers and Mr. Carlisle to talk the situation over. On the 27th, in pursuance of the previous statement, they did meet at the house of President Williams, and here is what took place:

[New York Sun, April 28, 1893, page 7.]

BANKERS MEET CARLISLE—AN HOUR'S TALK AT THE HOUSE OF PRESIDENT WILLIAMS—THE SECRETARY REPEATS HIS DECLARATION THAT THE REPEAL OF THE SHERMAN LAW WAS THE PRIME DUTY OF THE ADMINISTRATION—NO NEW BONDS EXCEPT AS A LAST RESORT.

Secretary Carlisle decided yesterday morning to have a talk with the New York bankers. Late on Wednesday evening after his arrival from Washington, he conferred with Assistant Treasurer Jordon, and ex-Assistant Treasurer James J. Canda. As a result the Secretary yesterday morning suggested that he met the bank presidents and private bankers at four o'clock in the afternoon. The postponement in the naval review because of the storm caused some delay, as Secretary Carlisle accompanied President Cleveland on the Dolphin.

The Secretary landed with the Presidential party at the foot of Ninety-sixth street, and was there met by the Columbian reception committee, including President J. Edward Simmons, of the Fourth National Bank.

The Secretary and Mr. Simmonds were driven to the home of President George G. Williams, of the Chemical Bank, and chairman of the Clearing House Association, at 34 West Fifty-eighth street.

The following gentlemen were there to greet the Secretary: Mr. Jordan, Mr. Canda; President Perkins, of the Importers and Traders'; President Sherman, of the Bank of Commerce; President Cannon, of the Chase; President Ives, of the Western; President Gallatin; President Coe, of the American Exchange, and President Woodward, of the Hanover; all national banks. The conference between the Secretary and the bank presidents lasted somewhat over an hour. There was the utmost good feeling displayed, and the Secretary said that he was there to make a free, frank, and open statement of what he believed to be the financial policy of the Government.

In the first place, the Secretary said that an issue of bonds just at this time might be an effective remedy, but it would only be temporary, and that it would be followed by disturbances in the money market, and would in the end retard the determination of the Administration to repeal the Sherman silver law. The Secretary said positively that there would be no bond issue except as a last resort. As the Secretary outlined the policy of the Government, it was that nothing would be done that in any way would retard or check the determination of the Cleveland Administration concerning the repeal of the Sherman law. The Secretary went over the currency laws of the country, and said they were in bad shape and needed revision. He said the revision should start with the Sherman law. There is a determination also to show to the miners of silver the evil effects of the Sherman law on their own fortunes.

President Cleveland's advisers have told him that the only way to induce the Western and Southwestern Senators and Congressmen to consent to a repeal of the Sherman law is to demonstrate to their constituents that they are losing money every day that this law is in operation. The missionary work in that direction has been started by a number of the bankers in the solid communities of the East. They are daily refusing credits to the South, Southwest, and West, fearing the effects of the Sherman law.

The Chicago bankers, it was said, are carrying out the same line of policy. Secretary Carlisle, in his talk with the bank presidents, made his stand very clear. It is to be heroic treatment all the way through on the Sherman law, and possibly by the next session of Congress the silver-mine owners and the adherents of silver in the Senate and the House will be ready to consent to a repeal of the law.

The bank presidents, replying to Secretary Carlisle, cordially informed him that they would be ready at all times to coöperate with him in the successful administration of the financial policy of the Administration. Everybody shook hands, and there was harmony all round.

In the meantime the Secretary continues to receive offers of gold from unexpected sources.

Mr. President, I submit that the testimony offered establishes beyond question the truth of the proposition that this panic "was made to order"—manufactured expressly for the occasion and for the three purposes already stated, to wit: To force an issue of bonds, the destruction of silver as a money metal, and the perpetuation of the national banking system. If the matter was submitted to the consideration of a fair and impartial jury upon this testimony there could be no doubt about an affirmative judgment on the propositions that I have named. In making this statement, I want it distinctly understood that I acquit the President of the United States and the Secretary of the Treasury of any complicity in it. I do not believe that either of those distinguished gentlemen were advised or had any knowledge of the specific objects and purposes of this meeting.

Nor do I believe that they or either of them would under any circumstances have given an approval, direct or indirect, to the wicked and fraudulent schemes of the gentlemen that the Secretary met at the house of President Williams—the purpose and effect of which was to destroy and paralyze, at least for the time being, the business interests of the country. I apprehend that all Mr. Carlisle did was to meet these gentlemen as a matter of ordinary courtesy and politeness, and to afford to them the privilege of presenting their views, as he would have accorded a like opportunity to any other citizen of the Republic.

Mr. President, it conclusively appears from the article last read that the bankers of the United States, forgetting their duties as citizens and their obligations to the Republic in which they live and to the laws of the land that secure to them the enjoyment of their possessions, and in defiance of every principle of good citizenship of morality and patriotism, deliberately entered into a conspiracy to paralyze and destroy for the time being the business interests and industries of the country, for the purpose of securing to themselves unjust and unconscionable advantages. The rights of the people were to be ignored; the interests of the Republic were to be ruthlessly trampled under foot; the wheels of industry were to be stopped; commercial enterprises were to be suspended; the fires and forges were to be smothered; all enterprises were to come to a standstill; the people of the silver States and the silver-mine owners of the West were to be crushed out—hardships of so onerous a nature were to be imposed upon them as to make it an "object lesson." And in their distress and peril they were to be forced to consent to conditions that their judgment and interests repudiated.

Those dependent upon banks and bankers for means to carry on their business were to be denied accommodation; credit was to be withdrawn, and banking accommodations were to be refused. The businessmen of the South and West and Northwest were to be crippled, crushed, and destroyed, ruthlessly and relentlessly. Men, women, and children were to go hungry and be forced to beg for bread in a land of plenty. They were to be starved into submission, and the accumulated perils and hardships, suffering and sorrow, distress and pain, which we have witnessed in the last six months were to be endured. The business interests of the country, the happiness and prosperity of its people, all to be wickedly and criminally jeopardized or destroyed for the sole purpose of subserving the merciless ends of conscienceless money-changers.

Mr. President, upon the evidence submitted "guilty" would be the verdict of an impartial jury against the money power of the United States; and punishment, swift, just, and relentless, ought to follow in the wake of such a verdict. But, Mr. President, we are not compelled to rely alone upon the evidence already submitted. It is supplemented by the further fact that on the 23d of September last an article appeared in the Manufacturer, an industrial trade journal published in the city of Philadelphia. I am told that it has a reputable standing, and is conducted and controlled by men of high character and intelligence, who are deeply interested in observing the course of events. This article reads:

HAS IT BEEN AN ARTIFICIAL PANIC?

The prostration of manufacturing industries is due to the uncertainty whether they are soon to be without tariff protection, and this industrial prostration is the great and governing cause of the general paralysis in business. But there has been, besides, a financial panic, a withdrawal of money from banks, a refusal of banks to pay their depositors on demand, and, beyond that, a practical suspension of bank functions in the collection and remittance of money. This financial trouble was superadded to the other, and it has caused great additional loss and injury. The question has been, from the first, how far this panic was natural and unavoidable, and how far it was artificial and manufactured.

It was observed that in those New York journals whose daily aim and purpose it is to serve the foreign and importing interests, regardless of the interest of the American Union, there was about four months ago a diligent effort to increase the natural anxiety caused by the outflow of gold. What are called "scare" heads, and "scare" paragraphs on the editorial pages, were used day after day, soon causing alarm as to the financial situation, and then developing that drain of the bank deposits which has been the main feature of evil in the money market. This "scare" was evidently artificial in a large measure. It is, moreover, believed by many that it was deliberately planned to excite public distrust, to give excuse for the assembling of Congress, and to exert "pressure" for the repeal of the Sherman act. It was to be an "object lesson" to the country, to convince business men, especially in the West, that the policy outlined in New York must be followed as the only way of escape from further distress.

That this charge was just, shocking as it seems, now receives support by fresh evidence. The hesitation of the Senate to repeal "unconditionally"—as the New York demand upon it reads—the silver-purchase clause has developed a new threat from that city that more object lessons will be given if the Senate halts longer. Thus in the money article of the Press of this city, on Saturday last, there occurs this statement:

"There is more time money offered and some commercial paper is being sold chiefly to country banks at 8 and 10 per cent. It is well understood that the New York banks will not freely lend money until the Senate votes for the repeal of the silver bill."

The threat in this may be said to be somewhat veiled. But that it is a threat appears from the dispatch sent at the same time from New York by the correspondent of the Ledger, of this city, and printed also on Saturday. This dispatch, speaking of the stock market in New York, said:

"It (the stock market) is waiting to hear from the Senate, and not without some apprehension that some further 'object lesson' may be needed to move that body."

This is certainly more definite, and can not be considered obscure. The threat that there shall be more "object lessons" is such a menace as all can understand. But in the money article of the Press on Monday there is a still more plain statement of the case. In that article there are these extraordinary sentences:

"The mercantile community which desires banking accommodations has not felt the improvement, and the reason is the New York banks have determined not to let money loose until the Senate votes for the repeal of the silver law of July. There is plenty of idle money in New York which business men could use to advantage, but the policy of the banks is to hold off. * * * According to some street authorities additional and aggressive steps will be taken in New York to impress silver Senators. The following was sent around the street on the news tissues on Saturday: 'Our statement that steps were under consideration likely to exert pressure for repeal was supported by facts which came to light during the day pointing to the possibility of an early advance in rates for sterling exchange to figures which would make talk of gold exports instead of imports.'"

Two matters are alleged in these passages: (1) That the banks will not accommodate the mercantile community until the purchase clause is repealed, though there is plenty of idle money; and (2) that there is to be such an advance in the rates of exchange as will cause "talk," and consequent alarm over gold exports. The latter was "under consideration," according to the tissue bulletins, but the former was a line of action which had become definite and well settled.

Upon such announcements as these comment must be practically superfluous. To endeavor to create, by manipulation and artifice, fresh financial distress, is simply an attempt to commit a public crime, compared to which arson is trivial. But, like any other criminal design prematurely disclosed, it ought to defeat itself. We trust it may.

One thing must be remarked in this connection: It will be a dire misfortune if the national banks of the country are betrayed into complicity with such of those in New York as are helping to concoct this scheme of public injury. Because, if they shall be—if the whole national-bank system is to be tarred with this infamous stick—how is it supposed they can be effectively supported when their time of trial comes, as it presently will? The distinguished men at Washington in whose company the implicated New York banks may now suppose themselves safe, will not help to defend the national-bank system; on the contrary many of them will turn to rend it. And is it supposed that the mass of the people, if further convinced that the money panic was artificial—in part, or entirely a "set-up job"—will rally in the bank's defense?

Gentlemen, whoever you are, who propose to make distress wantonly, you are playing with fire, and may perish in the flame of your own creating.

So the opinion of these very able journalists is that—

The prostration of manufacturing industries is due to the uncertainty

whether they are soon to be without tariff protection; and this industrial prostration is the great and governing cause of the general paralysis of business.

Mr. President, while I do not believe this statement to be entirely true, I do believe that the fear and apprehension entertained by the proprietors of the large manufacturing industries of the country is the result of anticipated changes of the tariff laws of the country; and it has had very much more to do with the financial disorders and business depressions of the last six months than all other causes combined. And when the tariff question comes up for discussion in this body you will hear this proposition advanced day after day by our friends on the other side of the Chamber. And very little if any of these disorders will be attributed to the Sherman law.

You will be told very pathetically too, and with great earnestness and eloquence by our Republican friends, that it was not the Sherman law that closed up the furnaces and forges and turned thousands of laboring men into the streets and made thousands of bread-beggars in the city of New York. And I am very much afraid that some of my Eastern Democratic friends whose homes are in the shadows of great manufacturing buildings, will be very much inclined to agree with them if they do not coöperate with them in order to prevent what I would call legitimate and proper tariff legislation. The article quoted from proceeds to say:

But there has been, besides a financial panic, a withdrawal of money from the banks and a refusal of banks to pay their depositors on demand.

That statement is true, Mr. President, and it is precisely the consummation of the purpose outlined in the article in the Sun of April 28. And here we might briefly inquire again, what was the policy to be pursued, as outlined in the Sun of April 28? What sort of an object lesson was to be presented to silver-coinage States and to Western Senators and Representatives, to compel them to vote for the unconditional repeal of the purchasing clause of the Sherman act? It seems that—

Some of the President's advisers had told him that the only way to induce Western Senators and Representatives to assent to the repeal of the Sherman law was to convince them that their people were losing money every day that this law was in operation.

I do not believe that the President ever had an adviser that gave him any such counsel or advice. I do not believe that the President would ever have submitted to any such suggestion. Certainly no friend of his or of his Administration ever advised such a course or policy. That such selfish suggestions were made to somebody by the bankers of New York, I have no doubt. It is in harmony with the methods usually adopted by gentlemen of such class. We are also advised that there was a determination to show to the miners of silver the evil effects of the Sherman law upon their own future. We are further advised that the necessary work in that direction had been started by a nubmer of the bankers in the "solid communities" of the East, and also in Chicago. And this object lesson was to be taught, and was taught, by daily refusing credit to the South and Southwest, and the West. In other words, in New York and elsewhere in the East, millions of money that legitimately belonged to the Southern, Western and Southwestern bankers, were locked up in New York and payment thereof refused when demanded.

Loans were to be refused to business men—loans required by them to enable them to carry on their operations. All the arts and wiles of banking were to be brought into effective operation for the purpose of creating a stringency in the money market. This would depress business, necessarily result in financial disaster, the closing of factories and forges, stopping the wheels of industry, paralyzing all commerce, producing an army of the unemployed—these were results that would necessarily follow the wicked and criminal conspiracy that was entered into by the New York and other bankers for the purpose of giving an object lesson to the "silver Senators," and to the Southern and Western Senators generally, thereby forcing them to vote for the unconditional repeal of the purchasing clause of the Sherman law.

Mr. President, this conspiracy and scheme was wicked, criminal, and infamous. It merits and should receive the unreserved condemnation of every man, without reference to his locality or his political relations. That these men could have entered into this conspiracy and could have pursued the plan so cunningly devised, in ignorance of its disastrous results, is absolutely impossible. Every man of ordinary judgment must have known that the execution of the plan agreed upon to bring about the terrible condition of affairs that we have witnessed would necessarily produce these precise results.

Unfortunately, Mr. President, the bankers have brought to their aid in this miserable piece of work a vast majority of the great newspapers of the country. Venal and corrupt as nine out of every ten of them are, these newspapers have been a part of the machinery—the engines, the mediums—by and through which these infamous schemes have been presented to the public. And day after day they have contributed their full quota of fraud and misrepresentation to inflame and excite public opinion. It is to be regretted, Mr. President, that the great newspapers of our country have to a very large extent ceased to perform the great functions for which they are intended. They are too often owned by speculating syndicates, gamblers, and brokers, and are published for the money in the enterprise without regard to any public interest. They are influenced and controlled by their environments—are often mortgaged to speculating capitalists, and, too frequently, their editorials are paid for at so much per line.

There was a time in the history of this country when a great newspaper stood for a principle. It had regard for the public welfare, was broad and comprehensive in its views and conceptions of public duty, and wielded great power for the public good. But this time has gone by. Now they too rarely represent a healthy political principle of any description. As a rule no words of condemnation have appeared in them denouncing the methods pursued by capitalists and bankers during the progress of this conspiracy, and notwithstanding the fact that these great moneyed institutions have withdrawn credit from the South, West, and Northwest, have deliberately refused to pay depositors their money, and have ceased to perform the ordinary functions of banking institutions in the collection and remittance of money, and have otherwise neglected and refused to discharge their duties to the public as contemplated and required by the very charters under which they exist. Not a word in condemnation was heard from our metropolitan press, because these acts are parts and parcels of the scheme to rob, oppress, and plunder the people of the West and South in order to force them to yield obedience to the money kings of the East.

Mr. President, I have heard it repeatedly stated on the floor of the Senate and elsewhere that large amounts of money were collected by Eastern banks and bankers and that they have actually refused to pay over such collections to the banks and persons for whom they were made: that when drawn upon for the money so collected they deliberately and arrogantly refused to pay it, giving as reasons therefor that "times were hard," that "financial conditions were dangerous," and that "we are afraid to part with the money." And, in addition to this, they have resorted to evasive plans and schemes unauthorized by law and in open violation of the very law under which they have their existence. They have associated themselves together and introduced and forced upon their creditors "certificates" and subterfuges of various kinds, never contemplated or authorized by law or by honesty. I particularly call the attention of the Senate to the following paragraph from the article quoted from the Manufacturer:

This financial trouble was superadded to the other, and it has caused great additional loss and injury. The question has been, from the first, how far this panic was natural and unavoidable, and how far it was artificial and manufactured.

It was observed that in those New York journals whose daily aim and purpose it is to serve the foreign and importing interests, regardless of the interest of the American Union, there was about four months ago a diligent effort to increase the natural anxiety caused by the outflow of gold. What are called "scare" heads, and "scare" paragraphs on the editorial pages, were used day after day, soon causing alarm as to the financial situation, and then developing that drain of the bank deposits which has been the main feature of evil in the money market. This "scare" was evidently artificial in a large measure. It is, moreover, believed by many that it was deliberately planned to excite public distrust, to give excuse for the assembling of Congress, and to exert "pressure" for the repeal of the Sherman act.

It was an "object lesson" to the country to convince business men, especially in the West, that the policy outlined in New York was the only way to escape further disaster. Mr. President, that the statements contained in this paragraph are true does not admit of a doubt. They are in harmony with the articles already quoted from New York papers and in line with actually occurring and existing facts. It presents a picture of wickedness and crime unparalleled in the history of financial operations.

Mr. President, we are not left to one incident; we are not remitted to one circumstance; we are not forced to rely upon one theory, or piece of evidence, to establish the truth of this criminal conspiracy. Turn whatever way we may—to the right, to the left, to the present, to the past—we find an abundance of evidence of the most conclusive character to establish this conspiracy, its objects and purposes. And now, having wickedly planned it, and having wickedly and in cold blood executed it, with resulting starvation, suffering, prostration of business, destruction of industries, the paralysis of commerce; having caused thousands and thousands of poor men, women, and children to be thrown out of employment, with an army of the unemployed in the streets of New York begging for bread; with the cries and lamentations of your victims ringing in your ears day and night, you turn and ask Congress to relieve you from the evil consequences of your own wicked and infamous conduct. And you assure us that the repeal of the purchasing clause of the Sher-

man act, which had no legitimate part in producing the troubles you complain of, will relieve the country from all its embarrassments.

Mr. President, as a link in the chain of circumstances tending to establish the existence of the conspiracy which I charge, and its objects and purposes, I quote further from the article in the Manufacturer:

> The hesitation of the Senate to repeal "unconditionally"—as the New York demand upon it reads—the silver-purchase clause has developed a new threat from that city that more object lessons will be given, if the Senate halts longer. Thus, in the money article of the Press of this city, on Saturday last, there occurs this statement:
>
> "There is more time money offered and some commercial paper is being sold, chiefly to country banks, at 8 and 10 per cent. It is well understood that the New York banks will not freely lend money until the Senate votes for the repeal of the silver bill."

Mr. President, it is difficult to understand and appreciate the full force and meaning of this paragraph. The threat to the Senate therein contained is, in substance, that unless we immediately repeal the purchasing clause of the Sherman act we are to be visited with another "object lesson." That such is the purpose of the men who are engaged in sowing the wind, in the first place, I have no manner of doubt. That they will be bold and wicked enough to attempt its execution I verily believe. With a full knowledge of what was threatened in April last, and in view of what has taken place since that declaration of war was made, and also bearing in mind the natural, universal, and ever-present insolence, intolerance, and cold-blooded tyranny of what is known as the money power, wherever it has reigned, there can be no doubt in the mind of any fair man about the execution of this new threat. Indifferent to the ruin they have wrought, careless of the happiness and rights of their fellow-men, unmoved by the spectacle of the poor and the distressed, earnestly resolved upon the accomplishment of their own wicked ends at whatever peril and however disastrously it may affect the rights of others, these men are prepared to recklessly and relentlessly enforce their "object lessons" until their purposes are gained.

Present conditions are not without a parallel in the history of the United States. There are those yet living who have some recollection of the terrible war waged by the old Bank of the United States against the Administration of Andrew Jackson. The present attitude of the national banks of the United States presents an exact parallel to the controversy between Andrew Jackson and the money monster of that day. The old institution was cold-blooded, selfish, insolent, intolerant, and reckless. It sought not only to control the financial operations of the United States, but endeavored to establish a mastership in every department of the Government. It even invaded the Executive Mansion, and threatened the very life of the President himself. It demanded servile obedience from Cabinets, and insolently stalked into the very Senate Chamber and boldly and arrogantly made its demands.

This is precisely what the same power is doing to-day. Its object is to turn the Executive Mansion into a temple of the money-changers and to convert the Treasury Department into an annex to Wall street. And it demands that the Senate of the United States shall be its craven agency in the accomplishment of its ends. The question, Mr. President, is whether the Senate of the United States shall be the refuge and shield of the people from wrong, injustice, and tyranny, as it has often been in times past, or whether it shall yield and abdicate its functions for the benefit of a relentless and selfish class. It is not so much a question whether the purchasing clause of the Sherman law shall be repealed, or whether it shall not be—however momentous the issues involved therein. A greater issue is presented, and it is whether government by the people of the United States shall continue, or whether the Government shall be delivered over to the dominance and control of an unscrupulous, arrogant, and selfish class. For one, so far as I am concerned, I intend to stand by the people and against classes, of every name and nature.

Even, Mr. President, if I were halting between two opinions upon the subject of repeal—if I were hesitating as to the line of duty I should pursue at this time—if I had doubts as to what the wishes and interests of my own constituents are—if I were uncertain of the line of policy to pursue in regard to the pending bill—the conduct manifested by the banking interests of the United States would alone be sufficient to determine my action and record my vote against their demands. If I doubted, I should resolve the doubt in favor of the people, against whose interests the plans of these gentlemen are aimed. In any event their attitude toward this bill would be sufficient warrant for any honest man to hesitate and pause for solemn inquiry as to the steps that he should take. And this Senate would do well to think often and seriously before yielding to dictates and demands of the character that I have endeavored to describe.

Mr. President, we can not rid ourselves of the conclusion nor divorce ourselves from the conviction to which I have directed the attention of the Senate by simply saying that the proofs offered "are simply newspaper articles." It is true they are newspaper articles, but they and the multitude of newspaper articles with which the Senate is familiar generally were written for a purpose. Many of them are articles that have been paid for. They are articles which reflect and represent the interests they speak for. They are not the vaporings of the idle and malicious. Nothing of the kind. They are declarations made for the benefit of men whose interests they represent. And there is no escaping that conclusion by any wave of the hand or mere declarations that they are irresponsible newspaper clippings or the statements of irresponsible men. No, sir; the effect of them can not be avoided in any such way. They simply reveal the objects, purposes, and interests of what is known as the money power with brutal frankness.

Let me again call the attention of the Senate to the closing paragraph of the article last quoted from:

> There is more time money offered, and some commercial paper is being sold, chiefly to country banks, at 8 and 10 per cent. It is well understood that the New York banks will not freely lend money until the Senate votes for the repeal of the silver bill.

Mr. President, I am not a very old man, but I am old enough to remember that there was a time in the history of this Government when we heard a great deal from certain men north of Mason and Dixon's line about the slave-driver, and the crack of the slave-driver's whip. Times have changed, sir. If it be true that at one period of the country's history we had a slave oligarchy in the South, it no longer exists.

Now we are afflicted and threatened with an infinitely more dangerous oligarchy—a money oligarchy—and the crack of the slave-driver's whip is no longer heard in the cotton fields of the South. It has been transferred to New York and Boston and Philadelphia, and other seats of the money power. And its crack is now heard in the temples of your money-changers and where fortunes are gambled for on your boards of trade, and like palaces of robbery and shame. These are the places where it is heard nowadays, and as a rule it is not in the hands of as brave, manly, and a generous people as in the days gone by; but it is wielded by the hands of cold-blooded Shylocks, whose prototype and ancestor Shakespeare found and immortalized by his genius.

There is one other fact, Mr. President, that I desire to call attention to in this connection, and that is, that notwithstanding all the clamor we have heard about the "money market" the fact is that the money market and the business industries of the country have been steadily improving since about the 1st of July. This is a fact that can readily be verified by the daily reports of Eastern newspapers, commercial journals, bank magazines, and financial papers all over the country. Upon an examination of these journals you will find that day after day and hour after hour the volume of trade, traffic, and commerce of every description has been on the increase. Day by day money has become more plentiful. Week after week the trade reviews are of the most encouraging character. Manufacturing establishments, after a period of idleness, have been put in active operation.

Gold has been constantly flowing into the country, so that at this hour we probably have more gold in the country or quite as much as we have had at any time in the last twelve months. And the New York, Boston, and Philadelphia papers, in their commercial reports, give evidence of an improvement in trade of every kind and character, which will no doubt continue in the absence of further "object lessons." There was and still is an abundance of money in the banks. Deposits are increasing by the million, loans are constantly increasing at a low rate of interest, and every movement gives clear indication of a return to order and prosperity. The new-threatened crusade may, and as a matter of course will, naturally, change these conditions. It will be instituted for the purpose of changing them. The people, and particularly Southern and Western Senators who are in favor of silver, must be treated to another "object lesson," and as a matter of course this object lesson can only be taught through the instrumentality and the devices that have heretofore been so disastrously used.

And why has this apparent season of prosperity set in? Simply because there was never any natural reason for the former disturbance. There never has been and is not now any legitimate financial trouble in our immediate presence. Hence the necessity for the object lesson for the purpose of deranging business, producing suffering, bringing distress upon the people in order to force an issue of bonds and to demonetize silver. And notwithstanding all the infamous schemes resorted to to emphasize this "object lesson" they were not sufficiently potent to prevent the resumption of trade and business according to the ordinary methods and principles. These conditions existing, the Senate is slow to act because there is not now and never has been a single hour since the Senate convened, a majority of its membership in favor of unconditional repeal.

Nor does a majority of the Senators to-day, nor has such a majority at any time, entertained the opinion that the Sherman law was the cause of the financial disturbances that we have had. Not even the "object lessons" have been sufficiently strong to induce the people or the Senate to believe anything of the kind. But the people have not yet suffered sufficiently, and have not sufficiently atoned for their independence in resisting the demands of the money lords; and I suppose the result will be a few more object lessons. And still we are gravely told by the newspapers, and sometimes inferentially by Senators on the floor of this Chamber, that the business interests of the country demand immediate action.

Mr. President, it may be important and useful to inquire what is meant by the "business interests" and the "business men" of the country. I have heard that phrase used so frequently in the discussion in this Senate that it has suggested to me the propriety of inquiring who these "business" men are that are demanding the repeal of the Sherman law. Judging from what I have heard, I would conclude that the millions of farmers, who raise the corn and the wheat, and the cattle and the hogs, and the millions of agricultural products that supply the land, these farmers are not to be classed as "business men." The blacksmith, the carpenter, the laboring man, and all those who are engaged in the arts and the sciences and the operation of the general industries of the country, are not to be regarded as "business men"?

Mr. President, the vast majority of the people in this country are included in the classes that I have named. Do they not constitute the great body of your citizenship, and are they not entitled to more consideration than the others? I think so. And yet they seem to receive less consideration at the hands of public journals and at the hands of certain politicians than any other classes. And I am sorry to say, Mr. President, that the classes for whom I speak now—the farmers, the mechanics, the laboring men, the men in the mines, and those engaged in the general productive industries of the country, the small merchant, the doctor, the lawyer, and the millions of people included in these callings—receive and have less consideration at the hands of the Federal Government than any other classes of our people. It is time that this condition of affairs was changed. We have had class legislation and class favoritism long enough; and now the people and their interests ought to be considered by the American Government.

Listening attentively to the debate in Congress, I have sometimes been amused at the nervous anxiety exhibited when the subject of national banks is mentioned. Stretch forth your hand and touch a national bank, and you are guilty of sacrilege. You have touched something holy, in the estimation of some people, and immediately you hear a storm of indignation as if you were invading the very holy of holies and rifling the temple of the sacred vessels. Advance a proposition which has some general tendency to benefit the whole people of the country, of making the laws uniform in their operation and in their results, that their blessings, like the showers of heaven, may fall upon all the people—the rich and the poor, the high and the low alike—and you are confronted by the proposition that you are treading upon holy ground, that you are imperiling the business interests of the country, and it must not be done.

Submit a proposition such as was recently done by the Senator from Missouri [Mr. COCKRELL] to authorize the Government of the United States to issue Treasury notes to take up and retire certain past-due national bonds—as we undoubtedly have a right to do—and instantly you are met with the proposition that "it can not be done; you are advocating the issuance of fiat money; you are jeopardizing the business interests of the country by the issuance of an irredeemable paper currency." And we were told that to do this would be highly improper, exceedingly injudicious, and absolutely unwise. But submit a proposition authorizing the issuance of more bonds or to amend the laws, giving to national banks the right to issue all the additional money that the country may need, and it is, in the estimation of these financiers and venerable statesmen, a highly proper thing. But for the Government to issue its own circulating medium is altogether improper.

It is entirely proper, in the estimation of many, to suffer an irresponsible agency, cold-blooded, selfish, and tyrannical in its nature, to control the monetary interest of the people. But when the Government undertakes to transact this business for itself and for the people you are forthwith met by some great constitutional or financial objection that is as idle and as unstable as the wind. All this must be relegated to the judgment and direction of our great financiers. And yet, Mr. President, I have never known in the whole course of my life of a great financier engaged in the banking business whose judgment I would be willing to accept over night when it comes to the formation of a great financial policy. I have never known one of them to make a prophecy respecting the financial operations of the Government that ever proved true, unless, indeed, it was of the kind and character we now have under consideration, where the bankers have deliberately and boldly formed a conspiracy to bring about certain conditions for their own advantage and and benefit.

I have some knowledge of prophecies made by "great financiers" in the past, and the result has never been favorable or complimentary to their judgment. The average "financier," as he is called, outside of the mere formula of loaning money, speculating in stocks, and collecting interest, knows less of the basic principles of monetary science than almost any other man in the community. And this is the result of his training and environments. In this connection, Mr. President, I want to direct the attention of the Senate again to the telegram received by me from the New York Times on the 9th of June last. It reads:

On equally good security money now loans in England at one-quarter the current rate in the United States. In the opinion of prominent financiers if the Sherman act is to be repealed immediate relief will result from prompt assurance thereof, and resulting in a flow of cheap money from London to America.

Now, Mr. President, if there were no other reason for my voting against the unconditional repeal of the purchasing clause of the Sherman act, I should do so for the very reason suggested in this dispatch, namely, that we should have a "flow of cheap money from England." I sincerely hope that this is a condition that will never exist in this country. We have had enough of "English cheap money." We have had too much of it. And conditions to-day would be infinitely better if we had never had a dollar of it. The fact is that we neither want nor need cheap money from any foreign country. What we do want and what we need—and a great deal more of it than we have—is the old-fashioned, Jeffersonian, constitutional, Democratic money, of gold and silver and greenbacks—greenbacks or Treasury notes issued by the Federal Government and not by national banks—gold and silver and greenbacks in abundance to supply all the reasonable wants of trade and commerce—that is the best money that can be possibly made.

It is good money; it is honest money; it is sound money, and the more we have of it the better. And the less "cheap English money" we have the better off we are. I am of the opinion, Mr. President, that the "English cheap money" which is now invested in watered stocks, fraudulent railroad bonds, and wild-cat securities of every description, is one of the causes of the financial derangement of the present time. I trust and earnestly hope that the time may come, and come soon, when this great nation of 65,000,000 freemen—this magnificent empire, with all its splendid possibilities, greater than all Europe; this great, aggressive, intelligent, and self-reliant people, the most highly educated, the most enterprising of which history gives any account; the most capable of self-government that has ever existed on the face of the globe, will have a financial policy of its own.

A political policy which shall be known as an American policy; a financial policy which shall be essentially American. What we most need at this time, Mr. President, is a broader, deeper, and more intense spirit of genuine Americanism, a business system adjusted to the needs, interests, and conditions of American citizens. In other words, an American political and social system, an American commercial system, a system in all respects in harmony with the greatness and spirit of our own people, in order that we may become what we ought to be absolutely independent of the nations of the earth. Unfortunately, a false system of political economy and vicious business methods has mortgaged us to Europe and enslaved our commerce and trade, and made us the financial slaves of England.

These shackles and bonds which paralyze and enslave us must be broken before final and complete commercial independence and prosperity come to us. I hope the time will come soon, when we shall be absolutely free from all the nations of the earth and have no union with Great Britain, except such as shall come from history and tradition. No nation can ever grow great, wise, or independent that is financially and politically subordinate to another. No people can ever rise to the highest degree of intelligence and manhood so long as its financial system is subject to the dominance, control, or interference of a foreign power. So the best possible thing that can happen to us as a people, the best thing that can happen for the benefit of our children and our children's children, for all generations to come, is that we shall end all financial dependence upon the outside world. When we become the masters of our own financial as well as our political conditions we will be in a position to assume among the nations of the earth the rank, dignity, and power which our resources, intelligence, thrift, industry, manhood, and courage entitle us to occupy, and not till then.

Turning again, Mr. President, to the question of financial prophets, it is to be remarked that one of the peculiarities of these

financial gentlemen is their habit of assuming a monopoly of knowledge about everything. The representative of this class promptly assumes that he knows everything about finance and that you know nothing. He is of the opinion that by virtue of his money-changing and stock-jobbing operations he has become absolute master of the science of finance in every respect whatever. The result of my observation is that as a rule they know less of the real laws of finance and are the most unsafe and unreliable judges of broad financial operations and principles, as well as governmental science, of any class of people on earth. I have a recollection of some singular financial prophecies connected with political actions and results occurring within the last twenty years.

In the great political contest of 1872, when we Democrats so loyally supported Horace Greeley for President of the United States—a circumstance of which I have always been proud—our Republican friends became somewhat alarmed as to the possible result of that Presidential campaign. And they felt constrained to call upon a financial prophet to give the country some reasons why Horace Greeley should be defeated and why Gen. Grant should be reëlected. If my memory serves me correctly, they called forth a prophet for that occasion, a gentleman of the name of Jay Cooke, who had been, I believe, a banker and a Government agent, and who was supposed to have grown enormously rich through this agency—a highly estimable gentleman of distinguished talents—and, as suggested by my friend from Delaware [Mr. GRAY], Mr. Cooke thereafter grew enormously poor; and I shall tell you how that happened.

Our Republican friends called upon Mr. Cooke to express his opinion as to the financial situation and the probable disasters and financial results which would overtake the country in case of the election of Mr. Greeley. So, in the latter part of the campaign a circular letter was issued by Mr. Cooke, a financial address from a Republican standpoint, advising the electors of the country to cast their votes for Gen. Grant; that the election of Mr. Greeley would be disastrous, and would dangerously disturb the financial interests of the country; that Mr. Greeley was not a financier; that he was without experience in the practical affairs of life, had no acquaintance with financial laws, and that it would be a serious mistake to elect him to the office of President. But, on the other hand, if they would vote for Gen. Grant, keep the Republican party in power and maintain its financial policies, continued peace and prosperity would hover over the land, and the smiles of Providence would be continually and perpetually upon us.

Unwisely, as people sometimes do, they obeyed the advice of this prophet and did vote for Gen. Grant. But notwithstanding the prophecy of Mr. Cooke that in the event of the election of Gen. Grant peace, happiness, and financial prosperity would continue, within less than a year from the inauguration of Gen. Grant we had a serious financial panic, in the very face of the predictions of Mr. Cooke. And the singular thing about it was that the very prophet who had so predicted was one of the earliest victims of the disaster which he had predicted would not occur if Gen. Grant should be elected. The result was that Mr. Cooke became poor because of uttering false prophecy—the natural and proper penalty for the false prophet.

Mr. President, I remember another instance which occurred during the Presidential election of 1876. Our Republican friends were much disturbed at the possible result of that campaign, and they called in another prophet and political financier. He scanned the political horizon, and in the deep and far-away skies he saw visions of peace and happiness and prosperity to the country if Mr. Hayes should be elected and Mr. Tilden should be defeated. At the solicitation of our Republican friends he put forth flaming manifestoes, advising the people of the country of their prosperous and happy condition and assured them of a continuance of that peace, happiness, and prosperity in the event that Mr. Hayes should be elected.

Upon the other hand, he pointed out in lurid language the calamities and misfortunes that would befall the country and ruin our people if Mr. Tilden should be elected, and particularly if we should adopt his 3-per-cent bond policy. This great political financier and prophet, this master in finance, was Henry Clews, of New York, a banker, broker, stock-dealer, a gentleman of character and intelligence, standing high in his business vocation, and enjoying, undoubtedly, the confidence and respect of his fellow-citizens. I believe Mr. Clews had been a Government agent for the sale of its bonds and other securities, and that out of it he had accumulated, by the toil and sweat of his brow, a handsome fortune; just how much I do not know, but he was the chosen prophet of all other prophets selected by our Republican friends for this special occasion. Like Saul among his brethren, he stood head and shoulders above them all. And as a matter of course, he prophesied in favor of the Republican party and the election of Mr. Hayes. The result was that the people, as a matter of fact, ignored the prophet and his prophecy and elected Samuel J. Tilden to the office of President. Our Republican friends by some manipulations of doubtful propriety, but with which they seemed to be entirely familiar, got the advantage of us, and gave the office to which Mr. Tilden had been elected to Governor Hayes, of Ohio. Following this result retributive justice again came to the front. With smiting hand she justly and righteously punished this second false prophet.

So our Republican friends deliberately cheated the people out of their man for the office of President and installed another in his place, and because of this false prophecy, and this great public wrong, divine justice visited the country with swift and heavy punishment. Mr. Hayes had not been in office more than about six months when we were overtaken by the great financial crash of 1877, which more seriously affected the interests of the country than any occurrence of like character that had happened in many years, and curiously enough history repeated itself, and the very prophet that had been selected to warn us of the dangers that lay in front of us in case of the election of Mr. Tilden—the very man who had been selected as high priest and prophet to warn us against Mr. Tilden's financial methods, was the very first man to bend to the storm. History does repeat itself. It is sort of a retributive justice, but another proof "that justice walks with leaden feet, but strikes with an iron hand."

Mr. President, the financiers of the present are false prophets. They are endeavoring to mislead the people. They are endeavoring to mislead us to the injury and ruin of the country. They have selfishly and wickedly "sown the wind," and are justly and properly "reaping the whirlwind." They are now beseeching us to relieve them from the burdens and from the just penalties incurred by reason of their own ill-advised conduct. I am not in favor of extending to them any benefit or advantages whatever resulting from their own cruel and wicked policy.

Shall we adopt the plan of giving special privileges and advantages to bankers or to any other class of citizens and permit them to use those rights, privileges, and prerogatives in such a manner as to produce harm and hurtfulness to the people and imperil and destroy their business industries through manipulations started originally for the very purpose of advancing their own personal interests? I do not believe such a policy would be either wise or just, and if such special privileges and advantages are accorded to any class of men and they shall abuse them to their own hurt no act of Congress ought to shield them from the consequences thereof. But in this as in all other cases swift and speedy punishment should follow the commission of the wrong.

Mr. President, I think I may be pardoned for diverging at this point from the line of argument I had intended to pursue in order to say that just so long as we continue to permit any sort of alliance and association between private individuals and the Government of the United States in financial operations, we shall have financial troubles. It is the history of the world repeated a hundred times, and always with the same result; and it always will be so, so long as human nature is actuated and dominated by the laws of avarice and selfishness. Whenever you unite the financial and political power of the Government with the interests of private individuals and corporations, you are sowing the wind and will as sure as death reap the whirlwind in the end. There can be no safe operation of any of the powers of Government when connected with individual enterprises.

Hence, Mr. President, I am unalterably opposed to a national banking system of any kind or character or any banking system subject to the supervision or control of the Federal Government. It is wrong in principle, dangerous in practice, and fatal in results. It may be possible for a man to be a Democrat and favor the existence of national banks; it is possible that a man can believe in the Christian religion and wholly reject the divinity of Christ, but I do not understand how it may be so. My theory of Democracy forces me to conclude that it is utterly impossible for a man to be a Democrat and at the same time believe in the principle of national banks: it may be possible that a man can be a Democrat and believe in a protective tariff, but to my mind the proposition is an impossible one.

It may be possible that a man may be a Democrat and loyal to the Constitution of his country and at the same time believe in a single gold standard, in the very teeth of the Constitution. Yet I confess that to me the proposition is a doubtful one. He may believe in a national bank and be a good citizen; he may believe in the protective tariff and be a good citizen; he may believe in the gold standard and be a good citizen; but to believe these things and be a good Democrat is to my mind incompatible. There may be harmony between good and evil, but I do not understand it. There may be no conflict between right and wrong, but I do not so understand it. It may be that there is no antagonism between virtue and vice, but I am unable to so understand it.

In my judgment the theory of national banking of any name or nature is contrary to every principle of Democracy; contrary to every Democratic platform that was ever written: and no instance can be found, so far as my knowledge goes, where a Democratic convention, State or national, has ever declared in favor of national banks. In my judgment the principle of national banks is absolutely at variance with the letter and spirit of the Constitution, as truly and completely so as is the right to protection for protection's sake. I have heard it said that there is a very great difference between our present national banking system and the old national bank of 1816. As a matter of course there were differences in the two systems, but in principle they were precisely the same. In my judgment the existence of any national banking system is contrary to the genius and spirit of our institutions and at war with the history and traditions of the Democratic party.

It is a constant menace and challenge to the financial operations of the Government itself. At every turn it challenges the safety, security, and happiness of the people. There is but one safe method to pursue in order to preserve our liberties and the rights of the people and the safety and security of the Government itself and that is to perpetually divorce the Government from all banking operations.

Mr. McPHERSON. Will the Senator yield to me for a question?

Mr. MARTIN. Certainly.

Mr. McPHERSON. The Senator knows very well that the system of national banks is one which the Democratic party have inherited. They are really not responsible for it as a party, and I should like to ask the honorable Senator, inasmuch as we have no other appliance, no other machinery for banking today, except that of national banks, and as we must have something to meet all the mutations of confidence and credit—is it not the safest and best course to maintain the national banking system until we find something else to take its place?

Mr. MARTIN. Mr. President, I take great pleasure in answering the question of my friend from New Jersey, because I have great respect for his opinions and character, and I am glad the suggestion I made brought him to his feet, for I want to get him out of the slough of despond and place him on safe Democratic ground. The Senator says, and says properly, that the existence of national banks is a matter for which the Democratic party is not responsible. He is right in that. They seem to have grown out of the conditions that appeared to make them necessary at the time they were instituted, but in my judgment it was a deliberate violation of the Constitution, a violation of every principle of sound government, financial and political.

The PRESIDING OFFICER. The Chair suggests to the Senator from Kansas that unless he addresses the Chair it is impossible for his remarks to be heard.

Mr. MARTIN. I thank you, Mr. President, for the suggestion. I shall endeavor to conform to it hereafter, but I was deeply interested in answering the question of my learned friend from New Jersey, and inadvertently turned my face his way. As a further answer to the Senator from New Jersey, I say unhesitatingly that I believe the wisest and best thing the Democratic party can do is to repeal the entire body of our national banking laws, and the quicker this is done the better. And while it is true that the national banking system is an inheritance for which the Democratic party is not responsible, the party is not bound to accept the inheritance or to become chargeable for its longer continuance. It is better for the public interest that we reject a bad inheritance at the earliest possible moment, and be thereby relieved from all responsibility for its further existence.

I understand and appreciate the fact that an immediate and utter destruction of all national banks would produce some inconvenience and trouble. Nevertheless the laws can be immediately repealed, saving to existing banks the right to continue in business until the expiration of their present charters, so that no additional banks can be hereafter organized. And while it is true that the plan suggested might cause some financial disturbance, the permanent dangers to result from their continued existence would more than counterbalance any temporary inconvenience. If the body be afflicted with a cankering sore, the sooner the sore is removed the sooner the body will be restored to a sound condition. Whatever conditions of a dangerous and perilous nature we find existing in the body politic, wisdom and prudence dictate that they should be removed at the earliest possible moment.

The Senator from New Jersey [Mr. McPHERSON] asks me what agency I would substitute for national banks. I answer that, while I am not what is sometimes termed a "fiat-money" man, I do believe in gold and silver, the constitutional money of the United States; and I believe it perfectly competent for Congress to authorize the issue and use of the old-fashioned Treasury notes. I do not believe that the United States or any State can make anything except gold and silver a legal tender for the payment of debt, notwithstanding the judgment of the Supreme Court of the United States to the contrary. However, as a good citizen, I accept the judgment of the court in that behalf as final and conclusive.

I accept this judgment of the court as I do many others that have been made. I do not believe that by judicial legislation immortality and individuality can be given to a corporation, thus clothing it with the rights of constitutional citizenship. Nevertheless we accept the decision as a fact and yield respectful obedience to the decree. I do not believe that a public officer of the United States, in the discharge of a doubtful public duty, or otherwise, can deliberately kill another citizen and be exempt from trial or other responsibility to the laws of the State in which the killing occurred.

To my mind the proposition is a monstrous one, and emphasizes the dangers of "judicial legislation," and the natural tendency of judicial tribunals to cling to power and grasp at jurisdiction. I would substitute for national banks gold and silver, and Treasury notes issued by the Government of the United States in the ordinary transaction of its business, and in accordance with the provisions of the Constitution. And if local banking institutions are convenient and necessary for the transaction of the business of the country, as I think they are, I would leave the matter of their establishment and regulation to the several States. The people of the several States are certainly capable of regulating their financial affairs in a safe and convenient manner. And one supreme advantage in the establishment of State fiscal institutions would be the decentralization of the money power in the United States.

A few days ago the Senator from New Jersey [Mr. McPHERSON] declared from his seat in this body that he was "opposed to converting the Treasury Department of the United States into a junk-shop." I agree with him on that point. I do not believe it any part of the duty of Congress to authorize the purchase of either gold or silver for any purpose. I do not think that Congress possesses any more power to establish a depository for gold and silver than it has to establish a depository for corn or wheat or cotton. Hence I have always opposed and am still opposed to the principle involved in what is known as the Sherman silver-purchasing act. I believe it is the purpose of the Constitution that Congress should coin money and regulate the value thereof, and of foreign coins, and not establish a depository for the reception of the same.

I believe it was the intention of the framers of the Constitution that the money of the country should be gold and silver, and that it should be coined upon terms of equality, without limitation or condition so far as the amount is concerned. Beyond this, I am in favor of the restoration of the old-fashioned democratic system of using Treasury notes or greenbacks, and I believe the Constitution authorizes and justifies the issuance of such notes, and to such an extent as may be necessary to meet the wants of the Government and to accommodate the commerce and business of the country.

I do not share the opinion that has been so frequently expressed in the Senate that the free and unlimited coinage of silver would produce too much money. I believe that the great commerce of this country will justify the coinage of every ounce of silver at the present ratio of 16 to 1 that can be produced in this country or elsewhere. Other gentlemen think differently. I respect their opinions. I may be mistaken. I may be right—I think I am—nevertheless it may be that I am wrong and that our Eastern Democratic brethren may be right. This is a matter that can only be determined by time and experience. I have not observed anything in the past history of the country that will induce me to believe that there is any danger to be apprehended from the free and unlimited coinage of silver.

I admit that there are arguments and conditions which should be fairly considered on both sides of this question. That there is a conflict between the East and the West and the East and the South in regard to this matter is manifest. It is not only a conflict of opinions, but it is a conflict of interests. And because it is a conflict of interests, a conflict between debtor and creditor, a conflict between borrower and lender, the greater the reason why some fair and honorable settlement should be made of this vexed question.

Mr. McPHERSON. The Senator is sure he is right on the greenback question?

Mr. MARTIN. There is no doubt about that.

Mr. McPHERSON. The Senator acknowledges that he may be wrong on the silver question, but on the greenback question he knows that he is exactly right.

Mr. MARTIN. Yes. I am absolutely certain that I am right on the greenback question. I think I am right on the silver question. But I mean to say that there is a possibility of my being wrong respecting the unlimited coinage of silver at pres-

ent. I do not believe, however, that the Senator from New Jersey and myself will disagree upon the question of the constitutional demand and requirement for the use of both gold and silver as money. Nevertheless, I understand the Senator from New Jersey to be opposed to the further coinage of silver at present under any conditions; while I am in favor of the continued free and unlimited coinage of silver at its present ratio. If I am correct in stating the position of the Senator from New Jersey, it would seem that he is in favor of legislating silver money out of existence, in violation of the letter and spirit of the Constitution.

But in view of the wide differences of opinion that exist at present respecting the coinage of silver upon the theory that I have suggested, and for the sake of producing harmony and peace in the ranks of the Democratic party, and throughout the country, and out of a due regard for all the interests involved, I should be willing to accept, in lieu of the present bill, any compromise measure that would be reasonably fair and just to all sections of the country. If it shall be the general judgment of Congress that the free and unlimited coinage of silver at the present ratio of 16 to 1 would be dangerous, and would likely imperil the business interests of the country, at an early day I am willing to accept, for the time being, some other fair ratio.

I am frank to say, however, that in my judgment the mere matter of ratio plays but a small part in the solution of this question. If it shall be the general opinion of Congress that the unlimited coinage of silver would endanger the business interests of the country, then in the interest of peace and for the purpose of doing justice to all sections of the land and dealing fairly with all the interests involved, I would accept, for the present, a limitation of the amount of coinage per month or per year. No man can say with an absolute certainty what would be the result if either or any one of the suggested plans were adopted. We can learn from experience alone what the result will be.

What I am particularly contending for, Mr. President, is an unmistakable vindication and establishment of the constitutional doctrine of the free coinage of silver. I am anxious to get rid of the false and pernicious doctrine that has embarrassed and paralyzed and uniformly discriminated against silver as money since 1873. At that time it was wickedly, unjustly, unfairly, and unconstitutionally stricken down in the house of pretended friends; destroyed as a money metal and relegated to the domain of commerce. And this is the material fact that has contributed from thence to the present time to the supposed depreciation of the value of silver. And I undertake to say, and without fear of successful contradiction, that if both metals had been continuously treated in the constitutional manner as money metals upon a basis of equality and fairness and without discrimination for or against either, that no such disparity in value would exist as we find to-day.

It is simply absurb to say that silver is worth as money only so much per ounce as compared with gold. In a commercial sense that is true. In a money sense it is not true, and never has been. It is true because by unjust, unwise, unfair, and unconstitutional methods, silver has been discriminated against, and gold made the favorite metal. If our financial policy had been reversed in 1873 and gold destroyed as a money metal as silver was, and made practically an article of commerce, and silver had been made the standard of value and receivable in the payment of all debts public and private—in other words, if silver instead of gold had been made the money of the country, no such difference would have existed between the value of gold and silver as we find to-day.

Upon the contrary, the advantage would have been on the side of silver, because of the fact of this favored legislation. The value of any metal as money depends largely upon the extent of its usability; and the decree of government fixing it legal status and the extent of its usability in payment of all debts public and private—in other words determining its legal-tender quality—is more potent and effective than any merely supposed value of the article itself. As a matter of course I am now speaking not of paper but such metals as are generally recognized by the civilized and trading nations of the world as money metals.

Mr. McPHERSON. If the Senator will pardon me——

Mr. MARTIN. Certainly.

Mr. McPHERSON. I know that the Senator's Democracy is of the cordial, ardent, and energetic kind. I should like to ask the honorable Senator what he would recommend to a Democrat—such a Democrat as I have just described—who would violate the very terms, conditions, and demands of the Democratic platform, made in national convention assembled by the Democratic party, demanding that if we shall proceed to coin money from the two metals, gold and silver, they must be intrinsically and exchangeably equal? The Senator speaks of "coining" at the rate of 16 to 1, when to-day it requires 28 pieces of silver to 1 of gold to make them intrinsically and exchangeably equal. He certainly would not want me to violate the platform to that extent?

Mr. MARTIN. Mr. President, I feel it not only a duty but a pleasure to answer the question of my friend, the Senator from New Jersey. He asks what I would do with such a Democrat as he is, who believes as he does. The first thing I would do would be to induce him to repent, believe, and be baptized. Then his political and financial sins will be forgiven. The Senator speaks of the impossibility of coining silver and gold upon terms of equality, because he claims that to-day it requires 28 pieces of silver to 1 of gold to make them intrinsically and exchangeably equal.

Mr. President, as a commercial proposition the statement of the Senator may be true. As a monetary proposition it is not true. Because, as a matter of fact, every silver dollar that has ever been issued by the American Government and every silver certificate that has ever been issued by the Government, whether redeemable in coin or bullion, is for all monetary and exchangeable purposes worth 100 cents on the dollar, measured by his gold standard, in every spot on the American Continent. So that his proposition as a statement of monetary conditions is not correct. The commercial difference exists largely for the very reasons I have already mentioned, and those reasons are: Because, of the universal use and debt-paying power accorded to gold by law, and the unwise and unjust and unfair limitations imposed by law against silver in the limitation of its use and debt-paying power. And if the laws of the country would place the two metals upon a plane of equality, so far as their coinage and use as money metals and debt-paying power is involved, no such difference in value as suggested by the Senator from New Jersey would or could possibly exist.

I am also glad, Mr. President, that the Senator has called my attention to the demands of the Chicago Democratic platform upon this subject. I listened a few days ago with deep interest to his interpretation of the Chicago platform and its demands. I do not know whether my friend from New Jersey is a lawyer or not. But judging from the course of his argument the other day, I infer that he is not. I also listened a few days ago to the very able argument of the distinguished Senator from Delaware [Mr. GRAY] upon this same question; and I always pay more attention to the remarks of the Senator from Delaware than almost anyone else, for the reason that I have the very highest estimation and appreciation of his judgment, character, and fairness.

And I must confess that I was somewhat amazed at the construction placed by my friend from Delaware upon the Democratic platform. As a matter of course, his argument was happy, agreeable, and interesting, as everything he says is, but it reminded me of a distinguished judge, who upon one occasion heard a very distinguished lawyer argue a case before him. And after the lawyer had concluded the judge was asked by a brother attorney his opinion of the argument to which they had listened. The judge replied by saying that he had never heard in all the course of his life so much bad law so pleasantly stated in the same length of time. It occurred to me that that was the exact condition of the argument of my friend from Delaware.

Mr. President, I have the Democratic platform adopted at Chicago last year before me. I have read it with care, and have endeavored to ascertain to the best of my ability what it means, and I think I have fairly succeeded in that respect. In their speeches in the Senate a few days ago the Senators from Delaware [Mr. GRAY] and New Jersey [Mr. McPHERSON] insisted that we must pass this bill in its present shape and without condition, because the fifth subdivision of the Democratic platform distinctly and unconditionally demanded the repeal of the purchasing clause of the Sherman act. I deny this. There is no such demand contained in that section or any other section or subdivision of that platform.

In the first place, one would naturally assume that in the formulation of that platform, those matters that were regarded as the most important would be the first treated of; and that all public policies would be considered in the platform in the order of their importance. This is a fair rule of interpreting any statute, contract, or written document. If we adopt this rule of interpretation and apply it to this platform, we find that the Democratic national convention did not attach the importance to the Sherman law that the friends of the present bill claim. If the repeal of the purchasing clause of the Sherman act was regarded as so vital and important to the welfare and interest of the country, it would undoubtedly have been the first proposition considered in the platform, certainly the second. Upon the contrary, it is the fifth proposition.

Now, this method of argument, as a matter of course, is not conclusive; but it is nevertheless a potential factor, and one that must be taken into consideration in the determination of the

amount of importance attached to the Sherman law by the Chicago convention. If it be true that the convention regarded the Sherman law or the purchasing clause thereof as being so dangerous as to challenge the welfare of the country and imperil its financial interests and industrial conditions, it is but fair to say that it would have been the very first subject treated of in the platform. But it was not. Tariff reform was by that convention regarded as of paramount importance. Opposition to Federal election laws was of supreme concern. But the Sherman law was relegated to the position of fifth in line of importance in the judgment of that great convention. Mr. President, my friend from New Jersey, and every other Democrat who participated in the campaign of 1892, knows as a matter of fact, that the great, overshadowing issues in that campaign were, first, the repeal of the McKinley law; second, the prevention of any force-bill legislation by our Republican friends.

The money question was discussed but little, if any, in New England and in the Northern States east of the Allegheny Mountains; but it was discussed and thoroughly considered in the southern, southwestern, and western part of the Union. And these sections of the Union were as deeply and as vitally interested in the money question as they were in the subject of tariff reform and in opposition to Federal election laws. And I may here add, that in my judgment, if the candidate of the Democratic party had at any time during that campaign written a letter or made a statement respecting his financial views, of the character embodied recently in the letter written by him to the governor of Georgia, or if the Democratic party at Chicago had assumed that position in its platform, or if the Democratic campaign orators throughout the country generally had made such speeches upon the silver question as we have had from the Northeastern Senators in this Chamber within the last two months, the Democratic party would have been utterly defeated.

If, during the last campaign, the Democratic party had assumed the position upon the money question now occupied by the Senator from New Jersey and those who act with him, Benjamin Harrison would to-day be President of the United States. Mr. President, in further answer to the question of the distinguished Senator from New Jersey [Mr. MCPHERSON], I repeat that in the construction of laws, of contracts, and agreements affecting the rights and interests of States or individuals, the natural and logical order of procedure would be to put in the foreground those things which are deemed fundamental; to name first the pivotal facts, around which details must cluster. Fundamental purposes are always placed in the beginning of the contract, statement, or agreement, while the incidental conditions take their places naturally and orderly in the subsequent parts of the contract or agreement. The Sherman law occupies no such important relation to the Democratic platform.

It is further insisted, Mr. President, by some of the friends of this bill that the different parts and subdivisions of the several sections of this platform must be separated one from the other; that each section contains many subdivisions, and that each must be treated as an independent proposition. One may be enacted to-day, another to-morrow, and a third some other day, and thus, by piecemeal, the contract may be enforced. I am amazed that a lawyer would advance a proposition of this kind. It is unsound in law, wrong in morals, and unjust in enforcement. To interpret a law, contract, or agreement upon such a basis would not be tolerated in any court of justice anywhere. In the first place, in the formulation of that platform, and particularly in the formulation of the fifth section, the Democratic party sought to announce a financial theory, a plan, a scheme of finance.

The reference to the Sherman law is incidental—not the basis of a financial scheme, and the plan was intended to be executed as a whole; not in parts, not in subdivisions, not by paragraphs. And this is manifest from the very language of the section. Good faith, common fairness, homespun honesty, require that the Democratic party and the Democratic members of Congress and the Democratic Executive of the nation shall construe this section of the platform according to its letter and in harmony with the manifest will and wishes of the convention that framed it. In the first place, and it has been repeated over and over again, that the Democratic national platform unequivocally demanded the repeal of the Sherman law; and I have even heard it stated that "the Democratic national platform demanded the immediate and unconditional repeal of the purchasing clause of the Sherman law."

I deny that the Democratic national platform makes any such demand. There is no such declaration in it. Not a word to be found that justifies any such conclusion. In fact, there is no declaration or demand of that kind to be found in any part of the platform. And I am unable to understand why it is that able and distinguished men of long experience and service in this body should have fallen into the habit of making such statements. But, as a matter of fact, what does the platform say upon this subject? I will read, and comment as I proceed:

We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future, which should make all of its supporters, as well as its author, anxious for its speedy repeal.

Mr. President, this great convention of the greatest political party on earth, the greatest political party that ever existed, met in the city of Chicago in national convention in June, 1892. Up to and at that time no Democrat in or out of that convention—not even the Senator from New Jersey [Mr. MCPHERSON], who was a member of the convention—had discovered that there had been any unusual dangers or perils in the operations of the Sherman law. Nor had the convention or the Senator from New Jersey up to that time discovered that it was fraught with a then present danger of any kind. All that the convention said, all that the Senator from New Jersey said (because he was a member of the platform committee and agreed to the proposition which I have read) was that the act was a—

cowardly makeshift, fraught with possibilities of danger in the future—

Not that it had produced any danger; not that any evils had resulted from it; not that any were then threatened, but simply that it was—

fraught with possibilities of danger in the future.

There was not a word or sentence in that platform condemning the Sherman law because of any evil results it had produced. There is no declaration to be found in the platform that it was even likely to produce dangers or disaster in the future. The sole declaration was that it was—

a cowardly makeshift, fraught with possibilities of danger in the future.

Mere possibilities, and nothing more. I have heard it repeated in this Chamber over and over again that the Democratic party has placed itself on record condemning the Sherman law as being the cause of all our financial disaster. I deny that the Democratic national convention said a word of the kind. There was nothing in the platform from beginning to end that justifies, wholly or partially, the statement.

Mr. President, I agree with the platform that the Sherman act of 1890 was a "cowardly makeshift." It was a cowardly attempt to evade political responsibility. It was a dishonest effort to save the Republican party from defeat in the election of 1892. It was a wicked and cruel measure, designed in part and by at least a part of those who voted for it, to complete the scheme begun in 1873 of utterly destroying silver as a money metal in this country.

And, Mr. President, I denounce the bill now under consideration as another cowardly makeshift to undo in part the wrongs of the former "cowardly makeshift," and for the further wicked and unjust purpose of forever and eternally eliminating silver as a part of the constitutional coinage of this country.

So, Mr. President, up to the time that that platform was reported to the convention for adoption by the appropriate committee, and of which committee my distinguished friend from New Jersey was a member, and in whose deliberations he participated, and in the presentation of the platform to the convention he was a party and for which he voted, neither he nor the convention nor anyone else had ever heard, suspected, or believed that the Sherman law had produced any serious financial disaster, or immediately threatened trouble in the United States. No one had discovered the fact that it was liable to imperil the business industries of the country, or that we were standing upon the brink of bankruptcy and ruin. But the convention said that the law was "fraught with possibilities of danger in the future," not that it was certain to produce any disaster or trouble; not that it was surely liable to do so; not that it would naturally or logically bring about any of the wrongs at present laid at its door, but that it was simply "fraught with possibilities" of such danger.

I agree, Mr. President, with that declaration. I believe that it is a bad law in every sense of the word and in every aspect of it. I believe that it is "fraught with possibilities of danger," but not of the kind or character or for the reasons suggested by the friends of the pending bill. It is fraught with the certain danger of impairing the usefulness and value of silver as a money metal. It was designed for that purpose. It is fraught with the danger, necessarily, of forcing the Government to depart from the constitutional method of treating silver as money. It is fraught with the possibility of ultimately destroying silver as a money metal, to the immeasurable hurt of the great body of our fellow-citizens not engaged in banking, stock gambling, and kindred pursuits. The platform further says that the law is—

a cowardly makeshift, fraught with possibilities of danger in the future which should make all of its supporters, as well as its author, anxious for its repeal.

Mr. President, I am not one of its supporters. I never have been. I am not its author. No Democratic Senator on this floor

was its author. No Democratic Senator on this floor is its supporter, and none ever was. It occupies, in the legislative history of this country, the unique position of having neither friend, guardian, nor defender, and no one seems to be willing to assume the role of father; and I apprehend that but few, if any, would be willing to be recognized as its mother. As to the question of its paternity, that must be referred alone to the distinguished Senator from Ohio [Mr. SHERMAN.] So much, Mr. President, for the Democratic national platform and the Sherman act of 1890.

The next declaration in the platform reads:

We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discrimination against either metal or charge for mintage. But the dollar unit of coinage of both metals must be of equal intrinsic or exchangeable value, or be adjusted through internation l agreement or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts. And we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of an unstable money and a fluctuating currency.

So, Mr. President, we find that this convention declared in favor of the—

use of both gold and silver as the standard money of the country.

This is sound Democratic doctrine. It places the party in harmony with the Constitution, in harmony with its history and traditions.

The Constitution says that Congress shall have the power to—

coin money, regulate the value thereof and of foreign coin; and no State shall make anything but gold and silver coin a tender in the payment of debts.

These constitutional provisions are alike binding on Congress and the several States of this Union.

The platform says:

We hold to the use of both gold and silver as the standard money of the country.

Not to gold as the standard, not to silver, not to either metal partially or wholly, not to either one alone, but to both. They walk hand in hand, as faith and charity. They are as closely allied as truth and justice. And they are bound as closely and as perpetually together by constitutional ligament as were the "Siamese twins," and no casuistical reasoning or metaphysical quibbling can ever separate them.

Mr. President, in the interpretation of the law and of contracts and agreements and all papers of a like character we must apply broad and comprehensive rules, not narrow, illogical, or technical reasoning, rules free from quibbling and broadly and comprehensively in harmony with the great objects and purposes to be attained—justice, right, and the public good. We must interpret the words contained in such laws, contracts, and agreements agreeably with their common and ordinary acceptation amongst men. The sense of the whole must be expressed as men usually express their thoughts, their wishes, their purposes—in the plain, ordinary language of the country. This is the rule of interpretation that the law fixes. In addition to that, the law requires as a universal rule that in the construction of laws, contracts, and agreements the whole of a paper relating to any particular subject—the whole of the law relating to any particular matter—shall be construed together; that is, as a whole, in order to gather the full meaning and purpose and intent of those who are to be bound by it.

It is contrary to every principle of law and justice that one party to a contract containing mutually beneficial conditions and fixing mutual rights shall be permitted to enforce such contract against the other party in such manner as to exclude such other party from presenting and litigating, in the same suit, his corresponding rights under the same contract. Under the same law, each man must have his day in court, each in the same suit to prosecute and defend whatever rights each may have against the other. To permit one neighbor to enforce the provisions of a mutual contract against another neighbor without permitting such other neighbor to enforce other provisions of the same contract against his adversary, would be unconscionable and unjust.

The Senator from North Carolina [Mr. VANCE] aptly and truly stated, in his recent speech in this body, that the fifth section of the Democratic platform was intended to formulate a Democratic policy as a whole; to fix a financial scheme and theory, to be applied in the administration of the Government. And that in justice and fairness this financial plan should be adopted as a whole, not by piecemeal, not by "cowardly makeshifts" dealing with one item at a time. And in this the Senator was correct. Such piecemeal legislation is neither wise, prudent, nor patriotic. It is essentially unjust and it is particularly unfair in that class of legislation where it is manifest that justice can only come through compromise and concession.

Mr. President, it is not alone the gold and silver already coined that is to be the "standard money of the country." No man ever dreamed of any such interpretation as that. It would hardly be fair to impute to any fair-minded man of ordinary intelligence a contention for a construction of that sort. But that convention, Mr. President, meant to include in that declaration not only the gold and silver then in use, but that the coinage of gold and silver should thereafter be continued, and should be used as standard money in the same way. Because it not only declares in favor of the use of both gold and silver as the standard money of the country, but it declares in favor of the coinage—

the coinage—

Referring to the future—

of both gold and silver, without discrimination against either metal or charge for mintage.

So good faith requires, and party honesty requires, the contract demands that the gold and silver coin of the country shall constitute its standard money, but that we shall thereafter continue to coin both gold and silver, without discrimination against either metal, or even mint charges, and that such money shall constitute the "standard money of the country." The use of the words "standard money" in this platform means lawful money—money that shall be receivable in the payment of all debts, public and private—it means constitutional money, that is the money that was contemplated by the convention, and it was intended that its coinage should be continued.

Mr. President, as before stated, there are two other rules of construction that are applicable to all written instruments, laws, contracts, or agreements. One is, that the whole and every part of such instrument shall be given force and consideration and that every word and sentence shall be construed to mean something and to mean that which the language used naturally implies. The second rule is that the whole of every part of a contract, statute, or agreement relating to a particular subject must be construed together as a whole in order to give the document under consideration harmony, uniformity, fairness, and justice. Adopting this universally-recognized principle of construction, accepted by every civilized nation on the globe, and applying it to the platform as I have read it, that platform means simply that the Democratic party have declared unmistakably for the continued use of both gold and silver as the standard money of the country; that it has declared in favor of the continued coinage of both gold and silver as the standard money of the country without discrimination against either metal so far as the right of coinage and mint charges are concerned.

The very language used utterly forbids the conclusion that that convention favored in the slightest degree the suspension of the coinage of either gold or silver. There is no inference to be drawn from the language that there was to be a limitation or suspension of the coinage of either metal. Every word used had reference to the future. It had reference to an enlargement and increase of the currency. Every word was a word of encouragement and commendation for the use of both gold and silver. And this is made the more manifest by the further declaration that the two metals should be coined, so as to maintain their parity and the equal power of every dollar, whether gold, silver, or paper, at all times in the markets and in the payment of debts. These were the only limitations placed upon it.

Now, my friend from New Jersey says that it is impossible that gold and silver, under present conditions, could be made of equal intrinsic and exchangeable value. The platform recognized the fact that there was a possibility that that exact condition might occur. So it provided for it, and has expressly declared that—

the dollar unit of coinage of both metals must be of equal intrinsic value or be adjusted through international agreement or by such safeguards of legislation as shall—

Do what? Make them of equal intrinsic and exchangeable value? Not at all. But the platform proceeded to say—

by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts—

and—

the parity of the two metals—

means simply the equal money use of the two metals. And this fact is emphasized by the further requirement that every dollar shall at all times—

be equal in the markets and in the payment of debts.

It is therefore clear that the Democratic convention meant to say that both gold and silver should continue to be coined so long as they were capable of performing the office of money in the markets and in the payment of debts.

The VICE-PRESIDENT. The Chair desires to call the attention of the Senator from Kansas to the fact that it is impossible for the reporter to hear his remarks.

Mr. MARTIN. Mr. President, I am so deeply interested in reclaiming my friends on the Jersey coast that I can not resist the temptation to turn and talk to them occasionally; but I shall endeavor to observe the suggestion of the Chair.

Is it not a fact, Mr. President, that every dollar of currency

that we have to-day, whether of gold, silver, or paper, is precisely the kind and character of money demanded by the Democratic platform?

I hold in my hand a ten-dollar silver certificate, redeemable by the payment of ten silver dollars. Is it not true that this silver certificate is worth 100 cents on the dollar, and is daily performing the office of money at that rate? That is precisely what the Democratic platform demands that it shall do. I hold in my hand a ten-dollar gold piece. In the markets of the country and in purchasing power and in debt-paying quality, is it not precisely of the quality and value as money as the silver certificate—nothing more, nothing less? I hold in my hand ten silver dollars.

Is it not a fact, beyond question, that these ten silver dollars, in purchasing power in the markets of the country, and for all money purposes, are each worth 100 cents on the dollar? Is it not a fact that these ten silver dollars will purchase as much of every article, will pay debts as readily, and be receivable in the discharge of every legal obligation of every kind and character in any quarter and locality on the American continent as the ten-dollar gold piece that I last exhibited? This is certainly true. If so, these facts constitute a literal compliance with the demands of the Democratic platform.

So, Mr. President, all this cry that we hear about the "cheap dollar," and the "dishonest dollar," and the "60-cent dollar," is pure demagogy and without foundation in theory or fact. The fact is, Mr. President, we have no "cheap" money in this country. We have no inequality of money. Every dollar that we have, whether of gold, silver, or paper, for all practical purposes, and in purchasing and debt-paying power, is the equal of every other dollar. And this particular fact is of more real value in the determination of the question now under consideration than all the metaphysical reasoning of a lifetime. When we have in use three classes of money, each possessing the same purchasing power, the same debt-paying power, each performing the same office as money in every market in every locality on the American continent, I submit that it is utterly useless, foolish, and absurd to waste time in the consideration of mere abstractions. No man makes complaint that our money is worthless. No man refuses to take it in exchange for any property or article of merchandise that he has for sale. No man hesitates to accept it, whether of gold, silver, or silver certificates, in the payment of any debt or obligation due him.

There is no complaint from any quarter that we have too much money. Upon the contrary, it is generally conceded that the supply of our money is inadequate to the business demands of the country. Hence it is a waste of time to listen to essays as to what may possibly happen in the future. The dangers that are supposed to lie in front of us are not apparent to the ordinary observer. No facts or conditions exist to warrant the belief that any such perils confront us.

The Senator from Delaware [Mr. GRAY] and others have advanced the theory that the Democratic platform does not warrant the conclusion that our financial policy shall be established and formulated in one bill. He admits that it might be done by one bill or two or half a dozen. To a certain extent I agree with the Senator.

But I submit, Mr. President, that by no fair rules of interpretation can it be established that the Democratic party intended or contemplated that its financial policy should be established by piecemeal. The fifth section of the platform must be accepted as a whole as the declaration of the policy to be enacted—not in part but altogether. As a matter of course the details of this policy are not outlined in the platform. General principles simply are announced, and upon this declaration of general principles it was intended that a permanent, broad, and comprehensive financial policy should be formulated and established.

I have shown that there was no distinct demand contained in the platform for the repeal of the Sherman law as a whole or in part; and the demand for its repeal is more a matter for inference than it is of direct statement. Hence, good faith, fair dealing, and common honesty demand that whatever legislation is had should be framed so as to protect the just rights of all interests. In politics as well as everything else I believe honesty to be the best policy. I do not believe in temporary makeshifts. I do not believe in evasions, tricks, and schemes that in the end must deceive and defraud somebody. And I repeat what I have heretofore said, that I believe the pending bill to be so bad, so wicked, so cruel, so remorseless in its provisions, so unjust in its conditions, that I feel justified in resorting to every known constitutional method for the purpose of its defeat. If the Constitution authorizes me to resort to dilatory methods, or filibustering, as it is called, for the purpose of preventing the passage of this bill, I shall not hesitate to avail myself of such methods.

Mr. President, I beg to call the attention of the Senate to certain other facts that I think of some value in the determination of the purposes and meaning of this platform. While it is true that there is no direct pledge or promise made in the platform for the repeal of the purchasing clause of the Sherman act—unconditionally or otherwise—the fair inference to be drawn is that the party was pledged to the repeal of the law as a whole. In that part of the platform treating of tariff legislation there will be found a distinct pledge for the immediate repeal of the McKinley act. In that part of the platform treating of the force bill it pledged the party unequivocally to resist at all hazards any attempts of the Republican party to pass any legislation of that character.

These three facts are of great value in the interpretation of the fifth section of the platform. They prove, first, that the convention attached more importance to tariff legislation and to a resistance to force-bill legislation than it did to the Sherman act. That convention believed, as I believe, that the country was in far greater peril and was likely to suffer more serious disaster from our tariff laws and force-bill legislation that it could or would from the Sherman law. Hence, in regard to the McKinley tariff, "repeal" was the watchword; and in the force-bill legislation "resistance" was the war cry. But, after all, no man supposed then or believes now that the convention meant that the McKinley law should be immediately and unconditionally repealed. In the demand for repeal was involved, necessarily, the idea and purpose of some additional and further tariff legislation as a substitute for the McKinley bill. And if this be true, the argument applies with infinitely greater force in the case of the Sherman law than it does in the case of the McKinley bill. Let me call the attention of the Senate to the declaration of the platform on the subject of force-bill legislation:

> Believing that the preservation of republican government in the United States is dependent upon the defeat of this policy of legalized force and fraud, we invite the support of all citizens who desire to see the Constitution maintained in its integrity with the laws pursuant thereto, which have given our country a hundred years of unexampled prosperity. And we pledge the Democratic party, if it be entrusted with power, not only to the defeat of the force bill, but also to relentless opposition to the Republican policy of profligate expenditure, which in the short space of two years squandered an enormous surplus and emptied an overflowing Treasury after piling new burdens of taxation upon the already overtaxed labor of the country.

In this case the convention specifically pledged itself as a party to the defeat of the force bill. In regard to the Sherman law, they simply say that it is so bad that the author and advocates of it ought to be ashamed of themselves and willing to see it repealed. As before suggested, no one supposed that the convention intended to pledge the party to an unconditional repeal of the McKinley law, without a proper substitute of some character. Let us see what the convention said on the subject of the McKinley act:

> We denounce the McKinley law, enacted by the Fifty-first Congress, as the culminating atrocity of class legislation. We indorse the efforts of the Democrats of the present Congress to modify its most oppressive features in the direction of free raw materials and cheap manufactured goods that enter general consumption. And we promise its repeal as one of the beneficent results that will follow the action of the people in entrusting power to the Democratic party.

Here is a distinct promise that it shall be repealed, but no expressed promise to substitute anything for it. In the case of the Sherman act, its repeal is impliedly promised, and in connection therewith we have the positive declaration that the party is in favor of the continued use and coinage of both gold and silver upon terms of equality, so far as mint charges are concerned, and the continued use of both metals as money. By every rule of interpretation, according to every principle of fair dealing, these two propositions must stand or fall together. The language does not admit of piecemeal legislation. It does not warrant the adoption of cowardly makeshifts or subterfuges of any description. And it seems to be bad faith in those Democrats who are now clamoring for the unconditional repeal of the purchasing clause of the Sherman act and who refuse to offer us any financial relief or to provide any money system in its place.

To show that I have correctly understood and properly interpreted the Democratic platform, I propose to read from Mr. Cleveland's letter of acceptance. This letter, like all of Mr. Cleveland's state papers, is clear, terse, strong, and manly. It shows that Mr. Cleveland understood this platform then as I understand it now. He says:

> The people are entitled to sound and honest money—

That is correct. Such "sound and honest money" is the gold and silver and silver certificates that I have exhibited to the Senate to-day. Sound and honest money is that sort of money that will pass current in all the various business transactions of life at 100 cents on the dollar—that will be accepted as a medium of exchange in the purchase and sale of every species of property. It is that sort of money that will be receivable in the payment of every debt that any citizen of the Republic owes.

It means that sort of money that the merchant will accept at 100 cents on the dollar for all his goods, wares, and merchandise; that will buy every foot of land on the American continent; that has built every ship that floats on the ocean; that has constructed

every railroad that gridirons the continent; that will buy every bushel of wheat, every pound of pork, and every article of commerce that is vended in the markets of the land. It means that kind of money that has the confidence of the people amongst whom it is to circulate. It is the exact kind and character of money that constitutes the sole circulating medium amongst the people at this hour. The letter adds:

abundantly sufficient in volume to supply their business needs. But whatever may be the form of the people's currency, national or State, whether gold, silver, or paper, it should be so regulated and guarded by governmental action or by wise and careful laws that no one can be deluded as to the certainty and stability of its value. Every dollar put into the hands of the people should be of the same intrinsic value or purchasing power. With these conditions absolutely guaranteed, both gold and silver can be safely utilized upon equal terms in the adjustment of our currency.

When Mr. Cleveland wrote this letter he contemplated the continued growth and development of our country, the increase of its commerce, internal and external, and the continued growth and prosperity of our people. He contemplated the fact that this increased trade and commerce would necessarily demand and require a continual increase in the volume of our circulating medium. Mr. Cleveland appreciated the fact that the American people were steadily and rapidly growing in wealth, in intelligence and population, and in power; that the field of our enterprise and energies is being constantly enlarged and developed. He appreciated the fact that for the development of these conditions there would be an increased demand for the use of a greater volume of money, and that as the people themselves increased in intelligence and progressed in social conditions their demands for better food, better clothing, better social advantages, and more of the luxuries of life would be likewise increased.

The people, therefore, were entitled to a "sound and honest money," and a continued increase of it to meet their business demands. And hence he declared that it was immaterial what kind of money we had, whether gold, silver, or paper, so that its certainty and stability of value was established, and that every dollar of it should be of the same intrinsic value or purchasing power. The words "or purchasing power" employed by Mr. Cleveland in his letter of acceptance, make clear beyond doubt the meaning of the Democratic platform. As between gold and silver, strictly speaking, there could be no such thing as equality of intrinsic or exchangeable value. It was the money value, not the commercial value, of gold and silver that was meant in the platform, and this proposition was made clear by Mr. Cleveland in the use of the words "or purchasing power."

Hence, so long as the purchasing power of gold and silver coin could be maintained at any given standard, that was all that was contemplated, expected, or hoped for. It was the present silver dollar and the present gold dollar that was under consideration. It was the coinage and continued use of this silver dollar that was referred to by the convention and its nominee. And if any gentleman in or out of this Senate can establish the fact that the purchasing power of the present silver dollar or the present silver certificate is not equal to 100 cents on the dollar as compared to the gold standard, or any other standard, then I am ready to vote for a change of ratio in order to preserve the parity of the two metals as money.

Mr. President, the Democratic party in its national platform, by history and by tradition, is unequivocally committed to the continued coinage and use of both gold and silver as a part of the currency of the country. In June, 1892, in national convention, it solemnly pledged itself to this policy. I do not believe that any conditions or circumstances have occurred since that time that can justify the party in disregarding these solemn pledges. Good faith, fair dealing, common honesty, and good citizenship demand an absolute and unconditional redemption of those pledges. No evasion, subterfuges, or false pretenses will be accepted by the people as a condonation of broken faith. If this Democratic Congress fails to keep in good faith these party promises; if we shall deceive the people; if we shall disregard and disappoint their just and reasonable expectations by any subterfuges, schemes, tricks, or devices, or cowardly makeshifts of any name or nature in regard to this money question, an independent and outraged people will visit swift and sure punishment upon us.

If the Democratic party deliberately proves false to the great trust that has been committed to its keeping, if it fails, neglects, or refuses to redeem in good faith its honest pledges—if it shall fail to keep faith with the people—very soon the places that know you now will know you no more forever. Platforms are supposed to be declarations of governmental principles and policy to guide the action of political parties, and the successful party stands pledged to the redemption of its promises.

A political party is as truly bound to keep faith with the people and execute in good faith its covenants and agreements as a business man is required to keep and perform his business engagements; a failure or refusal to do so ought to incur the penalty of political death. And the burial place of such party so faithless should be marked with a monument of shame having engraven thereon the history of its violated pledges and broken promises as a warning to its successors.

Mr. President, permit me to submit a few words of warning to my Democratic friends who are clamoring for the unconditional repeal of the purchasing clause of the Sherman act. You may accomplish this repeal, and after that, what? After death comes the judgment. You can not carry through this Senate unconditional repeal without the aid of your Republican allies. This unholy alliance is temporary. The day of parting will soon come. After this bill has been passed other matters will engage the attention of this body, such as tariff reform and the repeal of the Federal election laws, and then your allies will utterly abandon you.

By accepting their aid and assistance you have been placed in the uncomfortable position of having failed to keep your party pledges. After this will you be in a condition to redeem other solemn pledges that you have made? I think I hazard nothing in saying that your temporary friends who are now crying "Crucify him! Crucify him!" will very cheerfully and gladly resort to obstructive tactics, even to the supposed wrong of filibustering, in order to defeat your measures. If you fail in these important matters may not the Democratic party become a thing of the past—simply a memory and nothing more?

Mr. President, I deeply fear these gloomy consequences, and hence my anxiety that financial and all other legislation that shall take place under the present Administration shall be distinctively Democratic. For the first time in thirty years the Democratic party has been intrusted with the executive and legislative powers of the Government. The present is a splendid opportunity for demonstrating our capacity for governmental administration in the interest and for the benefit of the people. The occasion demands that all personal ambition should be hushed; that all conflicting interests should be harmonized; that the voice of the people and their interests shall be heard. So far you have not listened or given heed to the "still small voice" of the people. We have heard the clamoring from Wall street and the frantic appeals from the money-changers and the selfish demands of special interests, but nothing from the great mass and body of toilers and producers of the land; "the hewers of wood and the drawers of water" have so far had no day in court.

But, Mr. President, if we violate the Democratic platform by the passage of this cruel and unjust bill, in due time the voice of the people will be heard, and in a tone and manner that can not be mistaken. In my judgment, if the question of unconditional repeal of the Sherman law were submitted to a direct vote of the people of the United States at this hour, or at any time hereafter, there would be a majority of millions against it. In support of your proposed action the bankers and their dependents, stock-gamblers and their associates, the money-changers and their allies and all those attired "like Solomon in all his glory, but who toil not, neither do they spin," have by falsehood and misrepresentation attempted to create a public opinion in favor of your proposed action. They have suborned the public press.

By object lessons they have wronged and outraged those dependent upon them for accommodation and advantage; but the public opinion they have created lives alone in the atmosphere of its creation. They and their agents throng the corridors of the Capitol. They importune Senators and Representatives. They whisper their stories in the ears of cabinets. And while they may achieve a temporary success, a day of reckoning will come. The great body of our countrymen, the plain people, the men who work and labor and produce, the men who toil and sweat and create our wealth and substance, will yet be heard from on this subject; and when that day of reckoning comes they who have stood in the way of their will, who have opposed their interests, who have disregarded their cries, who have been deaf to their appeals, will be crushed between the "upper and the nether stones."

Mr. President, during the discussion of this bill, I have frequently heard the silver dollar referred to as a "60-cent dollar." I know of no such dollar. Does any gentleman in this Chamber know what a "60-cent dollar" is?

Mr. PALMER. Mr. President——

The PRESIDING OFFICER. Does the Senator from Kansas yield to the Senator from Illinois?

Mr. MARTIN. With pleasure.

Mr. PALMER. So far as I know it is 412½ grains of standard silver.

Mr. MARTIN. Is that the Senator's idea of what constitutes a "60-cent dollar?"

Mr. PALMER. That is my impression of it.

Mr. MARTIN. The answer is about as I expected from the distinguished Senator from Illinois. I supposed that he had

just that sort of an idea upon the subject. That is not the measure of the dollar. The dollar is a dollar because by the laws of the United States it is made a dollar, and because it has the purchasing power of 100 cents on the dollar in any part of the American Union. That is what makes the dollar. And that is what makes it an honest dollar. And there is no such thing as a "60-cent dollar." There never was and never will be. But we are told that the silver in a dollar is only worth 60 or 70 cents in the markets of the world at this time. Measured as an article of commerce, this is true. Measured by the gold standard as money and currency, it is not true.

The value of any article as money depends upon three conditions. First, the nature and extent of its usability as money, as fixed and regulated by law. Second, the law of supply and demand in the country or locality where used; in other words, the volume thereof; and, third, the character of the material used. At present the market value of silver as an article of commerce is low. It is low because it has been discriminated against, and its usefulness and value as a money metal has been substantially destroyed by unfriendly legislation. This condition can and will be radically changed if you will obey the mandates of the Democratic platform and open your mints equally to the coinage of both gold and silver, and clothe your silver money with its constitutional debt-paying power; in other words, make it receivable in the payment of all debts, public and private. If you will adopt this policy you will hear nothing further on the subject of the "60-cent dollar."

As a matter of course, if in your legislation and in formulating your currency plan you discriminate against either metal, you have to that extent imperiled its usefulness and value. The trouble now is, you have put an embargo on the use of silver. You have put upon it the brand of Cain, so far as its usefulness as a money metal is involved; and you have placed it in a state of orphanage in the world's currency. What would gold be worth as a money metal if treated in the same manner?

In order to judge correctly of the relative values of any two articles, such articles must be placed upon a plane of equality. Place them upon a plane of equality, clothe them with like conditions, and subject them to like uses; otherwise no correct judgment can be formed respecting their relative values.

Mr. President, in order to further illustrate the dangerous tendency of the times, I quote again from the article appearing in the Manufacturer of September 23, as follows:

> It (the stock market) is waiting to hear from the Senate, and not without apprehension that some further object lesson may be needed to move that body.

The article further says:

> The mercantile community which desires banking accommodations has not felt the improvement; and the reason is the New York banks have determined not to let money loose until the Senate votes for the repeal of the silver law.

In other words, Mr. President, we are confronted by the deliberate declaration of the money power of the country that confidence shall not be restored, that prosperity shall not return, and that the present social and financial disorders shall continue until Congress shall pass this bill. Repeal is made a condition precedent to their permission of a return of prosperity.

The declaration is arrogant and insolent, and it is truly an object lesson to the people of this country that should awake them from any dream of security that may be supposed to exist. It is time for the people of this country to learn that they who control the purse wield the sword, and that they who control the purse and wield the sword are the remorseless and tyrannical masters of the country and the enemies of the liberties of the people.

The resumption of ordinary banking operations is not made to depend upon the legitimate demands for money to use in the ordinary trade and business of the country; not upon the interest that can be obtained; not upon the character of the securities that are offered. But all the powers of these great banking institutions are to be ruthlessly and remorselessly used to stay the hand of enterprise, to suspend the business operations of the country, to produce bankruptcy, to inaugurate a new season of penury and want, starvation and disaster, and all for the purpose of forcing the Senate of the United States to pass the pending bill destroying silver as money and forcing upon the Government the necessity of issuing its bonds.

Mr. President, I have no feelings of enmity against bankers as individuals. They are a part of our common humanity, perhaps neither worse nor better than people ordinarily are, except as their vocation makes them. It is true that they are inclined to presume upon their superior knowledge of the laws of finance, trade, and commerce. It is true they are engaged in a business that necessarily makes them cold, calculating, cruel, and remorseless, as all money-changers are, always have been, and always will be. Selfishness and avarice chill the heart, distort the judgment, and render men utterly indifferent respecting the rights of others and their own obligations and duties to society. The co-operation of great financial interests is always easy and convenient.

The moneyed power of the country always stands ready to enter into such combinations and conspiracies—however ruthless and remorseless they may be—for the promotion of its selfish interests. And in doing this, neither the rights, the comfort, nor the happiness of others is considered in the slightest degree. Courts are swayed in their interest; legislatures are controlled for their benefit, and too often executives yield to the blandishments and advantages that its supreme power confers. The policies of government are distorted and shaped for the sole purpose of strengthening and continuing its power. Under these circumstances, Mr. President, is it any wonder that public disorders exist, and that the great body of our countrymen feel that they are unfairly and unjustly dealt with? Ought we to be astonished that the sense of duty and obedience to the Government is weakened? It is the wicked perversion and use of government for selfish ends and individual advantage which sows the seeds of anarchy and social disorder. Destroy the seed and the plant will not grow, neither will the fruit ripen.

Mr. President, as further illustrating the insolence, arrogance, and intolerance of what is often termed the money power of this country, I beg to call the attention of the Senate to a New York dispatch appearing in the Post of this city on the morning of September 17 last:

IMPATIENT NEW YORK BANKERS.—THEY BLAME MR. VOORHEES, RATHER THAN THE SILVER SENATORS, FOR THE DELAY.

[Special to the Post.]

NEW YORK, *September 17.*

In a group of bankers at the Union Club to-day the sentiment was given voice that the delay in the passage of the repeal bill had reached a point that needed explanation. At the Manhattan Club, where the Democratic bankers principally gather, almost the same idea was expressed, but Senator VOORHEES personally was held responsible. It was argued that the Democratic caucus had done all it could, but that the Indiana Senator had not lived up to the confidence reposed in him. The same assertion is made more bluntly in the open street, and at the Windsor Hotel the banking men were talking this evening about the difficulty of understanding what VOORHEES was trying to gain by what was considered his too considerate treatment of the silver minority.

Practically the same opinions are held by business men who have no banking interests.

The feeling here is that unless in a day or two VOORHEES performs without further delay what is considered his duty, of pressing for a vote, he must find himself under the necessity of explaining what are his concealed motives. "Candidly," said a banker of high standing to the Post correspondent, "we did not expect repeal to have been accomplished by this time, but the celerity with which the House passed the bill gave us reason to believe like speed would follow in the Senate. We know the ways of Senators pretty well, and we can understand some of the motives that seem to actuate Senator VOORHEES. But his refusal to come to New York and talk with us has suggested wrong motives, and his weak stand against the aggression of the silver Senators is more than we can fathom. What does it mean? I ask the question because we must know. We have a right to know. If we are not given satisfactory reasons for the delay, as we have not to this hour, we can not be blamed for believing that there is something behind it all. What can be Senator VOORHEES's personal interest in keeping back repeal? That's what we'd like to know; for his political interests are to our minds not enough to explain the strange delay."

This talk of other motives than politics behind the delay has gained currency among certain bankers, but is rejected as unbelievable by others.

Mr. President, I submit that this dispatch suggests a degree of lordly insolence on the part of this same money power that ought not to be tolerated in any liberty-loving community on earth. In this dispatch we are deliberately told that it is the feeling amongst the bankers who assemble at the Union Club and the Manhattan Club in the city of New York, these consumers of the results of honest people's toil, and the gatherers of the fruits of other men's labors, that the chairman of the Finance Committee of this Senate is by them to be called to account for his management of this bill, and that unless he assumes prompt action he will be under the necessity of explaining to them what his possible motives are. Mr. President, a more infamous, wicked, and unmerited attack was never made upon any public man. And it manifests to an alarming extent the insolence, arrogance, and relentless tyranny of this same money power.

Mr. President, the Senator from Indiana [Mr. VOORHEES], to whom reference is made in this dispatch, requires no defense at my hands, or from anyone else, against this brutal and cowardly assault that has been made upon him. His long-continued and splendid career as a Representative and Senator in Congress has made a record of which any honest man may be proud. His fidelity to every trust that has ever been committed to his keeping is a perfect shield from the poisonous darts of these money-changing vandals. His fame and good name rest secure and steadfast in the hearts of his constituents and in the annals of the great legislative bodies which he has adorned and honored for almost the third of a century, and his reputation and character are perfectly safe from the malicious criticisms of baffled

and disappointed bankers, as well as all others. But, Mr. President, the meanness disclosed in the article, its insolence, its arrogance, shows the extent to which such men will resort in order to carry out their wicked purposes.

Mr. President, the money power, as we call it, is not composed of bankers alone. They have allies, dependents, and Hessians, who fight for pay and murder for reward. One or two classes of their associates I have already referred to, and I come now to the consideration of another class that I regard as great if not greater public enemies than any other class in the country—men of luxurious tastes and extravagant habits, whose linen is always unstained, and whose hands are free from the marks of labor and honest toil—I refer to the gambling fraternity. These men figure in the newspapers as members of "stock exchanges" and "cotton exchanges" and "grain boards," and other gambling societies of like character, the middlemen who rob and plunder those who actually labor and produce the world's wealth. Mr. President, as illustrating the methods of the men to whom I refer, I propose to read an article appearing in the Republic, of St. Louis, Mo., of a recent date, as follows:

TWENTY THOUSAND DOLLARS A DAY—THE WALL STREET SHYLOCK'S RECENT HARVEST—READY MONEY PUT TO GOOD USE—THE BULK OF IT HE PUT OUT AT 75 PER CENT—THE OLD GENTLEMAN'S SHREWD METHODS.

THE REPUBLIC BUREAU, ROOM 146, TIMES BUILDING,
New York, July 5, 1893.

Russell Sage's part in the financial crisis of the past few weeks is beginning to leak out in Wall street. When money first began to tighten up, and railroads with dividends to pay, and other institutions badly in need of ready money cast about for it, Russell Sage, who has the reputation of keeping more ready money on hand than some of the richest of the banks, came in for a great deal of attention. Day after day, for something like two weeks, this bright and cheery old gentleman sat in his dingy office overlooking Trinity churchyard and all the headstones and monuments there, and heard all kinds of collateral.

Money was skyrocketing then, advancing rapidly from 20 per cent up to 50, and even 75 per cent. How many millions of dollars Mr. Sage had during these days available for loaning purposes, and what rates he charged his customers for the accommodation, can not, of course, be accurately stated. It is perfectly safe to say, however, that Mr. Sage did not loan his money below the market rate.

TWENTY THOUSAND DOLLARS PER DAY.

A Wall street man who keeps pretty well informed on the aged financier's transactions in loans gives it as his opinion that for a number of days the old gentleman's receipts from interest on his money were not less than $20,000 per diem. How much money Mr. Sage was able to command at so interesting a time for helping the stockbrokers can be surmised from the fact that on every day of the year, the whole year round, this modern but thoroughly amiable Shylock has about five millions that he can lay his hands on within twenty-four hours.

Even in 1884, when the great crash came in Wall street, and Mr. Sage closed the door of his office to protect himself from the army of creditors who flocked there, it is stated authoritatively that he had over $3,000,000 on deposit with two of the leading banks of this city. He only needed $1,000,000 to pay off all claims against him, but his impulse was to close his office and leave New York for some secluded spot where no creditor could possibly reach him. If, therefore, Mr. Sage had $3,000,000 in cash at such a time as that, it may readily be concluded that at the present time, ten years later, when he has suffered no losses in the stock market or through dealing in privileges, he must have a great deal more; and the statement may even be accepted that during the past three weeks he has manipulated for loaning purposes somewhere between $15,000,000 and $20,000,000.

BELIEVED IN WALL STREET.

This statement is familiar on Wall street and finds general belief. What Mr. Sage's receipts have been for interest during this storm and others depends, of course, not only on the amount of money he has loaned out, but also on the rates at which he has loaned it. As heretofore observed, there is not much doubt but that the shrewd old trader has secured the very highest rates to be had. That is his main purpose in life. He got the highest rates for nearly the whole volume of money, because nearly all the loans Mr. Sage makes are call loans, which can be called in from day to day at a few hours' notice.

It is not probable, of course, that Mr. Sage loaned all his money at 75 per per cent, but it is quite possible that he got at the rate of 50 per cent a year for all the money he loaned out during the ten days previous to last Saturday, and if these loans are calculated on a basis of $15,000,000, it will be seen that this amounts to the daily income of $20,000 already noted.

MR. SAGE'S BANK.

The statement in Wall street that Mr. Sage is in the habit, during periods of stringency, of borrowing money from the Importers and Traders' Bank, in which he is the chief stockholder and practical owner, and of borrowing it at regular rates and then relending it at 40 to 50 per cent, can not of course be regarded as anything but an exaggeration, inasmuch as such action would attract the attention of Comptroller Eckels and result in unpleasantness for Mr. Sage. But there is no doubt that he did oppose the Importers and Traders' Bank refusing to participate in any such proceeding. The officers of the Importers and Traders' Bank de lared that they had no need for loan certificates, and refused to take any. The fact of the matter is, Mr. Sage did not want his own bank figuring in the money market and breaking the rate of interest, and thus abridge his enormous profits from that direction.

Comment on this article is unnecessary. The iniquitous methods pursued are made manifest and clear. The same class of men are gamblers in silver, the very metal they are endeavoring to destroy as an article of money. And undoubtedly such gambling operations have much to do with the depreciated value of silver bullion. They are even gambling among themselves as to whether the pending bill will be passed by Congress. And, as illustrating the truth of this proposition and the wicked and corrupt methods pursued by them, I call the attention of the Senate to the following dispatch which I find in the Washington Post of September 29, 1893, as follows:

BROKERS BET ON REPEAL—HEAVY ODDS THAT SILVER PURCHASES WILL BE STOPPED—STOCKS ADVANCE RAPIDLY—THE FEELING OF CONFIDENCE AND BUOYANCY ONLY SLIGHTLY CHECKED BY DISPATCHES FROM WASHINGTON WHICH DID NOT BEAR OUT THE OPINION PREVALENT ON THE STREET, WHICH, TO A LARGE EXTENT, WAS BASED ON THE PRESIDENT'S LETTER TO GOVERNOR NORTHEN.

NEW YORK, *September 28, 1893.*

There has been a radical change in sentiment in stock circles in relation to the question of repealing the Sherman silver law. In fact, certain operators on the floor of the exchange were so confident that the Senate will expunge the law from the statute books that they were offering to bet twenty to one on the correctness of their views. They backed up their opinion by liberal purchases of stock, which led to an almost buoyant tone.

The bulls were favored by the strong expressions made by President Cleveland in favor of unconditional repeal of the Sherman silver law in a letter to Governor Northen, of Georgia, which gave color to the dispatches from Washington to the effect that the Senate will take an affirmative vote on the repeal bill within a week or ten days. Public dispatches received on the street up to the close of business, however, did not confirm this theory, but, nevertheless, bulls and bears were imbued with the belief that the silver question will be disposed of in short order, and bought stocks freely.

Mr. President, as further illustrating the corrupt and demoralizing methods pursued by this class of men in their nefarious business, I propose to read from a speech by the Senator from Minnesota [Mr. WASHBURN], of the 11th of July, 1892, in the Senate. I read from page 8 of the printed speech:

These people talk about "fettering commerce." Let me ask how commerce is or can be fettered, obstructed, restricted, or in anyway interfered with under the provisions of this law? It only attempts to suppress gambling and nothing more, and of the most vicious character that has ever existed, compared with which the Louisiana lottery is but a Sunday school.

This is a very graphic, and doubtless a very truthful description of stock-gamblers and their methods. Proceeding, the Senator says:

How can commerce, how can trade, how can any dealings of the merchant be affected from the fact that the gambler or operator can not sell for future delivery millions of bushels of wheat and thousands of bales of cotton that do not exist?

On page 9 of the same speech I find the following:

As near as I can learn, and from the best information I have been able to obtain on the Chicago Board of Trade, at least 95 per cent of the sales on that board are of this fictitious character, where no property is actually owned, no property sold or delivered, or expected to be delivered, but simply wagers or bets as to what that property may be worth at a designated time in the future. It has finally come to this, that the operators on boards of trade fix the prices of the different articles named in section 3 of this bill, without regard to the law of "supply and demand" or any natural conditions whatever. So that the business of the country has reached a crisis that is absolutely unbearable; so that the object of boards of trade, which are of necessity in conducting the commerce of the country, have been subverted from the uses and purposes for which they were created and have been turned into gaming resorts where the great products of this country are made the basis and football of gambling transactions. So that wheat and cotton have become as much gambling tools as chips on the faro-bank table. The property of the wheat-grower and cotton grower is treated as though it were a "stake" put on the gambling table at Monte Carlo. The producer of wheat is compelled to see the stacks in his barn dealt with like the peas of a thimble-rigger, or the cards of a three-card monte man. Between the grain-producer and the loaf-eater there has stepped in a "parasite" saying at what price one shall sell and the other buy—a "parasite" between them, robbing them both.

In proof of the charges I have made respecting the character and operations of this gambling fraternity, I quote further from the speech of the Senator from Minnesota, as follows:

To make clear that I do not overstate this matter, I desire to submit quotations, comments that have been made in the past few months on different boards of trade, as indicating how such quotations have been possible, and to show absolutely clearly that the price of wheat has not been made by foreign markets, as has formerly been the case, in accordance with the law of supply and demand, but has been artificially fixed, and depreciated at that, by the produce exchanges of this country, which have so large an export trade in so many of our agricultural products. For instance:

[Inter Ocean, February 1, 1892.]

The wheat market was controlled by the bears from the opening to the close, and Pardridge was particularly prominent. With Pardridge's operations almost continually against the price values showed a loss. Foreigners were fair sellers here and in New York, but the largest offerings were made by Pardridge. He had sold a big line of "puts," and his selling was to get the price down and has the wheat "put," and at the close a large quantity of wheat was "put" to him, enabling him to cover part of his (short) line.

[Chicago Tribune, April 12, 1892.]

The decline (in wheat) was greater than anyone anticipated, with the possible exception of Mr. Pardridge.

Pardridge's actions were naturally watched with no little interest, and it was generally conceded that he "scalped" the market very effectively. His early liberal selling around top prices helped to break the market.

[London cable in Baltimore American, April 13, 1892.]

The grain markets here and on the Continent for the past two days have been strangely affected by bogus European news, received by way of the United States.

[Inter Ocean, April 15, 1892.]

The wheat market disappointed the bulls, who expected that prices would move upwards, as the majority of the influences were bullish. The bad weather was expected to have a pronounced effect, but the "crowd" appeared to care little about the weather or the cables or crop reports, so that local influences dominated prices. The cables were stronger, the late ones showing good advances at Liverpool.

An operator said: "Pardridge has done the past two days what the trade said he could not do this month; that is, 'cover' his May wheat without causing a big 'bulge.' The 'longs' wanted to sell, and he bought it."

[Chicago Herald, April 19, 1892.]

E. W. Kalb, manager of the foreign department of Schwartz, Dupee & McCormick, and who is now in Europe, has sent the following on the foreign wheat situation, from Antwerp, under date of April 6: "The wheat markets in Europe are more than dull. Europe will hardly become a free buyer again as long as prices are kept declining in America. However, should your markets show signs of firmness for several days in succession, then Europe is bound to follow. America will remain the main key to the world's wheat situation for some years to come."

[Chicago Herald, May 3, 1892.]

The bulls had the news on wheat; the bears had the market. About everything which last week was looked forward to as likely to help prices was realized, yet prices yielded rather than advanced.

[Inter Ocean, May 5, 1892.]

Minneapolis sent advices that the acreage would be but 50 to 75 per cent of last year's. Combined with the bad weather reports were the cables which were generally stronger and higher. These were the most important bullish influences, but they were offset by the "unloading" by the "scalpers" and by the selling by Pardridge, and this selling had much to do with the decline.

[Philadelphia Press, May 6, 1892.—(Chicago dispatch).]

Traders have become so accustomed to receive bullish news and find it succeeded by a drop in the price that they were very slow to believe that anything different from their recent experience would happen to-day. Item after item of news kept dropping in during the first hour and a half, and no matter from which direction, its tenor was bullish. But Pardridge sold wheat; Cottrell sold wheat, and the "crowd," which runs in the wake of successful men, thought they were safe in getting in behind the big bears.

[Inter Ocean, May 7, 1892.]

A. L. Arrigoni, a young plunger, who had about 500,000 bushels of grain, was unable to margin his trades, and was closed out yesterday with a loss of $6,000.

[New York Tribune, May 13, 1892.]

The speculation was fairly active, about 8,000,000 bushels being dealt in, but the trade was mainly devoted to local "switching" operation. There was no outside interest, and the large operators seemed to be indifferent; hence the "scalpers" held full sway.

[Corn Trade News, January 18, 1892.]

The Marseilles (France) correspondent writes: "The past week has been decidedly bad; one day there was a ray of hope that the (wheat) market would revive, as a slight advance at New York was reported; and as it was said that the daily fluctuations in America were due to speculative operations, it was anticipated that with the disappearance of this exceptional cause a firm tone would take the upper hand."

[Corn Trade News, March 29, 1892.]

Genoa (Italy) correspondent writes: "The wheat market is dull; all sorts are *d.* lower, and the demand is limited. The continual decline at New York has demoralized buyers."

[Corn Trade News, April 12, 1892.]

Antwerp (Belgium) correspondent writes: "Business continued slack, in consequence of the decline in America; to-day the revival in that country was received with gladness, and we hope it will last."

Bordeaux (France) correspondent writes: "Our market has been greatly disturbed since our last report, consequent on the violent fluctuations in America. To-day, on the collapse in America, but few bids were made, and generally at prices too low to lead to business."

In a letter to the (Liverpool) Corn Trade News, dated in September, 1891, Mr. Dennison B. Smith, secretary of the Toledo Board of Trade, said that—

"We most heartily deprecate the conditions prevailing in this country. First is the apparent want of courage on the part of capitalists to invest in wheat, and the next is the reckless disposition of the fraternity of short sellers to pound down prices. Not an advance in prices has occurred on this side that has not been reflected abroad, and not a decline that has not been followed by a corresponding break over there."

[Inter Ocean, January 30, 1892.]

The market was emphatically a small one, with Pardridge, as usual, doing the greater part of the trading. Whenever the market showed any strength he accommodated the crowd by selling all they wanted, and on the decline he bought back the stuff he had sold at a profit, trading in over 1,000,000 bushels during the day. The outside public are not in the market to any extent, and commission houses are complaining about the scarcity of orders.

[Inter Ocean, February 4, 1892.]

Wheat was in the control of Pardridge the greater part of the day.

[Globe-Democrat, January 30, 1892.]

Chicago dispatch says: "Hutchinson's sale of 1,000,000 bushels of wheat in a lump to Leopold Bloom was up to that time the largest individual trade made, and it certainly has not until to-day been distanced. Pardridge sold "call" on 1,000,000 bushels of wheat, one lump, and wound up the sales of about 3,000,000 bushels more. The fact that the privileges were sold less than one-half cents away from the actual market, and that they are good for all Monday makes the feat even more daring than if he had sold the actual wheat at the market value. The effect of the transactions and Pardridge's known probity, wealth, and reliability set the whole speculative world in an uproar. A moderate estimate of his present short line is 10,000,000 bushels."

[The Chicago Herald, February 4, 1892.]

Pardridge said yesterday that he was pretty well cleaned up, and that he had made four times as much out of his recent bear campaign as he had ever made in one turn before in his life. Pardridge has never heretofore felt called upon to tell the crowd just exactly how he was fixed, and consequently his announcement, now that he is out, is taken *cum grano*. Still, it is generally agreed that the great trader has made one of the most astonishing turns ever witnessed in this market. He is generally credited with having been right for about 12 cents a bushel on a line from 5,000,000 to 7,000,000 bushels. In addition to his straight profit, he has pocketed any amount of money on privileges, and possibly a small-sized fortune on scalps. The outcome is certainly an astounding one, considering that all this money has been made on the short side in a famine year. Although Pardridge has been a bear all the time, and although he was caught short on an enormous line just as the immense excitement of the famine year began, he has been clever enough or lucky enough to so cut short his losses and to so play his profits, that the whole grain world is discussing his success toward the end of the crop year, which was relied upon to make every wheat bull, even the fool wheat bulls, rich.

[From the Iowa State Register, Thursday, April 14, 1892.]

THE GRAIN GAMBLERS MUST GO.

It has often been said that "Liverpool makes the market prices on grain for all the world." That statement has been proven false by the success of Ed. Pardridge, Chicago's famous, or rather infamous, "plunger." During the past six months he has absolutely dictated the values of grain in all the markets of the earth, and he has recklessly robbed the farmers of the United States of hundreds of millions of dollars by the low prices he has been able to establish for his own speculative purposes. His success this week supplies all the further evidence that has been necessary to induce both Houses of Congress to pass the antioption law. The grain gamblers should be driven out of the temples of trade. If they must gamble let them bet on the number of grains of sand on the lake and seashores and the world's visible supply of sand. Bidding down the values of grain has exactly the same effect as bidding down the value of labor and agreeing to supply a certain number of laborers for a certain month or year at reduced wages. The farmers demand protection from the grain gamblers and it should be promptly extended by a law that will tax every bushel of grain bought and sold in options, but not interfere with legitimate transfers of actual grain.

The Chicago Tribune, January 20, 1892, says editorially:

"A number of the members of the Chicago Board of Trade, belonging to the receiving class, think the market is often under the influence of artificial conditions, and that the constitutional bears too often have things their own way.

"Three of the daily circulars issued last week by a prominent commission firm may be quoted in this connection. Tuesday the market was stated to be 'entirely in the hands of the short seller.' Thursday it "broke sharply under the pressure of short selling.' Friday's circular contained the statement: 'The Chicago bear ring has finally succeeded in creating a panic throughout the world. All the energies of trade have been directed to breaking down the price of wheat in the United States, which they have finally succeeded in doing, and in so doing have necessarily carried the markets of the world down with them.' This followed the statement in Wednesday's paper that 'The situation has shaped itself to this extent, that if Western Europe wants wheat for the next four months there is no place excepting the Atlantic coast of the United States where it can be obtained.'"

I can not, perhaps, quote in any better connection from an article of Robert Lindblom, one of the most intelligent and level-headed members of the Chicago Board of Trade, as published in the Chicago Post several weeks since.

In the article referred to Mr. Lindblom says:

"What stronger argument can be furnished in favor of the Hatch or Washburn bill than the spectacle that few men, having no wheat, can in one hour lower the selling price of the wheat crop $24,000,000, when foreign markets were strong and higher, and every legitimate influence pointing to higher prices.

* * * * * * *

"There are in sight now over 40,000,000 bushels of wheat. The American speculator has bought it all for delivery to him next May. There are over 20,000,000 in sight in country warehouses, and hedge sales have been made against that in Chicago, so the speculator has to buy that too, and as though that was not enough, the professional short sellers and the sellers against flour and wheat in foreign countries have sold at least 50,000,000 bushels of wheat in Chicago, which weighs just as heavy as the sale of actual wheat. In fact, it weighs heavier, for while the seller of May wheat against actual holdings has completed his transaction and has no further interest in it, the pure short seller has an interest in further depressing the market, and in order to do so he resorts to every iniquity known to the trade.

"Is there in all America one sane man who will assert that it is of advantage to the producer to have the supply artificially increased from 65,000,000 to 115,000,000? Is there really anybody so obtuse as to assert that the sale and constant pressure of 50,000,000 artificial supply on the market is of benefit to the producer?

"It seems there is, but it is gratifying to know that these specimens are found only among that generation which has been developed since short-selling was confounded with speculation.

* * * * * * *

"The proposed legislation will, without any question, add materially to the selling value of farm products. It will cut off an artificial supply and increase the speculative while not diminishing the consumptive demand. There can be no real issue as to that."

That "short selling" is a menace to the solvency of all those who deal in articles which are subject to its blighting touch is shown by the relief experienced upon all the exchanges when it was reported that the greatest of "short sellers" had covered his "short lines," as set forth in the following extract from the daily market reports:

[Chicago special to Globe-Democrat, June 22, 1892.]

The only thing in relation to the wheat market which attracted attention was the gossip about Pardridge. The trade fully realizes that it has recently narrowly escaped from what might have been the most disastrous failure that the board has seen for many years, and which might have proved more severe than the Harper deal, in June, 1887, when fifteen great firms were forced to suspend. Had the Government crop report, on June 10, been bullish there is no telling how many of the large commission houses would have been carried down by the inability of Pardridge to protect his enormous short line. * * * His overtrading has caused the big commission houses a great deal of alarm.

[Chicago Inter Ocean, June 23, 1892.]

The question now asked is, Will Pardridge ever get his line covered? Each day the crowd say that his line is larger than they had previously estimated, and place it at 25,000,000, or about the entire visible supply. The more the commission houses think of it the more thankful they are that they did not have to buy (in) his wheat two weeks ago on the bulge to 88 cents. The trade is not opposed to Mr. Pardridge, but regard him as a very dangerous man.

[Chicago Tribune, June 23, 1892.]

Traders in wheat think Mr. Pardridge's operations are a menace to the safety of the trade at large and are trying to devise a scheme that shall curtail his trading and reduce the danger to a minimum. They say that but for the Government report coming just as he began to cover his short line, the advance, which had well started, would have soon carried the price to a point where he would have been unable to respond to calls for margins. Then they say any attempt to cover 5,000,000 bushels or more of wheat for his account would have resulted in a panic in which everyone would have suffered severely.

Mr. President, I call the attention of the Senate to still another class of conspirators engaged in producing the present panic,

namely, the newspaper press of the country. And upon that point I propose to read a letter from Francis G. Newland in the New York Sun, dated September 2, 1893, in which he charges that the public disturbances which we have observed for the past few months are largely due to newspaper clamor. He says:

THE PANIC MADE BY NEWSPAPERS—THE PUBLIC FRIGHTENED BY SENSATIONAL EDITORIALS—MISCHIEF THAT WAS NOT INTENDED.

To the Editor of the Sun:

SIR: I observe in to-day's paper that you take humorous exception to the statement of Mr. TELLER in the Senate that "a scheme had been organized early in the season in New York for the purpose of creating a financial panic, which would compel at an extra session the repeal of the purchasing clause of the Sherman act;" and you state that it is impossible that New York could thus go to work to pick its own pockets. Will you permit me to present my observations with reference to this matter?

I was in New York during the early part of this year for some months, and was a close observer of the course of the bankers and newspapers regarding the Sherman bill. You will remember the clamor that then existed for the calling of an extra session. Refer to the files of the Herald, World, Times, and Post during that period, and you will find the most inflammatory articles, intended to arouse and alarm the country. I remember in particular that the New York Herald would day after day have from five to six short editorials, double leaded or italicized, in every column, calling attention in the most alarming way to the danger of the situation: "The Treasury reserve was being depleted, the gold was flowing out, the country was drifting on a silver basis, the dollar was a 60-cent dollar, foreign investors were selling their securities," etc. I remember that in one of the papers for some days there appeared in immense figures at the head of the column the constantly decreasing amount of the gold reserve, accompanied by sensational headlines.

Now, what was the effect of all this? There is always a natural drain of gold from this country during the early part of the year, which is followed by a flow this way during the latter half of the year. These New York papers were read and quoted in England. They, doubtless, alarmed investors there, and the result was that the natural drain of gold was turned into a forced demand by foreign sales of American securities. The reserves of the New York banks were diminished; clearing-house certificates were resorted to to tide over the difficulty; the Western banks, being alarmed at the situation in New York, withdrew their balances and the situation was aggravated, and then a panic arose throughout the country, arising not out of fear of the governmental issues of money, but fear as to the security of the banks. The withdrawal of gold by foreigners, and the withdrawal of deposits and the hoarding of money by our own people, have brought on a monetary stringency which has caused the sacrifice of hundreds of millions of values in American securities, as well as wheat, cotton, and other products. Our foreign investors alone have profited, for they are now buying back the very securities which they sold some months ago at from 20 to 40 per cent discount.

It is impossible to believe that the bankers in New York entered into an organized conspiracy to produce the great panic from which we are all suffering. The part which they played was merely incidental. They were, of course, hostile to silver, and wished the Sherman act repealed. The national banks also wanted bonds issued for the purpose of increasing the reserve, and also for the purpose of enabling them to increase their circulation; but the newspapers were constantly interviewing the bankers and publishing their interviews with sensational headlines and comments. I ask, then, is it not fair to say that this great panic, which all agree now is a senseless panic, had its origin in the metropolitan press of New York? The only prominent papers which have pursued a conservative course throughout, in my judgment, have been The Sun, Tribune, and Commercial Advertiser. The very papers which started the scare are now declaring that it is senseless, and are trying to restore the confidence which they helped in so great a degree to undermine. So far as our foreign investors are concerned, they probably took as true the very aggravated utterances of our newspapers that we were drifting on a silver basis, but so far as the local want of confidence is concerned, it took the form of lack of confidence in the banks, not in the money bearing the stamp of the Government. The best evidence of this is that the silver certificates and silver coin, both alike representing, according to the statement of these papers, only 60 per cent of intrinsic value, have been hoarded by the people and have been practically at a premium.

I remember well, on my return to Washington from New York last March, I predicted to some friends that the New York papers would, within the next three months, create the greatest panic of the century. That prediction has come true. Later on, before the panic had assumed such large proportions, I was talking with a prominent banker in New York, and insisted upon it that the sensationalism of the New York press was doing great injury. I asked him why the substantial men of New York did not represent to these papers the injury they were doing, and appeal to them to modify their course. His answer, with great excitement, was: "Appeal to them, d—— them, they would publish the appeal and aggravate the difficulty."

For the purpose of illustration, let us suppose that the press of Paris should commence an outcry against the security of the currency of France. We all know that France is one of the largest owners of silver in the world. I believe she has about $700,000,000 of silver coin. Now, suppose the Paris journals should day after day, with sensational headlines and double-leaded editorials, declare that the 5-franc piece was worth only 3 francs; that the gold was in danger of going out of the country, and should pursue generally the course which our metropolitan papers have pursued. I ask how long it would be before a panic would be inaugurated in France? I apprehend, however, that no such emergency could occur in that country, for the editors of the Paris journals so engaged in the seditious work of undermining the public credit would doubtless be behind the bars of a prison before their work could be fully accomplished.

It is, of course, impossible to believe that the New York editors have entered upon this work of destruction with deliberate intention; they simply represent the sentiment of the great banking class of New York regarding finance, and they took what they thought to be the surest method of accomplishing results without reflection as to the trouble and distress the scare created by them would cause. Whether this scare will result in the repeal or the demonetization of silver in this country or not remains to be seen, but if it is accomplished, the loss and distress and ruin caused by this agitation will far outbalance any that would have happened even had the worst predictions of our opponents as to the effect of this country's drifting on a silver basis been realized.

Yours, truly,

FRANCIS G. NEWLAND.

HOLLAND HOUSE, *September 2, 1893.*

Mr. President, I have heretofore referred to the controversy between Andrew Jackson and the United States Bank in 1833. I hold in my hand a small historical volume published by G. P. Putnam's Sons in New York in 1880, entitled Andrew Jackson and the Bank of the United States, by William L. Royal, of Richmond, Va. It is a valuable contribution to the literature of the period, as exhibiting the attitude and conduct of the United States Bank and its agents and officers in its arrogant assumption of power and in resisting the authority of Congress and the President of the United States. It is particularly valuable at this time, because the facts therein given illustrate in the most marvelous manner the exact attitude and proceedings of the banks of to-day in their attempted intimidation of Congress and the country. I read from page 24 of the volume referred to as follows:

This session, the session of 1833, was known at the time as the panic session. The bank was still a prodigious power, and it was allied to and supported by the great Whig party, with Henry Clay in its lead. It was in no humor, therefore, to abandon the fight, but it determined by the use of its great money power, in aid of its political associates, to extort from Congress a renewal of its charter. Its plan of campaign was, by contracting circulation, calling in its loans, and discontinuing future loans at the mother bank, to produce as much disaster and distress as possible, and to keep the ears of Congress constantly harrassed with memorials from every quarter of the Union where it had influence enough to get them signed, reciting in the most affecting manner the ruin that the veto and the removal of the deposits had brought on the country. Its movements were directed especially against business communities, and establishments employing a great many operatives, so as to throw out of employment as many workingmen as possible. One loan of $100,000 to a single distress-agitator was detected, and $1,100,000 was discovered to have been put with a single broker, to be employed in making panic and distress.

The plan was fully carried out according to its design. Wherever the bank, through its manifold agencies, could cause a disaster the disaster was caused. Wherever, by uniting its clap-trap with the wails of those it had designedly ruined, it could get memorials signed, they were signed. These memorials were presented in Congress by the first men in the nation; in the Senate by Webster, Clay, and Calhoun, introduced by speeches in which all the arts of the orator were drawn on to paint the wretchedness of a ruined country.

Mr. President, after reading this historical statement, and comparing it with the present condition of the country and the methods adopted at this time by the money power for enforcing their demands, it would seem that the present conspirators had deliberately adopted the plan of campaign followed by the old national bank. In 1833 the plan of campaign adopted by the old national bank to enforce its demands was the contraction of its circulation, the calling in of its loans, discontinuing future loans, in order to produce as much distress as possible, harassing the ears of Congress with memorials from every quarter of the Union where it had influence enough to get them signed, reciting in the most effective manner the ruin the veto had brought on the country. Its movements were directed especially against business establishments of the country, so as to throw out of employment as many workmen as possible. And they even went so far as to appropriate $1,100,000, placing it in the hands of a single broker to be employed in making panic and distress.

Wherever the bank, through its manifold agencies, could cause a disaster the disaster was caused. Wherever, by uniting its claptrap with the wails of those it had designedly ruined, it could get memorials signed they were signed. These memorials were presented to Congress by the first men in the nation—in the Senate by Webster and Clay and Calhoun, introduced by speeches in which all the arts of the orator were drawn upon to paint the wretchedness of a ruined country. And that is precisely what has been done to produce the present panic. By concerted action a regular plan of campaign has been adopted. Object lessons have been enforced.

The banks have deliberately adopted the plan of contracting their circulation, calling in their loans, and refusing future loans, and for the very purpose of producing as much disaster and distress as possible, and to keep our ears constantly harassed from every quarter of the Union where they have had influence enough to get memorials signed, such memorials reciting in the most affecting manner the ruin that the continuation of the Sherman law would bring on the country. Their movements have been directed especially against business communities, and large business establishments have been forced to close their doors. Their operatives have been thrown out of employment, and doubtless thousands and thousands of dollars have been used and employed in making panic and distress.

Wherever the bankers and their coconspirators could cause a disaster, the disaster has been caused. Wherever, by uniting their clamor of "honest money" with the wails of those it has designedly ruined, it could, as a matter of course, get memorials signed. And these memorials have been presented to Congress by distinguished Senators in speeches, in which all the arts of the orator have been drawn upon to paint the wretchedness of a ruined country, the wretchedness and ruin deliberately planned and executed by the very agencies for whom they speak.

Mr. President, substituting 1893 for 1833 and changing a few

names that no longer figure in American politics to some who do, and you make the statement which I have read, in all its horrible details, absolutely applicable as a perfect parallel to the conditions with which we are confronted to-day. We have the contraction of the currency, the refusal of loans, the resorting to extraordinary methods, the closing of factories, the throwing of men out of employment for the purpose of creating a public sentiment and a public sympathy, in order to operate upon the minds of Senators and Representatives and force us to grant to these corporations certain unlawful advantages and privileges for which they are now clamoring, as the old national bank did in 1833. The author says further:

In addition to all its other sources of power, the cause of the bank received invaluable assistance from the coalition of these three great men (Webster, Clay, and Calhoun). Each one was an aspirant for the Presidency, and upon the bank's cause and paper money, each found a common ground upon which all three could meet and oppose Jackson, the great enemy of both of these things. All the movements of the bank were but a repetition, with a change of names and dates, of what had taken place in 1811.

As a matter of course, Mr. President, in one respect the events of 1833 and those of 1893 have no parallel—in regard to Webster, Clay, and Calhoun—as there are no Presidential aspirants in the United States Senate at this time. Thus we have three instances in the history of the country—1811, 1833, and 1893—where these great fiscal agencies, created by the Government of the United States to aid and assist its financial operations and for the supposed benefit of the citizens of the Republic, have in times of great distress and public peril utterly failed to accomplish the purpose intended; and to their shame and eternal dishonor have been the means and instrumentalities for wicked and selfish purposes of producing the very condition which they were designed to avert. The author further says:

When the charter of the first bank was about to expire, and many persons were living who could testify to it, and the records of Congress showed the counterparts to all the memorials that were presented, this fact did not escape the bank's adversaries, and they made good use of it. In the session of 1834 the House of Representatives appointed a committee, of which Mr. Francis Thomas, of Maryland, was chairman, to inquire into the cause of the distress that was represented to exist, whether the bank had been instrumental in producing it, whether the bank charter had been violated, and whether the bank had used its money to control the elections.

The report of this committee is an instructive document. It showed what a sham all the fuss about distress and hard times was; but as for investigating the bank, it had as well have attempted to find the North Pole. The bank set it at open defiance, and this effort, like previous ones, utterly failed. Shortly afterwards the Secretary of the Treasury made a report to Congress under a call from that body upon the financial condition of the country, in which he showed that an unusual degree of prosperity existed, and that the distress complained of was imaginary, except in those places where the Bank of the United States had been able to create it.

In the same volume the author, in referring to the events of 1837 and subsequent years, says:

In the spring of 1837, soon after Mr. Van Buren's Administration had commenced, the catastrophe of which Gen. Hamilton had sown the seeds in 1790 occurred. On the morning of May the 10th, by one concerted movement, all the banks in the city of New York, which banks gave the law to the rest of the Union, suspended specie payments, as it is called; that is, repudiated all their obligations. All the other banks in the Union quickly followed their lead, the Pennsylvania Bank of the United States affecting to resist it, but soon falling into line with the others. The way in which the suspension of the New York banks operated upon all the other banks in the Union, so as to force their suspension, is well explained by Mr. Van Buren in his first message to the Twenty-sixth Congress in 1839.

It has been charged, and with great show of reason, that the suspension of specie payments at this time was deliberately contrived and brought about by the Bank of the United States, as part of its general programme to create all the distress that it could, in order thereby to extort from Congress a recharter.

Here, Mr. President, we have another accurate description of current events. In this quotation it is stated in substance that on the 10th of May, 1837, all the banks in the city of New York suspended specie payment and that these banks gave the law to the rest of the Union. Unfortunately the same facts exist to-day. New York is the great money center of the Union. It is the center of the money power. It controls the financial arteries of the nation. Its banks give law to the rest of the Union. They can contract or increase at their pleasure. They bring prosperity or force disaster at their will, and hence the necessity of an absolute divorce between the Government of the United States and all the money institutions and private financial operations of every name and nature.

The continuance of this unlawful union and this unholy alliance between the national banks and the Federal Government is a perpetual challenge to the happiness and prosperity of the Union. The centralized money power of the Union is the most dangerous and threatening element with which this or any other Congress will be called upon to deal. No better evidence need be presented of this truth than the events of the last six months. The author of this volume, referring to the fact that the suspension of specie payments was a deliberately formed plan of the Bank of the United States as a part of its general programme to keep and create all the distress that it can in order to extort from Congress a recharter, adds:

It was certainly not too good to do so, and in the year 1841, just before it finally expired, it is proved to have attempted to create a general suspension, by forcing the banks of the city of New York to suspend. The manner of this attempt was afterward related by its cashier. It consisted in selling bills in unlimited quantities on Paris—at this time in great demand—where it had not a cent to meet them, and drawing the coin with the proceeds of these sales out of the New York banks and shipping it abroad to meet these bills as they made their appearance there.

The plan of action herein outlined is almost precisely the scheme exposed in the Philadelphia Manufacturer, of September 23, 1893. Selling bills of exchange in unlimited quantities on Paris, has its parallel in the shipment and reshipment of gold between New York and London, under the pretense that it was a legitimate transaction, and in the pretended increase in the value of exchange on London. And in addition to this the banks of the present day have invented a new scheme, that of issuing for the benefit of each other what is known as "clearing-house certificates." The author adds further:

The bills, however, got to Paris before the coin, came back protested, and the great bubble was finally pricked. But of this hereafter. Certainly the condition of the New York banks at that time, as statistics which have since made their appearance show, discloses no reason why they should have suspended in the year 1837 that would not have compelled their suspension in previous years. In the year 1837 they had a circulation of $3.70 to every dollar of coin in their vaults. In the year 1834, the proportion of circulation was $7 to $1 of coin in their vaults; and in the year 1836 it was as $3.39 to $1. (See finance report for 1876, page 212.)

I also read from pages 51 and 52, from the same volume, as follows:

The committee of the stockholders, having made a thorough examination of the bank's affairs, reported and showed that from the year 1830 to the year 1836, the period when it was making its most desperate struggle for a recharter, the loans and discount of the bank were about doubled, its expenses trebled. Nearly thirty millions of these loans were not loans upon business paper; they were loans to members of Congress, editors of newspapers, brawling politicians, brokers, jobbers, favorites, and connexions. They were in most instances made by Mr. Biddle himself, the directory having put everything under the control of the exchange committee, and it having practically put everything under his sole control.

The details of the manner in which the bank's money was squandered to control political power would be sickening if it did not arouse indignation and wrath. From 1830 to 1836 large sums were always out on loan to members of Congress. One member related to Col. Benton his experience on applying for a loan. Having borrowed the money from the Bank of the United States as he would have borrowed from any other bank, and with the purpose of returning it, he voted afterwards against the bank, and felt, therefore, that he could tell it without shame to himself. He said that he needed $4,000, and could not get it at home. He went to Philadelphia, to the bank, inquired for Mr. Biddle, was shown into an ante room and supplied with newspapers and periodicals, asked to sit and amuse himself, the president being engaged for the moment. Presently the side door opened, he was ushered into the the presence, graciously received, stated his business, was smilingly answered that he could have it, and more if he wished; that he could leave his note with the exchange committee and check at once for the proceeds, and if inconvenient to give an indorser before he went home he could do it afterward, and whoever he said was good would be accepted. And telling this the member said "he could read bribery in his eyes."

Mr. President, this is not an overdrawn picture. It is not a repetition of a dreamy story but the detailed statement of a dangerous fact and perilous conditions. As little as we may regard it the truth is that to-day we are confronted with the same power, the same perilous situation, and the sooner we realize this fact and retrace our steps the better it will be for the country.

Mr. President, in conclusion, permit me to say that the passage of the pending bill will not produce the gratifying results claimed by its friends. It may restore for the time being a certain degree of confidence amongst bankers, stock-gamblers, and other classes of this description. It may increase the price of stocks. It may stimulate stock-gambling, but it will not increase the value of the produce of the field and the farm and the factory to the extent of a single farthing. It may open a few furnaces and forges and start the wheels of a few manufacturing industries, but it will bring no general or permanent prosperity.

The trouble lies deeper than the Sherman law. Pain and suffering will continue until the cause of the disease is removed. We shall have no permanent or general prosperity until all the national banks are wiped out and we have a sound currency composed of gold, silver, and Treasury notes. In addition to this, your trade and tariff laws must be remedied, and the unconstitutional and unnatural restrictions placed upon our trade and commerce must be removed in order that the markets of the world may be open to our agricultural and other products. Equality and justice must be the standard upon which all this legislation is based. And our trade laws must be corrected so that our commerce shall have an equal footing in the markets of the world with all the nations of the earth. The sails of our merchant marine should girdle the globe; and the flag of our country should be daily and hourly welcomed in every harbor and port in the world; but these happy results can not be attained so long as our present false, imprudent, and unpatriotic policies prevail.

The Wilson-Voorhees Bill.

REMARKS
OF
HON. W. J. TALBERT,
OF SOUTH CAROLINA,
IN THE HOUSE OF REPRESENTATIVES,
Wednesday, November 1, 1893,

On the bill (H. R. 1) to repeal a part of an act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

Mr. TALBERT of South Carolina said:

Mr. SPEAKER: I desire, in behalf of my constituency, to enter my earnest and solemn protest against the passage of this monstrously iniquitous measure, a measure fraught with so much harm towards the laboring and producing classes of this country, and in doing this I do not propose to make an extensive speech, as I have already expressed myself upon this issue, and there is now no necessity for any useless waste of breath, for it seems to be a matter of hurry and haste on the part of the majority who are pushing this scheme. Then let them take the responsibility upon themselves of hurrying it through this body. The mandate has been issued; the decree has gone forth.

It is like the guilty Macbeth, from whose hands all ocean's waters could never wash out the bloody stains. Then I say to the majority here, go ahead if you wish, and, like skillful executioners, do it quickly and defiantly, running roughshod over the minority, and when you have done it then go home and tell the people what great and glorious things you have accomplished, what distinguished honors you have at last achieved for our common country, and the already impoverished masses.

You can tell them that in passing this bill you have destroyed, as it were, one-half the money of the country, when there was already too little to carry on the business of the same. Tell them that you have extinguished forever one of the purest and brightest lights that ever burned in the cause of freedom and civil liberty. Tell them that in doing this you have silenced one of the most formidable guns that ever belched forth in defense of the Constitution and the rights and interests of the common people. Tell them that under the waving scepter of the Chief Magistrate and the influence of boards of trade, chambers of commerce, national banks, Wall-street gamblers, and gold bugs generally you have gone back upon your promises to the people and voted in the interest of the money power, corporations, and monopolies. Tell them that henceforth, no matter what daring or outrageous measure the President may see proper to dictate, you stand ready to carry it out. Tell them, finally, that, no matter what the authorities may do, you would advise the people to practice the odious doctrine of passive obedience and nonresistance. Tell them all these things, and let them know the real condition which confronts them, and if they do not rise up in their wrath and indignation and inquire the reason why I will admit that I know nothing of the character of American freemen. Either do this or remain here instead of adjourning, and redeem your pledges so often made upon the stump in seeking your position.

Silver.

SPEECH
OF
HON. JOSEPH WHEELER,
OF ALABAMA,
IN THE HOUSE OF REPRESENTATIVES,
August 11 and 12, 1893.

The House having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. WHEELER of Alabama said:

Mr. SPEAKER: I come from a country that produces no silver and no gold, but in other elements of wealth is equal to the most favored land on earth, blessed as it is by Providence with a healthful climate, a fertile soil, mountains of iron ore, and inexhaustible beds of coal; and I am proud to say that it is peopled by those who love the Constitution, who love justice, and who love the principles of the Democratic party. I stand here, Mr. Speaker, as a representative of people of that character, in the opening of a debate which involves the most momentous question ever presented to the American people. It is a question which must be met calmly, considerately, and with wisdom.

The problem to be solved by Congress is to so legislate as to preserve the monetary functions in both gold and silver. If gold goes to a premium, for all practical purposes it ceases to be money, and nearly one-third of our circulation is withdrawn. If silver is deprived of its function as money we would lose nearly the same amount of circulation. Such a withdrawal of either would contract currency and add to the suffering and distress which provails in our land.

My contentions are—

1. That extravagance and adverse balance of trade and many other things have transpired to conduce to the crisis which now prevails in our country.
2. That the crisis is in a large measure artificial and will correct itself even without the action now demanded of Congress.
3. That the gold standard men do not truly represent Mr. Cleveland's wishes and position.
4. That no amount of excess in the production of either gold or silver will cause any material change in their relative values so long as there is a market for the entire production of both metals.
5. That the Democratic platform will be violated by voting for the pending bill.
6. That the interest of the people of the United States demands that gold and silver be coined at a proper ratio.
7. That the value of farm products have depreciated since silver was demonetized.
8. That Secretary Carlisle and President Garfield demanded free coinage of silver.
9. That Daniel Webster and James G. Blaine contended that silver was a coin of the Constitution.
10. That the gold and silver countries have nearly twice as much population, wealth, and circulation as the gold-standard countries.
11. That the Democracy prior to 1860 were opposed to the present financial system.
12. That the largest amount of money with full purchasing and debt-paying power will bring to any country the greatest prosperity.
13. That this proposition is especially true regarding the people of the United States where there is such a vast territory, and with such unlimited mineral resources entirely undeveloped.
14. That all paper money to have full purchasing and debt, paying power, must be ultimately redeemable in coin.
15. That there is not sufficient gold in the world to float the paper money necessary for the business needs.
16. That the amount of money in every country must bear proportion to its aggregate wealth.
17. That the amount of money now in our country in proportion to our wealth is less than half what it proportionally was in the days of Democratic prosperity, from 1850 to 1860.

THE PROSPERITY OF 1879.

In 1879 gold, which had been a commodity for eighteen years, once more became part of our currency, and the expansion of the amount of money in our country, caused by the addition of some three hundred million dollars of gold, produced the marked prosperity which continued for several years, and which is still so fresh in our memories.

Two years ago this House and the country were shocked at the great strike in the State of Pennsylvania. The people of a portion of that State declared that unless certain conditions demanded by them should be granted their labor would be withdrawn and the machinery of manufacture and enterprise and trade, which had depended upon their labor, would be suspended. These men had a right to decline to work if they chose to do so, yet their action caused turmoil, trouble, and distress, and by portions of the metropolitan press they were denounced, almost as severely as though they had been criminals and traitors.

BATTLE BETWEEN THE MONEY POWER AND THE PEOPLE.

The New York papers tell us that Mr. Chauncey M. Depew has said that—

> Fifty men in these United States have it within their power, by reason of the wealth which they control, to come together within twenty-four hours and arrive at an understanding by which every wheel of trade and commerce may be stopped from revolving, every avenue of trade blocked, and every electric key struck dumb. Those fifty men can paralyze the whole country, for they control the circulation of currency and can create a panic whenever they will.

Mr. Speaker, very possibly these fifty men have got together. These fifty men, controlling through the national banks most of the money of the country, have made their demand upon Congress and the American people.

Mr. HENDRIX. Will the gentleman name those fifty men?

Mr. WHEELER of Alabama. I could name some of them; but I presume Mr. Depew knows the names of them all. They are the capitalists of New York and the Northeast, and possibly Europe. These fifty men, by the power of the press, by the power which they wield in Europe, sailing there as they do in their magnificent yachts, costing a million a year to keep them afloat—those men are at least in a measure responsible for the condition in our country to-day.

They find, Mr. Speaker, that under the law of 1890 some $3,100,000 Treasury notes are issued every month, and that much is added to the currency of the country. Those men have been demanding for twenty-five years the curtailment of money in our country. And the strike for which they are responsible is the strike caused by their withdrawing from the channels of trade and from use in manufactures substantially all the money of the country, and we are informed that the great capitalists and bankers assert that this withdrawal shall continue until the Congress of the United States by solemn enactment says that there shall be no further increase in the money of our land. I do not think I can be in error in expressing the opinion that the strikers of to-day are the millionaire capitalists of the Northeast and their associates beyond the sea; and the question for the American people is, Shall the wealthy people succeed in their demands?

I do not mean to assert that any capitalist intentionally and with deliberation contributed to bring about a crisis such as confronts us at this time, but I do charge that circulars and other documents predicting money stringency have emanated from the financial centers, and I will also state that bankers and millionaires commenced long ago to use expressions which have tended to create a want of confidence, which expressions became current in the press, and this, added to natural causes, has produced an almost unprecedented crisis in the money affairs of our country.

And I believe that there are men who are using their efforts to avail themselves of this temporary depression to induce Congress to permanently demonetize silver and establish a gold standard in the United States.

I have heard more than once of statements by Wall street brokers and bankers and capitalists that this was a battle between money and the people, and that money would win. The battle has commenced; and where others may stand, I care not; but before God and my conscience I shall stand by the people. [Applause.]

THE METROPOLITAN PRESS.

In the New York Sun, April 28, page 7, there is an article headed "Bankers meet Carlisle." It says:

Secretary Carlisle decided yesterday morning to have a talk with the New York bankers.

The place selected for the meeting was the home of President Williams of the Chemical Bank.

The list of distinguished bank presidents who were present is then given, and the article states that—

The conference between the Secretary and the bank presidents lasted somewhat over an hour.

After giving some details, the article says:

The Secretary went over the currency laws of the country, and said that they were in bad shape and needed revision. He said the revision should start with the Sherman law.

This has proven to be a very correct statement.

The article also says:

President Cleveland's advisers have told him that the only way to induce the Western and Southwestern Senators and Congressmen to consent to the repeal of the Sherman law is to demonstrate to their constituents that they are losing money every day that this law is in operation.

Now, it seems that the President's advisers, whoever they may be, have been engaged in this work.

There certainly has been a great effort made to convince the people of the South that the Sherman law is causing them to lose money.

The correspondent also tells us that at that time, April 28, this pious missionary work had already been started by a number of bankers in the solid communities of the East.

The article says:

The missionary work in that direction has been started by a number of the bankers in the solid communities of the East. They are daily refusing credits to the South, Southwest, and West.

To my mind this language is certainly an admission of a combination on the part of these bankers to coerce the South and West into a compliance with their demands.

The reason assigned for this withdrawal of credit is that the bankers do it "fearing the effects of the Sherman law."

The article then goes on to state that the Chicago bankers are carrying out the same policy as that adopted by the New York bankers. It says:

The Chicago bankers, it was said, are carrying out the same line of policy. Secretary Carlisle, in his talk with the bank presidents, made his stand very clear. It is to be heroic treatment all the way through on the Sherman law, and possibly by the next session of Congress the silver mine owners and the adherents of silver in the Senate and House will be ready to consent to a repeal of the law.

The bank presidents, replying to Secretary Carlisle, cordially informed him that they would be ready at all times to coöperate with him in the successful administration of the financial policy of the Government.

Of course these gentlemen would be ready at all times to cooperate in carrying out such a policy as the article describes.

It is the policy they have been striving for years to force upon us.

The gold in the Treasury was reduced $80,000,000 when Cleveland came in office, and the line was drawing near the $100,000,000 reserve, and every day the press was reporting large shipments of gold to the Treasury from the banks of the South and in closing this article this fact is referred to by the New York Sun in these words:

In the meantime the Secretary continues to receive shipments of gold from unexpected sources.

I desire to call special attention to the significant fact that this gold which Mr. Carlisle received from unexpected sources nearly all came from the South.

The New York Sun of May 1 contains a letter dated Washington, April 30. The letter, after giving the views and purposes of the Government as expressed by Secretary Carlisle to the New York bankers, says:

There is to be an extra session of Congress to afford the opportunity at as early a date as possible. War will be opened against silver, notably the Sherman law.

I think all will admit that this prediction has been verified, and that war against silver has been opened.

The letter or article also says:

The statement of Mr. Carlisle to the New York banks makes it clear that while Cleveland works in Congress the bankers will be expected to work, not in New York only, but throughout the country, doing their utmost to pinch business everywhere in the expectation of causing a money crisis that will affect Congress powerfully from every quarter.

This prediction has also been verified. Business has been pinched, the expectations have been realized, and a money crisis has been caused. The letter then proceeds to explain how the requisite votes would be obtained to carry the war upon silver to a successful termination, and says:

Senators heretofore strong for silver are named as likely to go over to the President and the banks, among them VOORHEES.

This prediction has proven as true as prophecy.

At the same time are counted up the names of Representatives who will change front, notably Democrats conspicuous heretofore before the country as uncompromising silver men, who either have already gone over to gold or are expected to do so as soon as the terms can be arranged.

It is quite true that many Democrats conspicuous heretofore as uncompromising silver men have gone over to gold, but we are ignorant as to what has induced their sudden and wonderful change.

This letter and article, written four months ago, certainly foreshadows events with a remarkable degree of accuracy.

The same correspondent, in the Sun of May 2, speaking of the meeting of Congress, says:

That a dead set will be made for the repeal of the Sherman silver law.

Two months later the council closes the mints of India against silver, and the next day the London press says:

The effect will be severely felt in the United States and Mexico, and where silver mines abound, and the American Congress will be bound to expedite its action in consequence.

Can any one doubt but that the closing of the India mints was done to hasten demonetization of silver in the United States? And yet intelligent men argue that if we demonetize silver it will compel England and continental Europe to remonetize that metal.

On the contrary, they shout for what they will term a gold-standard victory.

I desire to call special attention to the statement in the New York Sun of May 1, that—

Bankers will be expected to work not in New York only but throughout the country, doing their utmost to pinch business everywhere in the expectation of causing a money crisis.

And to the statement from the same paper in the article of April 28, which explains how influences were to be brought to bear upon Western and Southwestern Senators and Congressmen, and then says that—

They (the bankers of the East) are daily refusing credits to the South, Southwest, and West.

Also that—

The Chicago bankers, it was said, are carrying out the same line of policy.

I also, in this connection, desire to call attention that the same article says:

In the mean time the Secretary continues to receive gold from unexpected sources.

And I call attention further to the fact that these unexpected sources were from the Southern bankers. Without some explanation it seems to me that the casual reader will conclude that while the bankers in New York were endeavoring to bring about a crisis, the bankers of the South were sending their gold to the Treasury in order to avert such a catastrophe.

Now, let me remind my follow-members of the South and assert that one marked effect of a repeal of the Sherman law will be to give largely increased strength to these bankers, who, according to the New York Sun, four months ago were exercising all the power they possessed to bring about the very crisis which now prevails, and for the avowed purpose of enforcing the very legislation which is in the pending bill.

I beg to ask if we are doing our duty to our constituents if we give additional power into the hands of such men?

WHAT CAUSES THE TROUBLE?

Now, Mr. Speaker, in order to stop the issue of this sum of about $3,000,000 a month, these men have started a cry that that is the whole cause of the stringency of money existing to-day. In a country spending $500,000,000 a year these people have the assurance to say that the buying of $38,000,000 worth of silver annually is alone responsible for this crisis. I contend that if we should throw $38,000,000 into the ocean every year no such depression would follow. Yet those gentlemen say that this addition to the currency of our country is the cause of our trouble.

Very recent events show that the compulsory purchase of 4,500,000 ounces of silver per month is not the entire cause of the trouble, as it appears that during the month of July the Government only purchased 2,393,068 ounces, about half the amount which it is supposed the Government is compelled to purchase. This is all that was offered at market rates. The probabilities are that in August the purchases will not much exceed the purchases in July. Now, if the whole world refuses to sell silver to the Government at the market rates, it is clear that it is not the drug that it is contended to be by the advocates of this bill.

The expenditure of the Government for silver during the entire month of July was less than 2½ cents for every inhabitant in the United States, and yet we hear intelligent men asserting that this expenditure of 2½ cents per month is the sole reason of this widespread panic.

EXTRAVAGANCE HAS CONDUCED TO THE CRISIS.

What is the real cause of the present distress I will explain in part. Extravagance is one of the elements—extravagance by Congress and extravagance everywhere—the abandonment of those principles of economy by which our nation was made great. Let us restore economy; let us reduce expenditures; let us reduce all salaries. Patriots can stand it. People not holding office are now receiving for their labor one-third of what they received in prosperous times. For God's sake can not patriots be willing to have their pay cut down 10 per cent? And ten per cent cut off the expenditures of our Government would restore prosperity. [Applause.]

We will at least in a measure have prosperity in a few months, whether the Sherman act or any part of it is repealed or remains on the statute book. We are about to gather abundant harvests, and with such elements of prosperity the present artificial panic or crisis can not continue. The resources of our country and the courage and enterprise of our people will come to the rescue.

Mr. Cleveland assures us that crops are plenteous and that we are blessed with nearly all elements of prosperity. He says:

Our unfortunate financial plight is not the result of untoward events nor of conditions related to our natural resources; nor is it traceable to any of the afflictions which frequently check national growth and prosperity. With plenteous crops, with abundant promise of remunerative production and manufacture, with unusual invitation to safe investment, and with satisfactory assurance to business enterprise, suddenly financial distrust and fear have sprung up on every side.

Our President tells the whole story of the trouble in these few words. He says:

Corporations and individuals are content to keep in hand the money they are usually anxious to loan.

It is hardly to be presumed that this condition can be very lasting, and I repeat that no matter what Congress does, the present temporary depression will be followed by prosperity. When people get tired of hoarding their money they will become anxious to get interest on it.

PROSPERITY WILL BE RESTORED.

If the New York press succeed in alarming Congress into repealing the Sherman act money will immediately appear in the channels of trade and we will be restored to temporary prosperity. But if the demonetization of silver is thus accomplished and no provision is made for a gradual increase of the amount of money in our land the ratio of money to both population and wealth will gradually be decreased and every year and month and week and day will add wealth to the accumulations of the rich and distress and poverty to the great laboring masses of our country. If, on the contrary, Congress does not comply with their wishes and the Sherman act is repealed by the enactment of a safe and judicious coinage law, as was pledged to the country in the Democratic platform, the owners of money will hasten to seek borrowers, and in a few months the present crisis will be a thing of the past; but the desire of the South and West is to couple a coinage act of some kind with the repeal, because they feel silver coinage is essential to our continued prosperity, and that the demonetization of that metal will be disastrous to all the rural sections of our land.

WHAT HAS CAUSED EXPORTS OF GOLD?

There are several very apparent reasons which have caused the excess of exports of gold during the last two years. For many years the actual value of imports of merchandise have far exceeded our exports. The reports of the Treasury have not been able to give correct statistics on this point. European merchants and manufacturers have established agencies in this country and a large amount of imports have been made through these agencies, and invoices have underrated values to a much larger extent than has been generally understood. When the duty is ad valorem they invoice goods at less than their value, and in many cases where the duty is specific they underrate the goods by representing them of a coarser or inferior quality.

Then again it is estimated that fully $50,000,000 a year is carried from our country by American tourists. All this has tended to make us a debtor nation. The trouble was intensified by the losses of the Baring Brothers in the Argentine Republic. They needed gold and this demand drew a part of this needed metal from the United States; and recently when Austria needed some $180,000,000 of gold in order to establish that nation upon a gold basis the demand then created again caused a drain from this country to Europe.

Our 4 per cent gold bonds were then sold at 116 to 120. Austria in order to raise gold offered her gold 4 per cent bonds at 91 to 92. As these bonds were virtually indorsed by the Rothschilds it is not surprising that English capitalists were glad to sell our 4 per cent bonds at 116 when they could invest the same money in the 4 per cent gold bonds of Austria at 91 cents.

When we turn the balance of trade in our favor gold will flow in a steady stream to our shores.

But even with the balance of trade against us gold is already arriving by the millions at our ports.

The demand for gold in Europe has in a measure ceased.

Our crops of cotton and grain are inviting an influx of gold.

Stocks and bonds are now selling at a price which also invites investments by European capitalists.

The gentleman from Indiana who spoke this afternoon asserted that he would vote for unconditional repeal, and also said he was for the free coinage of silver.

Mr. BROWN. Does the gentleman refer to me?

Mr. WHEELER of Alabama. Certainly, I was referring to the gentleman's speech which he delivered an hour ago.

Mr. BROWN. The gentleman is entirely mistaken.

Mr. WHEELER of Alabama. I understood the gentleman to say that he was in favor of free coinage, but would vote for the unconditional repeal of the Sherman act.

Mr. BROWN. If the gentleman will look at my remarks, he will find no such statement.

Mr. WHEELER of Alabama. Well, did not the gentleman use this language?

I regard the Sherman law so obnoxious to the best interests of the country, and so violative of justice and right, that I will, if opportunity is given me, vote for its repeal in any event, conditions or no conditions.

Mr. BROWN. If my friend will allow me to interrupt him, I will say now that I shall vote for the free coinage of silver at the very first opportunity.

Mr. WHEELER of Alabama. But does not my friend know that after the repeal of the purchasing clause in the Sherman act we can never pass a free-coinage bill.

Mr. BROWN. To make it more specific, I will vote for the Bland substitute.

Mr. WHEELER of Alabama. Does not the gentleman know that after the repeal of the Sherman act no man on this floor will ever successfully vote for the free coinage of silver? If two-thirds or three-fourths of the members of both Houses were in favor of free coinage of silver, or of any kind of coinage on any kind of basis, the other third would filibuster and would be applauded by the metropolitan journals for what the New York millionares would call "patriotic devotion to the best interests of the country." [Laughter and applause.]

MR. CLEVELAND IS FOR THE PEOPLE.

Now, sir, the Republican press tell the Democratic party that unless they establish a gold standard, they are against the Administration of Mr. Cleveland. What is Mr. Cleveland's record on this subject? In his letter of acceptance he said:

The people are entitled to sound and honest money abundantly sufficient in volume to supply their business needs.

And also he said:

The wants of the people arising from a deficiency, or imperfect distribution of money circulation, ought to be fully and honestly recognized and efficiently remedied.

That is his letter of acceptance.

Now, in his message of a few days ago to the House, there is a paragraph which is susceptible by honest men of but one construction. Gold men put upon it a construction which is not warranted by the text. He says:

I earnestly recommend the prompt repeal of the provisions of the act passed July 14, 1890, authorizing the purchase of silver bullion—

I am emphatically with our great leader, Mr. Cleveland, upon that proposition; but, Mr. Speaker, our platform demanded something else, and Mr. Cleveland, true to the platform, demands something else also. If the gold men were right, Mr. Cleveland would have stopped right there and said repeal the purchasing clause of the Sherman act. That is the gold men's demand. But what does he say? He says—

and that other legislative action may put beyond all doubt and mistake the intention and ability of the Government to fulfill its pecuniary obligations in money universally recognized by all civilized countries.

That is to say, gold and silver.

These words, gold and silver, are not in the President's message, but they are as clearly understood by the context as though they were there, for the preceding words describe them. I most emphatically indorse this demand of our noble President. I yield to no man in devotion to and admiration for Grover Cleveland.

Eight years ago, when the convention met at Chicago, Mr. Cleveland's nomination was very far from being assured. The delegates from the State of Alabama were very largely the advocates of another distinguished candidate. My battle for Mr. Cleveland assumed so intense a phase as to for a time almost disrupt lifetime friendships. I was his champion then, and as time rolled on my admiration increased for him day by day, and I believe this great man will pass into history foremost amongst the great statesmen of the nineteenth century. In devotion to duty and integrity to purpose the history of time hardly presents a parallel. On March 1, 1889, four months after the defeat of our party, it became my duty on this floor to rebuke certain expressions regarding this great man. I read from my speech in the CONGRESSIONAL RECORD, volume 101, pages 134–135 of the Appendix!

A MODEL AND STAINLESS EXECUTIVE.

Mr. Speaker, I care more for him, Mr. Cleveland, now than I did in the hour of his triumph. I care more for that great man and admire him more in this day of his defeat, for the grandeur of his action, than I did when men hailed him as a manifest child of a glorious destiny.

Is there a man within the sound of my voice, or throughout this broad land, who can honestly question my assertion that Mr. Cleveland exercised all of his undoubted talent and ability in his sincere and unselfish effort to advance what he believes to be the best interest of the Republic?

Politically he may have made some mistakes. He probably felt that the masses of the people would have a higher appreciation of his honest endeavors to serve them than is shown by the result. It is melancholy to reflect that there were a sufficient number of voters, nominally American freemen, who for a few dollars could be induced to cast their ballots so as to compass the defeat of so admirable and so blameless a President as Grover Cleveland has proved himself.

No President, sir, ever devoted himself more faithfully and laboriously to his duties; no President was ever more scrupulous in informing himself of the actual merits of every legislative measure submitted for his approval; no President was ever more rigorously consistent in fulfilling every pledge upon which he was elected; no President has ever vacated his high office with a more stainless record for unswerving honesty, unimpeachable integrity of act and purpose, and unshrinking devotion to duty as he understood his obligations to himself and to the people.

Mr. SENEY. Are you not giving the President taffy?

Mr. WHEELER. No, I am not. Mr. Cleveland merits the loftiest encomium that could be passed upon his official services by the most eloquent gentleman who ever stood upon this floor, and I only regret that I am not equal to the task of dealing fitly with so inspiring a theme.

This speech was made at a time when there was very little probability of Mr. Cleveland again appearing in public life. It was very generally understood that it was his desire and determination to devote himself to private pursuits, and I believe he would have done so had it not been for the almost unanimous demand on the part of the people that he should become their standard bearer in the last campaign, which he brought to so successful and glorious a termination.

It does not become men who, until two weeks ago, were Mr. Cleveland's censors and critics to contend that those who believe that the gold standard is not best for our country are opposed to Mr. Cleveland, and I assert here that any charge that Mr. Cleveland shirks any responsibility to the platform is a gross error and does him the greatest injustice.

Such other legislation—

What is it? It must be the making of money of some sort. Not gold, because that is provided for now. What, then? It can mean nothing but silver, the coin pledged to us by the Constitution and by the platform of last year, and by nearly every platform of every party in the last fifty years. But at what ratio? A fair ratio.

THE PRESIDENT'S EXALTED VIEWS OF DUTY.

I am confident that a law for coinage upon the line pledged to the country at the Chicago convention would meet the President's approval.

Those members of this House who represent rural constituencies and cast their votes for repeal without any provision for the continuance of silver coinage, are certainly placing it within the power of the advocates of the gold standard to effectually demonetize silver and place us upon the gold basis with all its attendant evils. They certainly appreciate that they are in palpable violation of the pledges of the platform upon which they were elected to this body.

If these gentlemen imagine the President wishes them to violate their duty to their constituents I think they are mistaken. Above all things Mr. Cleveland has enjoined upon the representatives of the people that their paramount duty is to the people. The entire life of this great man has been an exemplification of this rule of action.

In his first inaugural address Mr. Cleveland said:

Every citizen owes to the country a vigilant watch and close scrutiny of its public servants and a fair and reasonable estimate of their fidelity and usefulness.

And in his first message to Congress, which I read from the CONGRESSIONAL RECORD, page 109, Mr. Cleveland said:

While the Executive may recommend such measures as he shall deem expedient, the responsibility for legislative action must and should rest upon those selected by the people to make their laws.

Contemplation of the grave and responsible functions assigned to the respective branches of the Government under the Constitution will disclose the partitions of power between our respective departments and their necessary independence. The jealous watchfulness of our constituencies, great and small, supplements their suffrages, and before the tribunal they establish every public servant should be judged.

MR. CLEVELAND AND DANIEL WEBSTER'S SIMILAR VIEWS.

This expression reminds me of a similar thought from Daniel Webster, who, in his great speech of May 7, 1834, said:

When this and the other House shall lose the freedom of speech and debate; when they shall surrender the right of publicly and freely canvassing all important measures of the Executive; when they shall not be allowed to maintain their own authority and their own privileges by vote, declaration, or resolution, they will then be no longer free representatives of a free people, but slaves themselves and fit instruments to make slaves of others.

No one recognizes the great truth of this utterance more than our Executive.

Mr. Cleveland and myself differ upon a question of expediency. I regard him as the embodiment of integrity and fair dealing. He is a statesman. He has been lifted far above political management. He firmly believes that after the Sherman law is repealed that the Northeastern Democracy will proceed with a hearty good will to enact a silver-coinage law on the line pledged in the platform which they made at Chicago.

My observation, on the contrary, leads me to the firm belief that they not only have no such intention, but that they will employ all parliamentary expedients to prevent such legislation.

It is for this reason that I insist that the silver-coinage legislation promised us by Mr. Cleveland and the Democratic platform be enacted at the same time that we repeal the Sherman law.

Mr. Cleveland expects every Representative to do his duty to his constituents and to vote for measures which will be beneficial to their interests.

No one recognizes more readily that Mr. Cleveland that the interest of the various sections of our great country are frequently antagonistical.

VALUE DETERMINED BY SUPPLY AND DEMAND.

There is one universal law that the price of any article is regulated by the supply and demand, and the ratio of the value of silver to gold has always obeyed this law. No matter how great the supply of gold, it did not depreciate in value so long as there was no decrease in the demand. The same has always been true of silver.

During the period of the marvelous production of gold by the mines of California and Australia, from 1850 to 1866, there was no marked depreciation of the value of gold. The reason why the value of gold was practically maintained was that the entire supply was coined into money or used in the arts.

I contend that when the laws do not discriminate in favor of

one of the metals and against the other, the evidence is overwhelming that no amount of excess of production of either gold or silver will cause a divergence or ratio between the two metals.

The table which I will now read states the production of gold and silver in the United States from 1845 to 1860, and the ratio of silver to gold during that period.

Production of gold and silver in the United States, and prices of silver, measured by gold, annually from 1845 to 1860.

[Table prepared from records of the Mint of the United States.]

Year.	Estimated product.		Price of pure silver per ounce in London.			Average price of pure silver, per ounce, in gold.	Value of standard silver dollar, 412½ grains, in gold.	Relative value of gold to silver.
	Gold.	Silver.	Lowest.	Highest.	Average.			
1845	$1,008,327	$350,000	58⅞	59½	59⅛	129.8	100.46	1 to 15.92
1846	1,139,357	50,000	59	60	59 1/16	130.0	100.56	1 to 15.90
1847	889,085	50,000	58⅞	60½	59 1/16	130.8	101.20	1 to 15.80
1848	10,000,000	50,000	58⅜	60	59⅛	130.4	100.88	1 to 15.85
1849	40,000,000	50,000	59	60	59⅛	130.9	101.30	1 to 15.78
1850	50,000,000	50,000	59⅛	61⅛	60 1/16	131.6	101.83	1 to 15.70
1851	55,000,000	50,000	60	61⅛	61	133.1	103.42	1 to 15.46
1852	60,000,000	50,000	59⅞	60⅞	60⅜	132.6	102.57	1 to 15.59
1853	65,000,000	50,000	60⅜	62	61⅛	134.1	104.26	1 to 15.33
1854	60,000,000	50,000	61⅜	61⅞	61⅝	134.8	104.26	1 to 15.33
1855	55,000,000	50,000	61	61⅛	61 1/16	134.4	103.95	1 to 15.38
1856	55,000,000	50,000	60⅛	62⅛	61 1/16	134.4	103.96	1 to 15.38
1857	55,000,000	50,000	61	62⅛	61⅛	135.3	104.69	1 to 15.27
1858	50,000,000	500,000	60⅜	61⅜	61 1/16	134.4	103.95	1 to 15.38
1859	50,000,000	100,000	61⅛	62⅛	62 1/16	136.0	105.22	1 to 15.19
1860	46,000,000	150,000	61⅛	62⅛	61 1/16	135.2	104.58	1 to 15.29
Total	654,036,769	1,500,000						

This table shows that during these sixteen years the production of gold in the United States was more than four hundred times greater than the production of silver, and yet there was no appreciable change in the ratio or value of these two metals.

The production of silver increased seven hundred fold between the years of 1850 and 1873, and yet it did not fall in value, because it was demanded for coinage or used in the arts.

I read from Cyclopædia of Political Science, Volume II, page 883:

For a period of about two hundred years prior to 1872 silver and gold were used in most parts of Europe and America indifferently and alternately, in a ratio between 15 and 16 of silver to 1 of gold.

The ratio of silver to gold in 1860 was 15.29 and in 1873 it was 15.92. During that period the product of silver in the United States alone had increased from $150,000 in 1860 to $35,750,000 in 1873, and during all that period with this marvelous increase there was scarcely any change in the ratio of gold to silver.

I now present a table showing the production of gold and silver in the United States, and the relative value of the two metals from 1860 to 1873. It will be seen by this table that the depreciation of values did not commence until after that date.

Production of gold and silver in the United States, and prices of silver measured by gold, annually, from 1860 to 1873.

[Tables prepared from records at the Mint of the United States.]

Years.	Estimated product.		Price of pure silver per ounce in London.			Average price of pure silver, per ounce, in gold.	Value of standard silver dollar, 412½ grains, in gold.	Relative value of gold to silver.
	Gold.	Silver.	Lowest.	Highest.	Average.			
1860	$46,000,000	$150,000	61⅛	62⅛	61 1/16	135.2	104.58	1 to 15.29
1861	43,000,000	2,000,000	60⅜	61⅜	60 5/16	133.3	103.10	1 to 15.26
1862	39,200,000	4,500,000	61	62⅛	61 1/16	134.6	104.16	1 to 15.35
1863	40,000,000	8,500,000	61	61⅜	61⅛	134.5	104.06	1 to 15.37
1864	46,100,000	11,000,000	60⅝	62⅛	61⅜	134.5	104.06	1 to 15.37
1865	53,225,000	11,250,000	60⅛	61⅜	61 1/16	133.8	103.52	1 to 15.44
1866	53,500,000	10,000,000	60⅜	62⅛	61⅛	133.9	103.63	1 to 15.43
1867	41,725,000	13,500,000	60⅜	61⅛	60 15/16	132.8	102.67	1 to 15.57
1868	48,000,000	12,000,000	60⅛	61⅛	60⅛	132.6	102.57	1 to 15.59
1869	49,500,000	12,000,000	60	61	60 1/16	132.5	102.47	1 to 15.60
1870	50,000,000	16,000,000	60⅛	61⅛	60 1/16	132.8	102.67	1 to 15.57

1873	36,000,000	35,750,000	57⅞	59 13/16	59⅜	129.8	100.46	1 to 15.92

The treaty of peace between France and Germany was ratified on March 1, 1871, which provided that France should pay Germany 5,000,000,000 francs in gold. In two years from that time it became the interest of Germany to permanently demonetize silver and it was not until after this that silver commenced to decline.

This proves that silver will not depreciate in value so long as it is not denied the use for which it seems to be designed by nature.

It is interesting to examine the many changes in the value of gold and silver which has taken place during the last six or seven hundred years.

RATIO AND COINAGE IN ENGLAND.

In 1344, during the reign of Edward III, gold was being coined in England by the King's decree. The ratio was fixed at 1 to 12½. During the next two hundred and fifty years the ratio was subjected to many changes.

In the year 1600 it was little less than 1 to 11. Between the years 1600 and 1610 gold increased in value and the ratio was fixed at 1 to 12. During the next ten years gold still further increased, and the ratio was increased to 1 to 13. No doubt this increase in the value of gold as compared with silver was caused by the reports from the new world indicating that silver was being found in more abundance than gold. The difference in the value continued to increase, and in 1663 the ratio was fixed at 1 to 14½.

In the year 1717, the relative value of the guinea and silver shilling was fixed by a proclamation of George I, the ratio being about 1 to 15½. This put too much silver into silver coin, and from that date up to the year 1800 only about £584,000 of silver was brought to the mint for coinage, and a great deal of the more perfect silver coins were exported, those that were much worn being the only ones that were retained in circulation.

In 1774 Parliament passed an act limiting the legal tender of silver coins to continue in force two years. In 1798 this law was reënacted, and a law was passed providing that the mint should no longer coin silver. In 1799, the act was made perpetual, and in 1816 Parliament enacted—

That, from and after the passing of this act, the gold coin of this realm shall be, and shall be considered, and is hereby declared to be, the only legal tender for payments, except as hereinafter provided, and no tender of payment of money made in silver coin of this realm of any sum exceeding the sum of forty shillings at any one time shall be reputed a tender in law, etc.

I hold in my hand a table showing the comparative value of gold and silver coins of England from the reign of Edward III to the demonetization of silver in 1816:

Table showing changes in the comparative value of the gold and silver coins of England from the reign of Edward III to 1816.

Date.	Reign.	Comparative value of fine gold and silver.	Date.	Reign.	Comparative value of fine gold and silver
1344	Edward III.	1 to 12.584	1551	Edward VII.	1 to 11.000
1349	....do	1 to 11.571	1552	....do	1 to 11.050
1356	....do	1 to 11.158	1553	Mary	1 to 11.057
1421	Henry V	1 to 10.331	1560	Elizabeth	1 to 11.109
1461	Edward IV.	1 to 10.331	1600	....do	1 to 10.901
1465	....do	1 to 11.158	1604	James I	1 to 12.109
1470	Henry VI	1 to 11.158	1626	Charles I	1 to 13.346
1482	Edward IV.	1 to 11.158	1666	Charles II	1 to 14.485
1509	Henry VIII.	1 to 11.158	1717	George I	1 to 15.209
1527	....do	1 to 11.268	1816	George III	1 to 14.287
1543	....do	1 to 10.434			

It has been contended that in 1545 the comparative value of gold to silver was 1 to 6.818, and in 1846 and 1847 1 to 5, and in 1849 1 to 5.151. But it is very improbable that any considerable amount of gold or silver sold at any such comparative values. It is true that during the period between the discovery of America in 1492 and 1545 $90,000,000 of gold was received in Europe from America, and during that period only $30,000,000 of silver reached Europe from America. This was not sufficent to have had such a remarkable effect upon the values of the metals. In 1543 the ratio was 1 to 10.434, and eight years after, in 1551, it was 1 to 11, and I find that the report of the Secretary of the Treasury dated May 4, 1830, discusses this subject. Appended to the Secretary's report and made a part of it is a report from the Secretary of the Treasury from John White, cashier of the Bank of the United States, who says:

Whatever degree of uncertainty may exist as to the precious metals which were imported in Europe during the fifty-three years succeeding the discovery of America, the records of that time abundantly testify that gold constituted the chief part of the supply; and that nevertheless its great preponderance did not produce any sensible effect on its market value in reference to silver.

It is true that about the year 1543 very arbitrary laws were enacted regarding the price of articles. In 24th Henry VIII we find a statute to fix the price of beef, pork, mutton, and veal. Beef was to be sold at one-half penny a pound, and mutton and

veal at one-half penny one-half farthing. In 25th Henry VIII a law was enacted empowering the chancellors and other ministers to fix the price of poultry, cheese, and butter. In 1546 a law was enacted fixing the interest of money at 10 per cent, the first legal interest known in England. Other laws were enacted about this time confining particular manufactories to particular towns, and it is possible that restricted laws with regard to gold and silver were enacted which had a temporary effect upon values.

RATIO AS STATED BY LORD LIVERPOOL.

As corroborative evidence upon ratios I now read an official paper prepared by Lord Liverpool and presented to the King of England, and which I believe has been regarded as authoritative. It shows the ratio of gold and silver prior to the time of Herodotus, who was born 484 years B. C., bringing it down to the year 1717.

Value of gold to silver as stated by Lord Liverpool in his letter to the King of England.

In Persia, according to Herodotus	1 to 11⅓
In Greece at same period	1 to 13
In Greece in the time of Plato	1 to 12
In Greece it is stated by Xenophon at	1 to 10
After the plunder of gold from the temple of Apollo, according to Menander, it was	1 to 10
In the reign of Alexander the Great, it was	1 to 10
In Rome, according to Pliny the Elder	1 to 14⅓
In Rome, after the tribute from the Ætolians	1 to 10
The plunder of gold from the Gauls by Julius Cæsar reduced the proportions to	1 to 7½
In the reign of Claudius, Tacitus states it at	1 to 12½
Until the reign of Alexander Severus it contained	1 to 12½

Value of gold to silver as stated by Lord Liverpool in his letter to the King of England—Continued.

In the reign of Constantine the Great	1 to 01½
The disorders in the Roman Empire under Arcadius and Honorius raised it to	1 to 14½
From which it appears that gold, unless when depressed by sudden and unusual occurrences, or enhanced by a dread of public insecurity, may be stated to have been for upwards of 900 years in the proportion of	1 to 10 or 12
In England, in the reign of Henry III, 1216 to 1272	1 to 9½
In England, in the reign of Edward III, 1330 to 1377	1 to 12½
In England, in the reign of Henry IV, 1400 to 1412	1 to 10½
In England, in the reign of Edward IV, 1461 to 1477	1 to 11½
In England, in the reign of Henry VIII, 1510 to 1547	1 to 11.10
In England, in the reign of Queen Elizabeth, 1560	1 to 11
In England, in the reign of King James I, 1601	1 to 12½
In England, in the reign of King James I, 1611	1 to 13½
In England, in the reign of Charles II, 1665	1 to 14½
In England, in the reign of George I, 1717	1 to 15½
Relative proportions in China, according to Humboldt	1 to 12½
Relative proportions in Japan, according to Humboldt	1 to 8½
Relative proportions in Bengal, according to Bullion Report	1 to 14.86
Relative proportions in Madras, according to Bullion Report	1 to 13¼
Relative proportions in Bombay, according to Bullion Report	1 to 15
In the China Diaries it is stated at 16 taels of silver for 1 tael of gold of 100 touch or pure gold. If it is meant to be pure silver also, the proportion would be 1 to 16; but it is believed to be the average fineness of silver in dollars, which would be	1 to 14.296

The value of this table is due to the high position of its author, Lord Liverpool. He had great power and access to all possible means of information.

I will now read a very important paper showing the amount of gold and silver extracted from the mines of America from 1492 until 1825.

Summary of the amount of gold and silver which has been extracted from the mines of America from 1492 until 1825.

Years.	Period.	Gold.	Silver.	Total amount.	Mean year.	Gold.	Silver.	Gold to silver.
	Years.	*Dollars.*	*Dollars.*	*Dollars.*	*Dollars.*	*Castile marks.*	*Castile marks.*	
1492–1545	53	90,000,000	30,000,000	120,000,000	2,250,000	12,500	66,600	1 to 5

RATIO NOT MATERIALLY CHANGED FOR OVER 2,300 PRIOR TO 1873.

The above tables show that during two thousand three hundred and fifty-seven years, from the time of Heroditus to 1873, there were no very great variations in the comparative values of gold and silver. The production of gold sometimes exceeded silver many hundred fold, and, again, the production of silver very far exceeded the production of gold, and yet the comparative value of the metals was not materially changed. The special value of the above table is due to the very high authority of the authors from which the figures are taken. They all were very distinguished men, and their writings, especially those of Count Humboldt, will be the standard works for many centuries.

I will now present a very valuable table, showing the world's production of gold and silver and the percentage of production, from 1493 to the present time.

[For table see next page.]

This instructive table contains in a small compass a world of information and facts for reasoning. It shows that from 1493 to 1520 about eight times as many ounces of silver as gold was produced and the ratio during that time was 11.3 to 1; and in 1581 to 1600 about sixty times more weight of silver than gold was produced, and yet the ratio of silver to gold was 11.9 to 1. We therefore see there was scarcely any change in the ratio, although the relative production varied eight fold. Again, from 1781 to 1820, a period of forty years, the world produced about fifty times as many ounces of silver as gold and the value of the gold produced was about one-third the value of the silver, and yet the ratio of value averaged about 15.4 to 1.

Then thirty years later a most marvelous change took place, and from 1851 to 1860 we produced only about four times as much weight of silver as we did gold, and the value of the gold produced was nearly four times the value of silver, and yet the ratio of values remained at 15.4 to 1. Here we see a change of more than twelvefold in the relative productions, and yet there is no change in the ratio. Then came another change, and from 1860 to 1873 we produced eleven times as many ounces of silver as we did of gold, and still in 1873 we find the ratio was 15.92 to 1, which is hardly a perceptible variation, notwithstanding the wonderful change in the ratio of production.

I also present a table showing approximately the amount of

Statement of the production of gold and silver in the world since the discovery of America.

From 1493 to 1885 is from table of averages for certain periods, compiled by Dr. Adolph Soetbeer. For the years 1886–1892 the production is the annual estimate of the Bureau of the Mint.]

Years.	Gold.				Silver.				Percentage of production.				Ratio.
	Annual average of period		Total for the period.		Annual average of period.		Total for the period.		By weight.		By value.		
	Fine ounces.	Value.	Fine ounces.	Value.	Fine ounces.	Coining value.	Fine ounces.	Coining value.	Gold.	Silver.	Gold.	Silver.	
1493–1520	186,470	$3,855,000	5,221,160	$107,931,000	1,511,050	$1,954,000	42,309,400	$54,703,000	11.0	89.0	66.4	33.6	11.3 to 1

GERMANY.

Prior to 1871 Germany was a silver-standard country. On the 23d of November, 1871, the Imperial Diet of Germany enacted the single gold standard and adopted silver only as a subsidiary coin. This law was only to last for two years, but at the end of that time, in 1873, Germany permanently demonetized silver.

FRANCE.

In 1726 France adopted the ratio of 1 of gold to 14½ of silver. In 1785 the ratio was 1 to 15½.

In France silver was regarded as the favored metal, and the law of 1803 provided that the silver franc should constitute the monetary unit. This law continued the ratio at 1 to 15½. Under this law the ratio was maintained until 1873.

BELGIUM.

Belgium was an integral part of France when she enacted her law of 1803, and she was governed by that system until 1832, when Belgium adopted the single silver standard, retaining the franc as a monetary unit. Prior to 1847 Holland maintained the double standard, at a ratio of 1 to 15.60. Afterwards Holland, however, adopted the single silver standard.

The Encyclopedia Britannica says, page 736:

The result of the gold discoveries in Australia and California was to greatly

increase the supply of that metal, and, under the action of Gresham's law, to change the French currency from silver to gold, while Holland, to avoid the evils which were anticipated from the reduced value of that metal, adopted silver as the standard.

It is interesting to note in the history of these times that the little nation of Holland was the only country that took alarm and demonetized gold after the discovery of the rich mines in Australia and California.

LATIN UNION.

On December 23, 1865, France, Belgium, Switzerland, and Italy entered into a mutual agreement concerning the monetary and coinage policy, which took effect August 1, 1866. This was called the Latin Union. Greece and Roumania came into the association in April, 1867.

Belgium, France, Switzerland, and Italy were thus united to regulate the weight, title, form, and circulation of their gold and silver coins. By this agreement the ratio of gold to silver was fixed at 1 to 15½. On January 30, 1874, the Latin Union agreed to limit coinage, and in the year 1874, and at the conference held in 1875 and 1876, the Union made the same limitations for those years, respectively.

The war upon silver inaugurated by England in 1816 and by Germany in 1871 had commenced to affect other nations. In 1871 but 5,000,000 francs' worth of silver was deposited in the mints for coinage in France, but after the permanent demonetization of that metal by Germany and after information had been received that the Congress of the United States had demonetized silver, the tide turned toward the French mints and in a single year 154,000,000 francs' worth of silver was deposited for coinage in the mint of France. This caused a virtual breaking up of the Latin Union.

The delegates to the Latin Union were assembled on January 30, 1874. It was agreed that the entire six nations which comprised the Union should coin but 120,000,000 francs of silver per year.

A STABLE RATIO CAN BE MAINTAINED.

They say it is impossible to have a ratio that will maintain silver in any certain relation to gold by enactment. Let us look the history of the past. When the six small nations composing the Latin-Union agreed to the ratio of 15½ to 1, the value of silver was maintained with scarcely any variation until Germany and the United States demonetized that metal.

If the Latin-Union during all that period maintained silver without any appreciable fall in value during all the time that their mints were open at 15½ to 1, can not this great country, on a fair ratio, at 20 to 1 or 21 to 1, make silver of a permanent value while such a law stands upon our statute books? This is a great country, the greatest country on earth, the most powerful, the richest; and it ought to dominate every other nation on the face of the earth. Her foreign policy should control, her trade should surpass, her manufactures should excel, and in all things we ought to be greater and stronger, and more powerful and more influential than all other nations combined.

FALLACY OF THE GOLD-STANDARD ARGUMENT.

An almost superhuman effort is being made by the gold-standard men to convince the public that the three and one-quarter million dollars of Treasury notes which are created every month and paid out for 4,500,000 ounces of silver are imbued with some special element of evil. They insist that this money has a special facility and magic power of withdrawing gold from the Treasury and exporting it to foreign lands. This is a mere fancy of the gold men, who are attempting by this and other means to frighten Congress into complying with their demands. The gold men tell us that these Treasury certificates are handed into the Treasury for redemption in gold. I would like to ask them if it is not true that other paper money can not with equal facility be presented at the Treasury for redemption in gold?

TOO LITTLE MONEY.

The annual disbursements of the Treasury now amount to $500,000,000. The part that is paid in gold can be exported; the part that is paid in greenbacks can be presented to the Treasury for redemption in gold and the metal can be immediately exported. So the holder of national bank notes can demand their redemption in greenbacks and then, without a moment's delay, demand the redemption of the greenbacks in gold. Certainly the gold thus obtained could with equal facility be exported to Europe. Every element of evil which applies to the three and one-quarter million Treasury notes which are paid out every month for silver bullion applies with equal force to the $500,000,000 paid out to defray the expenses of the Government, and I desire to here to assert with all emphasis in my power that this three and one-quarter million is the least hurtful expenditure which the Government makes.

It is used to purchase a precious metal at a price below the average cost of production, and it is the only disbursement by the Treasury which adds to the wealth of the government and which increases currency, which is much needed to carry on the business of the country. We are confronted by overwhelming evidence that there is not sufficient money now for the business needs of the country, and yet we are called upon to remedy this evil of deficiency by creating a still greater deficiency.

THE DEMOCRATIC PLATFORM.

The seventh section of the National Democratic platform adopted at Chicago was in these words:

SEC. 7. We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future which should make all of its supporters, as well as its author, anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, or be adjusted through international agreement or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals and the equal power of every dollar, at all times, in the markets and in the payment of debts, and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farming and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

The party which promulgated this platform was one that had always pledged itself to the free coinage of both silver and gold, and this platform was a pledge on the part of the Democratic party that if intrusted with the power they would enact laws for free coinage of silver. We already had free and unlimited coinage of gold, and up to 1873 we had had free and unlimited coinage of silver, and the representatives of the Democratic party of the great convention pledged the people silver coinage on precisely the same conditions as the laws provided for the coinage of gold.

THE PLEDGES TO THE PEOPLE.

It promised the country—

coinage of both gold and silver without discriminating against either metal.

The only change proposed was that the dollar unit of coinage in both metals must be of equal intrinsic and exchangeable value. The platform also said:

We hold to the use of both gold and silver as the standard money of the country.

These were the pledges made to the people. Of course, this carried with it the necessity of readjusting the amount of metal in the coins so as to make them of equal value, and it was generally understood that this would be done by increasing the amount of silver in the silver dollar. The people of the South and West reluctantly assented to this platform and to the construction that it was to increase the amount of silver in a silver dollar, but they accepted it in good faith because they saw in it a positive promise that silver would be coined at a fair ratio and that at least $6,000,000 or $8,000,000 would be added to the money in the country every month. This was a positive and unequivocable promise to the people by the Democracy of the nation at the Chicago convention in 1892.

THE SHERMAN MAKESHIFT.

The same section of the platform denounces the Sherman act as a cowardly makeshift. This law only gave the country an increase in money of about three and a quarter millions a month, and the promise of the Democratic party was that the monthly increase should be raised from three and a quarter millions to six or eight millions. It is true, the words "six or eight millions" were not used, but free coinage of silver at a fair ratio would of necessity have brought about that result; and in enacting laws for the free coinage of silver it was generally understood that the Sherman law would be repealed, but I deny with all emphasis that the Chicago platform made any pledges that the Democratic party, if placed in power, would repeal that act. The language of the platform with regard to the Sherman act was in these words:

SEC. 7. We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future which should make all of its supporters, as well as its author, anxious for its speedy repeal.

ABUNDANT SOUND MONEY CAUSES PROSPERITY.

I lay it down as a correct proposition that no country, or section of a country, can possibly have too much sound money of full-purchasing, debt-paying power. Up to 1860, in those prosperous years, the money was equally distributed. There was but $442,000,000 in our entire country, and during the ten years prior to 1860 the average was but $375,000,000, and in our rural country we got along very well. Now with six times that amount, with $2,123,968,649, if we go into the West and South, we find there such a famine and dearth of money as there never was before. Where is it all? By laws which Mr. Cleveland denounced in his letter of acceptance, that money has been concentrated in the Eastern marts of our country. What is the effect?

ABUNDANT MONEY BRINGS PROGRESS AND PROSPERITY.

In New York city, with, possibly, almost $1,000 per capita, land sells at nearly $6,000,000 an acre, and money is sometimes loaned

at an interes of 1 or 2 per cent. In Georgia, Alabama, and Mississippi, where, in the rural sections there is not a dollar per capita, the land sells, if it sells at all, for but a few dollars per acre, and money is often loaned as high as 20 or 30 per cent. No, Mr. Speaker, we can not have too much money in any country, if it is money with full-purchasing, debt-paying power. When money can not be depreciated in its purchasing power, it depreciates in its power to earn interest. When money is plentiful and sound it seeks some way for use. It competes with other money, and the consequence is that it falls in the rate of interest. And in order for any country to be prosperous, in order to have railroads and manufactures, in order to open mines and develop wealth, you must have plenty of money at a low rate of interest. Without that no country can be prosperous.

I hold as another proposition that no paper money can be maintained as sound money that is not ultimately redeemable in coin, either gold or silver; and I contend that there is not enough gold in the world to float sufficient paper to carry on the business of the world or of this country.

SILVER COINAGE NECESSARY TO THE UNITED STATES.

But, Mr. Speaker, if every country on earth, except ours, found it to its interest to demonetize silver, it nevertheless would be imperative in a country like this to maintain silver coinage in order to establish prosperity and develop this great land. We produce 42 per cent of all the silver of the world, and with that production we are more interested in silver coinage than any other country on earth. It is essential to our prosperity, essential to our well-being as a nation, and essential to the well-being of our people.

Imperial governments are controlled by the favored classes, and they possess nearly all the wealth. They are generally advocates of the gold standard. They own the money, and they fully appreciate that their wealth will be enhanced by a curtailment in the volume of money. It is therefore natural that imperial and monarchical governments would desire the demonetization of silver; but our country is a country of the people, and we must insist upon all the laws being made for their benefit.

Again, our country is undeveloped, and it is vast in extent, and such a country must of necessity have large moneyed resources. The people of the South and West insist that the needed money be furnished from our unsurpassed mines of precious metals. Our friends from New York and vicinity argue that it is best to borrow and pay interest to European bankers and capitalists.

ANTIQUITY OF SILVER AND GOLD.

From almost the beginning of the world gold and silver have been the metals used for money. They both possess high intrinsic value, so that they can be conveniently used as money.

James G. Blaine said:

> I believe gold and silver coin to be the money of the Constitution. Indeed, the money of the American people anterior to the Constitution.

How far anterior to the Constitution he does not say; but we have ample proof that silver and gold were used for money in the very beginning of time—probably long anterior to the days of Abraham and Pharaoh.

The second verse of chapter 13 of Genesis says:

> And Abram *was* very rich in cattle, and in silver, and in gold.

This, it will be remembered, was forty-two generations, or 2,164 years' before Christ. And in the twelfth verse, seventeenth chapter, we find a command referring to—

> He that is born in a house, or bought with money.

And precisely the same expression is found in the next verse. And in the twenty-third chapter of Genesis, thirteenth verse, I read:

> I will give the money for the field.

And in the fifteenth verse are these words:

> The land *is worth* four hundred shekels of silver.

And in the sixteenth verse are these words:

> And Abram weighed to Ephron the silver, which he had named in the audience of the sons of Heth, four hundred shekels of silver, current *money* with the merchant.

In the earliest histories of Asia Minor the coins were a mixture of gold and silver. In the very early history of Greece the coins were silver. According to Pliny, silver was coined in Rome 269 years B. C., and gold was coined by that Government 207 years B. C. When Cæsar invaded Britain the people used brass and iron for money, and they were paid by weight. Six hundred years later we read of the pennies of Elphelbert, King of Kent. At this time money was expressed under pounds, shillings, pence, and mancas. The mancas were reckoned both in gold and silver. The Norman kings coined pence of silver. In 1222 silver farthings were coined. In 1257, during the reign of Henry VIII, gold pence were coined, 120 of them weighing a pound tower, and they passed for 20*d*.

Both gold and silver are homogeneous—a unit of gold being equal to another unit of gold, and a unit of silver being equal to another unit of silver. Both gold and silver are durable. They do not rust or decay. They are not damaged by either heat or cold, or air, or water. Both gold and silver are divisible; they either separate into parts, which parts can be united. Both gold and silver can be easily tested, so that the fineness of either metal or composition of value can be easily determined. Both gold and silver are readily distinguishable, so that the genuineness of either of these metals can be recognized with reasonable certainty. [Applause.]

August 12, 1893.

The SPEAKER. The gentleman from Alabama [Mr. WHEELER] is entitled to the floor.

Mr. WHEELER of Alabama said: Mr. Speaker, I hope that my New England friends have not forgotten that both Daniel Webster and James G. Blaine held that a law of Congress which demonetizes silver would be in violation of the Constitution, and all men, whether constitutional lawyers or business men, will agree that it would certainly be a violation of the spirit of that instrument.

THE CONSTITUTION ON SILVER.

Certainly the Constitution of the United States clearly contemplates that it is the duty of Congress to provide for coining both gold and silver. Section 8 gives Congress the power—

> To coin money, regulate the value thereof and of foreign coin, and fix the standard of weights and measures.

And section 10 provides that no State shall "coin money" and that no State shall make anything but "gold and silver coin" a tender in the payments of debts. This certainly shows that the framers of the Constitution imposed upon Congress the duty of providing for the coinage of silver as well as gold, because it especially provides that a State may make silver coin a tender in payment of debts; and as the Constitution prohibits the States from coining money, it shows beyond question that the Constitution imposed upon Congress the duty of making silver coin.

Now, I desire to ask how this provision can be carried out unless silver is coined by the Federal Government? It is clear it could not be carried out and would therefore become a nullity.

It is the principle of law that whenever a statute gives power to a legislative body to perform that which is necessary for the public good, it is mandatory upon said body to perform said duty. This principles was affirmatively decided by the Supreme Court of the United States forty-three years ago, when that court was composed of such men as Taney, Wayne, McLean, and others equally distinguished. In deciding the Marigold case, 9th Howard, pages 567, 568, it used this language:

> We hold it a sound maxim that no power should be conceded to the Federal Government which can not be regularly and legitimately found in the charter of its creation.

This shows that the court certainly was composed of strict constructionists, and these men in the same decision used this language:

> Whatever functions Congress are by the Constitution authorized to perform, they are, when the public good requires it, bound to perform.

This brief, plain statement of the matter shows how correct Daniel Webster and James G. Blaine were on this important subject.

THE GOLD STANDARD ARGUMENT.

In all the arguments against free silver on any ratio, the prominent feature seems to be that unless we adopt a gold standard European capitalists will decline to lend us money. I believe it is not contended that at any time we have owed England more than a few hundred million, and yet, in order to enable us to borrow that amount the New York capitalists and brokers are willing to deprive the country of four hundred million in silver. I do not blame the people of New York and the Northeast for insisting upon our adopting a financial system which will invite loans from Europe. From their standpoint it is our surest road to prosperity. They contend that we must have European money to build our railroads and develop our country.

In the South and West we take a different view. We look at this question at a very different standpoint from that taken by capitalists and brokers of New York. We believe that a country which produces seventy-four million in silver and thirty-two million in gold every year, and owns seventy thousand million of property can, with these precious metals as a basis and our vast property as a security, establish a financial system which would make us in a great measure independent of European countries; and in order to accomplish this, they are convinced that it is

necessary that we should provide laws for the coinage of both gold and silver.

They believe that it is better to create money than to borrow, and they believe that with free coinage of gold and silver at a proper and fair ratio, and the repeal of the 10 per cent tax so as to restore to our States their sovereign rights, a system can be established which will give us abundant money and make us independent, and make it unnecessary for us to borrow from foreign countries.

WE NEED MORE GOLD AND SILVER.

The very fact that we are compelled to borrow in foreign nations is positive proof that we need more money in this country. The proportion of money in the United States to the wealth of this country is much less than the proportion in France, Germany, Netherlands, Belgium, Portugal, Italy, and Russia. The proportion which our money bears to the wealth of the United States is 2.4, while the proportion of the money in France to the wealth of France is 4.

We therefore see that the money in the United States is a little more than half the money in France as compared to wealth. With all of this great need for more money in our land, the gold-standard men are using the greatest effort possible to reduce the money and currency of the country. They insist that we shall not coin silver, although a proper construction of the Constitution makes it our imperative duty to do so. The Republican party and gold-standard men not only refuse to coin silver, but they also refuse to repeal the 10 per cent tax law that now deprives States of their constitutional rights to charter banks of issue.

It is true that our platform upon which we won the victory last November pledged to the country that this 10 per cent tax should be repealed; but we see already that this will be resisted by the men who own and control the money of this land, and if they are successful in this, and also succeed in establishing the gold standard, the money kings of the United States, holding, as they do, a great bulk of the money now in America will be practically more powerful than any imperial monarch, even more powerful than the Czar of Russia or the Shah of Persia.

GOLD AND SILVER OF THE WORLD COULD BE PLACED IN THIS HALL.

There is now $3,582,605,000 of gold coin and bullion in the world. Every particle of it could be contained in a block 21 feet 5 inches square, and it could be placed in this Hall without being of any inconvenience to the members. This almost insignificant amount of metal is now owned, controlled, and manipulated by very few men, and they are here demanding that by this alone we shall measure the value of the wage-earner's daily labor and the product of the farmer's yearly toil.

Let me say, Mr. Speaker, that if we give them the power they demand, we place in their hands a lever with which they can crush the honest people of this free country to the dust, while these moneyed men of wealth will become practically sovereigns of this Republic. In answer to all of our arguments these people repeat, what has so often been said in monetary conferences—they tell us that silver is inconvenient to carry. Even if this were true, that difficulty is obviated by our laws, as the Government issues certificates in place of the silver coin which remains in the vaults of the Treasury. Having met this position we are then confronted with the outcry that the Government can not afford to furnish storage for such vast amount of metal.

In order to illustrate the fallacy of this argument I have taken the pains to learn the bulk of all the silver in the world. The total amount of silver coin and bullion, including full tender and limited tender, is now $4,042,700,000. This could all be contained in a square silver block 66 feet square. Every particle of silver coin and bullion in the world could be placed in this Hall. I make this familiar comparison to show the absolute absurdity of this excuse for demonetizing silver. It is a miserable makeshift invented by a few millionaires. The entire expense of storing and guarding all the silver and gold in the United States would not exceed $100 per month. [Laughter.]

DEMONETIZATION OF SILVER DEPRECIATES VALUE OF FARM PRODUCTS.

In former speeches I have explained how the demonetization of silver by the United States has had the effect to depreciate the value of farm products. I admit that there have been other causes besides the demonetization of silver, but the proofs are unquestionable that demonetization of silver has been the important factor in causing the rapid fall in price of cotton, wheat, and corn, and other products of our farms.

I have prepared a table showing the value of these products, also the value of silver each year since the demonetization of that metal in 1873.

The prices of cotton I have taken from the New York price currents. The price of corn I have taken from the Commercial Financial Chronicle, and the price of silver from the reports of the Secretary of the Treasury.

Table showing the value of cotton, corn, wheat, and silver, 1873 to 1892.

Year.	Cotton per pound.	Corn per bushel.	Wheat per bushel.	Bullion value silver dollar.	Silver per fine ounce.*
	Cents.				
1873	20.48	$0.70	$1.47	$1.03	$1.32
1873	18.15	.63	1.31	1.00	1.29
1874	17.00	.68	1.43	.98	1.27
1875	15.00	.62	1.12	.96	1.24
1876	13.00	.43	1.24	.89	1.15
1877	11.73	.49	1.17	.92	1.20
1878	11.28	.52	1.34	.89	1.15
1879	10.83	.54	1.07	.86	1.12
1880	12.02	.54	1.25	.88	1.14
1881	11.34	.62	1.11	.88	1.13
1882	12.16	.86	1.19	.87	1.13
1883	10.63	.62	1.13	.85	1.11
1884	10.04	.55	1.07	.86	1.11
1885	10.54	.48	.86	.82	1.06
1886	9.44	.49	.87	.76	.99
1887	10.25	.49	.89	.75	.97
1888	10.27	.48	.85	.72	.93
1889	10.71	.53	.90	.72	.93
1890	11.53	.48	.83	.80	1.04
1891	9.00	.50	.86	.76	.98
1892	7.00	.42	.70	.67	.87

*The coinage value of an ounce of pure silver is $1.29.

HISTORY OF COINAGE IN OUR COUNTRY.

In 1792 we commenced with a ratio of 15 to 1. In 1834 we increased it to 16 to 1. We got too much silver into our coin, and the consequence was that all the silver left the country. Such a thing as a silver dollar or a silver half dollar, coined by our mints, history tells us was not to be found, and instead of the silver of our own country there was nothing but the debased coin of other countries.

DEMOCRATS CONTROLLED THIS COUNTY FROM 1801 TO 1861.

Now, from 1801 to 1861, during a period of sixty years, our country was controlled by the Democratic party. They either had every branch of the Government, or at least one branch; so that the laws enacted by them could not be repealed by the opposition party. And during that time for sixty years we had peace, plenty, and happiness, and we changed this country from a wilderness to one of the happiest, strongest, and best countries on earth. There were very few poor men; there were few very rich men. The laws were democratic, and for the benefit of all. In 1861 the change came; and for thirty-two years this country has been controlled by the Republican party. They controlled every branch of the Government and enacted what laws they chose; and they always controlled at least one branch, to prevent their repeal.

The laws they enacted have brought about the terrible condition of things from which the country is suffering to-day. Last March we found this country financially a wreck, morally a wreck, and physically a wreck; and the people of our country have placed us in power, asking us to take this wreck and restore it once more to health, to honor, and to prosperity. That is the mission of the Democratic party to-day. [Applause.]

SECRETARY CARLISLE AND PRESIDENT GARFIELD.

On February 21, 1878, this House took up the Senate amendments to the bill which the House had previously passed, "to authorize the free coinage of the standard silver dollar and regulate its legal-tender character." The debates upon the Senate amendments are found on pages 1237 to 1285 of volume 28 of the RECORD. Many able speeches were made demanding free silver coinage. I have not time to quote to any extent, but must call attention to a few words from James A. Garfield, who spoke with all his power in favor of the white metal. He said:

> Every man who is opposed to the use of silver coin as part of the legal currency of the country I disagree with. Every man who is opposed to the actual legal use of both metals I disagree with.

He also said:

> I would endow the two dollars with equality and make the coinage free.

Hon. John G. Carlisle, the present distinguished and very able Secretary of the Treasury, also spoke on the bill, and with great emphasis advocated unlimited coinage of silver. His speech was not an expression of thought uttered in heat of debate, but was carefully prepared, and it was withheld from the RECORD for revision, and is printed on pages 41 to 44 of the Appendix. On page 42 Carlisle stated—

> he was in favor of unlimited coinage of both metals upon terms of exact equality. No discrimination should be made in favor of one metal and against the other; nor should any discrimination be made in favor of the owners of gold and silver bullion and against the great body of people who own other coins or property.

And on page 43 he said:

> I know that the world's stock of the precious metals is none too large, and I see no reason to apprehend that it will ever become so. Mankind will be

fortunate, indeed, if the annual production of gold and silver coin shall keep pace with the annual increase of population, commerce, and industry.

In 1878 the annual production of gold was $51,200,000 and the annual production of silver $45,200,000, the total being $96,400,000. The total amount of property in the United States in 1878 was $40,000,000,000; therefore the amount of property in the country was only 781 times the annual production of gold and 419 times the annual production of both gold and silver. This will show that the hopes expressed by Secretary Carlisle have not been realized. The entire amount of property in the country to-day is at least $68,000,000,000. We produced only $33,000,000 of gold last year and $74,989,900 of silver. Therefore the amount of property in the country is 2,030 times the annual production of gold and 627 times the annual production of both gold and silver. We therefore see that our relative production of gold is about one-third the relative production in 1878, when Mr. Carlisle made his speech, and yet there are men in this Hall attempting to strike down silver and relegate this country to the gold standard. Mr. Carlisle then proceeds to express this great truth:

According to my views of the subject the conspiracy which seems to have been formed here and in Europe to destroy, by legislation and otherwise, from three-sevenths to one-half of the metallic money of the world is the most gigantic crime of this or any other age.

It will be here seen that to strike down silver as is now proposed was denounced by Mr. Carlisle as a gigantic crime—the most gigantic crime of this or any other age.

Mr. Carlisle then proceeded in the following emphatic language:

The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilences, and famines that ever occurred in the history of the world. The absolute and instantaneous destruction of half the entire movable property of the world, including houses, ships, railroads, and all other appliances for carrying on commerce, while it would be felt more sensibly at the moment, would not produce anything like the prolonged distress and disorganization of society that must inevitably result from the permanent annihilation of the metallic money in the world.

This language by the present distinguished Secretary of the Treasury is stronger and more emphatic than any expression I can use; but he does not stop with these words, he goes on to express his emphatic advocacy of silver coinage, not by law alone, but he demands that it be made permanent by a constitutional amendment. I read from Mr. Carlisle's speech, on page 44 of the RECORD.

I am in favor of every practicable and constitutional measure that will have a tendency to defeat or retard the perpetration of this great crime, and I am also in favor of every practicable and constitutional measure that will aid us in devising a just and permanent ratio of value between the two metals, so that they might circulate side by side, and not alternately drive each other into exile from one country to another. Our ratio, as recognized by the present bill, is 15.98 to 1, while the ratio established by the states composing the Latin Union—France, Belgium, Switzerland, Italy, and, I believe, Greece—also is 15½ to 1. We therefore undervalue silver, as compared with the valuation put upon it by those countries.

Mr. Hewitt of New York moved to lay the bill and amendments on the table. I read from page 1283. But Hewitt's motion was defeated by a vote of 205 to 71.

Mr. Carlisle and his colleague, Mr. Herbert, in the present Cabinet, both voting with the majority.

The Senate amendments limited silver coinage to not more than $4,000,000 a month, and Carlisle and Herbert both voted against these amendments, thus declaring themselves in favor of unlimited silver coinage.

SILVER VIEWS OF CARLISLE AND GARFIELD INDORSED.

I select extracts from speeches of Mr. Garfield and Mr. Carlisle because their views have been so emphatically indorsed by the American people. Eight months from the date of his speech Mr. Garfield was reëlected to Congress by nearly 10,000 majority and was the nominee of his party for Speaker of the House of Representatives. A year later he was elected United States Senator from the great State of Ohio, and again in a few months he was elected President of the United States. Mr. Carlisle was also reëlected to the next Congress by majority of 3 to 1. In 1883 he was elected Speaker of the House of Representatives, which honor was conferred upon him three times. He was then elected Senator, and is now the minister of finance of the greatest country on the face of the earth.

There is practically no limit to the great men who have adorned the Senate and this body who were in favor of and ably advocated free coinage of silver.

JAMES G. BLAINE AND DANIEL WEBSTER DEMANDED FREE COINAGE OF SILVER.

Hon. James G. Blaine and Daniel Webster were among its ablest advocates. Both of these great men not only demanded free and unlimited coinage of silver, but, as I before stated, they both ably contended that silver coin was the money of the Constitution, and that a law of Congress demonetizing silver was in violation of the Constitution of our country; and Mr. Carlisle appears to have contended that if there was any question or doubt on this point that it should be removed by a constitutional amendment providing for the coinage of this metal.

JAMES G. BLAINE DEMANDS FREE COINAGE OF SILVER.

On February 7, 1878, Hon. James G. Blaine, then a Senator from Maine, made a very able speech upon the free-coinage bill. It is found on pages 820 and 822 of the CONGRESSIONAL RECORD. I wish every word of it could be placed before the members of this House, as it is a very able discussion of this subject. I read from page 820. He said:

I believe gold and silver coin to be the money of the Constitution; indeed, the money of the American people anterior to the Constitution which that great organic law recognized as quite independent of its own existence. No power was conferred on Congress to declare that either metal should not be money. Congress has therefore, in my judgment, no power to demonetize silver any more than to demonetize gold; no power to demonetize either any more than to demonetize both.

DANIEL WEBSTER ON SILVER AND THE CONSTITUTION.

I call special attention to the assertion of Mr. Blaine that Congress has no power to demonetize silver, and that such a law would be unconstitutional; and I now especially call attention to the fact that Daniel Webster, the greatest constitutional lawyer of the land, also held that silver coinage was made imperative by the Constitution. Mr. Blaine then says:

In this statement I am but repeating the weighty dictum of the first of constitutional lawyers. "I am certainly of opinion," said Mr. Webster, "that gold and silver, at rates fixed by Congress constitute the legal standard of value in this country, and that neither Congress nor any State has authority to establish any other standard or to displace this standard."

Few persons can be found, I apprehend, who will maintain that Congress possesses the power to demonetize both gold and silver, or that Congress should be justified in prohibiting the coinage of both; and yet in logic and legal construction it would be difficult to show where and why the power of Congress over silver is greater than over gold; greater over either than over the two. If, therefore, silver has been demonetized, I am in favor of remonetizing it. If its coinage has been prohibited, I am in favor of ordering it to be resumed. If it has been restricted, I am in favor of having it enlarged.

We see here that both Daniel Webster and James G. Blaine assert that under the Constitution Congress has no right to demonetize silver.

On page 821 he discussed this subject, and stated:

That remonetization will have a considerable effect in advancing the value of the dollar is beyond doubt.

And on page 821 he said:

The responsibility of reëstablishing silver in its ancient and honorable place as money in Europe and America devolves really on the Congress of the United States. If we act here with prudence, wisdom, and firmness, we shall not only successfully remonetize silver and bring it into general use as money in our country, but the influence of our example will be potential among all European nations, with the possible exception of England. Indeed, our annual indebtedness to Europe is so great that if we have the right to pay it in silver we necessarily coerce those nations by the strongest of all forces—self-interest—to aid us in the upholding the value of silver as money.

We see here that Mr. Blaine says that if we remonetize silver and bring it into general use as money in our country the influence of our example will be potential among all European nations, with the possible exception of England.

He then goes on to show that if we remonetize silver other nations in Europe will promptly follow our example

And further down on the same page, this distinguished man continues:

I believe the struggle now going on in this country and in other countries for a single gold standard would, if successful, produce widespread disaster in the end throughout the world.

The destruction of silver as money and establishing gold as the sole unit of value must have a ruinous effect on all forms of property except those investments which yield a fixed return in money. These would be enormously enhanced in value, and would gain a disproportionate and unfair advantage over every other species of property. If, as the most reliable statistics affirm, there are nearly $7,000,000,000 of coin or bullion in the world, not very unequally divided between gold and silver, it is impossible to strike silver out of existence as money without results which will prove distressing to millions and utterly disastrous to tens of thousands.

Alexander Hamilton, in his able and invaluable report in 1791 on the establishment of a mint, declared that "to annul the use of either gold or silver as money is to abridge the quantity of circulating medium, and is liable to all the objections which arise from a comparison of the benefits of a full circulation with the evils of a scanty circulation." I take no risk in saying that the benefits of a full circulation and the evils of a scanty circulation are both immeasurably greater to-day than they were when Mr. Hamilton uttered these weighty words, always provided that the circulation is one of actual money and not of depreciated promises to pay.

Mr. Blaine continued his speech in these words:

In the report from which I have already quoted, Mr. Hamilton argues at length in favor of a double standard, and all the subsequent experience of well-nigh ninety years has brought out no clearer statement of the whole case nor developed a more complete comprehension of this subtle and difficult subject. "On the whole," says Mr. Hamilton, "it seems most advisable not to attach the unit exclusively to either of the metals, because this can not be done effectually without destroying the office and character of one of them as money and reducing it to the situation of mere merchandise." And then Mr. Hamilton wisely concludes that the reduction of either of the metals to mere merchandise (I again quote his exact words) "would probably be a greater evil than occasional variations in the unit from the fluctuations in the relative value of the metals, especially if care be taken to regulate the proportion between them with an eye to their average commercial value."

Mr. Blaine then proceeds to discuss the reason why the United States, above all other nations, should have unlimited coinage of silver. He then continued in these words:

I do not think that this country, holding so vast a proportion of the world's supply of silver in its mountains and its mines can afford to reduce

the metal to the "situation of mere merchandise." If silver ceases to be used as money in Europe and America, the great mines of the Pacific slope will be closed and dead. Mining enterprises of the gigantic scale existing in this country can not be carried on to provide backs for looking-glasses and to manufacture cream pitchers and sugar bowls. A vast source of wealth to this entire country is destroyed the moment silver is permanently disused as money. It is for us to check that tendency and bring the Continent of Europe back to the full recognition of the value of the metal as a medium of exchange.

Mr. Blaine was one of the most conspicuous men in public life for a third of a century.

He was a member of the Maine Legislature, and was its speaker for two years. Was for fourteen years a member of this House, and was thrice elected its Speaker. Was appointed, and also elected to the United States Senate, was a prominent and the most popular candidate for President before the Cincinnati convention in 1880, was Secretary of State under President Garfield, received the Presidential nomination in 1884, and was again Secretary of State in 1889.

REPUBLICANS LEGISLATE FOR WEALTH.

Prior to 1861 Democratic legislation dispensed equal justice to all, but the moment the Republican party took control of our Government class legislation of nearly every kind was engrafted into our system. The influence of the rich and powerful was such as to enable them to frame laws favorable to their interests, and during the last thirty years there has gradually grown two widely separate classes, distinct if not antagonistic, the debtor class endeavoring by labor and economy to earn a meager maintenance, while the efforts of the creditor class have been to secure the enactment of laws which would add to their wealth and of necessity add to the burdens which the debtor class must endure.

When the Government bonds were issued, more than thirty years ago, they stipulated that the interest was to be paid in coin, but there was no such stipulation for the payment of the principal, and they were purchased with the full understanding that they would be paid at maturity with the lawful money of the United States. The fact that these bonds were payable in greenbacks regulated their market price in coin, and on account of the depreciation of greenback money at that time they sold as low as 40 cents on the dollar. After the close of the war the Government was thoroughly under the control of a party whose power was always exerted in the interest of capital, and the creditors of the Government were strong enough to induce Congress to change the contract so as to make the principal of these currency bonds, as well as the interest, payable in coin. This was a gross violation of the contract between the bondholder and the people, and it was to the interest of the bondholder, who was rich, and it was against the poor.

Many of the victims of this great wrong fought as soldiers during the four years of war, receiving for their services $13 a month in the very currency which the Republican Congress declared was not good enough for the bondholder. There was nothing in the bond itself, nor in the law which authorized its issue, which justified this outrage.

EVEN THADDEUS STEVENS AND JOHN SHERMAN ADMIT IT TO BE CRIMINAL.

Thaddeus Stevens was very much instrumental in preparing and reporting the bill which provided for the issuance of these bonds, and he probably knew as much of its scope and meaning as any other member of Congress. Mr. Stevens could not tolerate this great wrong, extreme Republican as he was. He denounced the bill which proposed to pay these bonds in coin as a swindle. Mr. Stevens said;

I would vote for no such swindle on the taxpayers of the country. If I knew there was such a platform and such a determination on the part of my own party, I would, with Frank Blair and all, vote with the other party.

JOHN SHERMAN was quite as denunciatory of this measure as Stevens. He wrote what is called his celebrated Mann letter, dated March 29, 1868, referring to the proposed law in these words:

My construction of the law is the result of careful examination, and I feel quite sure an impartial court would confirm it if the case could be tried before a court. I send you my views, as fully stated in a speech. Your idea is that we propose to repudiate or violate a promise when we offer to redeem the principal in legal tenders. I think the bondholder violates his promise when he refuses to take the same kind of money he paid for the bonds. If the case is to be tested by the law, I am right; if it is to be tested by Jay Cook's advertisements, I am wrong. I hate repudiation, or anything like it; but we ought not to be deterred from doing what is right by fear of undeserved epithets.

Notwithstanding these admissions by such prominent Republicans that these bonds were payable in legal-tender Treasury notes, the Republican House, on March 18, 1869, enacted a law which required that these obligations to the Government should be paid in coin, notwithstanding that under the contract they should have been paid in legal-tender notes. It was called "An act to strengthen the public credit," and was in these words:

Be it enacted, etc., That in order to remove any doubt as to the purpose of the Government to discharge all just obligations to the public creditors, and to settle conflicting questions and interpretations of the laws by virtue of which such obligations have been contracted, it is hereby provided and declared that the faith of the United States is solemnly pledged to the payment in coin or its equivalent of all the obligations of the United States not bearing interest, known as United States notes, and of all the interest-bearing obligations of the United States, except in cases where the law authorizing the issue of any such obligation has expressly provided that the same may be paid in lawful money or other currency than gold and silver.

The effect of this law was to immediately increase the value of these bonds and add to the wealth of the holders of this evidence of indebtedness. Senator Morrill, afterwards Secretary of the Treasury, in referring to the effect of this law on these bonds, said:

The 5-20 6 per cent bonds, then selling at 88 cents on the dollar, soon rose to par in gold coin, and have since borne the average premium of 5 per cent at home and abroad.

SEVEN HUNDRED MILLION DOLLARS TAKEN FROM THE PEOPLE.

This law wrested from the working people of our land at least $700,000,000, which was presented as a gift to the rich holders of these bonds. In 1834 the ratio of silver to gold was fixed at 16 to 1, and from that time to 1873, the silver in the silver dollar was worth more than the gold in the gold dollar; and, therefore, when the law of 1869 was enacted the creditor was more than willing to receive silver in payment of the obligations of the Government. At a time when the silver dollar was more valuable than the gold dollar the law of 1870 and 1871 was enacted, which provided for refunding the national debt. This law provided that coin (meaning gold and silver) should be paid to satisfy these obligations. The law itself is found upon the face of the 4 per cent bonds. It is in these words:

This bond is issued in accordance with the provisions of an act of Congress entitled "An act to authorize the refunding of the national debt," approved July 14, 1870, amended by an act approved January 20, 1871, and is redeemable at the pleasure of the United States after the 1st day of July, A. D. 1907, in coin of the standard value of the United States on said July 14, 1870, with interest in such coin from the day of the date hereof at the rate of 4 per cent per annum, payable quarterly on the 1st day of October, January, April, and July in each year. The principal and interest are exempt from the payment of all taxes or duties of the United States, as well as from taxation in any form by or under State municipal, or local authority.

The contract is also printed on the 5 per cent bonds and is in these words:

This bond is issued in accordance with the provisions of an act of Congress entitled "An act to authorize the refunding of the national debt," approved July 14, 1870, amended by an act approved January 20, 1871, and is redeemable at the pleasure of the United States after the 1st day of May, A. D. 1881, in coin of the standard value of the United States on said July 14, 1870, with interest in such coin from the day of the date hereof, at the rate of 5 per cent per annum, payable quarterly on the 1st day of February, May, August, and November in each year. The principal and interest are exempt from the payment of all taxes and duties of the United States, as well as from taxation in any form by or under State, municipal, or local authority.

In 1872 it began to be apparent to the bond-holding people of this country that a certain number of the European nations were legislating against silver. Germany had virtually adopted a gold standard in 1871, and it was generally understood early in 1873 that the Latin Union would, in consequence of the action of Germany, be compelled to limit the coinage of silver.

Every branch of our Government was in the hands of Republicans and controlled by the wealth of the land, and in order to prevent the possibility of their coin bonds being paid to them in the depreciated metal they secured an act of Congress which demonetized the silver dollar so that the Government would be compelled to pay them for their bonds in gold. The great panic of 1873, which followed this legislation, caused a revolution in the country, which resulted in the passage of a bill by the House of Representatives providing for the free and unlimited coinage of silver at a ratio of 16 to 1.

This bill was amended in the Senate, and was finally enacted into a law which provided for the limited coinage of silver. This law remained in force until the Republicans obtained control of the Presidency and both Houses of Congress, when, on July 14, 1890, they enacted the Sherman bullion law, the repeal of which is now being considered. Under the coinage law of February 28, 1878, there was coined about 3,000,000 standard dollars per month, and under the bullion law of July 14, 1890, a little over $3,000,000 of Treasury notes have been issued per month.

This law, called the Sherman bullion law, is vicious in many respects. All people concur that it should be repealed, but as the coinage act of 1878 was repealed when the Sherman law was enacted, the friends of the people contend that some coinage law should be enacted when the Sherman bullion law is repealed.

MONEY MUST BE PROPORTIONED TO PROPERTY.

I lay down as the fundamental proposition that all money to have a full-purchasing and debt-paying power must be ultimately redeemable in coin; and, therefore, the amount of currency in the country must be substantially limited or rather regulated by the amount of coin. I also lay down as a fundamental proposition that for success and prosperity the amount of money in the country, currency and coin, must bear a proportion to the total amount of property.

In 1850 the United States produced from fifty to fifty-five million of gold and scarcely any silver. The property in the United States at that time was $7,135,780,288, which was 129 times the annual production of gold and silver combined.

In 1853 we produced $65,000,000 of gold and only $50,000 of silver. The property of our country was about $7,500,000,000, and was therefore 115 times greater than our annual production of gold and 115 times greater than our production of both gold and silver.

In 1860 the annual production of gold was $46,000,000 and the annual production of silver $150,000. The total property in the country was $16,159,616,068, and therefore the amount of property in the country was 351 times greater than the production of gold and 350 times greater than the production of both gold and silver.

In 1870 the production of gold was $50,000,000 and the production of silver $16,000,000. The value of property in the United States was $30,068,518,507. Therefore, the property in the United States in 1870 was 601 times greater than the annual production of gold and 455 times greater than the annual production of both gold and silver.

In 1880 the annual production of gold was $36,000,000 and of silver $39,200,000. The total amount of property in the country was $43,642,000,000. We, therefore, see that in 1880 the property in the country was 1,212 times greater than the annual production of gold, and the property in the country was 607 times the annual production of all the gold and silver.

In 1890 the United States produced $32,845,000 of gold and $70,465 of silver. The total amount of property was $62,610,000,000. Therefore the amount of property in the country was 1,906 times the annual production of gold, and the amount of property in the country was 552 times the total production of both gold and silver.

It will be see that since 1850 the property of the country has increased ninefold, and therefore we need nine times as much money, and therefore nine times as much coin, upon which to base currency.

PROPERTY OF THE UNITED STATES INCREASES TWICE AS FAST AS MONEY

But to bring matters down further, last year we produced $33,000,000 in gold and $74,989,900 of silver. The total amount of property was then estimated at $68,000,000,000 and, therefore, we see that the amount of property in the country was 2,060 times the annual production of gold and 627 times the annual production of both gold and silver.

We see by the above figures that during the forty years from 1853 to 1893 the property in the United States has increased ninefold.

In 1853 the specie or coin in the country was $236,000,000. Consequently, for the specie or coin in the country to now bear the same proportion to property as it did fifty years ago we should have $2,124,000,000 of coin or specie, whereas the actual amount, as shown by the report of the Treasury, is as follows:

Gold coin	$520,273,567
Standard silver dollars	419,332,450
Subsidiary silver	76,563,878
Total	1,016,169,895

The above is less than one-half the proportion, and yet the gold-standard men in this Hall are using the utmost endeavors to cut down the coin of the country to one-half of what it is, therefore making it one-fourth the proportion we had in 1853, during our days of Democratic rule and great prosperity. It has been suggested that we have made up the deficiency with paper money; but our friends are in great error on this point.

In 1853 we had $188,181,000 in paper currency. With our increased property we ought now to have $1,693,629. The report of the Treasury shows that the amount we actually have is as follows:

Gold certificates	$87,704,732
Silver certificates	333,031,504
Treasury notes, act July 14, 1890	148,386,348
United States notes	346,681,016
Currency certificates, act June 8, 1872	8,340,000
National bank notes	183,756,147
Total	1,107,798,754

We therefore see that we fall far short in currency as well as in coin, but what makes matters worse is the present centralizing system by which one-fourth or 25 per cent of the money of the country is in the Treasury, whereas in 1853 only about 6 per cent of the money was in the Treasury—the rest was all in circulation; but the worst feature is yet to be alluded to. Under the centralizing financial policy of the Republican party nearly all the money which is supposed to be in circulation is concentrated in the great financial centers of the Northeast, while the South and West are almost entirely denuded of money of any kind.

It is customary to compare the amount of money in circulation to the population of the country under consideration. This is all proper, but other important comparisons should be made.

The relation of money to the property or wealth of a country should be considered.

I have prepared a table which shows the wealth, the circulation, the per cent of circulation to wealth, the population, money per capita, and the ratio between gold and silver in the principal nations of the earth.

Monetary systems, population, and approximate wealth and stocks of money in circulation and per capita in the principal countries of the world.

Countries.	Ratio between gold and full legal-tender silver.	Ratio between gold and limited-tender silver.	Population.	Circulation per capita.	Wealth.	Money circulation—gold, silver, and paper.	Per cent of money to wealth.
GOLD AND SILVER COUNTRIES.							
United States	1 to 15.98	1 to 14.95	67,000,000	$24.34	$69,000,000,000	$1,665,390,000	2.4
France	1 to 15½	1 to 14.28	39,000,000	40.56	42,990,000,000	1,681,402,000	4.0
Belgium	1 to 15½	1 to 14.28	6,100,000	25.53	5,035,000,000	174,000,000	3.2
Italy	1 to 15½	1 to 14.38	31,000,000	9.91	13,815,000,000	307,276,000	3.1
Switzerland	1 to 15½	1 to 14.38	3,000,000	14.67	2,470,000,000	44,000,000	1.7
Greece	1 to 15½	1 to 14.38	2,200,000	9.09	1,500,000,000	20,000,000	1.3
Spain	1 to 15½	1 to 14.28	18,000,000	16.56	12,580,000,000	298,000,000	2.3
Netherlands	1 to 15½	1 to 15	4,500,000	28.88	4,900,000,000	130,000,000	2.6
Turkey		1 to 15.1	33,000,000	2.88	2,965,000,000	95,000,000	3.2
Japan	1 to 16.18		40,000,000	4.90			
Total			243,800,000		155,255,000,000	4,415,068,000	
GOLD COUNTRIES.							
United Kingdom		1 to 14.28	38,000,000	18.42	47,000,000,000	700,000,000	1.4
Germany		1 to 13.957	49,500,000	18.54	32,185,000,000	916,000,000	2.8
Portugal		1 to 14.68	5,000,000	19.00	2,040,000,000	95,000,000	4.6
Austria-Hungary		1 to 13.69	40,000,000	9.75	19,275,000,000	390,000,000	2.0
Scandinavian Union		1 to 14.38	8,600,000	8.02	6,420,000,000	69,000,000	1.0
Australia		1 to 14.28	4,000,000	26.75	6,865,000,000	107,000,000	1.5
Canada		1 to 14.95	4,500,000	13.56	4,900,000,000	61,000,000	1.2
Egypt		1 to 15.68	7,000,000	16.43		115,000,000	
Cuba, Haiti, etc	1 to 15½		2,000,000	31.00			
Total			159,000,000		118,685,000,000	2,455,000,000	
SILVER COUNTRIES.							
Russia	1 to 15½	1 to 15	118,000,000	7.16	25,445,000,000	810,000,000	3.1
Mexico	1 to 16½		11,600,000	4.91		57,000,000	
Central America	1 to 15½		3,000,000	.84		2,500,000	
South America	1 to 15½		35,000,000	19.14		670,000,000	
India	1 to 15		255,000,000	3.64		928,000,000	
China			400,000,000	1.75		700,000,000	
Total			817,600,000		25,445,000,000	3,167,500,000	

It will be seen by this table that the silver and gold countries own nearly half the wealth of the world; that they have 25 per cent of the earth's population and half of the money now in circulation in the world. We also see that the population of the gold-standard countries are only one-tenth of the population of the world; that they have but about two-thirds the wealth of the gold and silver countries, and that the money in circulation in the gold countries is just about half the money in circulation in the gold and silver countries. We also see that the gold countries are all Imperial or Monarchal governments, controlled by the wealthy nobility, who make the laws in their interests and against the interests of the laboring peasantry of those lands.

ENGLAND IS OPPOSED TO BIMETALLISM.

The New York Press insists that the moment we repeal the purchasing clause in the Sherman act, England and the other gold-standard nations of the earth will hasten to propose international bimetallism. I do not think it is possible for anyone to conceive of a more improbable result. England and some of the other gold-standard countries are especially interested in maintaining a gold standard. Gladstone stated that England was a creditor nation to the amount of $10,000,000,000. Does anyone suppose that such a nation will adopt any course which will reduce the purchasing power of money? The least money there is in the world, the more valuable is the money which is owed to England. Again, if we omit Australia the United States produces seven times as much silver as is produced by all of the other gold-standard countries combined.

I give below a table showing the production of silver by the United States, ond by the gold standard countries:

Table showing a comparison of the amount of silver produced in the United States with the amount produced by the gold, standard countries of the world.

United States, bimetallic	$74,989,950
United Kingdom, gold standard	255,650
Germany, gold standard	7,921,336
Austria-Hungary, gold standard	2,161,951
Scandanavian Union, gold standard	387,400
Australia, gold standard	17,375,677
Canada, gold standard	407,100

The other gold-standard countries, viz., Portugal, Egypt, Cuba and Haiti, are not reported by the Director of the Mint as producing any silver.

DEMOCRATS INCREASE MONEY; REPUBLICANS CONTRACT IT.

I may as well at this point call attention to the fact that under Democratic rule the effort of the party in power was to constantly increase the money of the country in order to meet its growing needs. The great prosperity during the ten years prior to 1860 was without parallel in the history of any country. The gold production, amounting on an average to some 60,000,000 a year, gave promise under our free-coinage laws of a great annual addition to money. After the war was over and the Republican party was in full control of the Government they commenced legislating on finance. The whole purpose seemed to be to yield to the demands of money kings to reduce the amount of money in the country as far as possible.

ANDREW JACKSON AND NATIONAL BANKS.

By the national-bank laws this country, with $68,000,000,000 of property, more than $67,000,000,000 is prohibited from being used as a basis for banking. The evils of the banking system which the Republican party has ingrafted into our system and by which the Federal Government virtually becomes a partner in every bank of issue in our land was foreseen by a great statesman more than three-fourths of a century ago. These views were forcibly expressed in Andrew Jackson's great veto message of July 10, 1832. This able paper warned all people of the direful results which could be expected from a system of banking conducted pursuant to laws enacted by Congress which committed even in a limited degree the banking of the country to such Federal institutions. Andrew Jackson was a true Democrat and friend of the people. He clearly foresaw and predicted the condition with which we are to-day confronted. He clearly foretold the evils which would arise from a national bank system or United States bank system. He explained that the money power thus organized would exercise their strength for their own benefit and that it would seriously injure the people. Old Hickory, as he was called, clearly showed that a bank charter then before Congress was in the interest of the rich and against the interests of the poor. He said:

It is to be regretted that the rich and powerful too often bend the acts of government to their selfish purposes.

President Jackson went on to say:

When the laws undertake to add to these natural and just advantages artificial distinctions; to grant titles, gratuities, and exclusive privileges; to make the rich richer and the potent more powerful, the humble members of society, the farmers, mechanics, and laborers, who have neither the time nor the means of securing like favors to themselves, have a right to complain of the injustice of their Government.

It will be seen that President Jackson here very aptly describes the present banking system. This great defender of the people then says:

Experience should teach us wisdom. Most of the difficulties our Government now encounters, and most of the dangers which impend over our Union, have sprung from an abandonment of the legitimate objects of our Government by our national legislation and the adoption of such principles as are embodied in this act.

The law President Jackson was referring to was similar in many respects to the present national banking laws. They both made the Government virtually a partner in the banks. President Jackson then said:

Many of our rich men have not been content with equal protection and equal benefits, but have besought us to make them richer by acts of Congress.

So impressed was this great man with the views expressed in the veto message that he referred to it in his farewell address of March 3, 1837. He said the bank charter—

gave to its advocates the position they had struggled to attain from the commencement of the Federal Government down to the present hour.

This is true of the Republican financial system. It is the same system of concentration which the Federalists sought to ingraft upon our Government. He also said that the—

peculiar privileges bestowed upon it enabled it to exercise despotic sway over the other banks in every part of the country. From its superior strength it could seriously injure, if not destroy, the business of any one of them.

In his address Gen. Jackson also said:

That it asserted the power to make money scarce or plenty at its pleasure at any time and in any quarter of the Union by permitting an expansion or compelling a contraction of the circulating medium according to its own will.

This is certainly true regarding the Republican laws for the last twenty-five years. They have sought to make the money held by the rich more valuable by making it scarce when it was to their advantage to do so. Gen. Jackson also said:

The result of the ill-advised legislation which established this great monopoly was to concentrate the moneyed power of the Union.

Certainly the national banking system concentrates the moneyed power of the Union. This concentration has been going on for nearly thirty years, and now fully three-fourths of the money in the United States is concentrated in the great money centers of the Northeast. Money is so abundant in New York that it often seeks loans at 1 and 2 per cent, when in the rural districts of the South and West it is almost impossible for our people to borrow money even at exorbitant rates of interest.

Toward the close of his address, President Jackson says:

We are not left to conjecture how the moneyed power thus organized and with such a weapon in its hands would be likely to use it. The distress and alarm which pervaded and agitated the whole country when the Bank of the United States waged war upon the people in order to compel them to submit to its demands can not yet be forgotten.

Is it not true that the moneyed power in our country is exercising its power upon the people and Congress to compel this body to comply with their demands?

DEMOCRATIC PLATFORMS SINCE 1840 DENOUNCE NATIONAL BANKS.

The extracts which I have read from Jackson's veto message of 1832, and his farewell address of 1837, were the dominant Democratic sentiments of that time regarding the pernicious effects of national banks. On May 5, 1840, the Democratic national convention met at Baltimore and nominated Martin Van Buren for President. The sixth plank of the platform, which was unanimously adopted, was in these words:

Resolved, That Congress has no power to charter a United States bank; that we believe such an institution one of deadly hostility to the best interests of the country, dangerous to our republican institutions and the liberties of the people, and calculated to place the business of the country within the control of a concentrated money power, and above the laws and the will of the people.

I ask my colleagues if this prediction has not been verified. Is it not true that these institutions are here to-day demanding that the business of the country be placed within the control of a concentrated money power and against the will of 90 per cent of the people of our country?

Four years later, in 1844, Polk and Dallas were nominated. The sixth plank of the platform which carried the banner of Democracy to victory over the great Whig leader, Henry Clay, was precisely the same words as the financial plank in the platform of 1840. Again, four years later the national Democratic convention of 1848 indorsed the same principles. The eighth plank, in referring to Democratic financial principles, said:

The results of Democratic legislation in this and all other financial measures upon which issues have been made between the two political parties of the country, have demonstrated to careful and practical men of all parties their soundness, safety, and utility in all business pursuits.

And the fourteenth plank, in referring to Gen. Jackson's great message, by which he vetoed the banking charter, asserted that the veto power—

has saved the American people from the corrupt and tyrannical domination of the Bank of the United States.

DEMOCRATS DEFEND LIBERTY.

It must be remembered that this convention met at an important epoch of our country. During the preceding four years the Democratic party had conducted a glorious and successful war with Mexico. The gallant American heroes were just returning home, crowned with fame and glory achieved in a glorious campaign wholly within the territory of their antagonist. They had carried the flag of our country to the very capital of the ancient empire of Mexico; they had acquired vast territory, which had added many-fold to the wealth of our country. The success of our arms had added to the honor and power of the Stars and Stripes on every sea and in every port. The Democratic party were proud of their great achievements. They showered honors upon the brave men who had achieved these great victories.

In the Democratic platform of 1848, in congratulating the country upon the achievements of the Democratic party, the great leaders seemed to regard all these triumphs, great and valuable as they were, as of less importance than the Democratic achievement of preserving the rights and liberties of American people in their own homes and firesides; and in the twenty-first plank of their platform these great and good defenders of the people say:

Resolved, That the fruits of the great political triumph of 1844, which elected James K. Polk and George M. Dallas President and Vice-President of the United States, have fulfilled the hopes of the Democracy of the Union in defeating the declared purposes of their opponents in creating a national bank.

We see here that the Democracy dropped the words "United States bank" and called these institutions national banks, and I desire my colleagues to observe that the Democratic party of 1848 was so impressed with the evils of national banks that they regarded the success of the Democracy in preventing their creation as of more value to the American people than the triumphs of arms and the acquisition of the vast territory which has given us hundreds upon hundreds of millions of gold and silver.

In 1852 the ninth plank of the platform of the convention which nominated Pierce and King was in these words:

Resolved, That Congress has no power to charter a national bank; that we believe such an institution one of deadly hostility to the best interests of the country, dangerous to our republican institutions and the liberties of the people, and calculated to place the business of the country within the control of a concentrated money power, and above the laws and will of the people; and that the results of Democratic legislation in this and all other financial measures upon which issues have been made between the two political parties of the country have demonstrated to candid and practical men of all parties their soundness, safety, and utility in all business pursuits.

The tenth plank was in these words:

Resolved, That the separation of the moneys of the Government from banking institutions is indispensable for the safety of the Government and the rights of the people.

In 1856 Buchanan and Breckinridge were nominated. The seventh and eighth planks of the national Democratic platform being precisely in the same language as the ninth and tenth planks of the platform of 1852, and the ninth plank reiterated that the veto power of the President—

has saved the American people from the corrupt and tyrannical domination of the Bank of the United States—

of course referring to the bank veto message of President Jackson.

THE COLOSSAL FRAUD.

The most unblushing and colossal fraud which has been injected into the debate is the "honest dollar fraud," as interpreted by the banker and capitalists of the great money centers.

They tell us that the people of the great West owe them money on mortgages and they want it paid in honest dollars.

Now, I lay down as a correct proposition that the laws of a country enter into and form a part of every contract between its citizens.

Now, let us explain by some of the millions of examples which illustrate the injustice of the capitalist demand and the crushing hardship and wrong he asks us to inflict upon the struggling masses who have built up and created an empire in the rural sections of the South and West.

Take the Northern Pacific Railroad as an illustration. It has sold millions of farms to honest toilers. They paid part of the purchase money, and mortgaged the farm for the remainder.

These sturdy farmers have built homes and made a garden of a barren waste.

When the farm was purchased and the mortgage executed the silver coinage laws of the land provided for an increase of money in the United States at the rate of from $3,000,000 to $4,000,000 a month.

The money in the United States was therefore increasing, so as to, in a manner, keep pace with the increase in property and wealth.

The tendency of the monthly increase would be to make it easier for debtors to meet their obligations, and in every case this enlargement of the volume of money was essential to enable the debtor to fulfill his contract.

Now these creditors come to us and demand that Congress change the contract by stopping all increase of money, and if we comply with their demand we change the condition so as to make it very difficult and, in many cases, impossible for these debtors to pay their mortgages, and the beautiful homes they have built up will be swept away, and the honest farmer, with his wife and children, instead of being a land owner, becomes a tenant.

While the people of the Northeast are crying "honest dollar," let me remind them that very many of the loans they made were in silver dollars containing 371¼ grains of pure silver, the very dollar they now say is fraudulent and not fit to be returned to the modern moneyed aristocrat of the great centers of wealth.

I will also state that in cases where the loan was not made in silver dollars they were made in currency or coin which was of precisely the value of silver dollars and was exchangeable for silver dollars, and these silver dollars were just as easily exchangeable into gold or other money equal in value to gold. And now the heartless creditors say that the kind of money they either loaned or contracted to receive for property sold to honest men is not good enough for their lordships, and they demand that Congress shall enact laws the effect of which would be to compel payments to them under such circumstances as to make every dollar due them have a purchasing and debt-paying power nearly double what it was when they accepted the notes, mortgages, and other obligations.

These are the same men or same class of men who owned currency bonds in 1869, and induced a corrupt Congress to enact a law providing for the payment of the currency bonds in coin, thus wresting $700,000,000 from the people.

They are the same men who, in 1871, procured the enactment of the refunding law which provided that the bonds to be issued should be paid in coin.

They are the same men who, finding that the ratio of gold to silver was changing in favor of gold, came before Congress in 1873 and procured the demonetization of silver, so as to compel the Government to pay them the amount due on their bonds in gold.

It is therefore not surprising that such men should bring to bear the unprecedented influences now being exerted to enforce these demands for legislation which, if successful, will result in denying any further coinage into money of the produce of the rich silver mines with which God has blessed our country.

Mr. Speaker, while there is a great difference of opinion as to the cause of the financial strain from which the country is suffering, I believe no one will question that if the fifty millionaires referred to by Chauncey Depew were to issue an advertisement announcing that the money they had hoarded and were withholding from circulation would be loaned upon gold-bearing bonds, secured by three times the amount loaned, the stringency would cease almost immediately.

If those men have not caused the stringency, at least it is in their power to cause the stringency to cease within one hour, and to restore prosperity to our land.

I believe the brokers, bankers, and capitalists are largely responsible for the condition of our country? I read from a New York paper a statement attributed to Mr. Ward McAllister. He says:

I would much prefer to send a young man out West on a farm than to advise him to become a broker in Wall street. That is one of the worst fates that can befall a man of refined temperament. A broker, from the necessity of his business, is obliged to eschew all mercy, human kindness, and, in some extreme cases, to be given to lying. He believes in the doctrine that the end justifies the means, and that success makes the man and the want of it the fellow.

I take most serious issue with Mr. Ward McAllister in his opinion regarding New York business men, whether they be brokers, merchants, or capitalists. I believe they are as honest and honorable as any business men in any of the moneyed centers of the world. No doubt there are a few corrupt and bad men among them, but no more than is found in other business communities; but the difficulty is that the interests of these men is very different, and, I might say, opposed to the interests of the people of the South and West. They are lenders of money, while the people of the South are largely borrowers.

The wealth of these men would be vastly increased by the establishing of a gold standard, whilst such legislation would produce poverty and distress throughout the rural sections of the South and West.

If the gold standard is adopted they would become virtually money kings and their power to control legislation would be very much strengthened, and we can safely assume that they would exercise their power in their own interest, and therefore greatly to the disadvantage of the people of the South and West.

They would be tenfold stronger then than they are to-day, and their powers would be exercised as men of that character always exercise power intrusted to their hands. No; let me tell my fellow members that the moment the Sherman act is repealed there will not be a line or a word in the laws of our country recognizing the coinage of silver, and there never will be during our lives or the lives of our children.

The men who succumb to these powerful influences will be wined and dined and applauded by these millionaires, who will take them to their tables with gold service and with French waiters standing behind their chairs; but I would rather sit down to the table of those honest Christian constituents of mine, who for twenty-five years have been the victims of Republican financial legislation, men and women descended from the best and greatest people of our land, raised in comfort and affluence, but reduced to poverty by the legislation that is sought now to be perpetuated as the principle of the finance of our Government. Humble though the repast would be, it would be under a roof which sheltered honest, Christian, virtuous men and women. It is from such homes that come all the soldiers who defend the honor and the interests of our country when war, with all its horrors, comes upon us.

The advocates of national banks and the single gold basis say that the trouble is that the people do not work. The people of the South, they say, are lazy. Those people were prosperous prior to 1860. Their production of cotton from 1850 to 1860 averaged about three million bales a year. Now they make nine million bales. They work three times as hard and they make three times as much; yet they are three times as poor. It is caused, and caused alone, by the financial system which for twenty-five years has cursed our country. [Applause.]

Fallacies of Senators on the Financial Question Exposed.

SPEECH

OF

HON. WILLIAM M. STEWART,

OF NEVADA,

IN THE SENATE OF THE UNITED STATES,

Thursday and Friday, October 26 and 27, 1893.

The Senate having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. STEWART said:

Mr. PRESIDENT: I desire to call attention to a matter that was overlooked by the stock operators in New York yesterday. On the news that there was likely to be a speedy vote on the pending bill they advanced the price of stocks, a long list of which is given, but they overlooked another very important matter. They neglected to advance the price of wheat and cotton. December wheat opened at 65¼ and closed at 64⅜; May opened at 72⅛ and closed at 71⅛, and thus with the whole list of grain. November cotton opened at 8.05 and closed at 8.03, and so on through the whole list. They neglected to make a showing there to influence Congress. I hope the next time they will put up wheat and cotton with the other stocks, so that the stock market may have its full effect and bearing upon legislation.

In my remarks the other day I stated that it was the object of the action of Great Britain in suspending coinage in India to cripple the Indian manufacturers and by that means relieve the manufacturers of England from the competition of India with foreign countries. I hold in my hand an interview with a celebrated English gentleman, Mr. Frewen, who states:

The financial stringency in India becomes more acute daily, and not only is the government of India finding it impossible to sell its silver bills but since the Indian mints closed in June India's exports to China have fallen off by more than 50 per cent, and the Government revenue from the opium sales to China is greatly shrunk.

That is what was anticipated, and what I stated would be the inevitable result of compelling India to use dear money, appreciating money; that it would deprive her of her rupees; and that when that was done her power to furnish the Orient with commodities would be destroyed and England by that means would regain the trade. It is operating precisely in that way. That was the intention, and if they can place us in the same list they will reduce our exports. In the whole world every country is verifying the truth that an honest measure of value which keeps pace with the increase of population and bears a permanent and stable relation to the value of products, encourages production, encourages exports, and places that country in an advantageous position as against the country that is using a dishonest and an appreciating currency. I have heretofore called attention to that truth.

I do not wish to prolong this debate, but I do not think that my duty will be performed without calling attention to the fact, although the debate has been in progress for nearly three months, and although the entire gold press has continually charged that it was for the purpose of delay on the part of those who are opposed to this legislation. We have heard that continually, and we have heard many expressions of discontent on the part of Senators here that there should be so much delay. In fact in their speeches they have assumed that this discussion was for delay.

There have been something over twenty speeches made by the friends of the pending bill, and I undertake to say that in all those speeches they have been unable to point out in what way the country was to be benefited by this proposed legislation that they have so earnestly and peremptorily demanded. I do not think this debate should close without the attention of the country being called to the weak and inconsequential efforts that they have made to sustain this miserable cause.

I will take first the speech of one whom we all recognize as equal in intellect and equal in experience to any man in the Senate. I refer to the Senator from Iowa [Mr. ALLISON]. He made a labored and elaborate speech, but he failed to show any good results that could possibly flow from this proposed legislation. On the contrary, he admitted, as I shall show, that when this bill passes we shall be in a hopeless and helpless condition. He did not give us one ray of hope. He made no statement showing by what possibility prosperity could be restored by this measure. He reviewed the coinage laws and stated what they were. He said:

The Senator's statement is in corroboration of what I say, and shows that there was no public opinion in either party insisting upon a larger coinage than a minimum under the Bland act; but I am not on that point. I am now upon the point that in this country, with a question discussed more than any other question has been discussed, no political party has ever gone before the people favoring the free coinage of silver or the destruction of gold as the measure of value, which was made the measure of value in 1873.

In that of course he is mistaken Ever since the fraud of 1873 was discovered there has been an attempt on the part of the people to right that wrong, and I undertake to say that each political party and all public men have told the people that they were in favor of setting that wrong right.

Mr. PALMER. May I ask the Senator a question?

The PRESIDING OFFICER (Mr. PASCO in the chair). Does the Senator from Nevada yield to the Senator from Illinois?

Mr. STEWART. In a moment. And they claimed that they were in favor of honest bimetallism.

Mr. PALMER. I wish to ask the Senator whether there is any party in this country, any considerable party, that favors making silver the measure of value?

Mr. STEWART. Either gold or silver coin.

Mr. PALMER. I mean whether any party is in favor of making silver the measure of value.

Mr. STEWART. Certainly.

Mr. PALMER. Is that the position of the Senator?

Mr. STEWART. That is my position distinctly. I am in favor of making coin, either gold or silver, the standard of value;

COINED DOLLARS;

and I am in favor of the law which existed from time immemorial, making the coin out of either metal.

Mr. PALMER. But does the Senator mean that the coin shall be equal in value? Is that his theory?

Mr. STEWART. That is my theory, that the coins shall be of equal value if they are dollars. I undertake to say that we have a right to make dollars out of these metals, whether the commodity is of equal value or not. That is free coinage.

Mr. PALMER. If I may be allowed to interrupt the Senator further, I understand his theory to be that the free coinage of both metals would make them of equal value.

Mr. STEWART. Certainly it would make the coins of equal value. Our coins are now of equal value, without free coinage. Our silver dollars are as valuable as the gold dollars. The only way the two metals can be kept at a parity is by coining them both and giving them both the same coinage privileges; and then if one is more plentiful than the other, and can be more easily obtained, the demand will all fall on that metal and the other will not be used, and then the one will very soon be brought up to the other. That is what equalizes them. That is the only way you can maintain parity.

How can you talk about parity by redeeming one in another when one must be kept afloat by redemption in the other? One is money of ultimate payment and the other is only credit money and there is no parity of the metals, no more than there is between gold coin and unstamped paper. There is no parity between gold and silver in the sense in which that term is used if

you must redeem silver in gold. You can put paper money on a parity with gold in the same sense by a promise of redemption. It is then credit money. But the parity of gold and silver coin as well as of gold and silver metal have been sustained during all the ages by unlimited coinage of both and using the cheaper metal. The demand will all fall on the one most convenient to obtain and then it will soon be as dear as the other.

Mr. PALMER. As I understand the Senator's theory, it is that the cheaper metal will be used?

Mr. STEWART. Yes.

Mr. PALMER. And the dearer metal will vanish?

Mr. STEWART. No, it will not vanish; but what there is will be used and the supply will be made good by a more extensive use of the plentier metal.

Mr. PALMER. Well, it will disappear; it will leave business.

Mr. STEWART. No, there will be more of the cheaper metal coined, and the increased demand for it will make it as dear as the other.

Mr. PALMER. For the present the Senator proposes that silver shall be the standard of value?

Mr. STEWART. I propose to supplement gold with silver. The gold can not vanish until we can not only obtain silver enough to take its place, but until we can obtain silver enough to produce higher prices here than in other countries.

Mr. PALMER. I suppose gold would go where it is more profitably employed, and more useful, and silver would stay where it will serve the purpose. Then the Senator favors the silver standard in this country.

Mr. STEWART. I favor that standard which we shall have by pursuing the course of the ages, by opening the mints to either metal on equal terms, as every country did until speculators interfered with the automatic theory. In every country both metals were used, the more plentiful metal was in the more general use. From the discovery of America up to 1803 Humboldt tells us that there were 44 ounces of silver produced to 1 ounce of gold. The parity remained. There was very little change; but they had to use more silver than gold, because there was more silver produced than gold. Some countries did not have much of anything but silver. They had to use silver, or have no money.

Mr. PALMER. At such time as it may suit the Senator I should like to ask him another question.

Mr. STEWART. Very well; ask it now.

Mr. PALMER. I understand the Senator to say that for the present, without reference to the past, he favors the silver standard in this country.

Mr. STEWART. I favor the coinage of silver for the purpose of preventing contraction, which will bring it up to the standard of gold. I favor using silver to prevent falling prices and ruin——

Mr. PALMER. But for the present, with the hope that the silver may ultimately reach the price of gold?

Mr. STEWART. Whether it reaches it or not, I am in favor of coining silver.

Mr. PALMER. The Senator is in favor of the silver standard now?

Mr. STEWART. Why does the Senator persist in saying I am in favor of the silver standard when I tell him that I am in favor of the standard of coin made of either metal, whichever is most convenient to obtain.

Mr. PALMER. Oh, yes.

Mr. STEWART. I am in favor of either silver or gold; but I am in favor of making the coin out of either metal, and if we can obtain more silver than we can gold we would make more silver coin, and *vice versa*.

Mr. PALMER. I have listened to the Senator with a great deal of interest, and I have understood him to hold that there is an absolute necessity for the present, for a time, that silver shall be the standard. I care nothing about the reasons, but the actual fact is that for the present silver must be that standard.

Mr. STEWART. I do not think so.

Mr. PALMER. The Senator does not think so?

Mr. STEWART. I do not think so. I do not think if it should be the case it would make any difference.

Mr. PALMER. I should be glad to hear the Senator on that point.

Mr. STEWART. If the Senator will just sit down a moment I will tell him.

Mr. PALMER. Very well.

Mr. STEWART. I do not think it will drive the gold out, because I do not think we can get enough to drive it out. I should be glad if gold would go to a premium. It would increase our exports and discourage imports from Europe and the gold countries, and increase our trade with silver-using countries. I do not think that can happen, and I will tell you why. It is said that we have $600,000,000 of gold. As the Senator said, gold will go where it will buy the most property. If that $600,000,000 would go out when we pass a free-coinage law prices would fall away out of sight; you could buy a farm for a few dollars.

Would gold go and leave those things? No; gold will stay until the range of prices in this country rises above prices in other countries. It would stay here while prices did rise above prices in other countries. I hear Senators talk about free coinage producing contraction. That is impossible. The gold can not go out as long as it is wanted here. If you adopt silver, gold must stay here as long as it is more useful here than elsewhere. It will not go and leave a vacuum, or what is the same thing, contraction. The loss of gold, if at all, would be very gradual. It is admitted we need more than $200,000,000 more circulation to supply the present demand and make up existing deficiency in our circulating medium, and even $60,000,000 or $70,000,000 more to keep pace with population and business. It would require $600,000,000 to take the place of gold, if the gold should go out as alleged by monometallists. The world's supply for forty or fifty years is anticipated by these demands, and all these demands must be supplied before gold can go to a premium.

Mr. PALMER. Will an interruption be agreeable to the Senator?

Mr. STEWART. Entirely.

Mr. PALMER. I have understood myself to be a bimetallist, and the theory is that the country shall have the benefit of the coinage of both metals. I have supposed that it was possible, according to the Chicago platform, that some system of coinage should be adopted by which we could have both. I understand the Senator to state in substance that we can not have both in the actual business of commerce——

Mr. STEWART. Oh, no.

Mr. PALMER. But that silver is the profitable standard of the two, and that the gold will disappear; that it ought to disappear? Is that the theory?

Mr. STEWART. Do I understand the Senator to say he is a bimetallist?

Mr. PALMER. I am.

Mr. STEWART. How is he going to accomplish that? Let me ask him a question.

Mr. PALMER. I recollect once a friend of mine, a good many years ago——

Mr. STEWART. Answer it squarely, and do not tell a story. I want a categorical answer.

Mr. PALMER. I do not know how to do it except by the processes now in force.

Mr. STEWART. What are the processes in force?

Mr. PALMER. That silver shall be coined and introduced as fast as it can be absorbed in this country without disturbing the presence of gold, which is to-day the standard of value in this country.

Mr. STEWART. Now the Senator is entirely mistaken. He is not a bimetallist and does not know anything about bimetallism. The idea of being a bimetallist when you coin but one metal and do not coin the other. Do you call that bimetallism? If you do not coin one metal but coin the other and then start the two in a race do you expect them to run even? The two metals had a race for three thousand years, neck and neck, and they came under the wire in 1873 with silver slightly in the lead. After a race of three thousand years, with equal access to the mints, it was a draw game. Now one of them is hobbled and overloaded and crippled and shot down, and the Senator complains that it can not run as fast as the other.

Mr. PALMER. There is a good deal in that, I confess; but is the Senator a bimetallist?

Mr. STEWART. I am.

Mr. PALMER. Let me see what his position is.

Mr. STEWART. I am a bimetallist, and I will explain it. I am a bimetallist because I believe in making money out of the two metals, and under the same conditions. That is the only way bimetallism can be sustained. To talk about maintaining the parity of the two metals by coining only one is ridiculous. You might as well try to make two and two five. The people do not understand it. They have not learned the A B C of bimetallism. These are money metals, and the right to make money out of either of them is what we are contending for; and we say in this country, if we had a right to make money out of silver, we might make more money for a time out of silver than we would make out of gold, but it would very soon change again.

Mr. PALMER. Will the Senator allow me to ask him one more question?

Mr. STEWART. Any question.

Mr. PALMER. Can we make money of equal value out of the two metals?

Mr. STEWART. Exactly. There is no doubt of that.

Mr. PALMER. By what process? I should be obliged to the Senator if he would tell me.

Mr. STEWART. By coining. That is the way it has always been done. Your silver coin is worth as much as the other. Just coin them into dollars. The dollars are of equal value. That is the only way it has been done. It is the simple process which has been tried for three thousand years and never failed.

We are not experimenting, but following the custom of all the ages. All countries, while they were consulting the interest of the people and not the interest of a class, secured all the gold or silver they could, whichever was most easily obtained, without discrimination. Now is a most favorable time to obtain silver, because Europe, for the purpose of benefiting the creditor and robbing the debtor, has abandoned silver and made it easy to obtain. It was fifty years before she determined which metal it was best for the creditor to discard. England discarded gold in 1816. The balance of the world used silver, and some used both gold and silver. There were sufficient mints open for silver and for gold to preserve the parity. During the first half of this century there were produced 35 or 40 ounces of silver to 1 ounce of gold. Then came California and Australia, and for fifteen years there was only about 5 or 6 ounces of silver to 1 of gold, or four or five times as much value of gold as of silver.

Then Chevalier and others said to England, "You made a mistake, gold is going to be the more plentiful metal, and we must demonetize that to carry out your theory of robbing the world." England sent a commission, as I have stated before, to California and Australia. I traveled with that commission for three weeks in 1854. They were examining the question whether there was going to be a permanent crop of gold and they came to the conclusion that there was not. Then the Comstock was discovered and England said, "What did I tell you? We are right. The way to cinch the world is to destroy silver, because that is the more reliable and the more plentiful metal," and consequently the act of 1873 was passed here, as the Senator from Ohio tells us, through English influence.

I said to the Senator from Iowa, in reply to his question:

Both parties were juggling with the country, and were making platforms to deceive. That is the reason why I would not stand with them.

Mr. ALLISON. I am glad to know that is the Senator's view. I knew it was the Senator's view that we had been juggling with the question. I knew that the Senator for two or three years was dissatisfied with the parties. But, Mr. President, these political parties that go into great campaigns go into the campaigns upon principles enunciated in their platforms, which, although they may not always be stated with the frankness with which they ought to be stated, yet always show the tendency and trend of public sentiment in regard to great public questions. When the Senator from Colorado [Mr. TELLER] the other day in his observations stated that he knew what was in the Republican platform of 1892 because he participated in its making and he construes it to mean one thing, I want to say to him that if that had been understood as the meaning of the platform I think the Republican party would have been snowed under a good deal more than it was.

The platform was understood to be for the restoration of silver as money. That had been the theory of the Republican party and of all public men. I admit there has been a good deal of trickery in forming these platforms. They have drawn them to deceive. But what right had either party to deceive the people? What right had either party to go before them with platforms that they construe when they are in the canvass as being in favor of bimetallism and construe in this Chamber for monometallism? I say the people have been led to believe that both parties condemned the act of 1873. It has been condemned by both parties at all times. Both parties led the people to believe that they would rectify that wrong; and both parties here have turned their backs upon what was understood, and what they intended the people should understand as their pledges to mean. The President did not repudiate the platform, but his letter of acceptance, fairly construed, was an indorsement of the platform and for a more liberal supply of money.

The Senator from Iowa labored for an hour or two to show that it was possible to construe these platforms so that they would not commit either party to free coinage. I have heard a great deal of that kind of special pleading here. I suppose that almost any platform might be drawn, and by special pleading its main features be destroyed by legislation. The Senator from Iowa further said:

I think I have shown by the action of Congress and by the declarations of the two great parties that they have not been for the free coinage of silver. Why not? Because they believe that to establish free coinage of silver means the silver standard and the exclusion of gold as a part of the money of our country. For the same reason they are opposed to such measures as will accomplish indirectly what they are opposed to directly.

Here the Senator assumes the use of silver destroys the use of gold. What an absurd statement that is after the two metals had been used for three thousand years together, and neither had destroyed the use of the other! One supplements the other as naturally and as necessarily as the elements supplement each other. Silver has been the more plentiful metal, the more regular in production, and the more general in use for three thousand years. Gold has never been in general circulation and never can be. The people must have silver in order to make change, and 1,200,000,000 people use silver, while not 50,000,000 people in the world are in the habit of using gold. I believe that not half of the people of the United States ever saw a gold coin; but all of them are familiar with silver.

As to the quantity of the two metals, it requires both to furnish a sufficient basis. We have the accumulation of all the ages which forms a conservative reservoir, which can not in a short time be rapidly increased or rapidly diminished by the accidents of mining. The Senator said the parity between the two metals could not be sustained by the free coinage of silver. I tell that Senator and all others that no man on earth can suggest any other mode of maintaining the parity. The slightest limitation upon one affects its price. They must both be used or the parity can not be maintained. That is the kind of argument which Senators are forced to make day after day and week after week to avoid complying with the plain pledges they made to the people.

The Senator continued:

I am endeavoring to show that under our statutes and our policy and our laws we are to maintain the parity and value between silver and gold.

He proposes to maintain parity by limiting the use of silver. Has it had that effect? Is not the parity destroyed by that same kind of legislation? Was it not the legislation first of the United States and then of Germany and France which destroyed the parity and cut off the demand for one metal and put the whole demand on the other? Germany did a great deal toward destroying the parity when she not only refused to coin silver, but confined her coinage to gold and sold her silver.

Mr. PALMER. I ask leave of the Senator to interrupt him for a single question.

Mr. STEWART. Certainly.

Mr. PALMER. I have understood the Senator to insist that silver was demonetized by the act of 1873?

Mr. STEWART. Beyond any doubt.

Mr. PALMER. I agree with the Senator largely about that, but I do not know how to forgive the Senators who voted for it. Before I came here I was told that the Senator from Ohio [Mr. SHERMAN] was responsible for it. I have known him for many years. Since I came here I have been delighted to find that he voted against the act. There are, however, Senators present who did vote for it. How can the country forgive them for thus demonetizing silver?

Mr. STEWART. The act was passed by common consent and without a division—all voted for the act, but not for the fraud which concealed the demonetization of silver. The country will never forgive any man who knowingly voted for that fraud. That is certain. I have explained how silver was demonetized and gave a true history. If the Senator will read my speech of the 5th of September—I shall ask him to read no other speech—he will never ask a question of that kind again. If I have not proved in that speech how that act was passed, it never can be proved.

Mr. PALMER. Am I correct in the belief that the Senator himself voted for the act of 1873?

Mr. STEWART. I voted for it, and everybody voted for it. [Laughter.]

Mr. PALMER. How could that fatal act have escaped the attention of Senators like the Senator from Nevada? [Laughter.]

Mr. STEWART. Because the provision which demonetized silver was not read or brought to the attention of the Senate. The Senator from Ohio and Mr. Hooper of Massachusetts, either intentionally or otherwise, I believe intentionally, deceived every Senator and every Member of the other House who has ever spoken on the subject. They deceived Mr. Blaine; they deceived Mr. Garfield; they deceived Mr. Conkling; they deceived Mr. Thurman, and they deceived every watchful man who was here. That is the way it was done. It is that deception which I complain of. No man who knowingly voted for that act should ever be forgiven in this world or the next. [Laughter.]

Mr. PALMER. The Senator will allow me to ask what is to become of those who had the means of knowing it, and did not know it?

Mr. STEWART. They will all go to the bad place, too; but the trouble is we did not have the means of knowing. That is what we complain of. If we had the means of knowing, we should have known.

Mr. PALMER. I am told the bill was printed.

Mr. STEWART. Yes. Does the Senator know all that is printed here? [Laughter.]

Mr. PALMER. No, I do not.

Mr. STEWART. Here is a pile of printed matter. Does the Senator know what it contains? Has he read it?

Mr. PALMER. No, I do not fret myself about those things

but if those who favored that bill go to sheol, I hope the Senator from Nevada will admit that those who voted for it ignorantly ought to go to purgatory at least. [Laughter.]

Mr. STEWART. Not at all. Why should a man go to purgatory when he had not the means of knowing? We punish men who commit an offense knowingly. As the lawyers say, there must be an intent to commit evil in order to make a crime.

Mr. PALMER. There is such a thing as criminal ignorance, as I understand the law.

Mr. STEWART. If I am guilty of criminal ignorance, I have plenty of good company. I have all the Senators and Members of the other House who were here and who have spoken upon it, and when they are equally as guilty as I am I am willing to go in company with those whose names I have mentioned.

The Senator from Iowa continued:

> Therefore it is that although our resources are great those resources are not placed in the hands of those whose duty it is to administer them. There ought to be a larger reserve for the maintenance of the paper money we have in our circulation. Now, if we go on indefinitely issuing this paper money can it be doubted that the Treasury will be unable to redeem it, and we need not mince matters about that. I have shown you that we have bought bonds to the extent of $70,000,000 with the seigniorage under the Bland law. We have $60,000,000 more. There is no surplus in the Treasury. I need not argue that point. So I maintain that if we are to do what the people expect us to do we must see to it that the reserve in the Treasury is strengthened in some form, and if we continue indefinitely such issues it is essential that we should proportionately increase the reserve.

I wonder if the Senator intended to have us understand that the issue of silver coin was paper? Silver coin redeems itself, and has for thousands of years, and the denial to silver coin of its function is sending us upon the brink of bankruptcy. Every man who advocates the gold standard knows that he advocates either the impoverishment of this country by additional taxation, and by falling prices, or he advocates bankruptcy.

If the five hundred millions of silver coin in this country is not good money we have no basis, and we are bankrupt to-day. If silver will not redeem itself, we can not buy gold enough without impoverishing this country to redeem it. The day we undertake to declare that silver must be redeemed in gold, and that we shall buy gold to redeem it, that day the country's prosperity is doomed; and that is a part of this perilous scheme.

The scheme is to destroy silver as money, which both parties declared they would not do, but that we should use silver as money. Now, they propose to destroy this money, to reduce it to credit money, and thus load this country with taxes and interest to buy gold as our only money. Buy from whom? Buy it of Great Britain. Buy it how? Buy it by selling wheat and cotton lower and lower every year.

Conceal it as you may, the plan of the Administration, the plan of the leaders of the gold ring—and the Senator from Ohio is one of its leaders—is to issue bonds and buy gold, thus increasing the burden of the people for the purpose of destroying the silver money we have coined.

I put several questions to the Senator from Iowa during his speech, and tried to have him say how he would increase the reserve. He was constantly telling us that the reserve must be increased. He denied our right to increase it according to the Constitution, by coining one of the precious metals, silver, which we can obtain in abundance, and he shirked the responsibility of saying he would sell bonds; but we all know that that scheme is behind this. The Secretary of the Treasury is now paying out gold for current expenses, as I understand, and has reduced the amount in the Treasury to $82,000,000. He will continue to reduce it, and then will come the cry of universal distress in this country.

We are to have a thousand millions of gold and nothing behind it, in order that our credit may be strengthened, and you do not propose to imitate Germany, France, Austria, and Russia, when we get the gold to keep it, but you propose to put it in the Treasury and allow speculators to come and draw it out the next day, then sell more bonds to get more gold, and turn it back into the hands of the speculators.

Both parties have declared that they will use silver as money, but now they say it is not money, it is credit stuff, no better than paper. I regret that the Senator from Iowa is not here. I told him I was going to pay some attention to his great speech. He labored for a long time to show that we must have parity, that we must have the reserve strengthened; but he did not tell us what good that would do; he did not tell us how we could maintain the parity.

I wish to call the attention of the Senate and of the country to the impotent conclusion to which one of the greatest men in the Senate was driven in his miserable, feeble effort to justify the destruction of silver as money. I read what the Senator said:

> It was my belief then, and it is my belief now, that if this Government will undertake the policy of international arrangement regarding silver and gold that policy will be accomplished, and within a reasonable period we will be able to restore the parity between the two metals, and practically rehabilitate silver. That is my belief, and that is the permanent and wise solution of this question. In the mean time, it seems to me, we shall have to drift along as best we may, purchasing from time to time and coining all the silver that we can use in our domestic circulation maintaining the parity, and I have no doubt we can absorb a considerable amount beyond that which we now have.

When the country is drifting into bankruptcy, when a few men have been able to produce a panic and destroy thousands of millions of money for the purpose of coercing legislation, when all paper and silver must be redeemed and there is nothing with which to redeem them—when we are drifting on in that direction, the people are told that there is nothing to do but to drift and drift along, and we have drifted until the country is in distress everywhere. We must still drift.

What has produced this distress but the drifting policy? Since the crime of 1873 was committed there has been nothing but drifting and lower prices, harder times, and more misery, and now we are told that we must pass this bill. Is the Government of the United States so helpless that it must drift into bankruptcy, that it must allow its people to drift into poverty?

For what? For the purpose I have stated, of allowing a combination of gold and bond speculators in London and New York to augment their wealth by the enhanced value of bonds and by the depreciation of property. That is what we are drifting to. I was pained when I heard the great Senator from Iowa give the people no hope for relief in the passage of this bill, but to drift towards poverty and misery. Is that statesmanship?

Why cut off the last hope that points us to a chance of prosperity? If we could have silver, we could float on that, and that would assist us to secure prosperity, for it has borne up the people of the world through all the ages. The old ship is sound, why scuttle her and let her drift on to the rocks, without pointing out a ray of hope to the suffering masses?

Notwithstanding the length of time this bill has been discussed, the ablest men in the Senate are unable to point out any good results from its passage. Why, then, cut loose, drift into poverty, and tell the American people they must be satisfied with such a result? Pass this bill and you cut the cables of safety and turn the old ship of state adrift. That is all there is in it.

No Senator has given any better reason than the Senator from Iowa; no Senator has told us how prosperity was to come from this enactment; no Senator has shown us how to obtain more money, and they insist that we must stop issuing the money we are now issuing. All they have said is that the repeal of the Sherman law will give us sound money, money acceptable to our English friends, money that will be good in Great Britain. That is all they have told us.

What difference does it make to us whether our money is good in Great Britain or not if it is good in America, if it will pay debts, and secure employment to the multitudes who are now idle? That is the kind of money we want; money which will be good here; and if it is good here it will be good everywhere, for the value of money is its purchasing power in the country where it is created.

The Senator from Iowa continued:

> Mr. President, in view of the action in India, I believe that it is wise to repeal the Sherman law, although as to the precise date of its taking effect, whether to-day, to-morrow, or next week, if it be known in Europe and among the commercial nations that we do not intend alone to deal with the silver question, they will deal with it in agreement and in accord with us. So believing I am in favor of its repeal.

The Senator says if we repeal the Sherman act European nations will agree with us. I have just as good a right to say they will not as any man has to say that silver will not go to a parity with gold if we open our mints. I have the evidence of the experience of ages that it would. On the contrary, I have also the evidence that England has been plotting for seventy years to bring about the demonetization of silver. She appeared with the Senator from Ohio and Mr. Ruggles at the Paris conference in 1867, and by their joint efforts induced that conference to recommend the single gold standard. She has laid her heavy hand upon every country within her reach and compelled them to adopt the gold standard. She holds the obligations of Italy and has placed her in such a condition that her people are starving for bread, and we hear that her only hope is war. The people of Italy prefer death in battle to the slow starvation which prevails there.

England took Austria, holding her debt, and funded $2,400,000,000 of 5 per cent silver bonds into $2,800,000,000 of 4 per cent nontaxable gold bonds. That is England's power there; and Germany has joined with England. As the Senator from Ohio, who had charge of the bill which demonetized silver, told us in 1876 in this Chamber, the demonetization of silver was accomplished through English influence. Why does England do it? England does it, as Mr. Gladstone and the chancellor of the exchequer and other ruling men tell us, for the purpose of enhancing the value of bonds which she has as a creditor nation. Will she not

continue to be a creditor nation when you have passed this bill and when we have become more helpless than we are now? When we shall have destroyed legal-tender silver, and when we are put in the position of being compelled to borrow more money from her, will she not continue to be a creditor nation?

Will we not be more and more a debtor nation when we destroy our own money, when we refuse to coin silver, when we impoverish our own people and bankrupt our Treasury by this violent revolution? Shall we be less a debtor nation than we are now? Will that condition of things aid us in bringing England to terms? England never comes to terms except by force. You must stand out against her. Gladstone said if they would consent to the reconvening of the monetary conference and allow silver to be rehabilitated, it would be a vast gift to us, which we would thankfully receive; but he feared we would not have a very profound admiration for the British statesman who made us that gift.

We ask for no gift; we ask for the right to coin our own money. We protest against the vandalism in the pending bill, which proposes to destroy the money we have, because this bill is only a part of the scheme. The scheme is to issue bonds and buy gold to put up or down the price of property to benefit a creditor nation, to benefit our creditors, to give them an unearned increment. Will they be less greedy to obtain that unearned increment when we have repealed the Sherman law? Every step we take in submission, every step we take in destroying our own money, every step we take in subjugating ourselves and humbling ourselves in the dust to Great Britain will only increase her demands and her insolence, and decrease her respect for our manhood and our independence.

I regret that I have been unable to find in the speech of the great man from whom I have been quoting, no glimmering of hope, no word that would encourage the toiling masses of this country for a brighter and a better day. All I can get from it is to submit to England, borrow money from England, pay England more interest, get further down in the dust, humiliate the people of the United States more and more, and drift along under the whip and lash of English syndicates. That is the only hope. It is as much as to say to the people of the United States: "You are not fit for self-government, you are not fit for independence, you are not fit to inherit this country." That is what it means; that is what the Senator from Iowa tells us, and I propose to show what other Senators tell us.

The Senator from Indiana [Mr. VOORHEES] tells us that these money powers are robbing us. He pictures graphically the gigantic powers which brought on this panic and which are crushing the industries of this country in language far more eloquent than I can use. His picture was not only graphic, but it was truthful; still it was humilitating to the American people. I can not hope to equal him in eloquence, but I regret to say that his conclusion upon the situation was, in my estimation, illogical. But at that time the Senator from Indiana thought that our President might sign a free-coinage bill; and he said that we had no right to assume that the President of the United States would not be in favor of the principles of the platform and the coinage of silver and gold upon equal terms with each other.

I have no doubt that the Senator at that time believed he spoke the sentiments of the Administration. I sought to interrupt him to ask him if he had any assurance that the President would sign a free-coinage bill. He declined to be interrupted, and very properly too, because he had a prepared speech. But since then further evidence has been furnished. The situation has changed. The President says in his letter to Governor Northen:

> I am, therefore, opposed to the free and unlimited coinage of silver by this country alone and independently, and I am in favor of the immediate and unconditional repeal of the purchasing clause of the so-called Sherman law.

The President and everybody knows that the only way we can ever have financial independence is to act alone and independently ourselves. The President knows, and we all know, that Great Britain has never kindly taken care of us. The colonies complained of her before the Revolution. They talked over her conduct. She was so wicked and bad that it justified war. They struck for independence of England; and from that time to this she never has been charitable, so far as we are concerned, and now it is said we must ask her consent. She has broken up all your conferences. In those conferences a majority of the states represented have always been really in favor of bimetallism, but they have all said they could not move without England, because the debtor is a servant of the creditor, because the outside world owes England $10,000,000,000, and they can not speak without her consent.

We were in that category, and that power has been brought to bear upon my friends and your friends in this country. They have oppressed the debtors here; they have made them appeal to us to do England's will, or otherwise England would destroy them.

Mr. PALMER. Will the Senator from Nevada allow me to say one word?

Mr. STEWART. Certainly.

Mr. PALMER. I have listened during this debate with a feeling of humiliation that I never expected to suffer to imputations that we are under the influence of England. I have supposed that this great country, with its 65,000,000 inhabitants, with its illimitable resources, is independent.

Mr. STEWART. That shows how much the Senator is mistaken.

Mr. PALMER. I will proceed——

Mr. STEWART. He is very much mistaken.

Mr. PALMER. Mr. President, I am not mistaken. I know my country. We are not fearful of British financial influence. We have resources, we have industry, we have energy, we have courage, we have honesty. If we owe England we shall pay England in the terms of the contract.

Mr. STEWART. No, you will not.

Mr. PALMER. We shall.

Mr. STEWART. She will not let you.

Mr. PALMER. I protest that this array of English influence and English power in the American Senate is humiliating to us all. My ancestors have fought England in every war. My constituents are not fearful of England, either in war or in peace. We do not dread them in manufactures; we do not dread them in commerce; we do not dread them in finance. We are their equals; and instead of shrinking back into a depreciated currency, a currency that is not equal to the currency of the world, we challenge England on every land, in every port, on every sea. We are Americans, and these appeals to our fears are thrown away. I ask pardon for taking the Senator's time.

Mr. STEWART. Well, I am very glad that the Senator shows spirit. If he had knowledge equal to his pluck he would be a very considerable man. He reminds me somewhat of the animal that got on a railroad track, and his courage exceeded his discretion.

Mr. PALMER. Mr. President——

Mr. STEWART. I want to explain how the Senator's courage exceeds his discretion. He will have ample time to answer.

Mr. PALMER. I wish to remark here——

The PRESIDING OFFICER. Does the Senator from Nevada yield to the Senator from Illinois?

Mr. STEWART. I want to explain. As the Senator from Iowa [Mr. ALLISON] explained here, the obligations that we owe have been continued from time to time. They go back more than twenty years, the great mass of them. At that time they were to be paid in gold or silver. It was English influence that demonetized silver. That is pretty well established. We have the evidence on that point of the man who had charge of the bill. The Senator from Ohio stated that it was done through English influence. It was English influence at the Paris conference and at all the conferences that have been held for the single gold standard. That English influence deprived us of the right to pay in silver; it compelled us to pay in gold alone. We are paying England about $200,000,000 a year; but what we are paying her in is money whose purchasing power is at least 50 per cent greater than the money we borrowed; and we are paying it with wheat from the plains of Illinois and with cotton from plantations of Mississippi and other States.

If the price of wheat and cotton had remained the same as it was before silver was demonetized there would have been in the next three years nearly $400,000,000 difference in the wheat shipped and over $1,500,000,000 difference in the cotton shipped to Europe. You allow England to say what money we shall have.

It has been the plea of all the people who have discussed the question here that we must have money acceptable to all the world; that we must have as good money as England has, and that means the dearest money. And when we get the money she is the creditor, and we have to pay her more than we agreed, doubling up our obligations. It makes us pay more than we agreed by legislation here, and she is robbing this country. It is England's gold policy that she is fastening upon the debtor nations.

It is the policy of a creditor nation. When the witnesses were before the royal commission and they spoke about sensible people, one learned Englishman by the name of Watney, when the question was put to him "Do not nations act for their own interest and are they not always reasonable?" said, "No; look at America, a country largely in debt, with immense resources, needing money, demonetizing silver and enormously increasing her obligations to England and oppressing her people." They understand it; and yet we hear talk about our peo-

ple here being equal to them in finance, when we are their servants because we will not study economic questions and understand them plainly.

Ah, Mr. President, you are brave in talk, but the price of your wheat and cotton, the starving and the suffering in this country witness the baneful effects of English rule, the rule of the gold monopoly, which was so graphically explained by the Senator from Indiana [Mr. VOORHEES] in his speech in opening this debate. That is the rule which is trampling upon us. We do not fear force. We do not fear them on the battle field. We do not fear them in open daylight in a contest. But we do fear the insidious, the cunning, the artful devices of these money kings whereby they are sending misery to every home in America. Nothing would be so gratifying to every patriotic American citizen as to have the power, as our fathers did, to fight on the battle field for financial liberty.

England has not only robbed us, but she is enslaving us, and she is enslaving India, Egypt, Austria, Italy, and all the countries that are subject to her imperial rule. Only France and Russia stand out against her to-day. Otherwise she is a financial conqueror of heroes, with her fabric of wealth acquired by strategy, which Gladstone says the world never saw the like before—an accumulation of obligations amounting to $10,000,000,000 to be paid by the labor and the sweat of other nations.

Mr. HOAR. The Senator says France stood out against England. Did not France demonetize silver?

Mr. STEWART. Ah, yes, France has $700,000,000 of silver.

Mr. HOAR. We have $600,000,000.

Mr. STEWART. France has $900,000,000 of gold. France has a French policy. France has the option, as we have, to pay in gold or silver. France refuses to let English speculators draw her gold. France is not increasing in population. France does not need much increase of money. She gives her people all the increase required. France acts for France. The Government of France is patriotic; she acts for her people. The Government of the United States acts for money speculators; it acts for those who ship gold to England. Our Treasury is open to them. With the law and contract providing that we have the right to pay England only silver our Administration repudiated the contract, took away the option from the Government, and gave it to the speculators. If we were patriotic, if we had an American policy, we could take care of the American people.

Mr. HOAR. I should like to ask the Senator a question, with his leave. He says that France stood out against England?

Mr. STEWART. Yes.

Mr. HOAR. The only country that did.

Mr. STEWART. No; Russia, too.

Mr. HOAR. I think he said also formerly that France was the wisest financial country in the world. Now, I wish to ask him if France did not only demonetize silver, but if she has not a less proportion of silver to gold (although she has a large quantity of silver still remaining that she uses) than we have?

Mr. STEWART. She may have.

Mr. HOAR. Then, if I may add one remark, does not the Senator think, now, on honor bright——

Mr. STEWART. Honor bright! That is the way I talk.

Mr. HOAR. I have no doubt it is.

Mr. STEWART. My honor is always bright.

Mr. HOAR. The Senator's honor is brighter than his intelligence sometimes I am afraid. But is it not a little steep to charge the majority of both Houses of the American Congress with being subservient to England when we are doing exactly the same thing (except we are doing it with more liberality to silver) that the ablest financial nation of the world has done?

Mr. STEWART. If the Senator's honor was as bright as his intelligence he would not be a gold contractionist. We are not doing the same kind of thing as France. The conditions are altogether different. France has enough of both gold and silver for the basis of her circulation. She has only $80,000,000 of uncovered paper. She has gold and silver behind all her paper except about $80,000,000. She is able to issue more if she desires. She keeps her per capita always stationary or increasing. She takes care of her people. She does not let her gold go. Suppose she would have allowed British speculators to draw her gold out because her paper is all redeemable in gold or silver, she would have had very little gold by this time. But she was patriotic and took care of her people.

Now, we are very differently situated. We are a growing country, with untouched resources. We require constantly more new money; and instead of protecting the gold we have and having an American policy, when the law requires the Secretary of the Treasury to coin silver and provide for the redemption of Treasury notes, he allows exporters of gold to take all they want. Germany protects her gold. Our Government will not do it. When our Treasury is open to the speculation of the world, when we are required to buy gold to put there for them to speculate on, when our Treasury is simply the treasury of speculators, do you say that we are as patriotic as Frenchmen, and that the Congressmen who justify this policy are as patriotic as French citizens, when French citizens pursue an entirely different course, when our Treasury is depleted for the purpose of allowing speculators to buy gold and ship it to Austria?

Of course our finances are regulated by British influence. I do not like to charge an evil intent upon Senators, but I say this is what we are doing, and our honest statesmen have not reflected upon the fatal steps we were taking. That is what I complain of, and I complain that in all this discussion there has been no suggestion how the country would be benefited by the proposed legislation. We have had three months of discussion, and no policy developed. No Senator has said what is proposed to do next. No Senator has suggested a plan to place this country on a sound and enduring basis. We have been drifting, in the language of the Senator from Iowa. Do you say that we are patriotic when we come here to destroy without exhibiting a plan for rebuilding. The Administration has suggested no plan.

The country does not know what you intend to do. This measure is pressed in a manufactured emergency. All our financial legislation for the last twenty-five years has been legislation in an emergency, dictated by some scheme of avarice. This is of the same kind—simply a scheme of robbery. Do you call it patriotic for this great country to be made to drift without a financial plan, without a suggestion that will relieve the people after three months of debate, without a suggestion of any relief in the future, with the President saying that he is opposed to independent action so far as silver is concerned, without intimating what independent action on any subject we may take?

[At this point the honorable Senator yielded to Mr. VOORHEES, who moved a recess.]

Friday, October 27, 1893.

Mr. STEWART. Mr. President, there are two kinds of bimetallists: one from principle and the other from interest; one before election, and the other both before and after election; one through good and evil reports, and the other when there is no danger of legislation and no danger of offending the gold bugs.

At the commencement of this session scar-worn veterans of free coinage declared that they could under no circumstances be induced to surrender their bimetallic virtue, which they had maintained for so many years. They boldly told the all-powerful and virile Executive hero of monometallism, that if their votes were secured it must be by coercion; but they frankly admitted that they knew he had the power to coerce them. They gave him plainly to understand that the Federal patronage under his control and the golden cords under the control of his Wall-street associates were sufficiently strong to bind them hand and foot and prevent a struggle against the wicked embraces of the Moloch of avarice.

The plan of coercion was successfully executed. The embrace of sin was secured without a struggle or a groan. No sting of remorse disturbed the repose or touched the conscience of the victims. Why should they be charged with guilt for betraying the cause they loved so well when they only submitted to irresistible force? They will be allowed in the future to vote for silver when their votes are harmless and when a silver bill can be killed by a veto without endangering the repeal of the Sherman act. I notice that some of those Senators who invited coercion at the commencement of the session have invented what probably may be called a legislative cuttlefish, but which they call "compromise" amendments. There are two or three of that description of legislative cuttlefish. I believe the Senator from West Virginia [Mr. FAULKNER] invented the first, and that he is entitled to the discovery that such a fish could be created. He came early with his legislative cuttlefish. The Senator from Washington [Mr. SQUIRE] has invented one, which took him some time. These have been offered in the shape of amendments.

The outside world may not know to what use these legislative cuttlefish are to be applied. They will be very useful in the next campaign. It is known that the cuttlefish has a method of hiding himself from attack by the emission of a black substance, which gives forth an unpleasant odor and which colors the water and keeps him out of sight. No doubt the legislative cuttlefish which these Senators have invented will be used with vigor in the next campaign. They will say to their constituents, "Follow citizens, was I not a good bimetallist? Here is my proposition: do you not believe in that?" Thus they expect to be able in the next campaign to so muddy the waters as to blind the eyes of their constituents. I admire their genius. They may succeed. Tricks of that kind, though supposed to be vain, succeed sometimes.

It is with some satisfaction that I turn from these Senators to that bold, aggressive, great authority, the unyielding, unswerv-

ing advocate of the single gold standard. I refer to the Senator from New Jersey [Mr. McPHERSON]. He, almost solitary and alone, has stood here for years vindicating the right of the creditor classes, and showing how much better it is that the few should be happy than the many—how much better it is to enrich the gold trust than to make any foolish attempt to extend happiness too far, because it would become too thin. He wanted it thick and rich in the money centers. He undoubtedly is of the opinion of Bismarck that the gold blanket is too narrow for all. He is opposed to having any blanket but a gold blanket; and he proposes to tuck it in and make the commercial centers warm, notwithstanding the outside world may suffer from the chills of financial distress.

Mr. McPHERSON. Will the Senator give way to me a moment?

Mr. STEWART. With great pleasure.

Mr. McPHERSON. I do not think that the Senator means to do me any injustice. I have contended for the gold standard because I believe it to be the only safe and stable one; but I have not objected to the largest possible use of silver in our circulation, standing in the circulation concurrently with gold and circulating harmoniously with gold. I am willing there should be as much silver carried in the circulation of the United States as there is of gold. I want both metals to circulate together, one to be used for the payment of foreign commerce and the other, which may be used equally with gold in circulation, for domestic commerce, one metal for the butcher and the baker, and the other metal, if you please, which will transact our foreign commerce.

We need a small currency; we need a currency easily divided and subdivided. Silver can be divided and subdivided better than can gold; therefore I prefer to use silver for small transactions. I have never said that I was in favor of the exclusive use of gold as against silver; but, on the other hand, I favor the largest use of silver.

Mr. STEWART. But the Senator is in favor of the gold standard.

Mr. McPHERSON. I am in favor of the gold standard with silver maintained at the gold standard.

Mr. STEWART. I do not think I was misrepresenting the Senator from New Jersey. I think his position is very clear. He is willing there shall be silver used by the laboring man that he may have some little subsidiary coin—just how much I do not know—but the Senator is true to the foreign creditor, and he will give the foreign creditor gold or any other money which will suit the foreign creditor best.

Mr. McPHERSON. The Senator does not mean to place any such construction upon what I said. I know he does not. I said it was necessary in our domestic commerce that we should have money in circulation which would enable us to make payments in even subdivisions of the dollar; and I spoke of the little purchases that the Senator and I might have to make every morning in the market. Gold can not be used for such purposes. It is not that I want to impose on the laboring man poorer currency than I would give to the bondholder or the rich banker; but it is for the purpose of more conveniently transacting the business of the people. I want the silver dollar in this country to have the same purchasing power that the gold dollar has; and in order that that may be done we must limit the circulation of silver.

Mr. STEWART. I think I understand the Senator. He wants the laboring men to have as good a dollar as anybody else; but he wants him to have very few of them. He is willing to give him a few silver dollars; but he wants the colossal fabric, of which Mr. Gladstone spoke, to have plenty of gold dollars. I understand the Senator.

I understand that he does not comprehend that the only way to use silver as money and make it a money metal is to give it free coinage. I understand that he does not comprehend that the use of silver as subsidiary coin is a useless operation when it is not standard money. You can substitute a cheaper material; you can take copper or steel, perhaps, or anything that is cheaper. The cheaper the thing you can get the better, if it is to be only fiat money or credit money, and that would be paper. For anything except small change paper is a great deal better than silver if silver is to be only fiat or credit money.

What is meant by bimetallism is that standard money can be made out of either of the metals, thus enlarging the basis of circulation and credit. If you can not do that with silver, there is no use of talking about it.

I have no interest in silver as subsidiary coin, because you can take anything and have it circulate as token money. It is not token money that we want. We can get enough of that. We can make it at all times out of any kind of material. What we need is standard money, by which time obligations are measured, by which debts are paid. We want standard money, and we do not want the standard money diminished. That is the proposition. The gulf between the Senator from New Jersey and bimetallism is as wide as the poles. I commend him for being a gold-standard man, and sticking to it.

The Senator's theory of the gold standard is that you shall have gold money for foreigners and gold money for creditors, and a little subsidiary coin, made of anything you please, for domestic purposes.

Mr. CAREY. May I interrupt the Senator?

Mr. STEWART. Yes.

Mr. CAREY. I understood the Senator to say last evening that he was a bimetallist and believed in the use of both gold and silver as money, but that if the free coinage of silver would drive us off the gold standard, it would be better to have a silver standard than to have a gold standard. Is that true?

Mr. STEWART. May I ask the Senator a question right there?

Mr. CAREY. As soon as the Senator answers the question I have put to him.

Mr. STEWART. I will answer you by putting a question right there. Can you have bimetallism without giving each metal the same mint privileges?

Mr. CAREY. I do not believe you can.

Mr. STEWART. Then you are opposed to bimetallism.

Mr. CAREY. I am not. I am in favor of bimetallism, but I have not taken the time of the Senate to explain my position. I am in favor of the use of both of the metals on exactly the same conditions and terms as soon as it can be safely done in this country.

Mr. STEWART. Will you fix a date?

Mr. CAREY. I will fix a date.

Mr. STEWART. When?

Mr. CAREY. Just as soon as this Government can safely undertake to do it; but I do not believe that this Government or any other government on the face of the globe can undertake to coin all the silver of the world, and at the same time keep it on a parity with gold.

Mr. STEWART. Will you fix a date?

Mr. CAREY. The date is very plain.

Mr. STEWART. When will it be? Tell us that.

Mr. CAREY. As soon as we can get some other nations to undertake it.

Mr. STEWART. When? When you get England to do it?

Mr. CAREY. No.

Mr. STEWART. What nation, then?

Mr. CAREY. I say, I believe that France and this country, or the Latin Union and this country, can do it. I believe that this country and Germany can do it, or that this country and Great Britain can do it. I do not think it is necessary to get all the great commercial nations to agree to it; but I believe it will be utterly impossible to maintain the parity of the two metals if we alone shall attempt to do it.

Mr. STEWART. Does the Senator believe it would be impossible to coin silver to circulate as money?

Mr. CAREY. No; but I asked you a question.

Mr. STEWART. Then put it in the form of a question.

Mr. CAREY. You stated last evening that you were a bimetallist.

Mr. STEWART. Yes, I am.

Mr. CAREY. Do you believe in the use of both gold and silver as money?

Mr. STEWART. I do.

Mr. CAREY. But if the opening of our mints to the free coinage of silver should make the money of this country exclusively silver money, the Senator thinks silver would be better for this country than gold?

Mr. STEWART. I say so now.

Mr. CAREY. Then, I say, you are a silver monometallist.

Mr. STEWART. I say you are mistaken. You do not understand the question. You do not know what bimetallism means. [Laughter.] Bimetallism, I repeat, is the right to make coin out of either metal.

Mr. CAREY. Does anybody dispute that?

Mr. STEWART. Yes.

Mr. CAREY. Who?

Mr. STEWART. You said it was monometallism.

Mr. CAREY. I did not. I said that if we should go to the free coinage of silver it would drive all the gold from us, and silver would become the exclusive standard in this country, and we for all practical purposes would be on the silver standard, and that would be the only money in this country.

Mr. STEWART. It shows how little the Senator has thought about this subject. [Laughter.] It is surprising. The Senator says it would be silver monometallism if we got silver enough and did not use any gold. Bimetallism is the right to have your mints open to both metals. That is bimetallism.

Mr. DOLPH. At what ratio?

Mr. STEWART. At the ratio of 16 to 1 in this country. That is bimetallism, and that right is all we claim. You say the consequence will be that the gold will go out. I say that the gold will not go out until we get silver enough to take its place; and that will take so many years that there will be other changes which will probably make gold cheaper before that time.

Mr. DOLPH. Did we not have bimetallism up to 1834, when we had a ratio of 15 to 1?

Mr. STEWART. Yes, we did.

Mr. DOLPH. Then, I suppose, according to the Senator, bimetallism at the ratio of 16 to 1 was bimetallism, and when we had a ratio of 15 to 1 it was not bimetallism.

Mr. STEWART. What a little point that is! [Laughter.]

Mr. DOLPH. It is a very good point.

Mr. STEWART. You think so.

Mr. DOLPH. If you want to have bimetallism you have to fix the legal ratio without reference to the intrinsic value of the metal.

Mr. STEWART. Will the Senator give me a moment?

Mr. DOLPH. Oh, certainly. I should be the last one to curtail the Senator's right to be heard on this subject.

Mr. CAREY. I think the Senator from Nevada is a little unfair to me. I had not finished.

Mr. STEWART. I think it is a little unfair when two come at me at one time. One at a time. The Senator from Oregon asked me a question as to the ratio, and I said it was 16 to 1.

Mr. CAREY. Why?

Mr. STEWART. I am now answering the Senator from Oregon [Mr. DOLPH]. I said I was in favor of a ratio of 16 to 1. He said that we were not bimetallists when we had a ratio of 15 to 1. I have explained to him and to the Senate repeatedly what bimetallism means. It does not depend upon ratio; it does depend upon the right to make coin-money out of either metal. That is all there is to bimetallism. It often happens when that right exists that a country may have a great deal more of one metal than of the other; but where the metals are the same, the money is the same, and that is bimetallism. We do not want to give up gold. It may come back here again.

The only way to produce a parity between the two metals is to use either, and if we use either we will often use both, and the demand will fall upon the cheaper, when the price will be restored, and that will restore the parity. That is the only way to go to a parity. The talk about a parity by giving one metal the liberty of coinage and not giving it to another is nonsense. The reason the two metals have the same value is because you can take a given quantity of one or another given quantity of the other to the mint and get the same quantity of money for the one as for the other. As long as you can do that, the parity will be maintained, but it can not be maintained when one is deprived of coinage, as was done by the act of 1873, and by the act of Germany in suspending the coinage of silver. Let us restore the parity by reversing that act and opening our mints to silver. Nobody knew, not even the people of the United States, when the United States led off and destroyed the parity and discriminated against silver. We demonetized silver first, and we were followed by Germany. Now, why need we ask any organization of money dealers in any part of the world whether or not we alone may rectify the wrongs which have been committed alone?

Mr. CAREY. Will the Senator permit me?

Mr. STEWART. Yes, to ask a question, without making a long argument. That is not the way to interrupt a Senator's speech. I want the question straight.

Mr. CAREY. I shall not trouble the Senator with a speech. Between 1837 and 1862, I wish to ask the Senator, was the parity maintained between the two metals?

Mr. STEWART. Yes.

Mr. CAREY. It was maintained, was it?

Mr. STEWART. Oh, yes.

Mr. CAREY. Was this country, as a matter of fact—not as a matter of law, but as a matter of fact—using both metals during the time between 1837 and 1862?

Mr. STEWART. Oh, yes.

Mr. CAREY. Were the men who own silver bullion, the value of which was more than the coin, then rushing to the mints of the United States to have it coined?

Mr. STEWART. Yes.

Mr. CAREY. Were those men carrying silver to the mints?

Mr. STEWART. Yes.

Mr. CAREY. They were coining it then, I think, in standard silver dollars?

Mr. STEWART. You asked me a question. Let me answer it. I know how much was coined, and I will tell you.

Mr. CAREY. The Senator says the silver was going to the mints.

Mr. STEWART. I do.

Mr. CAREY. How much went between the times I have named?

Mr. STEWART. Will you let me answer that question?

Mr. CAREY. Certainly.

Mr. STEWART. In the two years preceding the 1st of January, 1873——

Mr. CAREY. I am not talking about 1873, but between 1837 and 1862.

Mr. STEWART. You said preceding 1873.

Mr. CAREY rose.

Mr. STEWART. Now, let me answer. The Senator will not let me reply. In the two years—and that is very important—preceding the 1st of January, 1873, there were over two and a half million silver dollars coined at the mints, and in the intervening period between the 1st of January, 1873, and the 12th of February, 1873—I think that was the date—there were coined about $300,000, and if the coinage of silver dollars had gone on during the year 1873 at the same rate there would have been about 2,600,000 silver dollars coined.

Mr. CAREY. Why did that silver go to the mints to be coined? Let us have the reason.

Mr. STEWART. Because it did.

Mr. CAREY. No, no. "Because it did" is no reason. None went before that time. The Senator is merely prophesying now.

Mr. STEWART. I say that if the coinage had been continued at the same rate during the year, it would have amounted to more than two and half million dollars.

Mr. CAREY. As a matter of fact—I want to be frank, and I am trying to obtain information—I ask why did silver go to the mints of the United States for coinage between 1837 and 1862, when we went off the specie basis?

Mr. STEWART. Will the Senator allow me to answer that?

Mr. CAREY. Certainly.

Mr. STEWART. Legal-tender silver was coined every year from 1792 to 1873, the larger part of which was of less denominations than the dollar, but it was full legal tender. The principal reason why no more was coined was that the United States did not produce silver. That is one reason. Up to 1857 the silver of foreign countries came here in the shape of coin, which was made a legal tender, and had been from the foundation of the Government; and we used a great deal more of silver than of gold. We had the Spanish milled dollar and other foreign coins which were declared a legal tender in this country. Other countries which shipped silver to us preferred to ship it in the shape of coin: and consequently it came in that shape. We had no silver bullion to export, for we were not then producers of silver bullion.

Mr. CAREY. Will the Senator allow me there?

Mr. STEWART. Yes.

Mr. CAREY. I believe the Senator represented the State of Nevada in the Senate; and I think along from 1862 up to 1873, during the time when so much silver was produced in the State of Nevada, it was in bullion shape. Am I not correct in that?

Mr. STEWART. To some extent.

Mr. CAREY. Was not that the time when there were so many millions of silver produced?

Mr. STEWART. No; the most of it was produced from about 1868 or 1869 up to about 1880.

Mr. CAREY. Will the Senator now tell me why that silver bullion produced in the State of Nevada did not go to the mints of the United States to be coined?

Mr. STEWART. Why it did not go?

Mr. CAREY. Yes.

Mr. STEWART. I am just telling you that a large portion was going to the mints when it was stopped by the act of 1873. A large amount was exported both before and after suspension of coinage; and gold also was exported. It is true that Europe paid a higher price for silver bullion than could be obtained here. Its owners could have it coined in Europe at the ratio of 15½ to 1, and that encouraged the exportation: but had the mints remained open and had silver coinage continued here, a vast amount would have gone to the mint and the country would have continued to prosper.

Mr. CAREY. It did not commence.

Mr. STEWART. It did commence. How many times must I tell the Senator it did commence, and how many times must I give him the figures before he understands me. I decline to be interrupted by a man who does not understand the facts when I state them. I have denied his statement.

Mr. CAREY. I think I understand the question, though I do not talk quite so much about it as the Senator. If he talked less and understood more about the subject he would get along better. [Laughter.]

Mr. STEWART. I think you have talked to the full extent of your information. [Laughter.]

Now, I turn to my friend from New Jersey who goes on in the

same easy way attributing all these evils to a plethora of money and to the Sherman act. He is not one of those who has been coerced but he is one of the original monometallists. He maintains his position boldly. His language is plain:

The present panic was caused by want of confidence. Mirabeau, the great French orator, defined confidence to be "Suspicion asleep." It is true there had been more or less suspicion ever since the passage of the Sherman act that it would ultimately lead us into financial trouble, but suspicion was not fully awakened until the real danger appeared; then confidence fled as a thief in the night. Ask the people of the country, a people excelling all others in intelligence and sound business sense, for the true cause of their distress, and what answer do they make? "Repeal the Sherman law," is their cry, "and you strike down the cause." Never before in the history of the Republic have the people condemned any act of Congress with so much emphasis as they do the Sherman law, or spoken with so much unanimity for repeal. Forty millions of people have already spoken through their Representatives in the other House in favor of repeal, and the people now ask this Senate to join the House of Representatives in correcting this faulty legislation.

Forty millions of people have spoken! If forty millions of people have spoken, when did they speak? It is claimed here that a majority of two-thirds have declared for monometallism because the House gave a two-third majority under coercion. If the Representatives who promise their constituents to vote one way are coerced to vote another, there is no use for representative government.

It was stated in the press throughout the country that there was an overwhelming majority of Democrats in the present House of Representatives elected for bimetallism. But they came here and voted for monometallism. What I am complaining of is that the Representatives here have not spoken as they were directed to speak by the platforms upon which they were elected.

What I complain of is that they have gone before the country for twenty years claiming to be bimetallists and the voice of the people was for bimetallism. They voted for the gold standard. They do not speak for the people but against them. They speak for the gold trust. They speak for the press that is in the employ of the gold trust. They speak for a President whose law office is in Wall street. They speak the language of the President. They speak the language of contraction. They speak the language of monometallism when their constituents sent them here to speak the language of bimetallism as laid down in the platform of the party. How are you to ascertain the will of the people but by the issues presented to them for determination? It is very easy for great capital to get up clamor in the public press to carry out any object desired. It is so difficult to get the people to indorse the gold standard that no party has dared to have this question put to that test, and they do not do it now.

Why this hurry? The reason for all this hurry is that the people may not be informed of the proceedings that are here taking place. I deny that there is any demand coming from the people to repeal the Sherman act. It is not true. You dare not submit that question to a vote of the people. You dare not submit monometallism to a vote of the people. You know that if the question were submitted to the people others would occupy seats here.

I read further from the Senator:

In the fullness of time it became apparent to the people that under such a system the avowed policy of the Government to continue gold payments could not be maintained.

To avoid such a calamity, the executive department of the Government was forced to choose between two methods of relief: First, to issue bonds and buy gold with which to continue the purchase of silver, or to adopt the alternative method of calling Congress together in extraordinary session to repeal the Sherman act and stop the purchases of silver. The President called Congress together on the 7th day of August last, choosing, as he did, the wiser and better method, and thus obeying, as he did, the injunction of the Democratic national convention, which met in Chicago in June, 1892, the first convention of either party held after the passage of the Sherman law in 1890, and which denounced this law in unmeasured terms as fraught with future evil.

Now he says that to avoid the calamity of paying out gold and depleting the Treasury the Administration was forced to the alternative of either continuing to pay out gold and letting the calamity come, or call Congress together.

I deny that. The law made it expressly the duty of the Secretary of the Treasury to coin silver for the purpose of redeeming the Treasury notes. The law expressly and in words enjoined this duty upon the Secretary. The Secretary would not obey. The calamity could have been avoided by complying with the law. The calamity was created by the refusal of the Secretary to comply with the law.

The contempt for law on the part of the Executive and its violation of law creep in everywhere. Since the 1st of July last the Executive has practically nullified this law. A plainer case of nullification was never known in the history of man.

The Secretary is deficient in the purchase of silver since the 1st of July last over 8,000,000 ounces. A law that the President said was imperative, the Secretary has refused to execute, and demands here and now a vindication of that violation of law. They want a vote, and want it quick, which shall say that the law was so infamous, so bad that the President and his Cabinet had a right to trample upon it. They want it repealed for the purpose of vindicating monometallism and for the purpose of forming an excuse for boldly and defiantly nullifying the law.

We had nearly eleven hundred millions of silver and paper items in our circulation, all resting upon one hundred millions of gold in the Treasury, and even that gold was pledged to a specific purpose. But this is not all; an unprecedented, greedy demand for gold arose among European nations, anxious to strengthen their gold reserve.

That is a pitiable condition. One thousand one hundred million dollars of silver and paper, all resting upon $100,000,000 of gold. Who tore up the foundation and made that $1,100,000,000 rest upon $82,000,000 or $100,000,000 of gold? Who paid out gold when they should have paid out silver? I repeat, who tore up the foundation? Who has been guilty of bringing on panic and ruin? Who denied silver already coined its monetary function? Was it Congress? No. It was the gold monometallists who have charge of the Government.

With precedents of every other self-respecting nation to guide them, with the act of Congress before them making it their duty to pay out silver, this Administration gave the gold to speculators to be shipped across the ocean, creating a condition of panic. That condition of panic will not be cured by the repeal of the Sherman act. When you recognize the Department's theory that there is nothing which can redeem itself but gold, and that your $1,100,000,000 of paper and silver must be redeemed in gold in order to sustain the credit of this country, your Treasury will be bankrupt. That is what the gold monometallists want. They want the Treasury bankrupted so as to form an excuse for borrowing gold. Why do they want to borrow gold? Because those who lend gold want a safe investment. Why do they want the Government to buy gold? Because then the Government would issue bonds. Why do they want bonds issued? Because they could use the bonds and obtain a subsidy for issuing money. Why do they want this done? They want it done to make them rich and to give them control of this Government, to give them control of the legislation of this Government.

The gold power has had control of the executive department of the Government for many years, and they have expected to be able to control the legislative department as well, and that Congress must obey. That is the scheme. That is the tyrannical scheme to remove the foundation of the credit of the country. They are attacking the foundation of the credit of the Government, shattering it, and sending gold across the ocean. Their own misdeeds are their only excuse for further ruin and oppression.

The Senator further says:

This the Treasury was in no position long to continue. The newspapers were daily recording the rise and fall of the gold reserve in the Treasury, and with the warning the people had already received it is not surprising that a panic should ensue.

I deny that the panic came from the people. I deny that any citizen of the United States believed that these conspirators against the credit of the Government, who were attempting to tear out this foundation and to reduce the silver coin of the country to a worthless mass of "pig silver"—as it has been designated by one member of the Cabinet—would succeed. The people were willing to take silver or paper or any issue of the Government, and hoard it and hide it away from the banks who were conspiring to destroy the credit of the Government. It was the banks and the Executive who were engaged in pulling down our fabric that had been built up by the labor and the taxes of the people.

Ah, here comes another idea, but it is not original. This excuse was invented by the President:

It matters not whether the danger is actually present or the full force of the storm center an apprehended calamity; surely there is no denying the fact that a panic is here.

The danger is actually present. I admit that there is danger under our financial fabric. I admit that the executive department has done all it could to destroy it. I admit that no Executive Administration has been patriotic in acting for the Government of the United States for the last twenty-five years. I admit that. That danger is present, and has been present.

But I deny that the $150,000,000 of legal-tender notes issued under the Sherman law have produced any danger or any panic. There has been sufficient silver bullion in the Treasury to redeem them according to the contract, and to maintain the credit of the Government. While the Government can maintain its contracts its credit is safe. This is the only Government on earth where the executive department dare give an option secured by law to the Government to speculators.

The Senator goes on:

At this moment gaunt poverty stalks uncovered in the streets of our principal cities; and its hungry victims are fed with the loaves supplied by the bounty of a generous people.

Is not that a beautiful picture for an American Senator to draw? What has closed business? What has impeded prosper-

ity? I answer, and I answer what every citizen knows, scarcity of money. Scarcity of money has made hard times. What has made falling prices? Scarcity of money, because property offered for sale on one side, and the volume of money on the other, are the demand and supply of each other; and when you reduce the volume of money or cut off the supply of money, money goes up, or, what is the same thing, property goes down, as it has been going down for the last twenty years.

That is what has closed your factories. That is what has made it impossible for the consumer to buy. That is what has made underconsumption. Poverty has made underconsumption and closed your factories. Falling prices have discouraged production, because the man who puts money into property loses if property is falling and money is rising. Hard times are made. That is a beautiful picture that the Senator from New Jersey has offered to us, of the starving multitude in the streets, the millions of unemployed. I should like to have him or any Senator tell me how they are going to furnish employment, how they are going to furnish more money, how they are going to remedy this evil. Will they remedy it by cutting off the little supply we have? By more contraction? Will that remedy it? That is the only remedy they propose, and there is either not ability enough or not honesty enough in the whole gold party to tell us what they propose to do. No plan is proposed. Here we are, short of money, called together for the sole purpose of making the supply shorter.

Labor, which a short time ago was happy and contented, having steady employment and abundant reward, is to-day tramping and seeking bread from door to door.

How do you propose to give them bread? They ask for more money with which to start factories, to inaugurate new enterprises, to prosecute existing enterprises, to raise prices, to relieve the farmers; and we are called together in the dog days to give them less money, to make times harder, to close more factories, to create more tramps. That is the way we answer their call. That is the humanity of the gold standard. That is the answer that greed and avarice furnish to the struggling masses.

What a mockery to be called here to repeal a law which has already been nullified. What a mockery to be called here to cut off the little supply of money we now have, when the country is suffering for want of money, when the streets are full of tramps, when misery has been abroad and visited every door for want of money on account of this terrible contraction created by the gold standard.

What a mockery, I say, to call us here and ask us to pretend to give relief by striking another blow, which the gold men believe will be the fatal blow at silver and the fatal blow at the masses. What mockery to call us together here now, to augment the colossal fabric of money and diminish the power of production; to call us together here and suggest nothing to us, no glimmer of hope, no word of promise, to relieve the distress which the Senator from New Jersey has pictured to us.

He says:

Any proposition, under existing conditions, which involves the continued issue of silver currency, payable in gold by the Government, even though said issue be reduced in quantity, only serves to perpetuate the vicious system which we hope to abandon.

"Any proposition, under existing conditions, which involves the continued issue of silver currency payable in gold!" We have no such currency. Congress has made no such currency. That currency was made by the Treasury Department, at the dictation of the gold ring, when the Treasury Department refused to obey the law and coin silver for the purpose of paying these notes.

That system never should have been inaugurated; and in the better times of the Government, when the people were free, when representatives were free, such trampling upon the laws, such subversion of the rights of the people would have been promptly met. It would have been stopped, not by legislation, but by another power in the Constitution which, when the lower House sees proper to make the complaint, may be judged in this Chamber.

I say in the purer days of the Republic if any Executive would have thrown away so valuable an option that was given to this Government to pay in silver its notes and protect the gold, if that had been given away to speculators in the early days of the Republic, we would have heard from it in the other House in a different voice from what we did the other day, and if in any days of the Republic, previous to the enthronement of the gold king, if any Secretary of the Treasury had nullified as plain a law as the act of 1890 is, requiring the Secretary to purchase silver, there would have been a noise in the other House and it would have reverberated here.

Was it not intended that there should be an exact equipoise between coins of gold and coins of silver? Did it not mean that you were to go into the markets of the world and ascertain what just relative proportion the value of silver bore to that of gold, and bring about the equipoise of justice between the two by deciding what certain proportion of one should be paid for a certain proportion of the other?

That was not the method suggested in the platform, to go to Europe and ask them to inform us what should be the proportion of value between silver and gold. The suggestion in the Democratic platform was that there should be unlimited coinage of both metals without discrimination against either. That is the way to restore the equipoise. The way to restore the equipoise is not to deny the use to the one that is given to the other. The Senator says:

After the repeal of the Sherman law the reformation of the laws relating to coinage becomes a duty devolving upon Congress, and not at present a subject for Executive action or interference. It remains to be seen whether Congress will act as wisely as the President has done. Promptly repeal the Sherman law. Give nature a chance to get back to its normal condition. Restore confidence in the ability of the Government to maintain its financial policy: help the crippled banks to resume: light again the fires in our furnaces and start anew the wheels in our factories.

That is a beautiful way to do, to take away their money, what little they are getting now. He says after the repeal of the Sherman law, then we can reform our currency. But we can not reform it according to the platform of the Democratic party, because Mr. Cleveland has taken pains to write to Governor Northen that he will have no such reform, he will have no independent action on the part of Congress.

They ask us to vote for the repeal and then trust to men who openly defy the law; who, when they are commanded to coin and pay out silver, refuse to do it. When they are commanded to purchase silver they refuse to do it, and we are told that we must trust to them. The time is far distant when the people of the United States will trust to Wall street, or Wall street lawyers, after the experience we have had in the last three months. The Senator says:

Mr. President, bimetallism and free coinage are impossible anywhere, and in no country do both gold coins and silver coins circulate except by virtue of limitations placed upon the coinage of silver.

Bimetallism and free coinage impossible! Did it not exist for three thousand years? The Senator from New Jersey is absolutely ignorant of what is meant by bimetallism when he makes that remark. Bimetallism, as I stated this morning, and repeat, is the right to use both metals and let the automatic theory have its full force to make money of either metal, to take either metal you please to the mint. You can have your choice. If gold is so dear that you can not get it, use the other; but the choice is a glorious boon. The choice is a boon that was guaranteed by the Constitution.

The right to use either metal and make money out of it was placed in the Constitution. It was declared in that instrument that the United States should coin money and that the States should not coin money, nor should they make anything a legal tender but gold and silver. When the States gave up the right to make anything but gold and silver a legal tender they did not suppose that a conspiracy would be formed to deprive them of silver coin of which they might make a legal tender. They have the constitutional right to make silver coin a legal tender.

You say you will take that right away by stopping the coinage of silver; you will take that right away which was reserved. You have destroyed all the reserved rights of the States in that respect. The States gave to the General Government the exclusive right to coin money. The Constitution denied to the States the right to coin money, and denied them the right to make anything a legal tender but gold and silver coin. Do you pretend to say that you can refuse to coin silver and take that right away from the States? If you can, you can also refuse to coin gold. Then if you refuse to coin gold, and refuse to coin silver, what rights are left to the States? They will have no silver coin or gold coin to make a legal tender. They can make nothing else a legal tender, and they are helpless.

Was it contemplated that the General Government should have the power and the right to deprive the States of legal-tender money? The demonetization of silver is a halfway step. It has deprived them of one of the metals which they reserved the right to make a legal tender of. Now, if you can take the right away as to one you can take it away as to both. A more unconstitutional, oppressive, wicked scheme was never invented.

The quibble is that nothing is bimetallism unless the exact parity is maintained; that if there is the slightest difference of price in the two metals it destroys bimetallism. That is a misconception of bimetallism. We have heard a great deal of harping about the parity. Parity is not bimetallism. It is the right to make coin out of either metal and the choice of the two. That is bimetallism, and that is all there ever was in it. Let the parity take care of itself.

Mr. President, evolution is as irresistible in the financial and commercial world as anywhere else, and it can not be to our interest to lose sight of the fact that evolution has selected gold as the best standard of value, and has rejected silver.

The evolution has done this but the Constitution has not. Are we going to evolutionize the Constitution out of existence? The evolution of rascality, which appears in all ages; the evolution of secret combinations; the evolution of greed; the evolution of oppression; the evolution of intrigue is the one that selected gold and destroyed silver—the evolution that secured the passage of the act of 1873, the act that is universally condemned, the act that nobody defends. That is the evolution. The evolution is the secret manipulation of interested parties to reap where they did not sow and to gather other people's property at will. That is the evolution.

Not only is this true in regard to commerce, but it is also true of all great nations as regards their money of account. Shall it be said that this great nation of 67,000,000 people, rivaling all other nations in civilization, in intelligence, inventive genius, and skill, imbued with the love of country and inspired by a pride in her glorious achievements, will tamely submit and abandon without a struggle the field of commerce and finance to her commercial and financial rivals?

The plan here proposed by the Senator is that this nation, as great as it is, shall abandon its right to mine and coin money and be as weak as a child for want of money. Oh, I have heard boasting of power and strength before. It reminds me of what I have seen in the ruder times in the West, when a burly crowd would gather around the gambling table, full of vigor and force, ready to fight ten times their weight in wildcats; but when they came before the gambling table the fellow behind, with his marked cards, would bring them all to bay. He would take all their money; he would send them home to their cabins without money to get their breakfast in the morning. I have seen that done. The Senator from Illinois [Mr. PALMER] boasted of his prowess. What prowess has brute force against the cunning of the gambling table? The man who sits behind the game marks the cards, loads the dice, and robs his victim is the man of power.

Does anybody believe that silver could have been demonetized if the giant strength of the people had been aroused? It was easily done in the dark. The tricks of the ordinary gambling place are harmless in comparison with the gamblers of Wall street and Lombard street when they deal the financial cards, and you allow them to deal as they please and you allow them to hire the press to defend their rascally game. The courage of the American people! I care not how much courage you have, if you play at the game which they have set up for you to play, if you let them destroy your money, if you let them monopolize your money by fraud, you will be slaves.

England has long ceased to make war upon the United States in the open battlefield, but her money power—not the great majority of the people of England, for they are our friends, and they are oppressed as we are, but the London bankers, the manipulators, and the Wall street bankers and manipulators—play with marked cards and loaded dice and play the financial game of the world, and your bravery and your resources count for naught. They have in their hands as cards to play against you bonds to the extent of at least $25,000,000,000 in London alone. You have made two bets. You bet with gold and silver that you could beat this creditor's game. They were not willing to give you the chance of your bets, but they call in one of them and make you rely upon the other alone, and double the chances of ruining you, and they are succeeding.

Bravery, forsooth! Bravery of the American people! With the Executive marching under the banner of three balls, the commander of the Army and Navy marching to the music of greed and avarice, eulogizing money when it is growing dearer and robbing the world! The people of the United States must be brave at the ballot box; and they must hold their Representatives responsible for the promises they make. Oh, if they could hold them responsible now for the pledges they made, we would have no trouble here. These bimetallists that could not be seduced, but gave notice in advance that they could be forced, that coercion would make them yield, make all the trouble.

The Senator from New Jersey continues:

The mass of the people are always in position to be injured by any governmental folly, and the experience of the last six months justifies the belief that the people have lost confidence in those intrusted with the responsibility of making their laws, and have assumed the responsibility of deciding for themselves what shall be the money of the country.

Yes; the mass of the people can be injured by the folly of the Government. There is no doubt about it. There is no doubt about the mass of the people being injured by the folly of the Government. It was the folly or the crime of Government that robbed the people of one-half their money. It was the folly or the crime of Government that refused to execute what laws Congress did pass; and for these crimes and these follies want has been brought to every household in the land.

What the Senator then said is true; but he did not put the blame in the right place. He is using the evil that has already been wrought and the misery that now exists as a reason for further extortion. Your condition is bad, he says; we have robbed you by bad legislation and worse administration; we propose to go on in the same direction, and from bad to worse.

The people understand how much harm bad legislation and bad administration may do. Why, here we have had twenty-five years of peace and abundant harvests. We have had the most industrious and the most energetic and progressive people in the world. We have unlimited untouched resources, but we have misery throughout the land. Whose fault is it? Is it the fault of honest people? They are as anxious to make money, they are as anxious to develop the resources of the country, they are as anxious to build up homes and educate their children as they ever were. Whose fault is it that they do not have the means of doing it? I say that the Senator in that respect is right. It is the fault of the legislation of 1873, which struck down silver and deprived them of money. It is the fault of the Administration, that would not execute the laws passed tending to restore silver. And after this great crime has been committed, when we see misery throughout the land, we are called together here to sanctify by our vote the crime of 1873 and strike from the statute book every law that recognizes the use of one of the precious metals as money.

We are asked to do this, too, after the gold in the world is cornered and in the hands of the few. We are asked to do this, too, when that combination can draw the entire foundation from our financial structure at any time. We are asked to do this, too, when the contraction of the currency has filled the streets with tramps and starving men. We are asked to do this, I say, after going in the same direction which has filled every house with mourning and starvation. We are asked to do more of the same infamous work. I protest against it in the name of justice, in the name of the Constitution, in the name of the people of the United States, whom I love and want to benefit.

It may not be now, but it is sure to come. The civilization of the age demands it. The whirlwind of indignation which is sweeping over this country to-day is not all in vain. It proclaims in thunder tones to the politicians and to parties alike, "You shall not debase the coin." Hearing the sound, yet heeding not the voice of the people, like as the autumn leaves are driven before the winter storms will you be driven from place and power in this land.

"You shall not debase the coin!" Who has proposed to debase the coin? The men who are robbing the people of one of the precious metals, or the men who are seeking to restore it? Is silver a debased coin, the silver in the Constitution, the silver which the States reserved the right to make a legal tender, the silver that has gone on *pari passu* with gold for thousands of years, the silver which the people used, which 1,200,000,000 people use to-day; the silver which circulates among the people? Is that a debased coin? If it is a debased coin who debased it? How was it debased? By violating the Constitution and rejecting it from the mints, by fraud by which bills were passed by Congress, by the greed of the bondholder who wanted to double his fortune, by the dishonesty, or weakness, or ignorance of public men.

The coin of Hamilton, of Jefferson, of Washington, and Jackson is not a debased coin. The silver that they ordained and declared in the Constitution would be coined by the General Government and might be a legal tender is not a debased coin. The debasement is in the rascality that destroyed the coin. The very proposition which destroyed this coin and robbed the people is a debasement of humanity, the crime is so great.

Debased coin! The coin is good enough, but the rascality which rules us, which rules this Government in its attempt to deprive the people of the coin of the Constitution, is debasing to the very name of humanity. That is the debasement. The people say, "Do not take away our coin; do not take away the coin of the fathers." That is the whirlwind that you will hear. That is what is coming up from the people. That is what has been demanded by them ever since the crime of 1873 was perpetrated. It is not the coin that is debased. It is the debasement of the men who have conspired against the welfare of the people. The Senator says:

Mr. President, since the 7th day of August last I have sat in this Chamber, patient and speechless, awaiting an opportunity to record my vote in favor of the repeal of a vicious law; a vote required of me by a whole nation of Democrats, and demanded by considerations affecting the public weal. I have listened to many able and eloquent speeches made for and against repeal; but in common with many Senators here, and in view of the manifest impatience and great financial distress of the people whom we were expected promptly to relieve, it has been to me a session full of distress and bitter disappointment. And when we reflect that not a single aye or nay vote will be changed as a result of this long debate, we need hardly feel surprised that what at first was popular discontent should in the end become public condemnation.

Ah, then, we can not change a vote. No yea-and-nay vote can be changed by debate. What does the Senator mean by that? Does he mean to say that they are deaf to reason, or that the influence is such elsewhere that it will control the votes, and that they can not be controlled by debate?

This is the greatest question that ever interested the human race. Upon it the destiny of mankind depends, because when the people are deprived of money they must relapse into barbarism. That has been repeated too often in history to be denied. Upon a question as far-reaching as this, involving all the hope of financial and political liberty of 70,000,000 people, the Senator tells us that no debate in this Chamber can change a vote.

Where were the votes fixed and made unchangeable? Where were the Senators made impervious to reason? Where was it done? In Wall street or in this Capitol? Whence came the influences that should make Senators dumb as lambs before the shearer, that should make them harden their hearts and their consciences so that they could not feel for the sufferings that they were about to inflict upon humanity? Can not change a vote, a yea-and-nay vote!

We did not expect, as I said before, to change the vote of the Senator from New Jersey, because he is a strict monometallist, but I did hope that those Senators who come here and declare that the purity of their bimetallic record is above suspicion, equal to the highest estimate that was ever placed upon the virtue of Cæsar's wife, might not possibly be effected by reason. They might be persuaded to return to their first love. We thought perhaps they might be open to reason, and that we might persuade them not to submit too readily to the coercion of the Executive, or any other force; but the Senator here says it is all fixed, that no vote can be changed. Let me tell you that the votes of the people will not be changed so as to indorse this offense.

The Senator concludes:

To-day the Senate of the United States is put upon its trial. We have just celebrated from the steps of the Capitol our centennial anniversary.

The Senate is on its trial. Yes; I admit it is on its trial, and a severe trial, if its votes are so fixed that the Senate is not open to reason. We did have a celebration from the steps of the Capitol about which I commented a short time ago. Such celebrations, if they are repeated too often, will produce trouble in this country at sometime.

Returning again to this Chamber, shall we find that the character of this body has changed, and that representative government here is a farce?

"That representative government here is a farce." I think we come pretty near finding it so. I think we pretty nearly find it so when no vote can be changed; when the Senators come here with a fixed purpose to trample upon their platform. It comes pretty near being a farce when we abdicate our authority to the Executive, when the Executive can determine when we shall adjourn, when we shall have a recess, and when we shall have a compromise and when we shall not have a compromise. I think representative government is a farce if what rumor says is true of that representative government. I am not speaking from actual knowledge. The President does not take me into his confidence, but if we can believe anything that the papers say there is no representative government here except the Senate, and, if the papers tell anything like the truth, we can only record the edicts of another department.

How often have we been told here to do what we were called together to do, pass this bill and go home, that there was no other use for the legislative department? Of course the Senate is a farce and the House is a farce if the edicts can come from the other end of the avenue to adjourn the Senate, to make and break compromises. The papers are full of it and no friend of the President has denied that this is his legislation. No friend of the President has claimed that either House of Congress has any right to participate in any legislation except that it is our duty to record the edicts of another department. That is the position. Is it not a farce? If the position that it is placed in by the unanimous voice of the press, particularly the Democratic press, is correct, the legislative branch is a farce.

That the Senate of the United States, as at present constituted, is not competent to exercise the authority conferred upon it and to discharge the functions it was intended to fill.

The authority conferred by whom? By the Constitution or by the Executive? If the Senate had the power to exercise the authority conferred by the Constitution and was untrammeled by Executive control, who would think of passing this bill without a substitute? Does anybody think that when the Senate records the edict of the Executive it is exercising the authority conferred by the Constitution? Not if the President is firm. He will submit to no compromise. Here they have been waiting for the President. Such humiliation of the legislative department as this was never anticipated by the framers of the Constitution.

Of what use is a legislative body that can not act as the majority dictates?

Of what use is the legislative body that can not act except as the President dictates, as one man dictates? What use is the legislative body that can not act as the majority desires? This legislative body is free at any time to act as the majority desires. The majority in this Hall desires bimetallism. The majority desires that, but the Senator tells us that they were so fixed before they came in here that no argument can induce them to change a vote; that it was predetermined.

When the pressure was not on it has been tested time and time again and found a majority for the free coinage of silver; and if the same men would vote for free coinage who voted for it when the pressure was not on we could pass a free-coinage bill; but the President and the Secretary of the Treasury and the banks and our master, the gold ring, determined to bring on a pressure, a squeeze, as it was called by the President last March. It was created by refusing and locking up money, and the panic was inaugurated by the Secretary of the Treasury refusing to buy silver of Denver smelters and breaking the Denver banks. These things had to be done, and the press had to be called in to misrepresent public sentiment. Every debtor in the land was called upon by his creditor to pay up or compel his representatives in Congress to fall in line and do the bidding of the gold kings.

All this was done to place the power in the hands of the Executive, in addition to patronage, so that he might fix members of Congress and so that the voice of reason could not be heard. What made the Senate deaf to the voice of reason? Was it not the strategy of avarice? Was it not the corrupting influence of the money powers? Was it not Federal patronage? If it was not Federal patronage, somebody ought to have denied the statement in the public press that is going about daily. These powers were brought to bear to suppress the majority. Then it is said that the voice of the majority can not be heard!

That a minority of this body should be allowed to stand as an obstacle to the other branch of the Legislature in giving effect to the will of the majority of the people is not to be endured.

I deny that any minority here has stood against the will of the majority of the people. The minority here is backed by ninety-nine one hundredths of the people of the United States. Feeling and knowing that, we defy a majority procured under the circumstances by which this majority was procured, when we read the speeches of the great Senators who are now marching to the music of gold avarice and obeying the behests of the Executive, when we read their speeches which I think have come from their hearts for twenty years, we know that they are with us still in their desire. We are not thwarting their desire. We know that some extraordinary power must be used to swerve men from the path of duty so clearly marked out in their grand and eloquent speeches. We know that in following their teachings when they were free from any influence to subvert their judgment, we are with them in their honest sentiments. We know that the honest judgment of the majority is with us.

They were sent here because they said they were in favor of bimetallism. They were sent here because they were said to be against the money power. They were sent here because they said that they were in favor of restoring to the people the money of the Constitution. Why have they changed? Is it not safe to follow their example when that example has been indorsed so many times by the overwhelming majorities of those who sent them here? Let them go back to their people and get a new warrant before they change. I would as soon cut my throat as to have an election by the people on an issue, pledge myself to a certain policy, and repudiate that pledge in my legislative capacity before I had submitted the question to the people.

We ask of you to postpone this criminal act, to postpone the ratification, and justification, and sanctification of the great wrong of 1873, demonetizating silver, until you have warrant by vote of the people to do it. The voice of the press in the interest of the gold ring is not sufficient. The command of the President, with an office in Wall street, is not sufficient. They are no excuse. They will not be heard by the people as an excuse for a change of front.

I have a few suggestions to make to my friend, the junior Senator from Kentucky [Mr. LINDSAY], whose speech was in the main a very acceptable free-silver speech, and it does not deserve any lengthy criticism. Still I wish to call his attention to the fact that he was acting under a misapprehension at the time he made the speech, and I shall expect when his attention is called to it, if there are no very strong influences bearing upon him, that he will change front. He says:

An international agreement is most desirable, but by no means indispensable, and, for one, I shall never consent that the action or nonaction of foreign countries shall determine for us our policy as to questions so vitally affecting our domestic trade as are the questions of standard money and the volume of our circulating medium.

That is very sound doctrine. I commend it because it comes from a man from Kentucky who in his first speech is pretty nearly right on the main question. He has to be away from that State

some time and has to go to New York a good many times before he gets rid of Kentucky views. Kentucky is a pretty good State, and that is a very sound proposition. I commend the Senator from Kentucky for that statement. I wish he was in his seat. The next position taken by him I think he will change when he learns the facts. He says:

> The President has nowhere said that the future coinage of silver shall depend upon international agreement. Our platform contemplates independent legislation as well as international conference, and we may safely resort to either method with the full assurance of Executive support, provided only we adopt the necessary safeguards to make it reasonably certain that "every dollar put in the hands of the people shall be of the same intrinsic value or purchasing power."

Since the Senator made those remarks the President has more fully defined his position and declared:

> I am therefore opposed to the free and unlimited coinage of silver by this country alone and independently, and I am in favor of the immediate and unconditional repeal of the purchasing clause of the so-called Sherman law.

The President has declared in unequivocal terms that he is opposed to independent action, that he is opposed to the platform on which he was elected, which provided for independent action. He is opposed to the position of the Senator from Kentucky, who favors independent action, and the Senator from Kentucky bases as his reason for voting for this bill upon future independent action and upon his confidence that the President will coöperate. Now he has notice that the President will not coöperate, and will he still continue to vote for monometallism in the hope of getting bimetallism from a President who says he will not let him have it? I think the Senator from Kentucky will revise his speech. I presume his attention has not been called to it or he would have been prompt to do it. He is an honorable man and he would not rest his case upon the supposition that the President is going to give us bimetallism after he found he was mistaken. The Senator says:

> This is all the Senator from Alabama [Mr. PUGH] demands. This is the platform upon which the President stood when he penned his letter of acceptance. This is the platform upon which I believe he stands to-day.
> So believing, I can not and will not be a party to a course of conduct, the tendency of which is to create a breach in the Democratic ranks, with no other or greater justification than the unfounded and groundless suspicion that he, whom the people trust as they have trusted no other public man of this generation, is quietly awaiting the opportunity to break faith with his party, with his friends, and with the country.

If the Senator from Kentucky should see the Northen letter, which he probably has not seen, what a shock it must be to him to find that his confidence was entirely misplaced; that the President was going to break faith with his platform and with his party, and commit a crime he could not suppose it possible for him to commit!

What position is the Senator from Kentucky in when he places his acts upon this sublime faith, and only a few days afterwards the President comes out with a declaration in a direction precisely opposite to what the Senator supposed he held? He breaks all the hopes of the Senator, if he has read that letter. I advise him to read the Northen letter, and then vote for bimetallism here and now. He will not have another opportunity to cast such a vote while the President is in power. There will be no use in passing any bill here to secure a more liberal use of silver while the President is in office, unless there is a two-thirds majority behind it.

The Senator from Kentucky is not the only Senator who would be inconsistent in voting for this bill if he was sincere in the reasons already given. Several Senators in defining their positions have told us that they were bimetallists; that after the passage of this bill they would vote for the free coinage of silver; that the President was a bimetallist, and would favor legislation to secure that object. Since those speeches were made the President has declared that he is opposed to independent action on the part of the United States. This makes a radical change in the situation, and if the Senators who have declared that they would vote for this bill in anticipation of obtaining free coinage in some other bill during the present Administration were sincere, they ought to vote against this bill unless a free-coinage provision is added to it. They now know that if free coinage is not obtained in this bill it can not be obtained at all during the present Administration. The logic of what they have already said compels them to vote with us for a free-coinage measure as a part of this bill.

I had intended to review the speeches of several other Senators, but I find nothing in them which seems to call for reply that is not contained in the speeches which I have already discussed. The friends of repeal have made no case for the passage of this bill and given no reason why it will benefit the country, nor have they answered the arguments which have been made showing the necessity of the restoration of silver to prevent disastrous contraction. The arguments so far are all against and none for the unfortunate legislation proposed.

Certainty and Uniformity in the Standard of Value Essential to Prosperity.

SPEECH
OF
HON. JOSIAH PATTERSON,
OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, November 1, 1893,

On the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

Mr. PATTERSON said:

Mr. SPEAKER: It is now certain that before another sun rises this memorable debate will have passed into history, and the repeal of the law authorizing the purchase of silver bullion will be an accomplished fact. In the heat of discussion much has been said calculated to mislead the people. It has been repeated time and again by the opponents of the measure, that it would, if enacted into law, destroy silver money. The people will soon see that this prophesy will never be fulfilled.

On the contrary, they will find that every dollar of silver now coined will remain with us as money, and in circulation on a parity with every other dollar. Nay, more, I predict, and I invite those who have differed with me on this great question to note the prediction—the amount of silver now in circulation will be from time to time increased as the exigencies of the country may permit or demand. I for one shall insist on the assimilation with our currency the largest amount of silver coins which it will absorb, without deranging our standard of value.

It has been repeatedly said by those who differ with the Administration on this measure that the passage of the bill would result in bringing the United States to the gold standard. They assume we have now some other standard of value. The truth is, this country has been at the gold standard from the day we resumed specie payments in 1879. Gold has been the standard for more than twenty-four years, and it has been the settled policy of this country during all those years to hold all kinds of money in circulation on a parity with gold.

The fearful ordeal through which we have passed, an ordeal which has wrecked so many fortunes and entailed so much want and misery on our people, was the result of an apprehension that this country could not, under existing conditions, maintain its standard of value. For sixty days prior to the date on which the President convened Congress in extra session not a dollar in gold was received at the port of New York in the way of revenue. With five hundred millions of dollars of currency which had to be redeemed in gold, if demanded, with the reserve being daily depleted and not a dollar of gold flowing into the Treasury, a financial crisis such as the country never witnessed before was inevitable unless something was immediately done to avert it.

The entire business community believed that this condition was brought about by the vicious law which we are now about to repeal, whereby the Government, without any limit as to time, was committed to the purchase of 4,500,000 ounces of silver every month. This silver was piled up in the vaults of the Treasury, while the Treasury notes given for its purchase went into circulation not only to flow back into the Treasury as revenue, but to menace the Treasury reserve. For all practical purposes it was an exchange of gold for silver bullion. This was the effect of the law.

For a time a country so great in its resources as ours could maintain its gold reserve and hold all its currency on a parity, but this thing could not go on forever without disaster. There is not a political economist of repute in America who has not warned the people of the catastrophe which was approaching. President Cleveland five years ago sounded the note of alarm. At last apprehension seized the public, and an appalling calamity was the result. It became evident that this country could not, under existing conditions, maintain gold payments. It was certain the moment the Government suspended payments in gold it would go to a premium and the United States would go to the single silver standard.

The real question at issue is whether we shall be forced to abandon a standard by which the gold dollar of the bullion value of 100 cents is the medium of exchange, or be forced to the necessity of shifting to a standard by which the silver dollar of the bullion value of 55 cents would become our measure of value. Disguise it as we may, this is the real question which confronts us. Such a contingency, Mr. Speaker, can not be contemplated by any thoughtful and well-informed mind without real-

izing that it is fraught with untold evil. Such a derangement of all values as would necessarily ensue would paralyze all enterprise, all industry, and all markets.

No human imagination can conceive the misfortunes of laboring men and women, the woe and misery of the poor which would necessarily follow such a derangement of our standard of value. A dear dollar and a cheap dollar constitute an ill-omened currency, fatal as a upas tree to all prosperity. England in the reign of William passed through such a calamity. Fortunately, we are not without the light of experience in the history of our own race. Macaulay, the great historian of England, thus graphically and pathetically describes the result when, in 1695, the medium of exchange was deranged and out of joint in that country:

The evils produced by this state of the currency were not such as have generally been thought worthy to occupy a prominent place in history. Yet it may well be doubted whether all the misery which had been inflicted on the English nation in a quarter of a century by bad kings, bad ministers, bad parliaments, and bad judges, was equal to the misery caused in a single year by bad crowns and bad shillings. Those events which furnish the best themes for pathetic or indignant eloquence are not always those which most affect the happiness of the great body of the people.

The misgovernment of Charles and James, gross as it had been, had not prevented the common business of life from going steadily and prosperously on. While the honor and independence of the state were sold to a foreign power, while chartered rights were invaded, while fundamental laws were invaded, hundreds of thousands of quiet, honest, and industrious families labored and traded, ate their meals and lay down to rest in comfort and security. Whether Whigs or Tories, Protestants or Jesuits were uppermost, the grazier drove his beasts to market; the grocer weighed out his currants; the draper measured out his broadcloth; the hum of buyers and sellers was as loud as ever in the towns; the harvest home was celebrated as joyously as ever in the hamlets; the cream overflowed the pails of Cheshire; the apple juice foamed in the presses of Herefordshire; the piles of crockery glowed in the furnaces of the Trent; and the barrows of coal rolled fast along the timber railways of the Tyne.

But when the great instrument of exchange became thoroughly deranged, all trade, all industry, were smitten as with a palsy. The evil was felt daily and hourly in almost every place and by almost every class, in the dairy and on the threshing floor, by the anvil and by the loom, on the billows of the ocean, and in the depths of the mine. Nothing could be purchased without a dispute. Over every counter there was wrangling from morning to night. The workman and his employer had a quarrel as regularly as the Saturday came round. On a fair day, or a market day, the clamors, the reproaches, the taunts, the curses, were incessant; and it was well if no booth was overturned and no head broken. No merchant would contract to deliver goods without making some stipulation about the quality of the coin in which he was to be paid.

Even men of business were often bewildered by the confusion into which all pecuniary transactions were thrown. The simple and the careless were pillaged without mercy by extortioners whose demands grew even more rapidly than the money shrank. The prices of the necessaries of life, of shoes, of ale, of oatmeal, rose fast. The laborer found that the bit of metal, which when he received it was called a shilling, would hardly when he wanted to purchase a pot of beer, or a loaf of rye bread, go as far as a sixpence. When artisans of more than usual intelligence were collected together in great numbers, as in the dockyard at Chatham, they were able to make their complaints heard and to obtain some redress. But the ignorant and helpless peasant was cruelly ground between one class which would give money only by tale and another which would take it only by weight.

Mr. Speaker, who can conjecture the appalling consequences if Congress continued the fatal policy which has brought the country to this pass? The financial condition from which we are emerging has already cost the people of the United States billions of material wealth and brought want and despair to the homes of the humble and the poor throughout the land. The passage of this bill will leave the country in a state of convalescence. It may not immediately bring that measure of prosperity which has been predicted, but it will restore confidence and mark the beginning of better times. It will insure employment for labor, a market for the products of the manufacturer, and a better price for the produce of the farmer. No dollar of our money will be destroyed or eliminated from our circulation, but the standard of value will be certain, uniform, and assured, and all our money will remain on a parity.

In conclusion, Mr. Speaker, let me impress on my party associates that, great as this question is, and far-reaching as the results of this legislation may be, yet the question about which we have differed and which we have so earnestly discussed, is not a party question. It involves no constitutional principle. It does not intrench on the liberty of the citizen. No cardinal doctrine of democracy is here at stake. It is a great economic question, equally affecting all parties and all citizens, without regard to condition in life, about which Democrats differ, and have the right to differ, according to the lights before them.

I assume that each and all of us have been impelled by honest convictions and patriotic motives. I am willing to ascribe to my colleagues, no matter how widely they have differed with me, on this great economic issue, the same love of truth, the same honesty of conviction which I claim for myself. We all believe in the patriotism of the present Administration. The President of our choice, who convened us in extra session, may be fallible as other men, but all realize his broad statesmanship, his consecration to the welfare of all the people of a common country, and his high sense of official duty. Those of us who believe with him on this question will secure the enactment into law of the bill now under consideration.

I for one claim no advantage of my fellow Democrats who differ with me, and find no pleasure in their discomfiture. No sense of superior sagacity, no feeling of triumph actuates me at this hour. On the contrary, I realize with regret that our differences have been sharp and sometimes not without acrimony. I am more concerned about securing perfect harmony throughout the ranks of our great organization, which stands pledged to the country for the accomplishment of reforms, which we all have so much at heart. The money problem at most is extremely difficult of solution. No man however wise can predict with certainty the result of financial legislation. I believe, and those Democrats who vote with me believe, the passage of this bill is absolutely essential to the welfare and prosperity of the country.

I say to my Democratic colleagues who have differed with us, we all had the right to differ according to the lights before us, within the Democratic party and without the violation of any one of its cardinal doctrines. But I appeal to you to give the Administration of our choice a fair chance. Do not antagonize it before results are known. If its policy turns out well for the country, if prices improve, labor is employed, and prosperity comes, then I beg you to accept results and let us abide together in the same political household in peace and harmony. Let us in good part abide, not by that which now seems to us best for our common country, but by that which experience proves best. My voice is for harmony in our councils, and for justice and forbearance to one another. We have great purposes in common. Let us proceed to accomplish them.

Silver.

From 1792 to 1820 the world's production of silver was more than three times that of gold, and the ratio or relative value was 1 to 15.5.

In 1855 the production of gold had so increased as to be four times that of silver—the change in the ratio of production therefore being twelvefold; and yet this marvelous change in the relative production did not change the relative value or ratio of the two metals.

Going further back we find that from 1493 to 1520 the world produced twice as much gold as silver, but from 1581 to 1600 the yield of silver so largely increased that the production of silver was nearly four times that of gold, and yet there was no material change in the relative value or ratio of the two metals.

Still again, from 1855 to 1873 the world doubled its silver production, and yet during that eighteen years there was scarcely any variation in the relative value or ratio of gold to silver.

The reason for this was, that with the exception of England, no nation had, up to that time, commenced hostile legislation against silver.

SPEECH

OF

HON. JOSEPH WHEELER,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, August 25, 1893.

The House having under consideration the bill (H. R. 1) to repeal a part of an act approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. WHEELER of Alabama said:

Mr. SPEAKER: I have listened with great attention to the debate which has now occupied the attention of the House for more than two entire weeks, and I have failed to hear any argument which justifies Congress in refusing to pass a bill for the coinage of silver as promised by the Democratic platform.

The gold-standard men say thot excess in production of silver has and always will depreciate its value.

This is untrue.

From 1792 to 1820 the world's production of silver was three and one-eighth times that of gold, and the ratio or relative value was 1 to 15.5.

In 1855 the production of gold was about four times that of silver. To be exact, it was three and eight-tenths times. The change in the ratio of production was, therefore, twelvefold, and yet this marvelous change in the relative production did not change the relative value or ratio of the two metals, as in 1855 it was 1 to 15.5.

Going further back we find that from 1493 to 1520 the world produced twice as much gold as silver, but from 1581 to 1600 the yield of silver so largely increased that the production of silver was nearly four times that of gold, and yet there was no material change in the relative value or ratio of the two metals.

Still again, from 1855 to 1873 the world doubled its silver production, and yet during that eighteen years there was scarcely any variation in the relative value or ratio of gold to silver.

The reason for this was, that with the exception of England, no nation had, up to that time, commenced hostile legislation against silver.

This disposes of the first proposition.

2. They then say that Germany and the United States demonetized silver because of the excessive production of that metal as compared with gold.

This is untrue.

Germany first demonetized silver in 1871 and the Congress of the United States inaugurated proceedings to accomplish that purpose the same year.

The world's production of silver the preceding year (1870) was $51,575,000, while the production of gold was more than double—being $106,850,000. This disproves their second proposition.

3. They then assert that Germany and the United States were impelled to demonetize silver because the world took alarm at the great increase of production of that metal prior to the year 1871.

This is untrue.

The production of silver the previous year (1870) was $51,575,000 and the average production for the six previous years was $51,058,000. This disproves the third proposition.

4. Beaten at every point, the gold standard men then tell us that the United States must now demonetize silver because since 1871 silver production has enormously exceeded the production of gold.

This also is utterly untrue.

The world's production of gold during that period was $2,256,697,000 and the world's production of silver during that time was $2,411,769,000.

We therefore see that this assertion is also untrue. The excess in the production of silver was less than 10 per cent.

It was to England's advantage to demonetize silver, because she became a creditor nation and the debts due her would increase in value just in proportion to the decrease of the volume of money.

It was also to the advantage of Germany to demonetize silver for the same reason. France had contracted to pay her 5,000,000,000 francs in gold. The demonetization of silver increased the value of this gold. The United States followed in the same line and demonetized silver under the influence of a European emmissary and European capitalists.

5. In their desperation the gold-standard men charge that the Democrats of the South and West desire to flood the country with cheap, debased money.

This is untrue.

We only demand that the pledges of the platform be redeemed and that silver be coined upon such a ratio that the value of the silver in the silver dollar will be equal to the gold in the gold dollar. This proves that the fifth proposition is untrue.

6. Overwhelmed with despair, the gold standard men then say that silver coinage will result in the laborer being paid with depreciative silver dollars. They must know this is untrue. They know that the silver dollar demanded by our platform has precisely the same value as the best gold dollar ever coined, and they know that every such silver dollar would be added to the specie money of our country, and would strengthen the foundation of our financial system, and would result in giving more constant and better paid employment to the millions of laborers who, without the sufficient volume of money, must remain idle. But no one will question but that additional sound money would be of equal benefit to the farmers of the United States.

This disposes of the sixth proposition.

7. In their further desperation the gold standard men tell us that with very little delay an international agreement will provide for free coinage of silver throughout the world.

They must know that this is untrue, because the evidence before us is overwhelming that international bimetallism is impossible. This disproves their seventh proposition.

The gold standard men stripped of every other argument are driven to their last and only position and assert that less money will be better for the world in general and for this country in particular. This assertion would be true if by the word "world" they mean the Rothschilds, Lombard, and Wall street brokers, bankers, and capitalists. But it is utterly untrue if we include as a part of the world the great industrial masses of the people; the people who have built up the civilization of our country and the entire world, the people to which we owe all of our progress, all of our inventions, all of our wonderful development in the arts, all of our contributions to literature, and all of our marvelous material prosperity. If they include these people as part of the world, their statement is utterly untrue, and we see that every vestige of argument which has been made in this Hall in favor of the gold standard is swept away like froth before a mighty current.

I shall endeavor to establish—

1. That to demonetize silver would destroy one-half the foundation upon which our credit fabric is based.

2. That the debts of the people in this country are very largely in excess of $19,000,000,000, and that to maintain this country's credit we must be able to liquidate these debts in coin.

3. That the combined gold and silver of the United States is necessary to give strength and stability to our credit system.

4. That the increasing demand for the use of gold and silver in the arts leaves us an inadequate annual increase of specie.

5. That the record of the Democratic party up to and including the last election was emphatically in favor of silver coinage.

6. That the record of the Republican party shows that in every political canvass it has promised the people free coinage of silver, and in all its legislation it has falsified its pledges and promises.

7. That the history of the world shows that abundant full debt-paying money is essential to the progress of civilization.

8. That in the present condition international bimetallism is impossible.

9. That upon the silver question the New York press represents interests that are directly antagonistic and diametrically opposed to the interest of the people of the South and West.

10. That the journals of New York predicted in 1885 that the continuation of silver coinage would denude our country of gold.

11. That the Southern States were the first to respond to the Administration's appeal for gold.

12. That prior to the hostile silver legislation no excess in the production of either gold or silver materially affected the ratio of value of the two metals.

13. That under Democratic rule the stock of gold in this country has always increased and that under Republican rule the stock of gold has always decreased.

14. That during the entire month of July the purchase of silver has been less than 2½ cents per capita.

15. That a law which demonetizes silver is unconstitutional.

The advocates of the measure now before this House reiterate over and over again that the purpose of the bill is to restore confidence and bring hoarded money back into the channels of trade. The arguments have been little more than admissions that this bill is an expedient and that its advocates believe that it is alone upon the condition of its passage that capitalists in this country and Europe will unlock their vaults, release their money, and allow confidence to be restored and business to resume its accustomed channel.

GOLD AND SILVER THE FOUNDATION OF ALL CREDIT.

The Treasury reports show that in 1890 the amount of specie in the country was $1,152,471,538. Therefore at that time, in round numbers, the United States had about $1,000,000,000 of gold and silver, nearly equally divided.

The gentlemen who seek to demonetize silver inform us that 95 per cent of the business is credit and 5 per cent cash.

If this is correct, we must have $19,000,000,000 of credit. But they tell us that this great amount of credit has shrunken from want of confidence. Of course, they must mean want of confidence in ability to pay. That is all that withdraws credit.

The reason why the $19,000,000,000 of creditors lose confidence is because they see there is only $1,000,000,000 of coin available in the country to pay these great sums.

The opponents of silver coinage contend that this $19,000,000,000 can more certainly and more easily be paid by striking down $500,000,000 of coin and leaving only $500,000,000 in existence.

These gentlemen want us to believe that a debt which can not be paid with $1,000,000,000 can be easily paid with half that sum.

It is a new, scientific finance by which $50 will pay a debt which a round $100 can not begin to pay.

On the same principle, if a man has $1,000,000, and his creditors become alarmed and fear he can not pay them what he owes, he has only to let one-half be destroyed, leaving him $500,000, and his creditors become perfectly satisfied with his solvency and his ability to pay every dollar.

A DEBT OF OVER NINETEEN BILLION DOLLARS.

But, Mr. Speaker, I fear very much that our friends underestimate the amount of debt actually owed by the people of this country, including, as we must, the debts due our fellow-citizens, as well as those we owe to European capitalists. The people of England alone claim that the amount we owe them is not less than $7,000,000,000. I can not say that this is correct, but I have looked into some of our statistics and have prepared a table from official documents which gives only a part of our indebtedness. In the North American Review of November, 1891, page 618, Hon. Robert P. Porter, Superintendent of the Census, says:

It it probable that the number of families occupying and owning mortgaged farms and homes does not exceed 2,250,000.

Mr. Porter also says:

The average farm and home debt shown by tabulation of partial returns from counties distributed throughout the Union, is $1,288 for farms and $924

for homes. If these averages hold good for the United States there is an existing debt in force of $2,500,000,000 on the farms and homes of the United States occupied by owners.

This is very much less than other estimates. Mr. Porter does not claim it to be reliable. He says in his article that—

Only some rough results of this inquiry are now known.

But to keep our estimate at the lowest figure possible we will assume Mr. Porter's estimate to be correct.

With these figures, together with the official statements from the authorities I shall quote, I will show some of the indebtedness which existed in our country during the census year of 1890.

It is as follows:

Table showing some of the debts of people and corporations in the United States during the year 1890.

Railway debts of 163,420 miles of railroad as stated in Poor's Manual for 1891. Introduction, page 1:	
Funded debt	$5,105,902,025
Unfunded debt	376,494,297
Current debt	271,145,250
Loans from 3,540 national banks, as shown by Statistical Abstract of the United States for 1891, page 31	1,986,100,000
Loans from 5,579 State, saving, stock, and private banks and trust companies, as shown by United States Statistical Abstract	2,201,764,292
National debt (Treasury report)	891,960,104
State, county, municipal, and school district debts, as stated by Statistical Abstract of the United States for 1891, page 9	1,135,351,871
Mortgages on farms and homes, not including those occupied by tenants	2,500,000,000
Mortage indebtedness on real estate used in business and all other realty not including the farm and home mortgages as stated above	3,500,000,000
Indebtedness of street railways, manufactures, business enterprises, etc., as shown by the census of 1890	1,500,000,000
Total indebtedness	19,468,616,709

These debts have increased during the last three years probably 20 per cent, making the debts included in these items amount to not less than $23,000,000,000.

We all know there are many other debts caused by the great and constant money exchanges in our financial centers and also the small indebtedness to merchants and others which constantly exists among the 70,000,000 people of our country. With this great mass of indebtedness or business done upon credit, can it be possible that there are men here who wish to demonetize silver and thus to materially reduce the specie foundation upon which this great fabric of credit business must be based?

But they tell us that they do not intend to destroy the silver we now have.

In reply I assert that if the money power of England and this country is strong enough to so coerce Congress as to secure the enactment of a law to stop the coinage of any more silver from the silver ores of our mines they will certainly be strong enough to succeed in their next move and deprive every silver dollar in this country of its legal-tender qualities.

GOLD AND SILVER THE BASE OF ALL FINANCIAL SYSTEMS.

Pass this bill, and one of two results is inevitable. Either the mines must produce less silver, and in that way the increase of wealth be lessened, or, if the output is the same, the price must fall. If silver falls in value, the silver in our present silver dollars would be of less value. The demonetizers now denounce the silver dollar as a fraud. If its value is lessened one-half or one-third, would they not denounce it still more?

Again, the gold and silver countries have $1,784,605,000 of gold and $1,757,200,000 of silver.

They have slightly more than half the gold of the world, and almost half the silver.

They have 7½ per cent per capita of gold and 7½ per cent per capita of silver, almost 15 per cent per capita of coin. Now, strike down silver and half of our money metal is gone.

Gold and silver form the base upon which all financial systems are constructed. Gold and silver is the foundation, and paper money is the superstructure. To insure firmness and stability, the foundation must be sufficiently strong and broad. Take away silver, and thus remove half of the foundation, and the superstructure will lose half its firmness and stability.

This is an inevitable result.

The only way to avoid it is to remodel and reduce the paper superstructure, and that is the ultimate purpose of the gold-standard advocates. They have but one object in view. They want less money and less distribution of money. This will give them more power, and the labor of our land will be more thoroughly under the dominion and control of capital.

No one will deny that in a country like ours, increasing so rapidly in both population and wealth, there must be a corresponding increase in the amount of money.

The gold production of this country is on the decline.

The use of gold in the arts is on the increase. Therefore gold coinage must be less and less each year.

How can this necessary money be obtained?

The real friends of sound money point to the Democratic platform and demand that the pledge made by that instrument be redeemed.

They demand that silver be coined.

The last report of the Director of the Mint, page 51, tells us that the entire gold product of the United States for the calendar year 1891 was $33,175,000, and on page 50 he says the approximate use of gold in the arts that year was $19,700,000, leaving but the insignificant sum of $13,475,000 for coinage. It is true that the actual coinage of gold was $29,222,005, but this excess partly comes from abroad, and partly is the result of recoinage.

The same report tells us, page 51, that the commercial value of silver product that year was $57,630,040, and on page 50, that $9,630,000 of the silver was used in the arts.

To give some idea of the amount of gold and silver used in the arts, I give below a table prepared from figures taken from the various reports of the Director of the Mint, stating the amount consumed in the United States each year since 1879. It will be observed that the amount used in the arts has been constantly on the increase.

Gold and silver furnished for use in manufactures and the arts in the United States during the calendar years 1880–1892.

Calendar years.	Gold.	Silver.
1880	$10,962,600	$6,098,000
1881	11,770,700	6,619,000
1882	10,868,000	7,197,500
1883	14,458,800	5,540,000
1884	14,560,000	5,520,000
1885	11,824,742	5,264,769
1886	13,069,529	5,055,965
1887	14,810,346	5,438,331
1888	16,514,842	8,101,889
1889	16,697,056	8,766,945
1890	17,655,960	9,229,154
1891	19,686,916	9,003,309
1892	19,329,074	9,301,388
	192,148,565	91,776,841

It will be admitted that the annual increase or production of the two metals does not keep pace with the growing needs for metal money, caused by the development of business enterprises, and most certainly the annual production of gold falls very far short of supplying the specie which is absolutely essential for the purposes of commerce.

It seems impossible to fully estimate the power which would be exercised by the Rothschilds and their associate capitalists if silver should be demonetized by the United States. We must remember that at least 36 per cent of the gold product now comes from mining silver. Of necessity for every dollar's reduction in silver production there will be 36 cents' less product of gold.

We see by the above table that the use of gold in the arts is constantly increasing, which, of necessity, still further deducts from the use of that metal for coinage.

Again, the establishment of a gold standard would increase the wealth of the class of people who indulge in the luxury of gold plate and gold ornaments, and therefore their ability and inclination to use gold in that manner would again reduce the amount of metal available for gold coinage.

That in the early days the world contained a large amount of gold and silver there can be no question. The Bible contains hundreds of verses which allude to the profusion of those metals.

Later during the Dark Ages there was very little enterprise and the production of gold, like all other industries, was neglected. But in the early history of man there is abundant evidence that gold was found in large quantities, and the early inhabitants of the world of course availed themselves of all the gold and silver that was easily attainable.

All through the Old Testament from the second chapter of Genesis to the last or nearly the last chapter of that Holy Book we see constant reference to gold and silver, and in the New Testament from the second chapter of Matthew down to and including Revelations, we again see repeated allusions to gold and silver.

In the second chapter of Genesis, eleventh and twelfth verses, I read:

The whole land of Havilah where there is gold; and the gold of that land is good.

This is the first reference to gold which I find in the Bible, and the last that I find is verse 16, chapter xviii, of Revelations:

That great city that was clothed in fine linen and purple, and scarlet, and decked with gold.

All through, and from the beginning of the Bible to the end, we see expressions of like character.

We read from the forty-first chapter of Genesis, forty-second verse:

And Pharaoh put a gold chain about his [Joseph's] neck.

We now read from the twenty-fifth chapter of Exodus and from the following verses:

Verse 3:

And this is the offering which ye shall take of them; gold and silver.

Verse 11:

Make upon it a crown of gold.

Verse 12:

Cast four rings of gold.

Verse 13:

Make staves and overlay them with gold.

Verse 17:

And thou shalt make a mercy seat of pure gold; two cubits and a half shall be the length thereof, and a cubit and a half the breadth thereof.

Verse 18:

And thou shalt make two cherubims of gold.

Verse 24:

And thou shalt overlay it with pure gold, and make thereto a crown of gold.

Verse 25:

And thou shalt make a golden crown.

Verse 26:

And thou shalt make for it four rings of gold.

Verse 28:

And thou shalt make the staves of Shittim wood, and overlay them with gold that the table may be borne with them.

Verse 29:

And thou shalt make the dishes thereof, and spoons thereof, and covers thereof, and bowls thereof, to cover withal; of pure gold shalt thou make them.

Verse 31:

And thou shalt make a candlestick of pure gold; of beaten work shall the candlestick be made; his shaft, and his branches, his bowls, his knops, and his flowers shall be of the same.

Verse 36:

Their knops and their branches shall be of the same; all of it shall be one beaten work of pure gold.

Verse 37:

And thou shalt make seven lamps thereof.

Verse 38:

And the tongs thereof, and the snuff dishes thereof, shall be of pure gold

Verse 39:

Of a talent of pure gold shall he make it, with all these vessels.

We see here in a single chapter of Holy Bible abundant evidence that gold was used in very great profusion. And there are many other chapters of the Bible where the use of gold is referred to in a manner which shows it must have been much more abundant in very ancient times than at the present period.

In the thirty-sixth chapter of Exodus I read from the following verses:

Verse 13:

And he made 50 taches of gold.

Verse 34:

And he overlaid the boards with gold. And made their rings of gold, to be places for the bars, and overlaid the bars with gold.

Verse 36:

And he made thereunto four pillars, and overlaid them with gold. Their hooks were of gold.

Verse 38:

And their fillets with gold.

I also read from First Kings, chapter vi.

Verse 20:

And the oracle in the forepart was twenty cubits in length and twenty cubits in breadth and twenty cubits in the height thereof; and he overlaid it with pure gold.

Verse 21:

So Solomon overlaid the house within with pure gold; and he made a partition by the chains of gold before the oracle; and he overlaid it with gold.

We also read from First Kings, chapter ix.

Verse 14:

And Hiram sent to the King six score talents of gold.

I also read from First Kings, chapter x.

Verse 14:

Now the weight of gold that come to Solomon in one year was six hundred three score and six talents of gold.

Verse 15:

Besides that he had of the merchantmen, and of the traffic of the spice merchants, and of all the kings of Arabia, and of the governors of the country.

Verse 16:

And King Solomon made two hundred targets of beaten gold; six hundred shekels of gold went to one target.

Verse 17:

And he made three hundred shields of beaten gold; three pound of gold went to one shield; and the King put them in the house of the forest of Lebanon.

Verse 18:

Moreover, the King made a great throne of ivory, and overlaid it with the best gold.

Verse 21:

And all of King Solomon's drinking vessels were of gold, and all of the vessels of the house of the forest of Lebanon were of pure gold.

Verse 22:

For the King had at sea a navy of Tharshish with the navy of Hiram; once in three years came the navy of Tharshish bringing gold.

Verse 25:

And they brought every man his present, vessels of silver and vessels of gold.

I also read from First Chronicles, chapter xxii.

Verse 14:

I have prepared for the House of the Lord a hundred thousand talents of gold.

Besides the verses I have read, I have before me two hundred and fifty verses from the Bible speaking of gold.

I also have before me in all one hundred and twelve verses from the Bible speaking of silver.

With all this evidence I feel that we would be justified in assuming that prior to the Christian era the production of gold and silver was equal to the production during any period of the world. If that were true, the production prior to the Christian era would have been ten times the production during the last 400 years, reaching the enormous sum of $82,143,030,000; but in order to prevent the possibility of making too high an estimate, we will assume that the production during the 5,497 years prior to 1493 was at a very much lower figure.

During the last four hundred years we have authentic records of the production of $8,214,303,000 of gold and $9,726,072,000 of silver. The Roman Empire alone at the Christian era had metallic money to the amount of $1,800,000,000. It would be no exaggeration to assume that the production of gold and silver during the five thousand four hundred and ninety-seven years preceding the discovery of America was at least three times as much as it was in the last four hundred years. That would make a total production to date of $32,817,212,000 of gold and $38,904,288,000 of silver.

The entire amount of gold we now have in the world is $3,582,605,000, and the total amount of silver in the world is $4,042,700,000, showing that the amount of gold and silver in the world which has not been consumed by the arts or lost or destroyed is only about one-tenth of the production. This fact, together with the demand which we see to-day for the precious metals for the arts shows that there is no possible danger of any excess of coinage of the precious metals.

DEMOCRATIC PLEDGES MUST BE REDEEMED.

The money promised by the Chicago platform is what the people demand.

This is honest money. It is honest politics. It is honest statesmanship. It is honesty to the people.

It is necessary in order to enable Congress to carry out the other financial pledges, and by repealing the 10 per cent tax, restore to the sovereign States of the Union their sovereign rights to enact laws to regulate their own financial affairs.

The Democratic Campaign Book for 1890, page 374, says:

DEMOCRATIC PARTY ON SILVER.

The records of the Fifty-first Congress show that the Democratic Senators and Representatives are practically a unit in support of the free and unlimited coinage of the white metal.

The Democratic platform of 1884, reaffirmed in 1888, spoke as follows on the coinage:

"We believe in honest money, the gold and silver coinage of the Constitution, and a circulating medium convertible into such money without loss."

The Republican platform of 1888 spoke thus:

"The Republican party is in favor of the use of both gold and silver as money."

The meaning of these declarations can be best learned from the history of silver-coinage measures in Congress.

In all its years of power the Democratic party never enacted a law to demonetize silver, but constantly and unceasingly maintained its free and unlimited coinage from 1792 to 1873, when the Republicans, being in a large majority in both Houses of Congress and having all departments of the Government, enacted a law in February prohibiting the coinage of the standard silver dollar.

In November, 1877, a Democratic House of Representatives enacted a free-silver coinage bill, which went to its grave in the Republican Senate.

The book then proceeds to give the vote upon silver showing that the Democratic vote in the House in 1877 was 97 votes for the free coinage of silver and only 10 against it. Various other votes upon the silver question are then given, including the vote of June 7, 1890, at which time the House gave a direct vote upon

the question of free coinage. The Democrats in the House were almost solid for free coinage, only 13 Democrats voting against the bill, and of that thirteen but three are now members of Congress, and these three all represent banking constituencies, one from the city of Boston, one from the city of Philadelphia, and one from the city of Albany.

Among those who voted for free coinage, I recall BRECKINRIDGE of Arkansas, BRECKINRIDGE of Kentucky, BYNUM, CARUTH, CATCHINGS, CLARKE of Alabama, CRANE, CRISP, EDMUNDS, MCCREARY of Kentucky, MONTGOMERY, OATES, O'FERRALL, OUTHWAITE, SPRINGER, STONE of Kentucky, TUCKER, TURNER, WASHINGTON, and the distinguished gentleman from West Virginia [Mr. WILSON].

With this overpowering expression of the Democracy in favor of free coinage fresh in the minds of the people, the election of 1890 took place and resulted in the great Democratic victory which gave us 150 Democratic majority.

This vote in favor of free coinage was made a very prominent feature in the campaign. It was made very noticeable in the campaign books, and it was regarded as a declaration and pledge on the part of the Democracy for free coinage.

Two years later, in 1892, the Democratic party again went before the people on the positive declaration in favor of the free coinage of silver.

The platform pledged the party to the use of both gold and silver as the standard money of the country and to the coinage of both gold and silver, without discriminating against either metal and charge for mintage, but upon the condition that the dollar unit of coinage of both metals must be of equal and intrinsic value.

THE NEW YORK PRESS INTERPRET THE CHICAGO PLATFORM FOR FREE SILVER.

The press of the United States were emphatic in interpreting this platform of the Democratic party as a pledge for free silver.

Just after the Democratic convention adjourned, the New York World asserted that the Democratic silver plank was stronger than the silver plank in the Republican platform. It went beyond this, and stated that that was the general opinion of conservative men.

In its issue of June 27 the New York World editorially said:

It is the general opinion of conservative men that the Democratic silver plank is stronger than the Republican.

The New York World also said in the same issue:

The issues are perfectly plain and simple. Every voter will know for what, as well as for whom, he votes.

The New York Herald not only concurred with the World, but emphatically indorsed the silver plank of the Democratic platform.

In its leading editorial of June 24, 1892, this great paper said:

The platform is squarely representative of Democratic principles. It is right on the tariff, right on silver, and right in its denunciation of Republican extravagance. It has already commended itself to the good sense of those who have carefully read it, and will still further commend itself when we get into the thick of battle.

The New York Tribune also asserted that a great majority of the Democratic convention was unequivocally in favor of a free-silver platform. It then discusses the subject, and says:

It is a free-silver platform.

The language of the New York Tribune in its leading editorial of June 23, 1892, headed "The Democratic Platform," was—

The Democratic platform is not an honest one.

It then proceeds to criticise it, and finally says:

Everybody knows that the great majority of the convention was disposed to adopt an unequivocal free-silver platform. If it is honest in any respect the platform means the free coinage of silver.
It is a free-silver platform with a trickery in the form of utterance.

In reply to the assertions now being made by the New York World and prominent gold-standard Democrats, that the main issue last year was a demand for the repeal of the Sherman act, I will quote an unequivocal refutation on this point, which I find in the New York World of June 27, 1892. In a leading editorial of that date that influential paper said:

Whatever the platforms may say, however, the silver issue is not in the present campaign. As the World has urged, this issue has been sent to the rear, behind the tariff, the force bill, and billion-dollarism.

And to show that the New York World in 1892 fully approved of the demand of the Democratic platform for the coinage of both gold and silver, without discrimination of either metal, and the further demand for such legislation as shall insure the maintenance of the parity of the two metals, I will read another paragraph from the same editorial of the New York World of June 27. It says:

Not only is the silver question not an issue in the present campaign, but there is a wholesome sign in the excellent Democratic plank that when it comes up for serious consideration it will be dealt with on business and economic principles and will not be made the sport of politics.

A large element of the Democratic party are here ready and anxious to comply with this demand of the Democratic platform. They are here using every effort to deal with this question upon business principles. They are endeavoring to obtain consideration for bills providing for the coinage of silver, in which the silver in the silver dollar shall be equal in value to the gold in the gold dollar.

THIRTY-ONE STATE PLATFORMS FOR SILVER.

Not only did the Democratic platform promise the people free silver, but in addition to that thirty-one States, in their conventions, adopted free-silver platforms, and substantially all of the Congressional districts which expressed themselves on the subject were emphatic for free coinage. The New York Tribune of June 21, 1892, refers to this subject in these words:

Behind Cleveland is a party which in the last three years has declared for free silver in thirty-one State platforms, and in two Congresses has voted for free-silver bills with substantial unanimity.

One of these thirty-one States was the State of Alabama, which in the State convention expressed itself unequivocally for silver.

I read from the fourth plank of the Alabama State platform of 1892:

That the Democratic party of Alabama expresses its condemnation of the Republican party for their administration of the finances of the country, under which the demand of the people for a sufficient circulating medium has been ignored, and silver has been driven from its time-honored and rightful place and uses under the Constitution of the United States, where it was maintained so long as our party had control of the national legislation.

So thoroughly was it understood that the people throughout the United States were in favor of free coinage that the Republican party did not dare go into the canvass without floating free-coinage banners to the breeze. It promised the people all that words could express in the line of free coinage, but the trouble with that party was that the people had learned to put no confidence in their pledges.

The Republican convention seemed to realize this, and endeavored to meet the exigency with an effort to outstrip the Democratic party in fulsome expressions in favor of silver. Not only were they profuse in the extreme in favor of silver coinage, but they even went so far both in 1884 and 1888 as to condemn the policy of the Democratic Administration for what they chose to term "the efforts of Democracy to demonetize silver."

REPUBLICAN PLEDGES IN FAVOR OF SILVER.

I read from page 19 of the Republican Campaign Book of 1890:

In its last national platform the Republican party declared this doctrine: "The Republican party is in favor of the use of both gold and silver as money, and condemns the policy of the Democratic Administration in its efforts to demonetize silver."
In conformity with this pledge the Republican Congress has passed, against the unanimous opposition of Democratic members, a silver bill, than which there has been no more useful and inspiring act since the resumption of specie payments. It provides, in brief, that the Secretary of the Treasury shall purchase 4,500,000 ounces of silver per month, at the market price, and issue in payment thereof legal-tender Treasury notes, redeemable in coin. This affords an annual increase in money of over $60,000,000.

The Republican Campaign Book, same page, then says:

The Democratic Bland act afforded an annual increase of $24,000,000.

The book then goes on to assert that the $60,000,000 of Treasury notes issued under the Sherman act is as good and must under all circumstances remain as good as any money the world has ever seen.

REPUBLICANS EULOGIZE THE SHERMAN ACT.

The language used was in these words:

The money provided by the present Republican Congress is as good and must in all circumstances remain as good as any money the world has ever seen.

Here was a positive declaration that the Sherman act was giving the people annually $60,000,000 of the best money the world has ever seen, and Republican criticism of the Democratic Bland act was that it gave the people but $24,000,000 when the Sherman act gave them $60,000,000, and yet those same Republicans are so faithless to the people as to stand in an almost solid phalanx, using every possible effort to take away from the people every dollar of the money which they assert is the best the world has ever seen, and the reason they now give for this action is, that these Treasury notes are dishonest money.

Now, each dollar which is now being issued under the Sherman act at the present price of silver is based upon almost twice as much silver as the dollars were based upon which were being issued in 1890 when the Republicans said the Sherman-act "Treasury notes" were as good as any money the world has ever seen.

But Republicans do not stop at these pledges to the people with regard to their advocacy of free coinage of silver.

The silver plank in the Republican platform of 1892 were in these words:

SILVER AND CURRENCY.

The American people, from condition and interest, favor bimetallism, and the Republican party demands the use of both gold and silver as standard

money, with such restrictions and under such provisions, to be determined by legislation, as will secure the maintenance of the parity of the values of the two metals, so that the purchasing and debt-paying power of the dollar, whether of silver, gold, or paper, shall be at all times equal.

And their candidate, President Harrison, in his letter of acceptance indorsed all that had been said by his party and used this emphatic and unmistakable language:

COINAGE AND CURRENCY.

The resolution of the convention in favor of bimetallism declares, I think the true and necessary conditions of a movement that has, upon these lines, my cordial adherence and support. I am thoroughly convinced that the free coinage of silver at such a ratio to gold as will maintain the equality in their commercial uses of the two coined dollars would conduce to the prosperity of all the great producing and commercial nations of the world.

The Republican Campaign Book, pages 157 to 165, then devotes a chapter in eulogy of the Sherman act and its effects, and unblushingly charges Democrats with having demonetized silver.

They also assert that the Bland act was a Republican measure.

They say, page 163:

The act formed by the Republican Senate in 1878 provided for limited coinage of silver. It was savagely denounced by Democrats, but, after, twelve years of experience, was found to have done no harm.

I wish to call attention to this remarkable fact.

This paragraph which I take from page 163 of the Republican Campaign Book of 1892 refers to the Bland-Allison act.

It will be observed that they claim that this act was formed by the Republican party, and they claim only last year that it was beneficial and was found to have done no harm, and yet this is the very law which the Republicans repealed on June 14, 1890, and it is this same act which the Republicans are using every effort in their power to prevent being restored.

The Republican party fully understood that the best interests of the great masses of the people demanded a more abundant volume of money and that bimetallism was essential to attain this deserved end.

The Republicans realized that these propositions were so self-evident, and they so fully appreciated that the people would not support a party which did not subscribe to them, that they incorporated in their campaign book a distinct announcement in favor of these principles.

I read from the Republican Campaign Book, page 157:

Some money lenders who are money monopolists want scarcer money that it may be dearer. The honest wage-earners, the tillers of the soil, and other producers who would rob no man, want more money but good money. More money, they believe, is required by the constant growth of commerce and industry.

In the next paragraph, the same page, the book says:

No party has ever favored money monopolists. a contraction of the currency, or an unchanged volume of circulation which, with growing business would involve a relative contraction.

In the great anxiety of the Republican party to secure votes they proceed in the next paragraph of their campaign book to use these expressions:

The subhead of this paragraph is as follows:

THE REPUBLICAN A BIMETALLIC PARTY.

The book then says:

Nine-tenths of the people are bimetallists. They want both money metals used, because they believe both needed to sustain the world's commerces The Republican party intelligently and honestly answers their wishes. President Harrison is a bimetallist, as his official papers and his speeches plainly show. The Republican platform declares for bimetallism, and in that respect faithfully represents the course of the party.

TRIBUNE, RECORDER, AND WORLD ON REPUBLICAN PLATFORM.

Not only was their campaign book emphatic in interpreting their platform and principles as unqualified in advocacy of free silver, but the leading Republican organ, the New York Tribune, was explicit in that interpretation. and even went further, and added its approval and admiration for the free-silver plank of the platform upon which they were to ask the people of the United States to retain them in power.

Remember that the Republican platform of 1892 said:

The American people from condition and interest favor bimetallism, and the Republican party demands the use of both gold and silver as standard money.

The New York Tribune of June 10, 1892, in its leading editorial on the Minneapolis platform says:

The platform gives frank expression to the pride of Republicans with the grand work of the Congress of 1890, and appeals without hesitation to the results of that work thus far realized.
The declaration on the silver question is equally free from ambiguity.

The New York Tribune very properly says that this—

Declaration on the silver question is free from ambiguity.

And it speaks of the pride of the Republicans in what the Tribune calls the great work of the Republican Congress of 1890 in enacting the Sherman law.

And the Tribune appeals without hesitation to the results of that work.

Bear in mind that this New York Tribune, which was so emphatic for bimetallism and free silver coinage pending an election, is, if possible, more emphatic in precisely the other direction when bills are before Congress to demonetize silver.

I especially call attention to its editorial of February, 1885, and February, 1893, and since the present Congress has been in session.

The contrast between its editorials just before the national election and just after, are as marked as it is possible for them to be.

The leading editorial in the New York Recorder of August 20, 1893, says:

The Recorder desires it to be distinctly understood that it is making its fight for free silver coinage strictly within the lines of the Republican party, as laid down in the Minneapolis platform of 1892, which declared that—
"The American people, from tradition and interest, favor bimetallism, and the Republican party demands the use of both gold and silver as standard money."
That was the declaration upon which Mr. Harrison was renominated last year by his party for the Presidency.

An election is now pending.

The Recorder is an extreme Republican paper, and its editor knows that expressions like the above will help his party.

Mr. Pulitzer's paper, of course, criticised the silver plank of the Republican platform, but it asserted that the platform declared in favor of bimetallism, and that it indorsed the existing Sherman law.

The New York World of June 10, 1892, in its editorial on the Minneapolis platform, says:

The silver plank agreed upon for a Republican convention is a dishonest dodge and a continent-wide straddle.
It declares in favor of "bimetallism" under such regulations of law as shall establish and maintain the parity of value of the two metals, so that the purchasing and debt-paying power of the dollar, whether of silver, gold, or paper shall be at all times equal.
This is virtually an indorsement of the existing silver law.
In trying to placate the voters of the silver and inflation States, and at the same time not to offend the friends of honest money, the Republican platform makers have left their party liable to fall between two very widely separated stools.

UNBLUSHING FALSEHOOD OF THE REPUBLICAN CAMPAIGN BOOK.

The Republican Campaign Book, page 157, then proceeds to make the most unblushing, false assertion that was ever placed in a document asking party support of the people. The assertion is in these words:

Every measure for the past thirty years, looking to a larger use of silver, has been passed by Republican votes.

Every public man knows that not only is this statement untrue, but that it is exactly the reverse of truth. Every public man knows that in 1873, when the Republican party was in control of every branch of the Government, that party demonetized silver. Every public man knows that after the Democratic House had, in 1877, passed a free-silver coinage bill at 16 to 1, that the bill was defeated in a Republican Senate.

The bill I refer to passed the House on November 5, 1877, just twenty days after the meeting of that Congress and one week after the committees were appointed.

One hundred and sixty-three members voted for the free-coinage bill, and only 34 voted against it, a little bevy of Republicans, with a sprinkling of some half dozen Democratic bank presidents, and gold standard Democrats who represented banking constituencies, but the bill was passed by the Democratic party, such grand Democrats as Blount, Carlisle, Forney, Sunset Cox, Garth, Herbert, Kelly, Hewitt, R. Q. MILLS, and Reagan.

The bill provided for the free coinage of silver dollars containing 371¼ grains of pure silver and 412½ grains of standard silver, 90 per cent fine.

I read a statement of the bill from the RECORD of November 5, 1877, page 241:

The first section provides that there shall be coined at the several mints of the United States the silver dollar of the weight of 412½ grains troy of standard silver, as provided in the act of January 18, 1837, on which shall be the devices and superscriptions provided by said act; which coins, together with all silver dollars heretofore coined by the United States of like weight and fineness, shall be a legal tender at their nominal value for all debts and dues, public and private, except where otherwise provided by contract; and any owner of silver bullion may deposit the same in any United States coinage mint or assay office to be coined into such dollars for his benefit upon the same terms and conditions as gold bullion is deposited for coinage under existing law.

This is the bill which, after passing a Democratic House by a vote of 163 to 34, was defeated in a Republican Senate.

A similar bill passed a Democratic House in 1876, and that also died in a Republican Senate.

Every public man knows that the Democrats succeeded, in spite of the veto of the Republican President, in securing a coinage of at least 2,000,000 ounces of silver per month, and that the Republican party again came into power, controlling absolutely every branch of the Government, and repealed this law, against the solid vote of the Democratic party, and enacted the Sherman law, which was as far as they could go in the direction of silver demonetization, and to-day that same Republican party stands in an almost solid phalanx, using every possible effort to wipe from the statute books every line and word which authorizes the coin-

age of silver, thus completing the conspiracy entered into by Rothschild, Lombard street, Wall street, and the Republican party, to deprive silver of its monetary functions and place this country, like the imperial governments of Europe, upon the gold standard.

And yet this party with such a record, had the unblushing audacity to insult the intelligence of the American people by going into canvass with such assertion, professions, and promises, as I have read.

I respectfully submit that it would hardly be possible for a party to express more extreme sentiments in favor of bimetallism than those uttered by Republican party managers when soliciting the confidence and votes of the people.

REPUBLICAN FAITHLESSNESS.

For a series of years this party had, in convention and out of convention, in season and out of season in Congress and out of Congress, reiterated over and over again, their devotion to and pledges for free-silver coinage; but when Harrison was elected, and Republicans became intrusted with full control of every department of the Government, instead of fulfilling their pledges, they, on the contrary, deliberately repealed the Bland-Allison silver-coinage law against the opposition of the solid Democratic party, and enacted in its place the Sherman law.

By the repeal of the Bland act Republicans took one step toward the gold standard, and now they seek the unconditional repeal of the Sherman act to complete their work, and in violation of these pledges utterly destroy silver as a legal-tender money, and effectually and forever make this Republic, like imperial Germany, Austria, and England, a gold-standard plutocracy.

The effect of the demonetization of silver by the United States will be to set many agencies in motion to still further enhance the value of gold.

Already, the metropolitan press demand an immediate issue of bonds for the purpose of buying gold.

EFFECT OF SILVER DEMONETIZATION.

This contention that bonds be issued and gold be bought is reiterated day after day. An increased demand for gold will of necessity enhance its value and purchasing power, and all other products, including silver, will apparently decline in value.

This will tend to drive other nations to the gold standard, and the action of the United States will very probably be followed by France, Belgium, Italy, Switzerland, Greece, Netherlands, and Turkey, or at least, some of these nations.

None of them have one-tenth the interest in silver coinage that we have.

The United States produces about twenty times as much silver as the combined production of all these nations. And leaving out France, the United States has four times as much legal-tender silver as is held by all the other nations I have mentioned combined.

It is evident that to put these nations, or even a part of them, on the gold standard they would be compelled to buy gold, and that would of necessity enhance its value.

It would in reality cause a scramble for this metal, and the result would be disastrous to all debtor nations. It would be equally disastrous to the farmers of the United States, as it has been clearly shown that it would accelerate the fall in the price of all farm products.

Republicans meet these undeniable facts by telling the farmer that the low price of his products is compensated by the low price of the manufactured articles which he is compelled to purchase.

These artful Republicans then go to the half-paid factory hand and tell him his low wages is compensated for by the low price of farm products.

MONETARY COMMISSION DEMANDS FREE SILVER COINAGE.

The monetary commission investigated this subject, spending years at their labors. The report is dated March 2, 1877, using these words (I read from page 49):

At the Christian era the metallic money of the Roman Empire amounted to $1,800,000,000. By the end of the fifteenth century it had sunk to less than $200,000,000. During this period a most extraordinary and baleful change took place in the condition of the world. Population dwindled, and commerce, arts, wealth, and freedom all disappeared. The people were reduced by poverty and misery to the most degraded conditions of serfdom and slavery. The disintegration of society was almost complete. The conditions of life were so hard that individual selfishness was the only thing consistent with the instinct of self-preservation. All public spirit, all generous emotions, all the noble aspirations of man shriveled and disappeared as the volume of money shrunk and as prices fell.

I admit that there are other causes than the shrinkage of money for the fearful conditions of society during the Dark Ages, but there is no question but that it was due very largely to that cause. The report then proceeds in these words:

History records no such disastrous transition as that from the Roman Empire to the Dark Ages. Various explanations have been given of this entire breaking down of the framework of society, but it was certainly coincident with a shrinkage in the volume of money, which was also without historical parallel. The crumbling of institutions kept even step and pace with the shrinkage in the stock of money and the falling prices.

Bear in mind that this condition continued until after the discovery of America, and until the discovery of the rich silver mines of Potosi. During the ten years from 1546 to 1555 the production of silver averaged $17,000,000 a year, and this inflow of the precious metals to Europe was the beginning of a new dawn to civilization. The report of the monetary commission, in alluding to the energizing influence caused by the shipping of silver from the mines of Potosi, says:

It needed the heroic treatment of rising prices to enable the society to reunite its shattered links, to shake off the shackles of feudalism, to relight and uplift the almost extinguished torch of civilization.

The commission further discusses this subject in these words:

That the disasters of the Dark Ages were caused by decreasing money and falling prices, and that the recovery therefrom and the comparative prosperity which followed the discovery of America were due to an increasing supply, the precious metals and rising prices, will not seem surprising or unreasonable when the noble functions of money are considered. Money is the great instrument of association, the very fiber of social organism, the vitalizing force of industry, the protoplasm of civilization, and as essential to its existence as oxygen is to animal life. Without money civilization could not have had a beginning; with a diminishing supply it must languish and, unless relieved, finally perish.

I now read from page 51:

It is in a volume of money keeping even pace with advancing population and commerce, and in the resulting steadiness of prices, that the wholesome nutriment of a healthy vitality is to be found.

I also read from page 53:

While the volume of money is decreasing, even although very slowly, the value of each unit of money is increasing in corresponding ratio, and property is falling in price. Those who have contracted to pay money find that it is constantly becoming more difficult to meet their engagements. The margins of securities melt rapidly away, and the confiscation by the creditor of the property on which they are based becomes only a question of time.

The report of the monetary commission, from which I read these extracts, was created by an act of Congress, and consisted of three Senators, three members of the House, and three Secretaries.

FRANCE CONSERVATIVE ON SILVER.

The French officials have always considered this subject in a conservative and business-like manner.

In 1869 a French commission on finance, in reporting to that Government on this question, very frankly stated the effect of both the single and double standards. In behalf of the gold standard it says:

That the prices of property had risen in consequence of wars and the increased output of precious metals, and that it affected unfavorably all that portion of the population who had fixed salaries and incomes.

This is a statement that I think no well-informed man will question, and it is certainly a strong argument against the gold standard in this country, and shows that the farmers will be injured by any system which reduces the price of products.

On the other hand, in favor of the double standard, the Commission said:

That the output of the precious metals had not increased faster than the business of the world, as shown by the exchanges, but that each had shown an increase of about 3 per cent per annum, thereby preserving an equilibrium. Besides that, it was a bad time to demonetize silver while the output of gold was falling off, inasmuch as it was $200,000,000 in 1853 and only $140,000,000 in 1869.

There is no question but that the world's output of gold was less in 1869 than it was in 1853, but the French report is a little in error in putting the output in 1853 at $200,000,000. The falling off of the production of gold in the United States during that period was very great. In 1853 we produced $65,000,000, in 1869 our production had fallen to $49,500,000, and it has now fallen to $32,000,000. These figures speak in tones of thunder in denunciation of a law which would confine the coin basis or foundation of the money in the United States to a metal which is so rapidly decreasing in production.

The facts I have stated make it evident that the reasons given in the French report against the demonetization of silver in 1869 have become stronger nearly every year since the report was made. The business of the world has been constantly increased, and therefore the demand for coin as the basis of paper-money circulation has become more and more necessary every year, and yet from that time to this date the production of gold has been constantly on the decrease, averaging since the date of that report only $111,822,000.

ENGLAND EMPHATIC FOR THE GOLD STANDARD.

In nearly all the speeches made in favor of unconditional repeal, we are told that the passage of this bill will cause England Germany, Holland, and other gold-standard countries to abandon their present system and agree to free and unlimited coinage of silver upon the same conditions that gold is coined. It seems to be incredible that intelligent gentlemen would allow themselves to be so deceived and deluded.

For three-quarters of a century England has been using all

possible efforts to induce or compel debtor nations to demonetize silver. She has persuaded, threatened, bullied, and bribed. Anyone who will read the expressions of English statesmen in the British Parliament and in the monetary conferences of the last twenty-five years must be convinced that international bimetallism can not be obtained by our demonetizing silver. We would be doing just what England is using every effort to induce, and, if possible, compel us to do.

During the Salisbury government it did seem for a time that bimetallism in England was possible. There was a strong pressure from English officials in India, who sought to have the double standard in England and all her colonies, because with the double standard in India they would be paid in gold, but now that England virtually established the gold standard in that country these officials receive all they sought, and we need not expect any further advocacy of bimetallism from that quarter. With that hope gone we may assume that England will be more tenacious than ever.

I have before me some expressions which I will read. The report of the American commissioners to the International Monetary Conference at Paris, dated October 17, 1878, page 8, says:

The English delegation, while strongly deprecating the crusade against silver, nevertheless declared that England would not recede from the monetary legislation of 1816, establishing the 'single gold-standard.'

AMERICAN DEMANDS AT MONETARY CONFERENCE IN 1878.

On the 16th of August, 1878, Mr. Fenton, Mr. Groesbeck, Mr. Walker, and Mr. Horton, the commissioners on the part of the United States, submitted to the conference the two following propositions:

1. It is the opinion of this assembly that it is not to be desired that silver should be excluded from free coinage in Europe and in the United States of America. On the contrary, the assembly believes that it is desirable that the unrestricted coinage of silver, and its use as money of unlimited legal tender, should be retained where they exist, and, as far as practicable, restored where they have ceased to exist.

2. The use of both gold and silver as unlimited legal-tender money may be safely adopted.

First. By equalizing them at a relation to be fixed by international agreement, and,

Secondly. By granting to each metal, at the relation fixed, equal terms of coinage, making no discrimination between them.

We see here that fifteen years ago the delegates on the part of the United States were demanding some of the same principles which are enunciated in the Democratic platform of last year.

The Democratic platform of 1892 expressed willingness to make another attempt at international agreement, but the convention declined to allow the prosperity of the United States to depend entirely upon obtaining the consent or coöperation of European powers, and, therefore, the platform also demanded and promised the people coinage of silver on the same terms as gold "by such safeguards of legislation as shall insure the maintenance of the parity of the two metals."

In 1878 our commissioners did not demand any special ratio, but left that to be fixed by international agreement. If there had been any inclination on the part of the gold-standard countries to join the United States in bimetallism they would certainly have acceded to these propositions; but what was the surprise of our commissioners to be informed that Belgium, Norway, Sweden, and England had sent commissioners with positive instructions against entering into any agreement whatever for the coinage of silver. Mr. Goschen, the English delegate, said:

England had plainly stated her intentions of maintaining her gold standard; Norway had said so, too; Germany was of the same opinion, while the Latin Union was not at present disposed to resume the free coinage of silver or depart from the ratio of 15½ to 1, by which they are now bound.

We see here that Mr. Goschen expressed himself in the plainest possible language as the determination of England to maintain her gold standard, and it seems from his speech that he had a right to speak with equal positiveness as to the determination of Norway, Germany, and the Latin Union. It is, therefore, clear that in 1878 these nations had determined not to consent to the coinage of silver upon any ratio, even though it should be fixed by an international agreement, in which they would have a controlling voice. The conditions which made it to England's advantage to maintain the gold standard at that time have more than doubled during the last fifteen years. England has now become a creditor nation, to an amount of not less than $10,000,000,000.

THE ROTHSCHILDS DEMAND CHEAP FARM PRODUCTS.

Every possible contraction of the money in the world will add to the value of this vast accumulation of wealth which is owing to the people of that nation. That England's desire to extend the gold standard to all debtor countries has become intensified was very manifest in the monetary conference at Brussels in 1892. Her delegate, through Mr. Rothschild, not only was very emphatic in his statement that England would not join in the coinage of silver, but he even went so far as to ask the people of the United States to partially demonetize silver in our own land, and to agree that the price should be kept as low as 83 cents an ounce, and when he was reminded that such a course would cause a falling price of commodities and distress, this great capitalist of the house of Rothschild unfeelingly replied:

I hold that wheat at 30*s.* a quarter instead of 45*s.* is rather a blessing than otherwise.

Another English delegate, Hon. Sir Rivers Wilson, speaking for his colleagues, expressed in a few emphatic words the determined devotion of England to the single standard. He said:

Our faith is that of the school of monometallism, pure and simple.

I think this is sufficient proof of the folly of passing the repeal bill and thus placing our country upon the gold standard, with the hope of returning to bimetallism with the aid of England. But there is abundant more proof that if this is done our country will never again coin silver as standard money.

MR. GLADSTONE AGAINST SILVER.

Only last February a proposition was made in the House of Commons for reconvening the Brussels conference. The prime minister of England, William E. Gladstone, was very prompt to express his disapproval of any conference which looked to the restoration of silver money. In speaking of England he said:

It is the great creditor country of the world; of that there can be no doubt whatever; and it is increasingly the great creditor country of the world. I suppose there is not a year which passes over our heads which does not largely add to the mass of British investments abroad. I am almost afraid to estimate the total amount of the property which the United Kingdom holds beyond the limits of the United Kingdom; but of this I am well convinced, that it is not to be counted by tens or hundreds of millions.

One thousand millions probably would be an extremely low and inadequate estimate. Two thousand millions, or something even more than that, is very likely to be nearer the mark.

This expression of Mr. Gladstone was met with exclamations of approval. Of course the prime minister, in speaking of 2,000,000,000, referred to that number of pounds, sterling pounds; and when he told the House of Commons that something more than 2,000,000,000 sterling was due to England from foreign countries, it meant that more than $10,000,000,000 was owed the people of the United Kingdom. The prime minister then proceeds with an air of sarcasm to ask whether England is called upon to sacrifice a part of the debt due her by the substitution of inferior or cheaper money. Mr. Gladstone proceeds in this language:

I think under these circumstances it is rather a serious matter to ask this country to consider whether we are going to perform this supreme act of self-sacrifice. I have a profound admiration for cosmopolitan principles. I can go a great length in moderation [laughter] in recommending their recognition and establishment, but if there are these two thousand millions or fifteen hundred millions of money which we have got abroad, it is a very serious matter as between this country and other countries.

We have nothing to pay to them; we are not debtors at all; we should get no comfort, no consolation out of the substitution of an inferior material, of a cheaper money, which we could obtain for less and part with for more. We should get no consolation, but the consolation throughout the world would be great. [Loud laughter.]

Mr. Gladstone knows full well that when money is abundant it has less purchasing power than when restricted in volume. Therefore as a defender of the great creditor nation of which he is prime minister, he opposes any measures which would increase the coinage of the world. Mr. Gladstone continued in these words:

This splendid spirit of philanthropy, which we can not too highly prize, because I have no doubt all this is foreseen, would result in our making a present of fifty or a hundred millions to the world. It would be thankfully accepted, but I think that the gratitude for your benevolence would be mixed with very grave misgiving as to your wisdom.

The veteran statesman then proceeds to tell the people of England that they must pause and consider for themselves, once, twice, and thrice before departing from the solid ground on which they have erected a great commercial fabric. He says:

I have shown why we should pause and consider for ourselves once, twice, and thrice before departing from the solid ground on which you have within the last half century erected a commercial fabric unknown in the whole history of the world—before departing from that solid ground you should well consult and well consider and take no step except such as you can well justify to your own understanding, to your fellow-countrymen, and to those who come after us

BRITISH ROYAL COMMISSION AGAINST SILVER.

But we have even more emphatic proof than this of the unalterable determination of the British Government to maintain the gold standard in England and use her best endeavors to establish it in all countries of which she is a creditor. The report of the Royal British Commission expressed this determination in no uncertain terms. It plainly asserts that as England is largely a creditor of debts payable in gold, that any change which would cause the rise in the price of commodities, or what is the same thing, a diminution of the purchasing power of gold, would be to the disadvantage of England. The report of the commission contained these words:

That it must be remembered that England is largely a creditor country of debts payable in gold, and that any change which entails a diminution of the purchasing power of gold would be to the disadvantage of England.

The Royal Commission then proceeds to call the attention of Parliament to gold-producing Australia, and the other gold-

producing colonies of great Britain, and the commission cautions Parliament against any step which would depreciate that metal. The exact language of the commission on this point was as I will read:

The interest of our Australian and other gold-producing colonies, at which we have already glanced, must also be considered. Their deposits of gold are one of their principal sources of wealth, and any measure which tended to check gold-mining or to depreciate that metal would, in all probability, injuriously affect the prosperity of the colonies and react upon the trade of the mother country with them.

Great Britain is ruled by the wealthy nobilities, and their expressions are only accumulative proof that the English Government is administered in their interest, and that the interests of the English nobility, like that of the wealthy of all lands, is best served by the maintenance of the gold standard.

With this overwhelming proof as to the unquestioned policy of that Government, is there a man in this Congress who can be deluded into the hope that England will join in international bimetallism?

And the proof is equally overwhelming that if we pass the pending bill and repeal the purchasing clause of the Sherman act, we need not have any hope of its being followed by legislation which will increase the volume of money in our country by the passage of a law for the coinage of one single full purchasing debt-paying silver dollar out of silver to be taken from the mines of this or any other country.

The Hon. BOURKE COCKRAN'S views on this subject are very clearly and forcibly expressed in a late article of the North American Review. He says:

The recent utterances of the President and of the Secretary of the Treasury, however, appear to settle the question that the present Administration is determined to use all the means at its command to maintain a gold standard.

Mr. COCKRAN also says:

The question of free coinage of silver by the United States may be excluded from consideration, as nobody deems the passage of such a law within the limits of possibility during the present Administration.

We are told that we ought to repeal the purchasing clause and demonetize silver, because it is demanded by the great and powerful metropolitan press of New York.

I have great, and I may say profound, respect for these superb daily journals.

METROPOLITAN PRESS ADVOCATES NEW YORK'S INTEREST.

I like to see people exhibit zeal and determination. I can not help but admire the earnest efforts of the New York press to secure the legislation they no doubt believe to be essential to the best interest of our country. But the trouble is, the tastes and associations of the learned and distinguished New York editors have thrown them into more intimate association with princes and lords and dukes of the old country and the millionaires and bankers of New York than it has with the honest farmer and breadearner of the great South and West. They sit at the tables of the rich men and simultaneously imbibe their wine and views regarding the financial laws which should govern our country.

We read of James Gordon Bennett dining and riding and sailing with the Prince of Wales and other notables. We hear of Joseph Pulitzer's visits to German counts and other people of noble blood. We hear of Whitelaw Reid's association of the some character, but if Mr. Bennett or the other gentlemen have ever been out among the farmers and miners of the South and West, this important fact has escaped our notice.

Naturally these papers express the views and wishes of the people with whom they daily associate.

The capitalists of Europe tell them they will lend money to Americans if they will demonetize silver, and these capitalists give their distinguished guests to fully understand that unless this is done the money they have to lend will be turned in other directions.

It is but natural that the surroundings of the great metropolitan press of New York should have a tendency to cause them to estimate the interest of the entire country very largely by what they plainly see is the interest of the people of New York.

We do not see how it could expect to be otherwise. The great journals are owned and supported by New York men. And it is proper and right for them to advocate laws which are demanded by their constituencies, and they expect the journals of the South and West to advocate laws which are best adapted to the welfare of these several sections of this great country.

The people of the South have nothing but kind words for these great and powerful agencies.

They have been our defenders when we needed their strong arms to shield us from oppression and wrong.

NEW YORK PRESS DENOUNCED SILVER COINAGE IN 1885.

We do not question the integrity of their motives, but we keep in view the influences to which we know they are subjected and which we fear affect their judgment.

It is still fresh in our memory that some eight years ago the same papers were equally emphatic and vehement in their predictions on this great question; and we also see that their predictions were as far from the mark then as we think they are now.

In 1884 the law made it imperative upon the Secretary of the Treasury to purchase and coin not less than 2,000,000 and not more than 4,000,000 ounces of silver every month.

This made an increase in the amount of money in the country, which was very distasteful to the moneyed element, and every means in their power was brought to bear to bring about a repeal of that law.

During the winter of 1884 and 1885 we were overwhelmed with the shout from Wall street and the New York press that unless we repealed the law which compelled the Government to annually buy and coin 2,000,000 ounces of silver that the United States would be denuded of gold and become the dumping ground of the world for silver.

NEW YORK BANKERS AND JOURNALS MISTAKEN IN 1885.

The Democrats did not repeal the law and so far from the prediction being verified the exact reverse was the result. So far from being denuded of gold, the reports of the Treasury show that during the four fiscal years of Cleveland's Administration, 1885, 1886, 1887, 1888, the imports of gold exceeded the exports by $54,772,459, and so far from our country becoming the dumping ground for silver the same official report shows that during those years the exports of silver exceeded our imports by $30,534,511.

In compliance with these demands of the bankers and brokers a bill was introduced in 1884 to repeal the law authorizing the coinage of 2,000,000 ounces of silver a month, and we recollect that all the metropolitan newspapers of New York and the Northeast were vehement in insisting that the law should be immediately repealed. It was called the bill to suspend silver coinage.

New York Tribune, February 27, 1885, said:

This suspension ought to be ordered—ought to be ordered at once—ought to be ordered without the least reference to the wishes of any President now in office or coming into office, known or unknown—ought to be ordered absolutely, and simply because it is right and demanded by the situation.

The New York Tribune also said:

The Senate at all events ought to send to the House a distinct and unequivocal proposition to suspend the coinage of silver.

The New York Herald of February 28, 1885, published and editorially approved and commended the following prediction with regard to the disaster which would befall the country unless that law was repealed.

These being the facts of our present condition, our danger, and our duty to avert that danger would seem to be plain. I hope that you concur with me and with the great majority of our fellow-citizens in deeming it most desirable at the present juncture to maintain and continue in use the mass of our gold coin as well as the mass of silver already coined. This is possible by a present suspension of the purchase and coinage of silver. I am not aware that by any other method is it possible.

Everybody is well aware of the authorship of the above quotation. We see here a positive assertion in February, 1885, eight years and a half ago, that the suspension of the purchase and coinage of the 2,000,000 ounces of silver a month was the only possible way to continue in use the mass of our gold coin as well as the mass of silver already coined.

An editorial in the New York Herald, February 28, 1885, headed "Mr. Cleveland's silver letter," said:

We have been encouraged to expect much from Mr. Cleveland, but we hardly looked at this moment for such a thoroughly statesman-like letter as that he has written to Mr. WARNER on the silver question. We print it elsewhere in our columns. It is a masterly exposition of the subject, and treats it as it should be treated, as an economic and not a political problem.

This is a direct and positive indorsement and adoption by the New York Herald of the view expressed in the letter which stated that the repeal of the Bland act and the absolute suspension of the purchase and coinage of silver in February, 1885, was the only possible method to continue in use the gold coin and the silver coin then in the country.

NEW YORK JOURNALS MISTAKEN IN 1885.

To show how mistaken these great journals were in their predictions we have only to point to the reports of the Treasury, which show that the coinage of silver or issue of notes in place of silver bullion since that time has more than doubled, and yet both the gold and silver continue in use.

At the time that these statements were made by the New York press and the letter referred to was written there were but 198,000,000 standard silver dollars in the United States; whereas now there are 419,332,450 standard silver dollars in the country, and $149,000,000 Treasury notes issued upon bullion silver in compliance with the provisions of the Sherman act, making a total of 568,332,450 silver dollars or Treasury notes representing silver.

After the first defeat of the attempt to demonetize silver a leading editorial from the New York Tribune of February 28, 1885, headed "Vote on Silver," said:

A larger number of Republicans would probably have supported the motion to suspend the coinage of silver had it been offered in a form worthy of

Congress. As it was, though objectionable in form, Republicans two to one voted for it.

This shows that the Republicans were then, as they are now, unanimous, or nearly so, in their efforts to demonetize silver.

If these great newspapers were so thoroughly mistaken then, is it not possible that they may be mistaken now?

COL. JOHN A. COCKERILL ON THE NEW YORK PRESS.

Col. John A. Cockerill published an article in the Cosmopolitan entitled "Contemporary Journalism." This article was discussed in the magazine called the Review of Reviews, which is published simultaneously in the United States and Great Britain. The article is entitled "The Trend of the Great Daily." I read from the Review of Reviews, page 450:

Col. Cockerill paints the evils of nonresident ownership of newspapers, resulting, as it does, in an absolutely heartless money standard.

When the success of a paper and the value of its work are gauged by the amount of the monthly remittances to the proprietor's European banker—all the rest follows. The managing editor must get money to his proprietor if he wishes to retain his position and reputation.

That many of the owners and editors of the great metropolitan newspapers spend much of their time in Europe no one will dispute; and here we have the statement of Col. Cockerill to that effect, who for years had control of the New York World and is now the editor of the Commercial Advertiser, which I believe is the oldest paper in New York.

It seems to me that such papers are not safe guides upon the question in which the interests of European capitalists and Wall Street banks, on the one side, and the great body of the American people on the other, are so entirely antagonistical.

NEW YORK PAPERS EDITED FROM EUROPE BY CABLEGRAM.

In the article written by Col. Cockerill in the Cosmopolitan, to which the Review refers, we find special mention of this evil of foreign ownership of the metropolitan press in New York. He speaks of the fashion of editing daily newspapers by cablegram, and he deprecates the effect of such control of the American press. He states that it leads to serious results. That the editor of the New York paper is beyond the reach of proof sheet and is not accessible to direct the policy of the paper, but, says Col. Cockerill, the address of the editor's banker in Europe is always known, and hither on the first of every month large sums of money is forwarded. He then goes on to say that a tendency of nonresident ownership of New York papers affects the *morale* of the paper and also affects the treatment of the interests of the people, whose trustee the paper professes to be, and which he states are only considered from the money point of view. Col. Cockerill winds up this branch of the subject by stating that the worst phase of nonresident ownership is its heartlessness.

Although these articles were written a year ago they have most accurately foreshadowed the appalling truth, which has been so forcibly manifested by the editorials of the New York press during the last four or five months. The Rothschilds, the New York bankers and capitalists may not influence the tone and language of the editorials of these papers, but if they do not they are precisely the kind of editorials which they would desire to have written, and they are precisely the kind of editorials which would tend to carry out the purpose nearest to their hearts. I will read some extracts from Col. Cockerill's article. It is in the October number of 1892. On page 699 he says:

The fashion of editing the more influential or the more successful daily newspapers by cablegram has completely destroyed what little virility was left in their editorial pages.

On page 700 he says:

The nonresident ownership of newspapers leads to one serious result, which, I think, has not been generally considered.

The owner receives from his newspaper property, at stated intervals, returns in money. He is beyond the reach of proofs.

The address of his banker is always known. Thither, on the first of every month, large sums of money must be forwarded.

The tendency of nonresident ownership must, therefore, necessarily be to measure everything by a pecuniary test. The *morale* of the paper, its course of public measures, and its treatment of the interests of the people, whose trustee it professes to be, with such protestations, are considered only from the point of view of the counting room.

The worst phase of nonresident ownership is its absolute heartlessness.

Also, on pages 698 and 699 Col. Cockerill says:

The editorial page has gone steadily to seed in the last decade or two; it has ceased to stand for the views of any individual, or to represent the demands of any preeminent power.

The readers of their papers are ignorant of what Whitelaw Reid, James Gordon Bennett, or Joseph Pulitzer thinks or says.

It seems to be incredible, with all these facts before the American people, that they could be influenced on such a question to follow the lead of journals whose editors are so entirely removed from them in interest, sympathy, and association.

That these journals most ably and honestly represent the interest of the bankers and brokers of New York on the silver question, I do not doubt, but they will not contend themselves that they represent the interest of the people of the great South and West.

I repeat that they are not proper guides for the people of the South and West on the question now being considered by the House.

PATRIOTIC SOUTHERN STATES GIVE THEIR GOLD TO THE TREASURY.

Soon after our Administration came into power it became evident to Mr. Cleveland and Mr. Carlisle that the net gold would soon fall below the $100,000,000, as the demands on the Treasury which were compelled to be honored were such as to make such a result inevitable. The entire public seems to keep their gaze upon the figures ready to cry out in alarm and create a crisis the moment the $100,000,000 is encroached upon.

The President and the Secretary strained every nerve and exhausted every resource to maintain the integrity of the reserve. They appealed for aid, and they did not appeal in vain. From what source did aid come? From what part of our country came the first patriotic response?

Any reader of American history could have foretold. When the British soldiers were shooting down the patriots at Lexington and Concord the first response came from a company of brave men from Virginia under Capt. Morgan.

In the war with Mexico nearly two-thirds of the killed and wounded were from the South. The people of that sunny land were always free with their blood, and now those same patriots on the first intimation that the financial integrity of our country was endangered, were equally generous with their gold, and the first response to Mr. Carlisle's appeal for gold came from Alabama and Kentucky, from Georgia and from grand old Virginia. They did not offer a part of their gold, but without a moment's delay shipped all they possessed to aid our grand Executive and honored Secretary in their efforts to maintain the integrity of the Treasury.

I have obtained from the Treasury a list of the States and cities that voluntarily tendered their gold to the Government. They are as follows:

States.	Cities.	States.	Cities.
Alabama	Selma.	District of Columbia	Washington.
Georgia	Columbus.	Colorado	Denver.
Do	Rome.	Illinois	Centralia.
Kentucky	Owensburg.	Do	Peoria.
Maryland	Baltimore.	Indiana	Indianapolis.
Do	Cumberland.	Massachusetts	Boston.
Missouri	St. Louis.	Minnesota	Minneapolis.
Virginia	Richmond.	Pennsylvania	Philadelphia.
Do	Norfolk.	Do	Pittsburg.

When President Cleveland handed over the Government to President Harrison in March, 1889, he left $197,874,421.96 of net gold in the Treasury.

When Mr. Cleveland received the Government from Mr. Harrison in March, 1893, the net gold in the Treasury had become reduced to $103,284,218.91.

It would have been much less at this time had it not been for the extraordinary efforts that were made by the outgoing Administration to keep the gold above $100,000,000 until the 4th of March.

I give below a table, which shows the amount of net and total gold coin and bullion in the Treasury, and also the percentage of each kind of money received for customs in New York, the statements being made for ten-day periods, from March 1, 1893, to date.

Table showing the total of net gold in the Treasury and the percentage of each kind of money received for customs in New York for ten-day periods since March 1, 1893.

For ten-day periods ending—	Gold and gold bullion in Treasury at the end of each ten days since March 1, 1893.		Gold coin.	Silver coin.	Gold certificates.	Silver certificates.	United States notes.	United States Treasury notes.
	Total gold in Treasury, coin and bullion.	Net gold in Treasury, gold and bullion.						
March 1	$217,672,947.91	$103,284,218.91	0.0	0.0	9.2	20.7	30.3	36.8
March 10	216,875,237.40	102,302,818.40	0.0	0.0	4.1	14.3	30.7	50.9
March 20	219,808,303.90	103,575,584.90	0.0	0.0	5.5	15.3	25.9	53.3
March 31	218,378,232.99	103,892,223.99	0.0	0.0	7.8	15.7	28.0	48.5
April 10	216,433,583.33	106,189,654.33	0.1	0.0	2.6	15.0	53.1	29.2
April 20	210,874,230.44	101,003,301.44	0.1	0.0	4.0	20.1	47.6	28.2
April 29	202,283,359.08	97,011,330.08	0.1	0.0	2.9	23.3	41.0	32.7
May 10	203,022,684.76	99,225,665.76	0.1	0.0	0.0	33.6	28.6	37.7
May 20	202,257,408.59	99,975,099.59	0.1	0.0	0.0	40.2	24.5	35.2
May 31	183,528,609.76	95,048,640.76	0.1	0.0	0.0	37.8	26.2	35.9
June 10	190,461,877.18	90,722,958.18	0.0	0.0	0.0	20.2	47.1	32.7
June 20	191,367,769.75	94,050,310.75	0.0	0.0	0.0	15.0	54.0	31.0
June 30	188,455,432.59	95,285,413.59	0.0	0.0	0.0	12.0	53.0	35.0
July 10	188,779,016.14	97,286,677.14	0.1	0.0	1.0	12.3	64.9	21.7
July 20	188,756,609.60	97,389,080.60	5.5	0.0	4.7	13.8	57.6	18.4
July 31	188,813,982.98	99,202,933.98	12.5	0.0	4.6	12.3	55.6	15.0
August 10	186,282,914.35	103,853,290.35	24.6	0.3	8.0	5.1	53.7	7.7
August 19	179,498,045.27	98,310,246.27	36.7	0.3	6.0	4.3	46.0	6.1

By the above table we see that when Mr. Cleveland became President there was a mere fraction of gold above the $100,0 0,-000 reserve. I also desire to call attention to the fact that until July 20 scarcely a dollar of gold coin was received for customs in New York; but I wish more especially to call attention that since that time the gold coin received for customs at the port of New York has been constantly increasing, and is now nearly 40 per cent of the total receipts.

This certainly shows that during the last thirty days people are paying out gold coin almost as freely as they are any character of money. I also wish to call attention to the fact that on August 10 the amount of net gold in the Treasury exceeded the amount of net gold which was in the Treasury when Cleveland was inaugurated.

WORLD'S PRODUCTION OF GOLD AND SILVER FOR FOUR HUNDRED YEARS.

In the speech which I had the honor to deliver when this bill was first reported to the House, I called attention to the fact that the enormous production of gold following the discovery of that metal in California and Australia had no material effect upon the comparative value of gold and silver; and I further called attention to the fact that the reduction in the production of gold, and the enormous increase in the production of silver, did not in any way depreciate silver as compared with gold; but the depreciation of silver did not commence until it was attacked by hostile legislation by its demonetization in 1873.

It was suggested on this floor that in an argument of this kind we should not confine ourselves to the consideration of the gold and silver productions of this country alone, but should extend them to include the products of the entire world. In order to meet this very proper suggestion, I have prepared tables showing the products of both gold and silver from 1493 to the present time, also showing the ratio of gold and silver during this period of four hundred years.

The first part of the table, from 1493 to 1792, is taken from figures found in the work prepared by Dr. Adolph Soetbeer. At the latter date the United States Mint was established; and from the year 1792 to the present time the figures are taken from the estimates of the Bureau of the Mint. A grand total during this period of about four hundred years shows a production of gold amounting to $8,204,303,000; the production of silver, $9,726,072,-000, and that the production of both metals amounted to $17,930,-375,000. The tables are as follows:

Statement of the production of gold and silver in the world since the discovery of America to 1792.

[From 1493 to 1792 is from table of averages for certain periods compiled by Dr. Adolph Soetbeer.]

Period.	No. of years.	Gold, value.		Silver, coining value.		Percentage of production, by value.		Ratio.
		Annual average.	Total.	Annual average.	Total.	Gold.	Silver.	
1493–1520	28	$3,855,000	$107,931,000	$1,954,000	$54,703,000	66.4	33.6	
1521–1544	24	4,759,000	114,205,000	3,749,000	89,986,000	55.9	44.1	1 to 11.2
1545–1560	16	5,656,000	90,492,000	12,952,000	207,240,000	30.4	69.6	1 to 11.3
1561–1580	20	4,546,000	90,917,000	12,450,000	248,990,000	26.7	73.3	1 to 11.7
1581–1600	20	4,905,000	98,095,000	17,413,000	348,254,000	22.0	78.0	1 to 11.9
1601–1620	20	5,662,000	113,248,000	17,579,000	351,579,000	24.4	75.6	1 to 13.0
1621–1640	20	5,516,000	110,324,000	16,361,000	327,221,000	25.2	74.8	1 to 13.4
1641–1660	20	5,828,000	116,571,000	15,226,000	304,525,000	27.7	72.3	1 to 13.8
1661–1680	20	6,154,000	123,084,000	14,008,000	280,166,000	30.5	69.5	1 to 14.7
1681–1700	20	7,154,000	143,088,000	14,212,000	284,240,000	33.5	66.5	1 to 15.0
1701–1720	20	8,520,000	170,403,000	14,781,000	295,629,000	36.6	63.4	1 to 15.2
1721–1740	20	12,681,000	253,611,000	17,924,000	358,480,000	41.4	58.6	1 to 15.1
1741–1760	20	16,356,000	327,116,000	22,162,000	443,232,000	42.5	57.5	1 to 14.8
1761–1780	20	13,761,000	275,211,000	27,133,000	542,658,000	33.7	66.3	1 to 14.8
1781–1791	11	11,823,000	130,055,200	36,540,000	401,945,500	24.4	75.6	1 to 15.1
			2,570,395,200		4,648,111,500			

This brings us down to the year 1792, after which the United States Mint was established, and the following table, showing the production of gold and silver in the world from 1792 to 1892, is prepared from the annual estimate of the officials of that Bureau:

Table showing production of gold and silver in the world, 1792–1892.

Calendar years.	Gold.	Silver (coinage value).	Total.	Ratio of value of gold to silver.
1792 to 1800	$106,407,000	$328,860,000	$435,267,000	1 to 15.37
1801 to 1810	118,152,000	371,677,000	489,829,000	1 to 15.49
1811 to 1820	76,063,000	224,786,000	300,849,000	1 to 15.49
1821 to 1830	94,479,000	191,444,000	285,923,000	1 to 15.79
1831 to 1840	134,841,000	247,930,000	382,771,000	1 to 15.75
1841 to 1848	291,144,000	259,520,000	550,664,000	1 to 15.85
1849	27,100,000	39,000,000	66,100,000	1 to 15.78

1869	106,225,000	47,500,000	153,725,000	1 to 15.60
1870	106,850,000	51,575,000	158,425,000	1 to 15.57
1871	107,000,000	61,050,000	168,050,000	1 to 15.57
1872	99,600,000	65,252,000	164,850,000	1 to 15 63
1873	96,200,000	81,800,000	178,000,000	1 to 15.92
1874	90,750,000	71,500,000	162,250,000	1 to 16.17
1875	97,500,000	80,500,000	178,000,000	1 to 16.59
1876	103,700,000	87,300,000	191,300,000	1 to 17.88
1877	114,000,000	81,000,000	195,000,000	1 to 17.22
1878	119,000,000	95,000,000	214,000,000	1 to 17.94

Table showing production of gold and silver in the world, 1792–1892—Continued

Calendar years.	Gold.	Silver (coinage value).	Total.	Ratio of value of gold to silver.
1879	$109,000,000	$96,000,000	$205,000,000	1 to 18.40
1880	106,500,000	96,700,000	203,200,000	1 to 18.05
1881	103,000,000	102,000,000	205,000,000	1 to 18.16
1882	102,000,000	111,800,000	213,800,000	1 to 18.19
1883	95,400,000	115,300,000	210,700,000	1 to 18.64
1884	101,700,000	105,500,000	207,200,000	1 to 18.57
1885	108,400,000	118,500,000	226,900,000	1 to 19.41
1886	106,000,000	120,600,000	226,600,000	1 to 20.78
1887	105,775,000	124,281,000	230,056,000	1 to 21.13
1888	110,197,000	140,706,000	250,903,000	1 to 21.90
1889	123,489,000	162,159,000	285,648,000	1 to 22.10
1890	113,150,000	172,235,000	285,385,000	1 to 19.76
1891	129,519,000	186,733,000	307,252,000	1 to 20.92
1892	130,817,000	196,605,000	327,422,000	1 to 23.72
Total 1792–1892	5,633,908,000	5,077,961,000	10,711,869,000	
Total 1493–1791	2,570,395,000	4,648,111,000	7,218,506,000	
Grand total for 400 years, 1493–1892	8,204,303,000	9,726,072,000	17,930,375,000	

From the first table we see that during the twenty-eight years from 1493 to 1520 the annual production of gold was double the production of silver, and the ratio during that period was 1 to 11.3.

During the sixteen years from 1545 to 1560 the annual production of silver had so increased as to be much more than double the production of gold, and the ratio of gold to silver did not change at all, but still remained at 1 to 11.3.

GREAT VARIATION IN THE AMOUNT OF GOLD OR SILVER PRODUCTION DOES DOES NOT CHANGE RATIO.

From 1561 to 1580 the annual production of silver was almost three times that of gold, and yet the relative value of silver to gold changed but the merest fraction.

From 1581 to 1600 the production of silver was three and one-half times the production of gold, and yet there was no material

change in the ratio between silver and gold, at the end of that period the ratio being 1 to 11.9.

From 1601 to 1660 the relative production of silver materially decreased, while the production of gold materially increased, and yet silver, instead of becoming more valuable, became much less valuable, and during this period the ratio of gold to silver ran as high as 1 to 13.8.

From 1661 to 1680 the production of silver continued to fall and the production of gold so increased that the production of silver was a little more than double that of gold, but the ratio, instead of showing increase in the value of silver, showed a decrease, the ratio during that period being 1 to 14.7.

From 1681 to 1740 the relative production of silver as compared with that of gold still further decreased, so that during that period the production of silver was less than one and one-half times that of gold. But here again, instead of silver relatively increasing in value it actually decreased, the average ratio during that period being 1 to 15.1.

Then again, what is more remarkable, during a period from 1781 to 1792 there was an enormous increase in the production of silver and a decrease in the production of gold, so that the production of silver far exceeded three times the production of gold, and yet the ratio remained the same, being during that entire period 1 to 15.1.

We see by the second table that from 1792 to 1820 the production of silver continued to be more than three times that of gold, and the ratio of gold to silver averaged 1 to 15.49.

From 1831 to 1840 silver production materially decreased, being only about one and three-fourths times that of gold, and according to the arguments of gold-standard men silver should have increased in volume, but, on the contrary, it actually fell, averaging during that time 1 to 15.75.

From 1841 to 1848 the production of gold outstripped silver, and here certainly it would be argued that gold would fall and silver rise in value, but again the contrary took place and the average ration was 1 to 15.85.

ARGUMENTS OF GOLD-STANDARD MEN UTTERLY REFUTED.

In 1852 the production of gold was three and a half times that of silver, and yet the ratio was 1 to 15.59, even higher than the ratio which existed from 1792 to 1820, when the production of silver was more than three times greater than that of gold; and, notwithstanding the enormous production of gold from 1852 to 1861, during which period there was no increase in the production of silver, the ratio remained without any material variation.

If the arguments of the gold-standard men are correct, gold should have very materially depreciated, and silver should have advanced in value, but we see that quite the contrary, the reverse took place, and silver depreciated and gold advanced, the average ratio during the five years from 1856 to 1860 having been 1 to 15.30.

Now, from 1860 to 1873 the production of gold fell off 20 per cent, and the production of silver increased more than 100 per cent.

Here the gold men would argue that silver should have fallen enormously, but, on the contrary, the ratio had not perceptibly changed, the average for the three years just prior to January, 1873, being 1 to 15.59.

I insist that all this proves that with coinage of silver at a proper ratio there is no probability of any increase in production which possibly could affect the relative value of the two metals.

HOSTILE LEGISLATION ALONE DISPARAGED SILVER.

It was not until hostile silver legislation commenced in the United States, Germany, and other countries that the value of silver as compared with gold began its downward tendency.

I have prepared a table showing the amount of specie and the amount of paper money supposed to be in the country from the organization of the Government to June 30, 1892.

A most exhaustive examination of the reports of the various Secretaries of the Treasury and other documents failed to find data for the years which are omitted. Neither could I find any records of the amount of specie in the country from 1862 to 1875, except the general statement that about $25,000,000 was in circulation on the Pacific coast. There is no record of the amount of hoarded specie during that period, and any estimate would be mere conjecture.

The figures given for the early years may be taken as safe approximation, compiled from such evidence as was attainable.

From 1851 to 1861 the figures are very reliable, and from 1879 to date they are official and accurate.

With this explanation I give the following table:

Statement of the amount of gold and silver and paper money in the country for the years stated, according to the authorities quoted in the margin.

Years.	Total of specie in the country.	Bank notes in circulation.	Authorities.
1790	9,000,000	2,500,000	Blodget.
1791	16,000,000	9,000,000	Do.
1792	18,000,000	11,500,000	Do.
1793	20,000,000	11,000,000	Do.
1794	21,500,000	11,600,000	Do.
1795	19,900,000	11,000,000	Do.
1796	16,500,000	10,500,000	Do.
1797	16,000,000	10,000,000	Do.
1798	14,000,000	9,000,000	Do.
1799	17,000,000	10,000,000	Do.
1800	17,500,000	10,500,000	Do.
1801	17,000,000	11,000,000	Do.
1802	16,500,000	10,000,000	Do.
1803	16,000,000	11,000,000	Do.

1891	1,068,131,071	931,999,903	Do.
1892	1,234,588,789	1,139,745,170	Do.
1893	1,213,412,584	1,109,988,808	Do.

I have also prepared a table which shows that from 1843 to 1861 under Democratic rule we gained gold to the amount of $77,682,257; that under Republican rule from 1862 to 1877 we lost gold to the amount of $583,831,117.

That from 1878 to 1888, with only a part of the Government controlled by Democrats, we gained gold to the amount of $224,203,020. That during Harrison's Administration we again lost gold to the amount of $200,070,000, and we have already shown that during July and thus far in August under Cleveland and Carlisle the flow of gold to our shores has reached $45,000,000.

Table showing the value of gold coin and bullion imported into and exported from the United States from 1843 to 1861, inclusive, and from 1862 to 1877, inclusive, and from 1878 to 1888, inclusive, and from 1889 to 1893, inclusive, also showing annual excess of imports or of exports.

Year ending June 30—	Exports.	Imports.	Excess of exports over imports.	Excess of imports over exports.
1843 (9 months)	$300,258	$17,066,437		$16,766,179
1844	1,183,116	1,613,304		430,188
1845	2,210,979	818,850	$1,392,129	
1846	1,629,348	910,413	718,935	
1847	975,301	21,574,931		20,599,630

DEMOCRATS CAUSED AN INFLOW OF $77,682,257. REPUBLICANS AN OUTFLOW OF $578,813,117 OF GOLD.

I wish to call special attention to the valuable lessons of instruction which are given to us by this table. We see that from 1843 to 1861, when the country was under Democratic rule, with economy in the administration of affairs in every department, and with judicious tariff laws, our imports of gold exceeded our exports by $77,682,257, and at that time, it must be borne in mind, we had free coinage of both gold and silver. The Republicans then came in power, and even in time of peace increased the expenditures of the Government more than fourfold what they were under Democratic rule. They also enacted odious protective tariff laws, and during their fifteen years of unbridled extravagance our gold was very freely exported. We see by this table that from 1862 to 1877 the exports of gold exceeded the imports by the enormous sum of $538,831,117.

DEMOCRATS CAUSED $224,203,020 OF GOLD TO FLOW TO OUR SHORES.

In December, 1875, the Democrats for the first time obtained a voice in the Government by getting control of the lower House of Congress. They immediately inaugurated systems of reform, and in spite of the hostile Senate, finally succeeded in obtaining compromises, by which they materially reduced expenses, and in February, 1878, succeeded in enacting a law for the coinage of 2,000,000 ounces of silver a month. This was enacted over the veto of the Republican President. Its effect in checking gold exports was almost instantaneous, and from 1878 to 1888 our imports of gold exceeded exports of that metal by $224,203,020. It will therefore be seen that Democratic economy and almost free coinage of silver enabled us to increase our stock of gold during eleven years by $224,203,020, while we see that the Republican extravagance and bad government from 1862 to 1877 caused us to lose gold to the amount of $538,831,117.

In 1889 the Harrison Administration came into absolute power with a Republican House and a Republican Senate. Extravagance, which was denounced by the conservative press as criminal, was immediately inaugurated. The McKinley bill and the Sherman law were enacted, and these two acts, together with the criminal extravagance and foreign demand for gold, caused us to lose gold so rapidly that up to June 30, 1893, the excess of our exports over the imports during Harrison's Administration reached the enormous sum of $210,070,999. The last year of Harrison's Administration the loss to our country in gold reached the sum of $87,506,463.

CLEVELAND AND CARLISLE HAVE TURNED THE FLOW OF GOLD TO AMERICA.

I am very happy to say, however, that the conservative action on the part of Cleveland's Administration has already brought about a change, and in July the country ceased losing gold and commenced gaining it. The excess of exports of gold over imports during January and February of this year under President Harrison were $25,201,621; while in July under Cleveland the reverse took place, and so far from losing gold we gained very largely. The imports of that metal exceeded the exports by $5,776,401, and the inflow of gold in August has been much greater, and the gain to our country in gold during this month will exceed $40,000,000.

We see from the reports of the Treasury that the purchasing clause in the Sherman act is correcting itself. The law only proposes to authorize the Secretary of the Treasury to discontinue the purchase of silver, and yet the reports show that last month he was unable to purchase half the amount which the law required. This shows that the Sherman law is repealing itself.

PURCHASE OF SILVER LESS THAN TWO AND ONE-HALF CENTS PER CAPITA.

The amount paid out for silver in July was $1,675,000, and the amount paid out thus far in August is even less than those figures, and at this rate the entire amount of Treasury notes paid for silver would be but $20,000,000 a year, which is less than 4 per cent of our expenditures; and I wish to call special attention to the fact that the entire expenditure for silver in the entire month of July amounted to less than 2½ cents for every citizen in the United States.

I beg to ask if anyone can reasonably contend that the expenditure of $20,000,000 a year in purchasing silver can be the cause of the great money stringency which this Congress has been called together to relieve.

We have also shown that gold is no longer being hoarded, but that it is more freely paid out for customs than any other money. We have also shown that the outflow of gold has ceased, and that in July and August, so far from losing gold, the imports of gold were $45,000,000 greater than the exports.

We have also shown that silver-coinage laws do not cause an export of gold, but exactly the contrary. The reports of the Treasury show that thus far in the history of our country they have had precisely a contrary effect, notably during the period from 1878 to 1888.

We therefore see that every reason that has been given in opposition to coinage of silver has ceased to exist.

Not only is it very plain from these figures that coinage of silver is not responsible for the present financial condition, but the very reverse. And they show the wisdom of the distinguished gentlemen who framed the Democratic platform which pledges the party to free coinage of both metals, and with the enactment of such a law the repeal of the Sherman act would of necessity follow.

PROHIBITORY BANK TAX TO BE REPEALED.

The platform also pledges the party to a repeal of the prohibitory tax upon banks other than national banks, thus decentralizing money and restoring to the States their constitutional right to control the financial affairs of their own people.

Our great statesmen of years ago were emphatic in their opposition to banks in which the Government became virtually a partner.

In referring to such institutions Thomas Jefferson said that—

Banking institutions are more dangerous than standing armies.

The New York Tribune takes a very different view. In speaking of banks, it expresses the views and purposes of the Republican party. It says:

The time is near when they will feel compelled to act strongly. Meanwhile a very good thing has been done. The machinery is now furnished by which, in any emergency, the financial incorporations of the East can act together on a single day's notice with such power that no act of Congress can resist their decision.

In another article the New York Tribune said:

It is astonishing, yea, startling, the extent to which faith prevails in money circles in New York that we ought to have a king.

In the same line of argument the millionaire Senator Sharon said:

We need a strong central government. The wealth of the country has to bear the burdens of the country and should control it.

These are the character of expressions which emanate from the extreme centralizing strong-government Republicans.

During the Harrison Administration the influence of that element with the party in power was almost absolutely controlling.

DANIEL WEBSTER'S DECLARATION THAT CONGRESS HAS NO POWER TO DEMONETIZE SILVER.

In a former speech I quoted Daniel Webster as asserting that Congress had no authority to demonetize either gold or silver. In his great speech of December 31, 1836, on the subject of "A Specie Circular," this great statesman said—I read from volume 4 of the Boston edition of the works of Daniel Webster, page 271:

If we understand by currency the legal money of the country, and that which constitutes a lawful tender for debts, and is the statute measure of value, then, undoubtedly, nothing is included but gold and silver. Most unquestionably there is no legal tender, and there can be no legal tender in this country, under the authority of this Government or any other, but gold and silver, either the coinage of our own mints, or foreign coins, at rates regulated by Congress. This is a constitutional principle, perfectly plain, and of the very highest importance.

The States are expressly prohibited from making anything but gold and silver a tender in payment of debts; and although no such express prohibition is applied to Congress, yet Congress has no power granted to it in this respect but to coin money and to regulate the value of foreign coins. Congress has exercised this power fully in both its branches. It has coined money, and still coins it; it has regulated the value of foreign coins, and still regulates their value. The legal tender, therefore, the constitutional standard of value, is established and can not be overthrown. To overthrow it would shake the whole system.

This language is very clear; but further on in the same speech Mr. Webster clearly and positively asserted that gold and silver constitute the legal standard of value in this country, and that Congress had no authority to establish any other standard or to displace this standard, namely, the gold and silver standard. I read Mr. Webster's exact words, on page 280:

I am certainly of opinion, then, that gold and silver, at rates fixed by Congress, constitute the legal standard of value in this country; and that neither Congress nor any State has authority to establish any other standard, or to displace this.

Here we have the legal opinion of the greatest constitutional lawyer that this country has produced, proclaiming in the plainest and most positive language that a law which demonetizes silver or deprives that metal of its function as money—which means a full debt-paying, full purchasing power—would be in violation of the Constitution of the United States. This is the plain, unmistakable meaning of Mr. Webster's language.

CONSTITUTION TREATS GOLD AND SILVER THE SAME.

The Constitution makes no discrimination between gold and silver.

The great Democratic party which met in convention and nominated Mr. Cleveland and Mr. Stevenson so understood the Constitution, and in the plainest language pledged the Democratic party to favor silver and promised the people—

Coinage of both gold and silver without discriminating against either metal.

The only conditions imposed were that—

The dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value.

This plank of our platform closes with these words:

We insist upon this policy as especially necessary for the protection of the farming and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

Now, as a friend of the farming and laboring classes I demand, and as long as I have breath in my body I will continue to demand, that this policy be adhered to, and that these promises so specially made to the farmers and laboring classes be redeemed.

THE HONORABLE COURSE FOR DEMOCRATS.

It seems to me, Mr. Speaker, there is but one fair and honorable course to be pursued by the Democratic party. We should immediately enact a law carrying out the pledges of the financial plank of the Chicago platform of 1892. This would involve free coinage of silver at a ratio provided for in the platform. By the same bill we should repeal the 10 per cent tax, and the bill should close by repealing the purchasing clause in the Sherman law. Having done this our pledges to the people would be redeemed, and if, after giving the law a fair trial, it should be found that a modification of the law was necessary we could enact legislation to accomplish that purpose very much easier than we can pass the bill now under consideration. In answer to this proposition we are told that it might become necessary from time to time to recoin the silver so to keep the commercial value of the silver dollar always equal to the commercial value of the gold dollar. I do not think such a result would necessarily follow, because the history of metal coins during the last 400 years shows that when the law provided for the free coinage of both metals there was never any material change in the ratio. But even if we were compelled to change the ratio every fifteen or twenty years that ought not to be raised as an objection. The cost would be very slight, and the history of money and mintage shows that in all countries gold and silver are recoined on an average of about once in fifteen years. The laws of both this country and England especially provide for recoinage of all money whereby abrasion of metal has sustained a very slight loss in weight. The standard weight of the double eagle is 516 grains, and when by abrasion it falls to $513\frac{43}{100}$ grains it ceases to be legal tender, and section 3512 of the Revised Statutes provides that it shall be recoined.

The weight of an English sovereign is 123.274. It ceases to be legal when by abrasion its weight does not exceed 122.50.

WHEN SHALL OUR PROMISES BE REDEEMED?

When, Mr. Speaker, do we propose to commence to comply with our solemn pledges to the people and give them the silver coinage promised in our platform of 1892? When, Mr. Speaker, shall we redeem the promises which were inscribed upon the banners which waved throughout our land from the beginning to the end of our last campaign, and around which patriots gathered, and behind which an army of 11,000,000 Democrats followed with exultant shouts—the banners of the Democratic party borne aloft and carried to victory in that memorable battle of less than a year ago? When shall these pledges be redeemed? Shall it be the next week or the next year? Shall it be when the rich mines are closed, which are now adding so much to the wealth and prosperity of our beloved country? Will it be when we have abandoned and trampled upon the wealth of that precious metal which God has given to us and now demands that we dig from the earth for the use of our people? Will it be when the silver-mining interests of our country are destroyed, and the noble pioneers who have developed the great West have been crushed?

God bless those men with brave and stout hearts who, with rifle in one hand and pick in the other, met and conquered the fierce Indian, endured hardships, overcame obstacles, made prosperous States of arid deserts, silent plains, and uninhabited forests.

Shall it be when these men are crushed and the place they made civilized and beautiful are again the homes of wild beasts and savage Indians? Will it be when silver is thoroughly debased and its function as a legal-tender money is utterly destroyed? Will it be when, with double force, the Rothschilds and the Lombard and Wall street brokers are exercising their already almost irresistible power in the interest of money and plutocracy and against the interests of liberty and the people? Will it be when the mortgaged homes in our loved South and the great West are sold by the sheriff, and the honest husbandman and his loved ones have ceased to be home-holders and have become tenants of soil once theirs, but then owned by Eastern or foreign landlords; or will it be when these tenants of the soil, these brave, honest men, crushed by unjust legislation, have become tenants of the sod? Will it be then, Mr. Speaker, that the solemn pledges and promises of last November will be redeemed?

What boots it to those whose votes placed the Democratic party in power last November as to what laws are enacted after they are crushed or dead, and the beautiful Republic which their forefathers founded has passed from the hands of the people and is controlled by the arrogant and wealthy?

Now, Mr. Speaker, is the time. This year, this session, this month, this week. Let us not delay.

The promise was sacred; let it be redeemed. [Applause.]

Uniform System of Bankruptcy.

SPEECH

OF

HON. EDWARD LANE,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, October 25, 1893.

The House being in Committee of the Whole, and having under consideration the bill (H. R. 12) to establish a uniform system of bankruptcy throughout the United States—

Mr. LANE said:

Mr. CHAIRMAN: If the measure under consideration had been on the Calendar in the ordinary way I would have contented myself with simply voting and would not have taken up any of the time of the House in this discussion. But, as a member of the committee that had charge of the bill, I deem it proper to make

some statement to the House as to the manner of the reporting of this bill. I know it is not customary, nor perhaps, in every case, proper to state what has occurred in the committees of the House, but the gentleman who opened the debate in favor of the bill made some statements that I deem it necessary to meet with counter statements.

The fact is, sir, that this bill has never been considered by the Committee on the Judiciary of this House. The committee sat one morning to consider it and the bill was taken up, and after a few minutes, before we had discussed it for more than ten minutes, we discovered that our views were very diverse, and a motion was made that the bill be referred to the House and that the House or the Committee of the Whole take the place of the Judiciary Committee in dealing with this bill, as we were not very busy in the House at that time. There was just a quorum of the Judiciary Committee present, nine members. There are seventeen members in all on that committee. I think that on the vote on the motion to refer the bill to the House a majority of those present voted, so the motion prevailed. But instead of the Committee on the Judiciary considering the bill it was referred to the House.

The gentleman who has charge of the bill [Mr. OATES] was presiding in the absence of the regular chairman, and he was authorized by the majority of the quorum present to report the bill. I understand now—I will not state it as a positive fact—that ten members of the Committee on the Judiciary are opposed to the bill in its present form; that is, a majority of the whole committee are against the bill.

Mr. OATES. Will the gentleman allow me to say a few words just there?

Mr. LANE. Yes, sir.

Mr. OATES. My friend has not got the facts precisely right, although he is correct as far as he goes. When this bill was first taken up in the committee and discussed I do not know whether he was present or not.

Mr. LANE. I think I was present at every meeting.

Mr. OATES. When it was first taken up and discussed it was agreed that the consideration of it should be postponed for one week, to afford an opportunity to the members of the committee to examine the bill. At the end of that week it was again taken up for consideration. The first chapter was read and we got into the second chapter, relating to the causes of involuntary bankruptcy. They were discussed, and motions were made to strike out or amend, and all except one or two of those motions were voted down. Then it was stated by myself, I know, and probably by others, that the bill had been well considered, had received a great deal of attention, that the House was not very busy, and that it would be perhaps wise to report it to the House, and I, as acting chairman, stated that if I had charge of the bill in the House, those who favored the measure but who desired to amend it, should certainly have an opportunity to offer their amendments and to test the sense of the House in relation to them.

Then a vote was taken. I do not remember how many members were present—the gentleman says nine. I presume he is right. When the vote was taken, according to my recollection (and I counted those voting for and against), only two voted against reporting the bill. But of course that was done with the understanding that liberal opportunity would be afforded in the House (as it will be) to members of the committee and to other gentlemen to amend the bill as we proceed with it under the five-minute rule.

Mr. BAILEY. And to offer a substitute?

Mr. OATES. Yes; a substitute is one form of an amendment.

Mr. LANE. We agree substantially about the facts. There were not two pages of the bill read all the way through. I know that I never read the bill before it was reported; I had not the time. I expected that the bill would be read in committee and that we would have full time to consider it. But it was stated that some former committee had fully considered the bill. The fact, however, was that the personnel of the committee had been changed and also its politics. In the Fifty-first Congress it was a Republican committee that acted upon the bill; and many members—some at least——

Mr. OATES. The committee of the last Congress is the one that labored so long upon the bill—three months in all; and that was a Democratic committee. It was also considered by the committee of the Fifty-first Congress, which was Republican.

Mr. LANE. At any rate, the bill is now before the House without full consideration by the present committee, it having been reported in the manner that the gentleman states. It is a very extraordinary measure; and it is unfortunate that it should come up at the present time. The jurisdictional fact in this bill is the question of insolvency. As a measure for the collection of debts we have nothing to do with it. A measure of this kind can deal with no person unless he is insolvent. I concede that Congress has power to pass "uniform laws on the subject of bankruptcy," but I think the conditions in this country have so changed since the adoption of the Constitution as to render it impossible for us to pass such a bill.

I doubt very much as to the construction which would be adopted by the courts if this question should now come before them, in view of the settled condition of our country and the changed habits of our people. I make the broad assertion that in this country at the present time we should not pass a bankruptcy bill. The very foundation of a bankruptcy bill is uniformity. If such a bill is not uniform in its operation upon all the citizens of the Republic it should not be passed. I insist that this bill is not uniform; and that no bill can be made uniform under our existing laws.

I know that the Constitution and the laws passed in pursuance of the Constitution are the supreme law of the land. But if you adopt the policy of a bankrupt bill you repeal the laws of forty-four States of the Union. If you undertake to pass a uniform bankrupt law, you must make it uniform as to the persons to whom it applies; and when different parties have been subjected to the operation of this law, their estates must be left in the same position. This can not be done under our present system.

This bill declares in effect—I do not pretend to quote its exact terms—that a man is a bankrupt when his estate is not equal to his liabilities at some valuation—I do not know whether it means a valuation with reference to a forced sale or a voluntary sale; but for the purposes of my argument that question is immaterial.

In this connection, the bill makes no statement as to the amount of property which may be exempted under the law of any State. In the State of Texas the law allows a debtor an exemption of something like $5,000; in Illinois the exemption is $1,000; in Michigan $4,000; in some other States it is as low as $300. Now, when you declare a man a bankrupt do you take into consideration all his property? If you do, then a man in the State of Texas who owes $2,000 and owns property to the value of $5,000 is not an insolvent; but if you take into consideration the exemption law of the State, a man in Texas who has $5,000 and has not sufficient property over and above that amount to pay his debts, is insolvent; so in Illinois a man owning $1,000 worth of property, and not having sufficient above that amount to pay his debts, is insolvent. Is this a uniform system of bankruptcy?

Here you have forty-four States of the Union, all or nearly all of them having insolvent laws and laws regulating assignments for the benefit of creditors; and in a great many cases these laws are equitable and just. Now, when the bankruptcy machine provided by this bill begins to grind, one debtor starts with a margin of $5,000, another with a margin of $4,000, another with a margin of $1,000, and so on. Is this uniformity within the meaning of the Constitution when it provides for a "uniform" system of bankruptcy? No; sir. The meaning of that instrument must have been that such a law should apply equally on all persons in all parts of the Union, that when you discharge bankrupts under this law you should leave them in just the same condition.

The bill provides that each debtor shall be entitled to the exemptions provided by the laws of his own State. Thus under the operation of this bill the debtor would in some cases, when discharged by the bankruptcy court, be in comparatively good circumstances, worth $30,000 or $40,000; in other States he would be left with little or nothing. Again in many of the States the law declares specifically what property shall be exempt. That is the case in my own State. There the law reserves to a man the homestead on which he is living to the value of $1,000, and also allows him personal estate to a certain amount. When execution is sued out against his goods and chattels, he has a right to schedule as against that execution $400 worth of personal property.

Now, how are you going to enforce this under the provisions of this bankruptcy bill? It can not be done. Why? Because, take as one illustration: The law of the State of Illinois makes an exception of $400, but the law can not be brought into operation until the execution is actually in the hands of the sheriff, the constable, or other officer, and a levy is about to be made upon the property. Therefore under this act there is no property in that State that can be exempt. You see, then, the manifest injustice of undertaking to establish such a law. So you might pass on through the whole schedules of this bill and you will find it is thoroughly impossible, absolutely impossible, to accomplish the intent of the Constitution by making a uniform bankrupt system that will treat every man alike, under the design of the Constitution, in all parts of the Union over which the law has dominion and power.

I know in my own State, Mr. Chairman, our courts have taken different views as to the application of laws in different States. For example, we have the common law of England in operation in that State, and it is held in England that a man is compelled to keep his stock on his own land. We have, as I say, the common

law prevailing in Illinois, and yet in Illinois our supreme court—and there is no abler court in the Union, able men all of them—held that under the common law a man had a right to let his stock go at large; that he was not compelled to keep them in his own inclosure. Public policy would not tolerate the common law to prevail there. Why? Because we have large prairies there, vast pasture lands, and public policy, under the same law that prevails in Illinois and in England held that public policy permitted a man to turn his stock at large for the reason that I have stated, that we have extensive ranges there.

Now, when you bring this question as to the operation of a bankrupt law before the Supreme Court—I do not know that it was ever before the court in the past—why could they not hold that the conditions of the country have so changed that there are now forty-four States having assumed this jurisdiction, to be contrary to the genius of our Government to pass sweeping laws that repealed the enactments, as it must, of all of the States of this Union. You will see the confusion to which it would lead. I do not know what the court may decide on such a question, and, as I have said before, I do not care.

As far as I am personally concerned I have never paid a great deal of attention to what the courts decide unless it meets with my own approval. I have never regarded a case as *res judicata* as far as I am concerned, unless it confirms my own ideas and opinions of justice. I have seen cases overruled too often. If you follow the Supreme Court of the United States itself, you will find on the constitutional questions alone that they have time and time again reversed themselves.

There is no question of that, and when you change the personnel of the court you can not tell just what the decision on the same question may be. And you can not tell what they might hold, therefore, in a case of this kind that we are now discussing. So I say from a legal standpoint that you can not pass a uniform system of bankruptcy. Manifestly it would be an impossibility.

I want to speak, Mr. Chairman, not in extravagant terms about the bill before us. But it does seem to me, using language as mild as I can possibly use it, that it is the most drastic, vicious, and pernicious bill that was ever offered before to a legislative body for its enactment. Every word of it bristles with penalties and punishments. The genius of the man must have been extraordinary to have produced such a measure, and I can not believe that any one man ever wrote it all. It must have been the emanation of more than one human brain. Why if you leave the question of preparing a bankrupt bill to my friend from Alabama [Mr. OATES], the chairman of the subcommittee, he could no more draft that bill, with his kind heart, than he could fly in the air.

The very moment you file under this bill a petition you open the door of the State prison to the bankrupt debtor somewhere; and the moment the petition is filed he stands an adjudged convict before the law or a ticket-of-leave man. He loses his citizenship in the sense of a loss of freedom. He stands before the door of the penitentiary in every step under the operation of the bill, from the filing of the petition until the day of his discharge. It is most extraordinary, sweeping, vicious, and wicked. I do not know whether any more vicious legislation has ever existed heretofore.

Blackstone says that the Roman law was that when a man was declared a bankrupt his body was divided amongst his creditors; that it was cut up and each creditor got his piece. He does not say just what his creditor did with the body or the piece of it which he got for his share; but he tells us if it was not enough to go round among them, satisfying the debt of each one, then they took his wife and the children and divided them amongst them and held them in slavery. The measure under consideration may not be as bad as that, but there is not a great deal of difference. When a man is disgraced and the savings of his lifetime taken away from him what is life to him? When a man goes through this mill he is a convicted man, and his family would never outlive the odium that is attached to his act. Never.

I know in my own community men who went through the bankrupt mills of 1841, and yet to his grandchildren the fact is thrown into their teeth that their grandsire was a bankrupt. If bankruptcy is not an odious thing, why do these gentlemen who send out their inquiries about the financial standing of every man in the country, insert in every one of them the question: "Was this man ever declared a bankrupt?" They all contain that inquiry.

When you put a man through this machine you destroy his credit forever. He has no more financial standing in the community, and the odium of it will abide with him as long as he lives. Why should the American Congress at this time wish to pass an act of such a drastic nature?

The English law was pretty severe. Under that law, if a man was convicted of petit larceny, he forfeited his goods and chattels; but this bill is worse than that, because when the man was tried for petit larceny he was entitled to the benefit of a reasonble doubt, which is held by the courts everywhere to be equal to one good witness; but under this bill he forfeits his whole estate, because he fails for thirty days to pay a promissory note. He forfeits the entire property of his estate. That is what it is absolutely.

Under the English law a man forfeited his lands if he was found guilty of outlawry; but here, because a man suffers an execution or attachment lien to remain against his property he forfeits both his personal goods and his real estate, although the attachment is taken out where there is not the shadow of a claim against him.

In my State, for example, the law allows you to sue out attachment in a tort, in a case of slander, *crim. con.*, or anything of that character. The plaintiff is allowed to sue out an attachment and levy upon your property. Now, you may deny in law and in fact that you are liable for a dollar in that action, but the court does not sit for three or four months. We only have court twice a year, and you have no chance to try the question. Pending that the attachment remains, and you are liable under this bill to be driven into bankruptcy. They say they will amend some of these things when they come to them. I hope they will. If they do, then it will not be this bill.

Mr. CULBERSON. They did not amend it in the committee.

Mr. LANE. They did not do it in the committee, as my colleague [Mr. CULBERSON] suggests, and I apprehend they will not do it here.

This bill ought not to be passed. I am not criticising the vote that any man may cast upon this floor. I am only speaking here for my own people. I say if this bill should be passed it will be such a blow to their interests, such a detriment to their welfare, that I could not meet them and look them in the face and say I had supported this measure.

Now, what is the condition in this country? It is different everywhere. The gentleman who addressed the committee yesterday [Mr. DENSON] told us of the condition in the South. The condition in the South is entirely different from what it is in the West. He said that in the South the farmers had mortgaged their possessions to their local merchants, who carried them through from year to year, and that at the end of the year they had a settlement and paid up.

Now, that is not the condition in my country. In the West we have mortgages, and a great many of them, I am sorry to say, but nearly all of our mortgages are held in the East. Our farmers owe our local merchants, but it is on running accounts; and here I want to show you where the injustice of this bill comes in. In one part of my State, up near Chicago, they settle their accounts about every thirty days. They sell goods there on thirty days' time, and close the accounts at the end of that period by note or otherwise. Down in my part of the State, 200 miles from there, accounts run a year. The farmer goes to the local merchant and runs an account. There is no agreement as to when payment shall be made. The merchant may at any time bring suit on that account, but that is never done in my country. It is never done until the end of the year, and when the farmers harvest their crops they come in and settle these accounts.

Now, if this bill is passed, what will happen? Laying aside altogether the question of the debtor and the creditor affected immediately by the bill, the effect would be to turn loose upon my people a hundred deputy marshals. You declare a man in my community a bankrupt, and of course if he is a bankrupt the reason is because the farmer can not pay him. You have so reduced the price of property in the last fifteen or twenty years that no farmer is able to pay. The legislation of the country has been such for the last few years and prices so low that no farmer can pay.

I want to give you some statements of my own personal knowledge in this matter. I want to tell you that in my country lands that sold readily fifteen years ago for $45 an acre will not bring $25 now. Horses that sold three years ago for $150 are a drug upon the market at $50. Sheep that sold at $5 a head two or three years ago are bringing a dollar and a half now. We used to get 80 and 90 cents and a dollar a bushel for our wheat a few years ago. Now it is selling for 40 cents, and everything else in about the same proportion.

Now, in the name of Heaven, what does a Democratic Congress mean by bringing in at this time a bill that will force these men to be sued in the Federal courts, a hundred miles from home, to pay the bankrupt merchants in their own town; and then, when that is done, what is the next step? Why, these fellows in the East will come on and foreclose their mortgages. Nay, gentlemen, I suspect that this bill is brought in for that very purpose.

These mortgages will be foreclosed ultimately, but in my State a debtor has some chance for his life. We have been

hedging for twenty years. The laws we have been passing in our State have been constantly in favor of the debtor. A few years ago a merchant in Chicago had the right to get out a summons in the city of Chicago and summon a man down in my part of the State, send the summons to any sheriff in the State, and have it served upon the debtor there, returnable in Chicago, where judgment could be taken against him. But our Legislature put a stop to that kind of thing, and under our law a man can not now be sued except in the county where he lives or where he may be found.

Mr. OATES. Will you explain how this bill could operate against the farmers and laborers, when they are not subject to its involuntary provisions, but can take the benefit of going into bankruptcy if they need it or desire it?

Mr. LANE. I have just been stating how that was. You declare that some merchant in my town is insolvent. He is put into bankruptcy, while the farmers may have accounts with him for $5,000 to $8,000, as they have around in my neighborhood, that they have contracted during the year. Now, this man is put into bankruptcy and you appoint an assignee.

Mr. OATES. A trustee.

Mr. LANE. Yes; you have changed the name. You appoint a trustee, who takes charge of his goods. It is just like the old story of the lion putting on the asses clothes; the ears still stuck up, and showed what he was. You have changed the terms in this bill so as to make it more pleasant so that it may pass them. The people are used to the names of "register" and "assignee," and know what those words mean. The courts have construed their meaning, and you have changed them here to a "referee." We understand what that is in my country. It is not a court. You have no "assignee" or "register" in this bill; but you call him a "trustee;" and when a man is adjudged a bankrupt by the law the right of action is transferred from the debtor to the trustee. The trustee has the right, and it is his duty to at once, or as soon as he can thereafter, bring an action to recover these accounts.

Mr. OATES. Your argument is that the debts the farmers owe to the merchant, and which compel him to go into bankruptcy, will go into the hands of the trustee, and that he will oppress them?

Mr. LANE. He will bring suit against them for the recovery of these accounts; and it is made his duty to do so by this bill.

Mr. OATES. But he will have no more right than the merchant had, will he?

Mr. LANE. The merchant could at any time under our system of business sue upon the account, because there is no time given. That is the rule in our country; but it is tacitly understood with all merchants that a farmer may go to their stores and trade, and he will not be called upon for one dollar until the end of the year, when he is to settle the account. The merchant may change his view and sue him at once; but if he should do so he would never do any more business in our country.

When you appoint the trustee or register, why these accounts go into his hands as accounts due and he must collect them.

Mr. OATES. Of course, his rights will be no greater than those of the man to whom the debts were due.

Mr. LANE. I concede that; but he could do what the other man dare not do; he could give the man more time.

Mr. OATES. Perhaps it is doing too much of that which made him a bankrupt and not able to pay his debts.

Mr. LANE. That may be true; and he would not be declared bankrupt unless you, by this machinery, made him so.

Mr. KYLE. He could grant indulgences and the trustee could not.

Mr. LANE. He is paid for it; it is no favor; and this bill tries to do what you could not do by any other legislation.

Mr. OATES. Has a man the right to grant indulgences to others at the expense of anybody else——

Mr. LANE. He is only doing it at the expense of those to whom he is granting the indulgence.

Mr. OATES (continuing). If he owes debts and can not pay them?

Mr. LANE. He takes that into consideration when he makes the sale.

Mr. OATES. How is it, then, that he fails to pay his debts?

Mr. LANE. Because he has made his account upon this plan, which you would wipe out. They do not want to be sued until the term of the court comes around, if sued at all.

Mr. OATES. Can not he make his contracts so as to get more time?

Mr. LANE. Yes, he could; but he can not do so under this bill.

Mr. OATES. The bill would not subject him to anything he did not contract for. If he becomes a bankrupt by giving too much credit to irresponsible people, ought that exempt him from responsibility?

Mr. LANE. Yes, sir; he could not do business with the people in our country, and they would not contract with him. You destroy the credit of the merchant there, and, as I said before, you make every farmer in the country who may be owing him liable to be sued in Springfield or Chicago, a hundred miles away from his home.

Mr. OATES. You argue that it would break down the credit system?

Mr. LANE. No, sir; not at all.

Mr. OATES. If that is it, all our Populist friends ought to favor the bill, because they denounce the credit system in their platform.

Mr. LANE. Whatever it is, I am in favor of preventing that. I am not in favor of a law that collects debts in this way. If the times do not improve, we would be forced in many of the States to pass stay laws. But if this bill becomes a law, you can not pass a stay law in any State because it ties up the State Legislatures. Now, there is no doubt that the experience of mankind teaches that the passage of stay laws now and then is a great benefit to a community. I have said that this bill attempts to do what can not be done, it attempts to equalize debts. That can not be done. It is utterly impossible. If you were able to do that, you would overthrow the legal learning of five hundred years.

Mr. BOATNER. Will the gentleman state what provision of this bill proposes to equalize debts; and will he also tell us what he means by saying that it undertakes to "equalize debts?" In what sense does he use the words?

Mr. LANE. It proposes to pay every creditor pro rata. That assumes that all a man's debts are on an equal footing. It takes away the right, which the law of my State and of other States gives a debtor, to prefer certain creditors. That is the law of my State. We have, however, an assignment law which compels a man who makes an assignment to treat everybody alike. If he makes an assignment, he must treat resident and nonresident creditors alike, and our courts are open every day in the year for the enforcement of that law, and any one of the creditors has the right to bring the debtor before the court and have an investigation as to whether he has turned over his whole estate or not; and we have laws to punish perjury in such cases.

Those cases are tried before judges learned in the law, elected by the people, and having a local responsibility, but here you propose to turn loose a horde of ignorant sappers and miners on the people, men who have no legal knowledge, and the pay you propose to allow them is such that no man who has brains can afford to accept the office. But I know the purpose of that. You can not deceive anybody about that. If this bill should pass, as I hope it will not, you will bring in a bill at the next session of Congress to pay these gentlemen a fair compensation such as every man is entitled to. Why, a mouse could not live upon the compensation fixed in this bill.

Nobody of respectable business capacity could afford to accept an office under the provisions of this bill. The former bill provided a compensation of $1,000 a year to be paid out of the Treasury to each referee; but that has been left out of this bill because the promoters of it evidently thought that in this case the best way was to cut off the dog's tail by inches; and I repeat that if this bill becomes a law now, in the next Congress somebody will come in here with a wailing cry that we have these public officers, appointed under the law, and that they ought not to be required to work without just compensation.

Mr. OATES. The bill in the Fifty-first Congress was a Republican bill with liberal salaries, but this is an economical Democratic bill. [Laughter.]

Mr. LANE. Yes, economical for the present.

Mr. RAY. Before the gentleman leaves the subject of preferences, I wish he would state whether or not he is in favor of laws which permit the debtor to give preferences to a certain few and to cheat his other creditors out of any part of his estate?

Mr. LANE. I am in favor of the common law of England, which has stood for five hundred years, which is indorsed by the wisdom of ages and has had the approval of the greatest men in the world, and that law allows a debtor to give preferences.

Mr. RAY. But I wish the gentleman would give me an explicit answer. Are you in favor of a condition of things which permits the debtor to transfer all of his property to a few of his creditors to the exclusion of the others?

Mr. LANE. I am in favor of the law as laid down by the highest courts in this country and in England, and that is to the effect that a debtor has the right to prefer his creditors, and to pay one to the exclusion of others. I think a man can administer his own estate best, and that he has the right to say under all the circumstances of his case which creditor has rendered him the greatest service.

Mr. BOATNER. A law which permits a man to transfer his estate to his brother-in-law, his father-in-law, or his sister-in-law.

Mr. LANE. Yes; they are the proper ones to take care of at certain times; if their debts are just they are the very ones to take care of and the ones that I would take care of. But, Mr. Chairman, I have said that if this bill should pass it would contradict the wisdom and the adjudications of the courts for five hundred years. Judge Story himself devotes a great part of his Commentaries on Equity to the right of and the duty of a debtor in failing circumstances to prefer certain creditors to others. Pomeroy on Equity Pleading devotes a large part of his work on equity to the same subject, and all the law books through all the ages have held that doctrine.

Mr. RAY. Would it not be much better for the law itself to point out the class of creditors and the class of debts that shall be preferred?

Mr. LANE. Oh, I believe in leaving something to the American citizen's conscience. I do not want to make him a slave to laws on every occasion, to tell him how often he shall kiss his wife, how often he shall nurse his baby, and all that kind of thing. [Laughter.] I do not want laws of that kind. Now, Mr. Chairman, what I was about to say is this: Suppose I am in business, buying goods from a New York or St. Louis merchant. I have been buying goods from him for five or ten years. He has been selling me his goods at a profit of 30 or 40 per cent on every bill. He has made that profit out of me right along because it was my contract. I get into a straitened condition and I go to some friend and say to him: "I am greatly in need of money and I wish you would lend me some money or indorse for me for a short time."

In the one case I have bought goods from the merchant at such a profit to him that on a fair accounting I would not be owing him a dollar. He has made so much out of me in the meantime that if I should fail and he should lose his whole claim, he would not in equity actually lose 1 cent. But, on the other hand, the man who, for the time being, lends me $500, or lends me his name, to bridge me over my difficulty, has parted with his own money for my accommodation, and I say that all the law books hold that it is my right and my duty to protect him in preference to the general creditor. Take another case which might arise under this bill. A man may be sued in court, as everybody knows, upon a claim which has no foundation in fact, and the case may go against him by rank perjury, yet under this bill that judgment stands and is held to be as equitable and as just before the court as the claim of a man's mother-in-law, as the gentleman from Louisiana has suggested, who has lent him money to go into business or to support his family. I know that people make a cry against this principle, but what justice has not equalized you can not equalize by law.

My State, I say, allows this to be done. If a man is in failing circumstances he may convey all his property (if he does it bona fide) to one creditor; and this he is allowed to do upon the principle of the English law which, as I said, has been in force for five hundred years, and has met the approval of the best English judges and of the great jurists of this country.

This bill does another thing in the way of legal robbery. It provides that if a man is proceeded against as a bankrupt—or possibly as soon as the papers are served on him—the bankruptcy court acquires jurisdiction of his estate; and even if the man dies the court goes on with the administration of that estate.

How would such a provision work? I say that in this provision you propose to enact a law which will rob the wife and children of the debtor of what the State law gives them and of what they have a right to expect in the event of his death. In my State we have what is called the widow's award. If the husband dies the widow is entitled under our law to a set-off of about $700 or $800. She is entitled to a set-off of one year's support for her family and to various other allowances. But under this bill, as soon as a man is sued as a bankrupt the bankruptcy court acquires entire jurisdiction of his estate, and such allowances as I have just mentioned are not claims provable in bankruptcy; so that the result is that the whole estate is taken away from the debtor's family.

Now, I want to call attention to another point in this case. This bill provides for a local court—a referee in each county of the whole Union. Thus at one sweep you make 2,300 officers, and I venture to say that it will require not less than 8,000 persons in all to put the provisions of this bill in operation. This referee is constituted a sort of court, but he has no right to punish for contempt except in certain cases; in all others he must report to the court. Under this provision the party is liable to be dragged off a hundred miles from his home. What does that amount to when a man is engaged in business? Why, sir, at one fell swoop it snatches from a man the character of a lifetime. Do gentlemen here realize what a man's character is worth to him in business transactions?

Why, sir, it is everything. The merchant who has lived in your town for twenty or thirty years and has carried on his business honestly and uprightly, has a character which stands by him as a stone wall—as a bulwark of defense—which in our courts is equal to a witness to every fact connected with his life. When he is tried in court, he has a right to be tried by his peers, his neighbors, the people of the locality where he lives—people who know him, who know that he is an upright and honorable man. Thus when he is unfortunately compelled to go into court his character carries him through, and he goes out without stain, with an untarnished reputation. But under this bill you may take a man hundreds of miles away from his home—to a new jurisdiction—to be tried before a jury who know nothing about him.

Thus you deprive him of the advantage of the character of a lifetime; for he stands before that jury subject to be regarded as the merest charlatan. They do not know him. In the first place, the juries of our Federal courts are not selected in the right way. How are they selected? The clerk of the court or somebody in authority writes down to your county or mine asking some minion to send up the names of four or five men to act as jurors. Juries made up in this way are not to be compared with our local juries selected by our supervisors, who know the men chosen, who select the very best men in the community to do jury duty.

I am opposed to this bill from beginning to end—in all its features. I am opposed to all laws for voluntary bankruptcy. Why should a man be allowed to discharge his debts by passing through a bankruptcy court? Suppose a man says to me, a creditor, "Oh, yes, I did owe you money, but here is my discharge from the bankruptcy court." It is not signed by his creditors, but it is signed by the court. Is there any man in the world who would respect that kind of a discharge? Though a man is discharged by a thousand courts or a thousand juries in that sort of a proceeding, he still owes his previous debts in justice and equity. He can not pay his debts in that way.

We had that sort of thing illustrated here in the Fiftieth Congress when the contested-election case of Small *vs.* Elliott was before the House. It had been stated that Mr. Small, the colored gentleman who was here claiming a seat, had been convicted of perjury. But rising on the other side of the House he flourished here a pardon, saying, "Gentlemen, what does it amount to if I was convicted of perjury? Here is my pardon." According to his view that wiped out the perjury, that cleared his character, that settled the whole thing. In the same way, under this bill, you propose that a debtor may come in with his certificate obtained in a proceeding of voluntary bankruptcy and may say "My debt is discharged."

I know that such a provision is urged as operating in favor of honest debtors; but I want to say to you, after thirty years' experience in the active practice of the law and as a business man, that I have never seen an honest debtor who has not been able to compromise with his creditors upon more favorable terms than you can provide by any bill which you may pass. I never saw a man who, having been unfortunate in business ventures and being obliged to appeal to his creditors, has not found them, if they recognize the fact that he intended to pay them, ready to help him out. That invariably happens if the creditors are the right sort of men; and if they are not, let the debtor remove to Kansas, where, I believe, the statute of limitations wipes out all debts at the end of two years.

My friends, and gentlemen of the House of Representatives, I say here that so far as I am individually concerned, I think it would be more commendable to go to some almshouse than through a court of bankruptcy. I am not making this statement, of course, to influence other gentlemen, or for their benefit; but I am indicating what would be done as a choice between the two evils.

I want to say, Mr. Chairman, that you can not make this bill a success. If you will examine the American Statistician you will find that in England, where a bankruptcy law has been enforced in one form or other for many years, the cost of its administration is 40 per cent of the total assets of bankrupt estates. Where you find a compact community in dealing with the administration of a law, a community where there is no dual government, necessitating such an expense as that in its administration, what could you expect of its cost in a Government like this? In the case of the English bankrupt courts the parties are upon the ground; they can have an adjudication at their own homes. With us it is a very different matter. Taking the expense of the law in England as a criterion, you will find that 75 per cent of the assets here would be required for the administration of the law.

I have been able to find only a few references as to the cost question, but I will give some of them to the House. The Attorney-General in 1878 was asked for a report on this very question, and he gave the report in a thousand cases selected from the mass of cases promiscuously. I find that in those cases the assets were $9,000 in each case on an average, and I found the amount collected was $700 each on an average; $9,000 to start with being the amount reported to the court, and $700 was all that was realized from the assets of the estate, or $13 less on every $1 than the bankrupt schedules. Now, add the cost of administration to this, and see what is left of the bankrupt estate. I find another report given in the next year, 1876 down to 1877, under the old bankrupt act, and I find here in one thousand cases, again selected at random, under the provisions of that law, that the total assets amounted to $375,700, and the costs—I ask you to think fo this for one moment—and the costs in those cases were $261,334.

Mr. HUNTER. Is that 75 per cent?

Mr. LANE. It is worse than 75 per cent.

Now, if you are going to strip the creditor and take all he has got, why not take it all at once and not fool it away under such a law as this? Remember, Mr. Chairman, that the moment you file the bankruptcy petition the debtor is in peril of the jail or penitentiary, and you make no provision for his discharge by a trial by jury, to which he is entitled under the Constitution. The very act—as shown here by the gentleman from Pennsylvania [Mr. STONE] the other day—the very act by which he is made a bankrupt makes him a guilty man, and prevents his discharge in bankruptcy, and puts him in danger of the penitentiary, and he is not entitled to a discharge; and this bill expressly provides that the records shall be conclusive—not *prima facie* evidence—but makes the records of the court conclusive evidence. Who ever heard of a record of a court being conclusive. A clerk writes up a judgment, obtained perhaps by fraud or forgery even, when there was nothing at all to justify the act; and yet, under the provisions of this bill, when that judgment is once written, no matter how obtained, it becomes conclusive proof of the facts therein stated.

[Here the hammer fell.]

Silver.

SPEECH

OF

HON. JOSEPH WHEELER,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, November 1, 1893.

The House having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. WHEELER of Alabama said:

Mr. SPEAKER: From the beginning of our Government there has always been more or less division of sentiment and opinion within the ranks of each of our great parties upon economic measures. There have been high-tariff and low-tariff Republicans and high-tariff and low-tariff Democrats.

The mighty and victorious Democratic party of to-day differs within itself upon the question which for three months has occupied the time of the American Congress, and very largely the attention of the people not only of this, but all other civilized countries.

But, Mr. Speaker, we are all Democrats, pledged to the great principles upon which our party is founded, and we will stand together as Democrats, firm as the eternal hills, fighting for the principles for which our forefathers contended a century ago. [Applause.]

Diversity of opinion upon questions of policy and business must always exist within the ranks of the dominant and controlling party of so great a country as this.

Upon questions of finance the Northeast has interests very different from those of the South and West, but upon the fundamental principles of government we all stand in the solid phalanx of democratic brotherhood.

Mr. Speaker, I want to say one word to our Representatives of the rural South and West who have lent their influence and votes in the advocacy of repeal unaccompanied by legislation for the silver coinage pledged to the people by the platform of only a year ago.

TERRIBLE RESPONSIBILITY ASSUMED BY CONGRESSMEN FROM THE SOUTH AND WEST WHO VOTE FOR REPEAL WITHOUT SILVER COINAGE.

I admonish them of the terrible responsibility they have assumed. They have promised prompt action in carrying out the pledges of our party to give the people the coinage of silver promised in the platform.

They have assured the country that this is the first step and the direct pathway to bimetallism, and that this law will be promptly followed by the silver coinage for which the people voted last November. They tell us that this is only clearing the decks for action.

Mr. Speaker, my apprehension is that they either deceive us or are themselves deceived. They no doubt will vote with us for the silver coinage promised by the platform, but I fear it will be when confronted by too strong a combination of Republicans and gold-standard Democrats.

Let me tell these gentlemen that to be worthy of and enjoy the enduring regard of Mr. Cleveland, they must be true to the people whose credentials entitle them to seats in this Hall.

In the war play of "Held by the Enemy," honor, fidelity, and duty compelled a brave Federal officer to crush the heart, and almost the life, of the beautiful and devoted Southern girl he very dearly loved.

You recall the rapturous applause when, with anguish penetrating his soul, he turned to the idol of his heart, and said:

You must be true to your cause, and I must be true to mine.

Mankind respects honor, fidelity, and truth, and the applause received by our great Chieftain from all the world is more than all else due to these ennobling qualities entering into and exemplifying his life and character.

ENGLISH OPINION OF THE REPEAL BILL.

The editorials of the English press immediately following the passage of the repeal bill by the House show very clearly that the financiers of England regarded this bill as an establishment of the gold standard in this country. These editorials also show that the capitalists of England regard this action of the American Congress as a triumph on their part.

The bill passed the House August 28, 1893, and I will read paragraphs from the editorials of London papers.

I read from the editorial of the London Times upon this subject in its edition of August 29. This influential paper says:

It is the expiring effort of the silver party. Silver, deprived of the support of the Sherman act, will sink to a level too low to suit the bimetallist notions of a proper ratio or to facilitate the establishment of a double standard.

I also read the editorial from the Pall Mall Gazette of August 29. In discussing that subject that paper says:

When confidence and credit are restored by the repeal of the pernicious Sherman act, the task of fiscal reform (single gold standard) in the United States will become easier.

A dispatch from London dated August 29 says:

The Daily News to-day expresses the opinion that the repeal of the Sherman act will prove a serious blow to bimetallists throughout the world, but a great victory for common sense and the single standard.

These three great journals are the exponents of the opinions of English people, and it is clear from these editorials that they regarded this legislation as the death-blow and death-knell of silver.

THE BILL IS A REPUBLICAN MEASURE.

The very source from which the bill now before the House emanated ought to put every Democrat upon his guard. There is no man in the United States who has fathered and fostered so much obnoxious financial legislation as Hon. JOHN SHERMAN. From the time he was understood to have become interested in a New York national bank, he has been the sponsor and author and advocate of legislation in the interest of Wall-street bankers and capitalists, and we have the remarkable picture of Democrats in the House joining their voices and votes with THOMAS B. REED and his Republican minority, and Democrats in the Senate joining votes and voices with Senator JOHN SHERMAN, in efforts to enact into law one of the most obnoxious measures ever proposed by that distinguished Republican.

But, worse than that, the men who are committing this wrong were elected to repudiate and condemn the very character of legislation they are endeavoring to fasten upon our country; and what makes this still worse, this Republican law which they are about to enact is the very first piece of legislation of a party so recently intrusted with power under pledges which they do not fulfill and in the face of demands from the people which they neither heed nor obey.

I repeat, that a Democratic Administration which was elected for the very purpose of repudiating legislation of this character by its very first act proposes to enact into law one of the most obnoxious and astrocious laws ever proposed by Senator SHERMAN. It is not a Wilson bill or a Voorhees bill, it is a John Sherman bill, pure and simple, and it should be condemned and denounced as such.

The bill now before Congress was introduced in the Senate by Hon. JOHN SHERMAN on July 14, 1892. I read the bill in full. It was as follows:

Fifty-second Congress [Second session].

IN THE SENATE OF THE UNITED STATES.

July 14, 1892, Mr. SHERMAN introduced the following bill; which was read twice and referred to the Committee on Finance.

A bill (S. 3423) for the repeal of certain parts of the act directing the purchasing of silver bullion and the issue of Treasury notes thereon, and for other purposes, approved July 14, 1890.

Be it enacted, etc., That so much of the act entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes," approved July 14, 1890, as directs the Secretary of the Treasury to purchase, from time to time, silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month, at the market price thereof, and to issue in payment for such purchases of silver bullion Treasury notes of the United States, is hereby repealed, to take effect on the 1st day of January, 1893: *Provided*, That this actshall not in any way affect or impair or change the legal qualties, redemption, or use of the Treasury notes issued under said act.

SENATOR VOORHEES DENOUNCED THIS BILL.

This bill was denounced and opposed by Senator VOORHEES, and the Democrats of the last Congress were strong enough to prevent its passage.

I read from Senator VOORHEES' speech on February 17, 1893. It is on page 1734 of the RECORD:

Sir, I believe I could pass a civil-service examination as a faithful friend of silver. Standing on this floor, in the position I am now, more than fifteen years ago I helped to start the silver ball in motion, and I have never faltered since. I should vote to-day for the coinage of all the American product of silver. I would go further; I would vote, as Thomas Jefferson advised, for the free coinage of silver the same as gold. I would vote, in the language of the Democratic platform laid down at Chicago last June, that "we hold to both gold and silver as the standard money of the country and to the coinage of both gold and silver, without discrimination against either metal and without charge for mintage," only stipulating, as we did in that great platform, that the two dollars, the one of silver and the other of gold, shall be of equal intrinsic value and purchasing power.

I should have voted the other day to take up what is known as the Sherman act and for its repeal, but for the fact that its passage would absolutely demonetize silver and leave it supported by not one word of legislation. I thought the measure was audacious; I thought it an outrage to ask men, like myself and others, to absolutely sweep from under the silver currency every vestige of law. This is not what we meant at Chicago; that is not what the people mean.

I should vote for the repeal of the Sherman act simply because it is vicious in principle, but it must be in connection with something better.

I own no silver mines; I am interested in none; the people I represent have no interest in silver bullion; they are interested simply in the great dollar with which their fathers bought the country in which they live, cultivated it, and made it prosper and bloom as it is blooming to-day.

I beg to ask if the introduction and passage of this bill by the House in August, and its passage by the Senate last Monday, has not caused prosperity to cease, and blooming to be a thing of the past.

Now, the first act of a Democratic Administration is to take this repudiated bill of JOHN SHERMAN'S and introduce it as bill No. 1 of the House of Representatives.

The bill thus introduced on August 11, 1893, is as follows:

Mr. WILSON of West Virginia introduced the following bill:

"A bill (H. R. 1) to repeal a part of an act approved July 14, 1890, entitled 'An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes.'

"*Be it enacted, etc.*, That so much of the act approved July 14, 1890, entitled 'An act directing the purchase of silver bullion and issue of Treasury notes thereon, and for other purposes,' as directs the Secretary of the Treasury to purchase from time to time silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month at the market price thereof, not exceeding $1 for 375.25 grains of pure silver, and to issue in payment for such purchases Treasury notes of the United States, be, and the same is hereby, repealed; but this repeal shall not impair, or in any manner affect, the legal-tender quality of the standard silver dollars heretofore coined; and the faith and credit of the United States are hereby pledged to maintain the parity of the standard gold and silver coins of the United States at the present legal ratio or such other ratio as may be established by law."

It is true that the bill is now called the Wilson bill in the House and the Voorhees bill in the Senate, but, with the slightest change in phraseology, it is the same old Sherman bill, and its effect will be to place this country upon a gold standard with all its attendant evils.

The bill comes back from the Senate with the Voorhees caudal appendage, which means nothing, and does not in the slightest degree change the effect of the bill.

The Voorhees appendage is in these words:

And it is hereby declared to be the policy of the United States to continue the use of both gold and silver as standard money, and to coin both gold and silver into money of equal intrinsic and exchangeable value, such equality to be secured through international agreement, or by such safeguards of legislation as will insure the maintenance of the parity in value of the coins of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts. And it is hereby further declared, that the efforts of the Government should be steadily directed to the establishment of such a safe system of bimetallism as will maintain at all times the equal power of every dollar coined or issued by the United States, in the markets and in the payment of debts.

This would be a very proper declaration for a convention or Democratic caucus, but it is mere unsounding words, and it has no effect whatever so far as the law is concerned.

REASONS FOR THIS BILL HAVE CEASED.

When Congress was convened it was insisted that the immediate passage of the repeal bill was necessary to prevent the outflow of gold. This was a mistake, and we see that without this bill the outflow promptly ceased and an inflow commenced, which has continued without interruption to this moment, and, during July, August, and September we gained $51,434,691 in gold; that is to say, our imports of gold during those three months were $53,997,744 and our exports were only $2,563,053, leaving a net gold gain of $51,434,691 during a period of only three months.

Table showing imports and exports of gold coin and bullion during July, August, and September, 1893.

	Exports.	Imports.
July	$174,212	$5,950,613
August	949,502	41,340,031
September	1,439,339	6,707,100
Totals	2,563,053	53,997,744

We were also informed that gold was being hoarded and that the Government did not receive any gold coin in payment of customs dues and that the repeal bill was absolutely essential to correct this. It is true that during January, February, and March not a dollar of gold was paid for customs dues in that great entrepôt, the city of New York; but it has been clearly proven that this would correct itself without the repeal bill; and we see that although the repeal bill has not become the law, gold has been freely received in New York in payment of customs dues since early in July, the gold coin receipts being as follows: July, 12.5 per cent; August, 47.4 per cent; September, 58.1 per cent; October to date, 37.6 per cent.

We see from the above that natural causes, and not the repeal bill, have created a great inflow of gold to the Treasury for customs dues.

SILVER PURCHASES DID NOT CAUSE THE PANIC.

Before I close let me again call attention to the serious mistake of attributing the present stringency to the issuing of Treasury notes to pay for the purchase of silver. The purchase under this act during the last four months has been less than half the amount authorized to be purchased by the Sherman law. The reason why the purchase has not been greater has been that holders of silver throughout the world were unwilling to sell at the present low market prices.

I give below the exact figures showing the amount of silver purchased under the act of July 14, 1890, during July, August, September, and October.

Table showing the amount of silver purchased under the act of July 14, 1890, during the months of July, August, September, and October, 1893.

1893.	Fine ounces.	Cost.
July	2,218,982.61	$1,583,230.20
August	3,934,497.27	2,907,344.15
September	2,728,741.74	2,026,410.13
October	3,029,241.15	2,192,934.63
Total	11,911,462.77	$8,709,919.11

In other words, during four months the United States has printed Treasury notes to the amount of $8,709,919.11, and has received in exchange for these Treasury notes 11,911,462.77 ounces of silver.

During that same period the Government has collected nearly $200,000,000 from the people by taxation, and has paid out that money in current expenses, and yet we are told that this purchase of so small an amount of silver has caused a widespread panic, extending, not through this country alone, but to nearly all the civilized parts of the globe.

Again, this small purchase of silver has averaged less than 3 cents per month per capita for each person in this country, and the average expenditure of these same persons during that period for liquors, tobacco, and other articles of luxury and dissipation has been about $9 per month—more than three hundred times as much as the expenditure for silver. So far as I have heard, no one contends that this expenditure for luxuries has contributed to the panic, and, if not, I beg to ask how could the almost infinitessimal expenditure for silver have caused all the trouble?

THE ENACTMENT OF THIS LAW WILL REDUCE THE PRICE OF COTTON AND WHEAT.

The South has been flooded with assertions that the moment the repeal bill passes Congress cotton will rise to 10 cents. And the people of the West have been assured that the passage of the bill would cause wheat to rise to 90 cents or $1, and the

same extravagant statements have been made with regard to corn, oats, and other products of the farm. The Senators who have opposed the bill have been denounced as imposing a great injury upon their constituents, and the Senators of the South are charged with having cost the Southern people fifty or one hundred million dollars. These absurd statements are unworthy of the persons from whom they emanate.

It is evident to every intelligent person that the only possible effect of the passing of this bill will be to reduce the prices of all products of the farm. When we increase money, prices will rise, and, as certain as the sun shines, when we reduce the amount of money in the country prices will fall.

It is possible that the very short crop of our cotton may eventually cause a rise in the price of that article, but any increase in the price will be in spite of the repeal, and not on account of it.

DEMOCRATIC SENATORS DID NOT FILIBUSTER.

Mr. Speaker, there is another point to which I wish to refer. The statement is being reiterated throughout the press of the country that Southern Democratic Senators have filibustered against the passage of this bill. In reply I desire to say that I believe this statement is absolutely untrue. I assert that the record of the Senate, so far as I can discern, does not show a single filibustering motion made by a Southern Democratic Senator, and I think I am correct in saying that it does not show that any Democratic Senator has made any filibustering motion. This bill, which makes an entire change in the financial system of one of the greatest countries on earth, was introduced in the House on August 11, and in about two months and a half after its introduction it will become the law of the land.

That a bill of such vast importance should be properly discussed no reasonable man will deny. The opponents of the measure only made this reasonable request. When the advocates of the bill sought to lengthen the hours of the Senate sessions so as to occupy almost the entire day no objection was made by Southern Democrats, and when Senator VOORHEES and the friends of the bill commenced what they announced to be a continuous and uninterrupted session of the Senate, the opponents of the measure did not even object to that. They quietly went on occupying entire nights in discussing this measure. They did their full duty as Senators and patriots. Not so, however, with the friends of the bill; they left the Hall of the Senate, refusing to listen to any arguments in favor of the reasonable amendments which the friends of silver had announced they would propose. They had been appointed as judges in an important question, and yet they refused to listen to any arguments which were opposed to their preconceived views on this subject.

It is true that, on two or three occasions, the distinguished Senators from the Northwest who are opposed to the repeal bill urged the gold-standard Senators to do their duty, to occupy their seats in the Senate, and listen to the arguments of those who believed in the Democratic platform and American bimetallism, and this has been denominated and denounced as filibustering, by the metropolitan press.

But it is proper to call attention to the fact that this was not done by Democratic Senators, but I think in every instance the gold-standard Senators were recalled to the Senate upon the demands of Populists and Republicans from the Northwest.

SILVER COINAGE DEMANDED BY THE PLATFORM WOULD BE AS SOUND AS GOLD.

The gold standard men do great injustice to those who demand the silver coinage promised by the platform when they insinuate that such legislation would not be in the interest of sound money.

The bill No. 211, prepared by myself, and one of the earliest introduced in this Congress, and which I desire to offer as an amendment to the pending bill, did not go even so far as the platform. It was a compromise measure and only proposed to coin the silver from the United States mines, upon the precise terms which the platform pledged for silver coinage from all the mines of the world. The bill is in the following words:

A bill for the coinage of the products of the silver mines of the United States.

Whereas the actual amount of money which the Treasury Department has paid for silver bullion under the Sherman act has been at a rate which would make 510 grains of pure silver, when coined, equal in value to the gold in the standard gold dollar: Therefore,

Be it enacted, etc., That all holders of silver bullion of the value of $50 or more, and not too base for the operations of the mints, said silver being the product of the silver mines of the United States, shall be entitled to deposit the same at the mints and have the same coined into silver dollars containing 510 grains of pure silver, together with the usual alloy, making said dollar contain 567.6 grains of standard silver, on the same terms and conditions as gold bullion is now deposited and coined. That said dollars shall be a legal tender for all debts and dues, both public and private, and silver certificates shall be issued on said dollars in like manner as silver certificates are now issued on standard silver dollars.

SEC. 2. That, under such regulations as the Secretary of the Treasury may prescribe, agents of the Treasury Department shall be placed at each smelting furnace in the United States, or shall visit said smelting furnaces from time to time, in order to receive silver which the owners thereof desire to have coined, and transmit the same to the mint.

SEC. 3. That the expenses attending the reception of silver to be coined and its transmission to the mint shall be paid by the owners thereof.

Of those who have promised this redemption of the pledges of our party I beg to ask: When do they propose to commence to comply with the solemn pledges to the people and give them the silver coinage promised in our platform of 1892? When, Mr. Speaker, will they redeem the promises which were inscribed upon the banners which waved throughout our land from the beginning to the end of our last campaign, and around which patriots gathered, and behind which an army of 6,000,000 Democrats followed with exultant shouts—the banners of the Democratic party borne aloft and carried to victory in that memorable battle of less than a year ago? When shall these pledges be redeemed? Shall it be the next week or the next year? Shall it be when the rich mines are closed, which are now adding so much to the wealth and prosperity of our beloved country? Will it be when Congress has abandoned and trampled upon the wealth of that precious metal which God has given to us and now demands that we dig from the earth for the use of our people? Will it be when the silver-mining interests of our country are destroyed, and the noble pioneers who have developed the great West have been crushed?

God bless those men with brave and stout hearts who, with rifle in one hand and pick in the other, met and conquered the fierce Indian, endured hardships, overcame obstacles, made prosperous States of arid deserts, silent plains, and uninhabited forests.

Shall it be when these men are crushed and the place they made civilized and beautiful are again the homes of wild beasts and savage Indians? Will it be when silver is thoroughly debased and its function as a legal-tender money is utterly destroyed? Will it be when, with double force, the Rothschilds and the Lombard and Wall street brokers are exercising their already almost irresistible power in the interest of money and plutocracy and against the interests of liberty and the people? Will it be when the mortgaged homes in our loved South and the great West are sold by the sheriff, and the honest husbandman and his loved ones have ceased to be home-holders and have become tenants of soil once theirs, but then owned by Eastern or foreign landlords; or will it be when these tenants of the soil, these brave, honest men, crushed by unjust legislation, have become tenants of the sod? Will it be then, Mr. Speaker, that the solemn pledges and promises of last November will be redeemed? [Applause.]

Silver.

SPEECH

OF

HON. JOHN C. BELL,

OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, November 1, 1893,

On the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

Mr. BELL of Colorado said:

Mr. SPEAKER: To the utter surprise of the people of the country, a majority, and you may say the leaders, of the Democratic Administration in this and the other end of the Capitol have joined hands with the men they have been denouncing for the past twenty years as traitors and criminals from the stump and in State and national platforms for the crime of 1873. They have not only condoned the crime, but are crystallizing the objects of the act of 1873, and they are giving silver the fatal death blow.

SUPERFICIAL VIEW OF ADMINISTRATION.

It seems to us that the Administration branch of the party is taking a very superficial view of the causes of this unprecedented industrial and financial disturbance. There must be some fundamental rather than incidental evil gnawing at the vitals of our prosperity.

If we ignore and waive the present general crisis, then has the industrial system of the country been healthy and normal since 1880?

I have before me the extra census bulletins as far as obtainable on the subject of farms, homes, and mortgages. I here give a few samples. With great unanimity they begin as follows:

The real estate mortgage movement in Pennsylvania, the second State of the Union in population and near the first in wealth and manufactures, was

a progressive one, with a single interruption, from 1880 to 1889, beginning with a debt of $92,046,674 in 1880 and ending with $186,642,124 in 1889.

This increase of 102.77 per cent during the ten years was greater than the increase of population, which was 22.77 per cent.

The real estate mortgage movement in Connecticut from 1880 to 1889 was on the whole a progressive one, beginning with a debt of $9,196,506, incurred in 1880, and ending with $17,703,325 in 1889. This increase of 92.50 per cent in the yearly incurred debt during the ten years was greater than the increase of population, which was 19.84 per cent.

The real estate mortgage movement in New Hampshire from 1880 to 1889 was on the whole a progressive one, beginning with a debt of $2,643,999 in 1880, and ending with $4,407,008 in 1889. The increase of 66.70 per cent in the incurred debt during the ten years was greater than the increase of population, which was 8.51 per cent.

The real estate mortgage movement in Arkansas from 1880 to 1889 was on the whole a progressive one, beginning with an incurred debt of $2,738,128 and ending with an incurred debt of $8,423,747 in 1889. This increase of 207.65 per cent in the incurred debt during the ten years was greater than the increase of population, which was 40.58 per cent.

The real estate mortgage movement in Indiana, one of the oldest States of the West, from 1880 to 1890, was on the whole a progressive one, beginning with a debt of $21,556,118 in 1880 and ending with $37,494,415 in 1889. This increase of 73.94 per cent in the incurred debt during the ten years was greater than the increase of population, which was 10.82 per cent.

The real estate mortgage movement in Minnesota was a strongly progressive one from 1880 to 1887. In the first year the increased debt amounted to $15,093,076, and in 1887 $70,500,337. During the ten years, 1880 to 1889, the annual incurred real estate mortgage debt increased 296.09 per cent, while at the same time the population increased 66.74 per cent.

As far as I have been able to secure the figures they run in the same general line as the above, with the single exception of Vermont.

I here submit a tabulated statement of the Government showing the per capita debt of some of the different States, which exhibits a monstrosity:

Statement showing the per capita debt of the States named.

Alabama	$26	Kansas	$170	Oregon	$73
Arkansas	13	Maine	49	Pennsylvania	117
Colorado	206	Massachusetts	144	Rhode Island	106
Connecticut	107	Minnesota	152	Tennessee	22
Illinois	100	Missouri	89	Vermont	84
Indiana	61	Nebraska	126	Wisconsin	72
Iowa	104	New Hampshire	50		

Can such a condition exist among the great army of toilers and promiscuous property owners generally without suggesting some fatal error and elementary evil?

INDUSTRIAL FEATURES.

The executive department of this Government, notwithstanding the above conditions, has been annually congratulating the country on its great and unexampled prosperity. It has made the common mistake of considering the banker and money-changer as representing the business interests of the country. The producer of wealth has been ignored. The Democratic party has been proclaiming to the world for twenty years that the price of silver controlled the price of wheat and cotton. This is true beyond question, as shown by the following table:

Year.	Wheat.	Cotton.	Silver.	Year.	Wheat.	Cotton.	Silver.
1872	1.47	29.3	1.32	1883	1.13	10.8	1.11
1873	1.31	18.8	1.29	1884	1.07	10.5	1.01
1874	1.43	15.4	1.27	1885	.85	10.6	1.06
1875	1.12	15.0	1.24	1886	.87	9.9	.99
1876	1.24	12.9	1.15	1887	.89	9.5	.97
1877	1.17	11.8	1.20	1888	.85	9.8	.93
1878	1.34	11.1	1.15	1889	.90	9.9	.93
1879	1.07	9.9	1.12	1890	.83	10.1	1.04
1880	1.25	11.5	1.14	1891	.85	10.0	.90
1881	1.11	11.4	1.13	1892	.80	8.7	.86
1882	1.19	11.4	1.13	1893	.72	7.3	.78

In 1873 we produced 281,254,700 bushels of wheat. This brought $1.312 per bushel = $366,635,166.40. In 1889 the crop was 611,780,000, at 80 cents per bushel = $489,424,000. Had the 611,780,000 bushels sold for $1.312, price in 1873, it would have brought $802,655,360.

The wheat-grower lost by this reduction $313,231,360. The same proportion of loss runs through cotton, corn, and all other products.

SHORTSIGHTED MANUFACTURERS.

It seems to me that the New England and Middle States have been cajoled by the Administration and its newspaper sponsors into a ruinous error. It is not currency, but consumers of their manufactured products they need. It is not so much a lack of currency as a want of fall orders that has closed up the shops. Will the repeal of the Sherman act and expansion of bank currency consume your products? Will this start the wheels of industry all over the land? Will manufacturers move until the consumers demand it?

WHERE ARE YOUR CONSUMERS?

Are they in the well-developed East, or are they in the rapidly developing West and South? Not as a disparagement, but as an example let us compare the New England States with six of the Western States in railroad building between 1880 and 1890.

Let us see who has kept your car works, bridge works, steel works, lubricating-oil works, your wage-earners generally at work, etc.

Miles of railroad built from 1880 to 1890.

NEW ENGLAND STATES.		WESTERN STATES.	
Rhode Island	7.43	Montana	2,689.58
Vermont	74.45	California	2,133.03
Connecticut	83.64	Minnesota	2,394.35
New Hampshire	127.25	Nebraska	3,454.47
Massachusetts	181.69	Colorado	2,731.11
Maine	372.47	Kansas	5,492.11
Total	846.93	Total	18,284.65

These six Western States in ten years built 18,284.65 miles, or 21.47 miles to each one built in the six New England States. These six Western States would consume 21.47 times as many cars, boilers, engines, iron bridges, miles of steel rails, safes, lubricating oil, and other manufactured articles pertinent to this business, as would the six New England States. Other developments run in like proportions. I append a table showing the railroad building during these ten years.

Railroad building between 1880 and 1890.

I notice the following item in the public press, headed—

DESTROYING THEIR BEST CUSTOMER.

Joseph Nimmo, jr., the statistician, says:

"The silver States are the best customers of the manufacturers, taking over $50,000,000 per annum of their products, and are worth more to the manufacturers than all of South America and Europe combined."

It is estimated that over $10,000,000 in fall orders were countermanded by the silver States after the mines were shut down. Fifty thousand men were let out of employment at the mines and twice as many more, who were transporting to and from mines,

digging coal, burning coke for smelting and refining the ores, and they have been added to the idle list.

He further says, in a letter to the Washington Post under date of September 15, 1893:

THE SILVER QUESTION—CERTAIN COMMERCIAL CONSIDERATIONS INVOLVED WHICH HAVE BEEN OVERLOOKED.

EDITOR POST: There are certain commercial considerations closely related to the present discussion of the silver question and having an important bearing upon the just and beneficent settlement of that question, but which during the present discussion appear to have been overlooked.

The silver product of the United States, with the small exception of about 1 per cent, is the product of the arid region, an area extending from the western parts of the Dakotas, Nebraska, Kansas, and Texas at the east to the Coast Range and the Sierra Nevada Range on the Pacific Slope. The dimensions of this area are about 1,200 miles from north to south and 1,300 from east to west. Its chief mineral products are gold, silver, copper, and cad. almost all of which is exported to States outside of that region.

The agriculture of the arid region, in so far as relates to the culture of the soil, is dependent entirely upon irrigation. But irrigation, although profitable, involves large expenditures. The arid region is, however, a vast and exceedingly productive pastoral region, yielding an enormous annual exportable product of horses, cattle, sheep, and wool. In consequence of the large preponderance of the mining and pastoral interests of this vast area over those of agriculture, every State and Territory of the arid region is a large importer of grain, hay, lumber, vegetables, provisions, and breadstuffs. Machinery and general merchandise are also imported in large quantities from other parts of the country. The total annual value of such imports is about $200,000,000.

The total value of the annual exports of the arid region amounts to about $240,000,000, of which silver stands at the head, amounting to amount $75,000,000.

But silver mining sustains to the commerce and productive industries of the arid region relations far transcending its arithmetical proportion of the value of the total surplus products of that region. Silver is the primary source of the commercial, agricultural, and industrial prosperity of that vast area. Strike it down and you paralyze the business interests of that whole area.

The total value of the commerce of the arid region with the other States of the country, including imports, $200,000,000, and exports, $240,000,000, amounts to the enormous sum of about $440,000,000 annually. This exceeds by $100,000,000 the total value of the combined commerce of the United States with Mexico, Central America, South America, and the West India Islands. This commerce centers at St. Paul, Milwaukee, Chicago, St. Louis, Boston, New York, Philadelphia, and many other points at the East.

Stop for a moment and consider the enormous import of these facts. For several years the country has been deeply concerned about reciprocity with the countries of Central and South America and the West Indies, and about the project of an intercontinental railroad to connect those southern countries with the United States. But here is a vast region in the very heart of our own country which sustains a much larger commercial relation to the rest, and which is bound to us by the most intimate relations of transportation facilities—six transcontinental railroads, with numerous branches extending into every part of a region peopled by fellow-countrymen, who are alive to every common impulse of our splendid civilization.

The stopping of our demand for your goods closed your shops and let out a large force in the East.

The Eastern and New England States have forced the Western States to prepare to start their own little manufactories and live among themselves as far as possible. I here cite a notice of an agreement being entered into all over the West. This is in no sense a boycot, but an absolute necessity:

[Denver Times, September 5, 1893.]

FOR HOME INDUSTRIES.

The Times prints an imposing list of names of officials, business and professional men of Denver who have pledged themselves to use as far as possible Colorado-made goods in preference to those made outside the State.

The position taken by these gentlemen, whose number will no doubt be considerably augmented, calls for no explanation beyond that conveyed by the card. This is a season of serious business depression. Many men, in all lines of manufactures, are out of employment. They are a class of citizens it is most desirable to keep in the State. The way to do it is to create an increased demand for Colorado made goods. Such a demand means employment for more men, a greater consumption of raw material, and the keeping of vast sums of money in the State that would otherwise go outside to other States and to other communities.

It is to be hoped that every one will sign the pledge that has been taken by such men as Chief-Justice Hayt, Acting Governor Nichols, Judge Hallett, Acting Mayor McMurray, ex-Mayor Rogers, President Byers of the Chamber of Commerce, President Jeffery, President Platt of the Manufacturers' Exchange, ex-Senator Hill, most of the leading business houses of the city, and many others. Every name helps.

The organized workingmen should recognize the step taken by those who have signed in the interest of the movement for home industries, sign the pledge themselves, and in every legitimate way further the commendable design that the plan betrays. They will, of course, be helping themselves in so doing. This is certainly a time when we have got to help each other, when all classes must stand together.

IMMIGRATION.

Is there not another industrial feature connected with our disturbances entirely overlooked by the Administration and its supporters? We have heretofore been building some great trunk lines of railways connecting the two oceans and also building numerous local feeders. This and other public and semipublic works caused an unprecedented immigration of laborers to this country. This Government should through its representatives abroad call attention to the overcrowded labor market—for the benefit of our own laborers as well as that of immigrants.

These lines and convenient feeders have been in a great measure stopped and this has greatly narrowed the field of railroad labor and cut down the demand for manufactured articles amazingly. In 1890 139,365 common laborers, 29,296 farm laborers, 28,625 domestic servants, 3,776 carpenters, 3,745 miners, 3,653 clerks, 3,879 tailors, 2,232 shoemakers, 1,792 blacksmiths, 44,540 skilled laborers, and 211,756 promiscuous persons immigrated and came in direct competition with our overcrowded labor markets. In 1891 and 1892, respectively, there was a large increase in immigration over 1890. Our rapid increase of laborers to the manor born and immigrated far exceed the expansion of our industrial development under normal conditions, much less during this crisis.

The Boston Herald has just analyzed a car of immigrants landing at that port, as follows: It says on the late arrival of the "Cunard steamer Scythia, that of 491 immigrant passengers 314, including women and children, were without occupations. They were ostensibly destined for twenty different States; 305 for Massachusetts, where there are now not less than 100,000 persons with nothing to do; that it is the exception rather than the rule for one to have money enough to subsist on for more than one week." Has not this immense number of poor immigrants constantly ariving greatly augmented our large idle list and injured our idle laborers?

THE BANKERS' SUCCESS.

It is clear to everyone who has kept pace with the silver fight that the banker and bondholder have controlled the press of the country, and created a public sentiment in favor of destroying a great Western industry. The destruction of this industry has also destroyed the manufacturer and laborer of the East.

During the entire session of this Congress the daily cry of the press has been for United States bonds. The weekly statements of the banks show that they are piling up great reserves beyond legal requirement. They want an investment for their idle money and a further basis of a banking capital. One of the first bills introduced in the Senate of the United States was to give them a circulation equal to their bond deposits. The determination is and has been to force the country to use bank conveniences instead of gold and silver.

The banking and money-lending portion of the people have been pampered and favored by legislation until they have consumed and are now consuming all of the profits of the productive industries.

Let us see how the national banks, for which the executive and legislative branches of this Government have such a tender solicitude, have been prospering. From 1872 to 1891 the ratio of dividends to capital, including the 3,575 banks, range from 7.70 per cent to 10.31 per cent per annum. October 31, 1892, we had 3,694 national banks.

National bank statistics of the United States.

Year ending September 1—	No. of banks.	Capital.	Ratio of dividends.
			Per cent.
1872	1,852	$465,676,023	10.19
1873	1,955	488,100,951	10.31
1874	1,971	489,938,284	9.90
1875	2,047	497,864,833	9.89
1876	2,081	500,482,271	9.42
1877	2,072	486,324,860	8.93
1878	2,047	470,231,896	7.80
1879	2,045	455,132,056	7.60
1880	2,072	454,215,062	8.02
1881	2,100	458,934,485	8.38
1882	2,137	473,947,715	8.73
1883	2,350	494,640,140	8.30
1884	2,582	518,695,725	8.00
1885	2,665	534,593,602	7.80
1886	2,784	532,459,921	7.96
1887	3,049	578,462,765	7.98
1888	3,093	583,539,145	8.02
1889	3,170	596,302,518	7.82
1890	3,353	625,089,645	8.19
1891	3,577	660,108,000	7.70

When we bear in mind that from 1872 to 1891 154 national banks failed, were closed for insolvency; that the large stockholders as officers of banks generally receive enormous salaries as managers of their own business, not counted as a part of net earnings or dividends, then we can form some appreciation of the real profits of the solvent and well-managed banks. (See table, page 18, volume 1, Report of the Comptroller for 1892.)

If the successful wheat-grower, cotton-grower, or any other real producer of wealth could receive a handsome salary for managing his business, and by including all of the failures in his line the business should pay a dividend of from 7.70 to 10.31 per cent on all capital in his line of business, we would indeed conclude that he did not need or deserve administrative or legislative concern.

In forty-eight years the banking of the world has increased about elevenfold, three times as fast as commerce and thirty times faster than population. On the 17th of September, 1881, the total receipts of the national banks in New York, other reserve cities, and the banks elsewhere in the United States aggregated $295,233,779, but of this amount only 1.38 per cent was in gold, 0.17

in silver, 4.36 in paper currency, while 94 per cent was in checks, drafts and other bank conveniences. In New York City less than 1 per cent of the payments were made in money, while 98.86 per cent of payments were in checks and drafts. Outside of the clearing cities 81.74 per cent was made in checks and drafts.

It is the object of the banks to completely control the finances, and, therefore, necessarily the business and wealth of the world. It would seem the object lesson we are now being given, wherein checks and drafts are not current even among bankers, would be sufficient to force a conviction upon the most simple-minded and obdurate that legal-tender money of final redemption issued by the Government is the only remedy for or preventive of panics. The great enlargement of the use of bank conveniences and scarcity of legal-tender money are largely causing our present troubles, and this last move is and will be an aggravation of it.

It is admitted by all that if credit was not contracted that general business would not be disturbed. A fatal defect in the use of bank conveniences as a substitute for money is that when the least financial disturbance arises credit is shut off, and there is no substitute for it. Legal-tender money is required to take the place of credit, and it does not exist, and disaster must reign supreme until the old stock of credit can be returned to circulation. We should abandon these special interests and devote our energies to fundamental errors that are undermining the very foundation of our institutions. Give the people more legal-tender money of ultimate redemption, and not more bank conveniences or redeemable money.

Whatever members may say as to being bimetallists or as to keeping the silver we now have in circulation, that they have depreciated silver and laid the foundation for its ultimate destruction there can be no question.

The provision of the Sherman act requiring the Secretary of the Treasury to maintain a parity between the two metals has been construed and is now being construed as requiring the Government to redeem silver dollars with gold, or coin notes, with gold at the option of the creditor. This is no more nor less than making silver an obligation of the Government to be redeemed in gold the same as its greenbacks and must work the ultimate destruction of silver money.

We are now making a volume of history which will be memorable in this and all coming generations. From the very logic of conditions this Congress will go down to posterity as the bankers and money-changers' assembly. This epoch will be known in history as the one wherein the liberties of the American people were consigned to the greed of a merciless moneyed aristocracy.

Amendment of Naturalization Laws.

SPEECH

OF

HON. ELIJAH A. MORSE,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, October 31, 1893,

On the bill (H. R. 3299) to amend the naturalization laws of the United States.

Mr. MORSE said:

Mr. SPEAKER: I desire to say that I can not find words to express my admiration for the patriotic speech delivered by the gentleman from Alabama [Mr. OATES] in support of this bill, and I am sorry that the indications point to the fact that he will be able to command the vote of but a fraction of his party on this floor.

God pity the statesman so gangrened by prejudice that he can see no measure of statesmanship except in the light of his party's advantage. Surely the learned gentleman from Alabama does not belong to that class.

Mr. Speaker, time will demonstrate the wisdom of this measure. God forbid that we should learn it too late; God forbid that we should learn it, as prophesied by Lord Macaulay forty years ago, in mob law, ending in anarchy, and that succeeded by despotism. God forbid that we should learn the wisdom of this measure in the smoking embers of a once free Government.

This bill offers no objection to honest, virtuous immigrants coming to this country seeking a home and desiring to become good citizens, so it is not necessary to discuss that aspect of the subject or that class of immigrants.

Our fathers builded this fabric upon the foundation of intelligence and education. And George Washington in his farewell address admonished his countrymen that education, virtue, and religion were the only enduring foundations of our form of Government.

Mr. Speaker, wise, thoughtful, and patriotic citizens of all parties are crying out for this legislation. I am fearful, unless I misunderstand the signs of the times, that the pilot of your ship of state may cry out that she is on a lee shore and that there are breakers ahead. And the rock upon which the ship of state may founder will be ignorant, disqualified suffrage.

So far from the representation being true—made by the gentleman from Illinois [Mr. GOLDZIER]—*i. e.*, "that naturalization and suffrage in this country is not cheap enough," I assert that it is already a good deal too cheap.

I say, patriotic men are crying out for legislation against the horde of ignorant voters who have no knowledge of our institutions and laws, or the genius of the government for the people and by the people. Let me give you an illustration of a class of men that are now being naturalized and made citizens at the rate of two a minute by the naturalization mills in New York, Boston, and other large cities. The case is this, and it is by no means solitary; it represents thousands: I interviewed a man about to be naturalized, and, calling him by name, I said, "You are going to be naturalized, sir." "Yes," said he; and I said, "What will you be when you come to be a citizen and a voter; will you be a Republican, a Democrat, a Populist, or a Prohibitionist?" and his answer was, "I don't know, Mr. MORSE, what I will be, but I will be agin' the Government."

Now here was a man, representative of thousands, who was going to swear to support the Constitution of the United States and the State in which he lived, who brought with him from Europe and transferred to this Government, of which he was to become a part, the animosities, prejudices, and hatred which he felt for the despotic government from which he had escaped.

The gentleman from Illinois [Mr. GOLDZIER] objects to the reading qualification for naturalization. Why, Mr. Speaker, all history confirms the lesson that this form of government can not exist except upon the basis of the education and intelligence of the voters. Why, what an object lesson is being enacted on the South American continent in support of this bill, at the very moment while we are considering it. Witness the bloody revolution now in progress in the Republic of Brazil and of almost yearly occurrence in all of the South and Central American republics, where attempts are being made with a degraded and ignorant populace, and with no public schools to qualify men for intelligent citizenship.

Witness the bloody revolution in Chile, where every rule of civilized warfare was disregarded, and old men, women, and children were butchered in cold blood on both sides. Witness the war between Chile and Peru, in which similar scenes were enacted.

The history of republics in France, Spain, Mexico, and South America, with an ignorant populace, is but a history of anarchy, bloodshed, and revolution, and I warn my countrymen that history repeats itself, and that we can not continue to embody into our body politic the dangerous and ignorant classes which this bill would exclude without eventually sharing the fate of the states and nations I have here recited.

In the name of the State which I represent, in the name of my glorious country, I ask, have we not ignorant voters enough now in this country to warrant us to erect this slight barrier to more ignorance. A man who does not care enough for American citizenship to learn to read the Constitution of the country is unworthy and not entitled to citizenship.

Why, Mr. Speaker, I confess with shame that there is authority for the statement that the last Presidential election in this country was carried by the votes of men in New York, Chicago, and other cities who had only declared their intention to be citizens and may never be citizens at all.

The gentleman from New York [Mr. CAMPBELL] cries out against this bill. I have very great respect for that gentleman, but I submit that an objection comes with a bad grace from the representation of an organization that under the régime of Tweed spent and stole from the city of New York and taxpayers money by the million.

Why, the city of New York paid as much for carpeting the new city hall as it would cost to carpet the Shore Line Railroad from New York to Boston. Mr. Speaker, the government of Tammany Hall at that date and since has made a republican form of government a hiss and a byword among the nations of the earth which would have been impossible had the qualifications for citizenship contemplated by this bill been in force.

The gentleman from Illinois cries out against this bill, and he is from the home of the anarchists, Chicago, at that. He announces on this floor the astounding proposition that it is safer to let the criminal and ignorant classes vote than not to let them vote.

And I overheard one good brother Democrat say to another on this floor, "Why, where would we have been in the last election if these classes had been excluded?" Yes, where would you have been? Benjamin Harrison would now be President, the complexion of the House and Senate would undoubtedly have been different, and there would have been no panic and prostration of business.

But, Mr. Speaker, this question rises above party, and I would vote for the bill even if it defeated the party to which I belong, because the party that can not stand the provisions of this bill deserves and ought to be defeated.

I say the proposition of the gentleman from Illinois is astounding when you contemplate the influence of this class or any other large class upon the elections and laws of the country. Do you suppose if the Chinamen had a vote in this country that any such act as the Geary law could have passed this House? Not much; the Chinaman would have no end of champions on this floor, who would cry out for his defense louder than the gentleman from Illinois, the gentleman from New York [Mr. CAMPBELR,, or the gentleman from Texas [Mr. CRAIN].

Mr. Speaker, the charge is openly made, the truth of which I do not know, that the present governor of Illinois, Mr. Altgeld, owes his election to a trade with the anarchists of Chicago. Whether that charge is true or not, it would appear that the goods had been delivered. Governor Altgeld has earned the execration of all right-minded people of this country and other countries by his pardoning the red-handed murderers who participated in the massacre in Chicago. And grave as is this outrage upon justice, it is not a circumstance to his justification of the act by his denunciation of the jury and court that convicted them. I submit that had this bill been in force the great empire State of Illinois would have been saved the disgrace of such a governor.

Mr. Speaker, because I believe in intelligent suffrage I am one of those who believe that the Republican party made a great mistake in conferring suffrage upon the ignorant black men of the South immediately following their emancipation. It was done as an offset to the ignorant Democratic vote in the cities of the North; but two wrongs do not make one right; and we, the Republican party, gained nothing by it, we lost by it.

The enfranchisement of the colored people largely increased the Southern representation in Congress and in the electoral college, and the colored people are not allowed to vote, and if they are their votes are not counted.

After the Senate shall have passed the Tucker bill, which wipes out all Federal supervision of elections, then, as never before, the colored people will find it healthy to hoe cotton or rice on election day and keep away from the polls. I can not in my heart blame the South for being opposed to a government of ignorance; I am opposed to such a government myself, either white or black, and that is why I am advocating this bill.

Mr. Speaker, in reconstruction times, when we had the power, had the Republican party adopted an educational or even a property qualification to entitle a man to vote in State and national elections, North and South, black and white, the country would be safer to-day, and the dire forebodings for the welfare of our country would have given place to promise and hope.

Had an educational and property qualification been required of the ex-slaves as a qualification for citizenship it would have been an incentive to thrift, education, and qualification for citizenship, and would have been more gradual, and would not have excited the opposition of the intelligent white voters of the South.

Mr. Speaker, it is no time to throw down the existing safeguards of the country, and it is high time to erect more safeguards, as contemplated by this bill. All honor to the gentleman from Alabama for this measure of statesmanship and for his wise and patriotic support of the same. I wish that he might receive the support of his side of the House. Like Abou Ben Adhem, "he loves his country and he loves his fellow-men, and may his tribe increase."

The great English historian, Lord Macaulay, wrote a letter, to which I have referred, to a man in this country who had sent him the writings of Thomas Jefferson. It is not necessary for me to indorse all this great man says with reference to the future of our country, but this letter contains certain warnings, although written a long time ago, that in the light of our recent experience sound like the voice of prophecy:

HOLLY LODGE, KENSINGTON, LONDON, *May 23, 1857.*

DEAR SIR: You are surprised to learn that I have not a high opinion of Mr. Jefferson, and I am surprised at your surprise. I am certain that I never wrote a line, and that I never in Parliament, in conversation, or even in the hustings—a place where it is the fashion to court the populace—uttered a word indicating an opinion that the supreme authority in the state ought to be intrusted to the majority of citizens told by the head; in other words, to the poorest and most ignorant part of society. I have long been convinced that institutions purely democratic must sooner or later destroy liberty or civilization, or both.

In Europe, where the population is dense, the effect of such institutions would be almost instantaneous. What happened lately in France is an example. In 1848 a pure democracy was established there. During the short time there was reason to expect a general spoliation, a national bankruptcy, a new partition of the soil, a maximum of prices, a ruinous load of taxation laid on the rich for the purpose of supporting the poor in idleness. Such a system would in twenty years have made France as poor and barbarous as France of the Charlovingians. Happily the danger was averted, and now there is a despotism, a silent tribune, an enslaved press. Liberty is gone, but civilization has been saved. I have not the smallest doubt that if we had a purely democratic government here the effect would be the same. Either the poor would plunder the rich and civilization would perish, or order and property would be saved by a strong military government and liberty would perish.

You may think that your country enjoys an exemption from these evils. I will frankly own to you that I am of a very different opinion. Your fate I believe to be certain, though it is deferred by a physical cause. As long as you have a boundless extent of fertile and unoccupied land your laboring population will be far more at ease than the laboring population of the Old World; and while that is the case, the Jeffersonian policy may continue to exist without causing any fatal calamity.

But the time will come when New England will be as thickly populated as Old England. Wages will be as low and will fluctuate as much with you as with us. You will have your Manchesters and Birminghams; hundreds of thousands of artisans will assuredly be sometimes out of work. Then your institutions will be fairly brought to the test.

Distress everywhere makes the laborer mutinous and discontented, and inclines him to listen with eagerness to agitators, who tell him that it is a monstrous iniquity that one man should have a million while another can not get a full meal. In bad years there is plenty of grumbling here, and sometimes a little rioting, but it matters little, for here the sufferers are not the rulers. The supreme power is in the hands of a class, numerous indeed, but select, of an educated class, of a class which is, and knows itself to be, deeply interested in the security of prosperity and the maintenance of order. Accordingly the malcontents are firmly, yet gently, restrained. The bad time is got over without robbing the wealthy to relieve the indigent. The springs of national prosperity soon begin to flow again, work is plentiful, wages rise, and all is tranquillity and cheerfulness.

I have seen England pass three or four times through such critical seasons as I have described. Through such seasons the United States will have to pass in the course of the next century, if not of this. How will you pass through them? I heartily wish you a good deliverance. But my reason and my wishes are at war, and I can not help foreboding the worst. It is quite plain that your Government will never be able to restrain a distressed and continued majority. For with you the majority is the government, and has the rich, who are always a minority, absolutely at its mercy. The day will come when in the State of New York a multitude of people, none of whom has had more than half a breakfast, or expects to have more than half a dinner, will choose a Legislature.

Is it possible to doubt what sort of a Legislature will be chosen? On the one side is a statesman preaching patience, respect for vested rights, strict observance of public faith. On the right is a demagogue, ranting about the tyranny of capitalists and usurpers, and asking why anybody should be permitted to drink champagne and to ride in a carriage while thousands of honest folks are in want of necessaries. Which of the two candidates are likely to be preferred by a workingman who hears his children cry for more bread? I seriously apprehend that you will in some such season of adversity as I have described do things which will prevent prosperity from returning; that you will act like people would in a year of scarcity, devour all the seed corn, and thus make the next year not of scarcity, but of absolute famine.

There will be, I fear, spoliation. The spoliation will increase the distress. The distress will produce fresh spoliation. There is nothing to stay you. Your Constitution is all sail and no anchor. As I have said before, when a society has entered on this downward progress, either civilization or liberty must perish. Either some Cæsar or Napoleon will seize the reins of government with a strong hand, or your Republic will be as fearfully plundered and laid waste by barbarians in the twentieth century as the Roman Empire was in the fifth; with this difference, that the Huns and Vandals who ravaged the Roman Empire came from without, and that your Huns and Vandals will have been engendered within your country and by your own institutions.

Thinking thus, of course I can not reckon Jefferson among the benefactors of mankind. I readily admit that his intentions were good and his abilities considerable. Odious stories have been circulated about his private life, but I do not know on what evidence those stories rest, and I think it probable that they are false or monstrously exaggerated. I have no doubt that I shall derive both pleasure and information from your account of him.

I have the honor to be, dear sir, your faithful servant,

T. B. MACAULAY.

HENRY S. RANDALL, Esq.

It will be seen that I have dealt largely and principally with the question of intelligence in persons proposing to be naturalized and become citizens. There are other aspects of this great question, and the bill contains other important provisions, excluding criminals and persons convicted of crime, etc., that will be gathered from the report of the committee.

I append to my remarks the report of the Committee on the Judiciary, as follows:

Section 1 provides that no alien who has ever been convicted of a felony or other infamous crime or misdemeanor involving moral turpitude, or who is an anarchist or polygamist, or who immigrated to the United States in violation of any of their laws, or who can not read the Constitution of the United States, shall be naturalized by any court; nor unless he has resided continuously for five years next preceding his application within the United States, and for one year in the State, District, or Territory in which the application is made. That no class are by this act made eligible to naturalization who are ineligible by existing law, except Indians who have adopted the customs and manners of civilized life and severed their tribal relations.

Section 2 prescribes a form of petition for naturalization and its verification.

Section 3 provides for the docketing and hearing of such petitions, and for the United States to be represented thereon by the district attorney or public prosecutor, who shall deny its allegations and require proof thereof to the satisfaction of the court, and prescribes, as far as practicable, the measure and credibility of the proof.

Section 4 prescribes a penalty for swearing falsely to such petition or to any material allegation thereof of the hearing.

Section 5 confers jurisdiction upon and specifies the courts to hear the petitions for naturalization. In this there is some restriction of the present law.

Section 6 provides that aliens who have filed their declaration of intention to become citizens before the approval of this act shall not be affected by its provisions.

Section 7 provides that any alien who is eligible to naturalization, except as to the requirement of five years' residence, may take a homestead on the public lands by setting forth his alien condition and intention to become a citizen in his application for the entry thereof; but that no patent shall issue to him until he is legally naturalized. Said section repeals subdivisions 1 and 2 of section 2165, Revised Statutes, and other laws in conflict with the bill. The declaration of intention, the fruitful source of the major part of the evils and frauds practiced on the law, is abolished.

Some of the reasons which influence the committee to recommend the passage of this bill are as follows: The loose manner in which aliens have been naturalized in many places of late years has been most shameful, and in utter disregard of the requirements of our laws, although they are entirely too liberal and inefficient in their provisions. Naturalization of aliens recently arrived from abroad, and knowing nothing of our institutions and Government, just before elections, for the purpose of making voters, has been resorted to in several localities. In States where only the declaration of intention to become a citizen is an essential qualification of the alien to make him a voter, have the greatest frauds and most unblushing violations of the spirit of the law been perpetrated. The bill, however, does not touch the qualification of voters, except incidentally, as that power resides in the States.

The investigations made by the Ford committee in the Forty-ninth Congress developed the fact, as shown by the testimony taken, that in Brooklyn one of the courts was used by imposition and fraud for naturalization purposes by a combination of lawless men, who would naturalize and thus make a full-fledged citizen out of any alien within three days after he landed for the consideration of $25.

Under a resolution adopted by the House of Representatives the 1st day of April, 1890, instructing the Committee on the Judiciary to investigate certain alleged illegal practices of United States courts and officials connected therewith, your committee, through a subcommittee composed of Hons. A. C. Thompson, of Ohio, H. C. McCormick, of Pennsylvania, and WILLIAM C. OATES, of Alabama, among other matters investigated, found and reported to the House the following facts in regard to the naturalization of aliens in the courts of the United States at Boston, Mass.:

The circuit court there has a clerk with two deputies and the district court also has a clerk with two deputies.

Some few years ago, to remedy the loose practice which prevailed in the State courts in the matter of naturalizing aliens, the Legislature of that State passed an act to regulate the practice in its own courts, and to require greater vigilance in the detection of fraud and stricter proof of the right to receive the great benefit of being adjudged a citizen of the United States. When this law was put into practice aliens no longer applied to the State courts, with rare exceptions, but went from all parts of the State, and even from some adjacent States, to Boston, where they found in the United States courts much more convenient methods of accomplishing their purposes.

They found, from the testimony of the clerks, their deputies, and Judge Nelson of the district court, the following practice to prevail:

An alien, wishing to be naturalized, and frequently great numbers of them together, are in the habit of applying to one of these clerks, or one of his deputies, who are provided with blanks printed at the expense of the Government, setting forth all the requirements of the law, which are filled up and sworn to by the applicant. This is deemed a sufficient declaration of intention, and for this work, if the clerk fills out the blank, he charges a fee of $2, but if the applicant comes in with the blank already filled, the clerk charges $1 for administering the oath. When aliens apply to become fully naturalized, the blanks are filled both for the applicant and the witnesses which he brings with him, and then the clerk or deputy, as the case may be, proceeds with the applicant and his witnesses, and sometimes quite a number of applicants at the same time, into the court room when the court is not in session, or to the door of the court room if it be in session, and in either case he says to the applicant and his witnesses, "Now, you are in the presence of the court," and administers the oath to him and his witnesses, retires to his office, issues the necessary certificate, and, if he fills the blank, he charges the applicant a fee of $4, but if the applicant brought in his papers already filled, the fee is but half that sum. The judge's attention, even when present and holding court, is never called to the matter at all, unless the clerk gets up a doubt as to whether the applicant is entitled to be naturalized, and then he refers the matter to the judge, which is not of very frequent occurrence.

Just before elections are to be held, when there is a great pressure of applicants for naturalization, backed up by committees from the different political parties, the judges give in such cases some personal attention to these matters, but usually the applicants are put through and adjudged to be citizens of the United States by the clerk or his deputies, in the absence of the judge and without his knowledge. Neither is it the practice in such courts to make any investigation of who the witnesses are, or whether they are worthy or unworthy of credit. Any two witnesses are generally accepted as competent and credible to prove up ten cases, but the clerks say they refuse to take the testimony of the same two witnesses for more than ten applicants at one time. What a ridiculous farce! The making of citizens out of aliens, which should be a grave judicial proceeding in the exercise of a constitutional function, is left by the courts to its mere ministerial officers who can not exercise judicial power, but run the machine merely for the fees they can make out of it.

Boston, however, is not the only place where the naturalization of aliens is treated as a merely formal or clerical matter, which requires no judicial investigation; it is the rule rather than the exception. If the making of citizens of this great country is of no greater moment why not abolish it altogether and extend the privileges of citizenship to all who come to reside among us? A thing which is worth doing at all is worth doing well. In Congress is vested the power to make laws upon the subject of naturalization. The States have no power to legislate on the subject. Congress should therefore make such laws as will amply protect the State against the citizenization of criminals, paupers, anarchists, and aliens who are unworthy of a residence and much less the citizenship of the United States or of a State. Under the very liberal immigration laws, which are administered with great laxity, over a half million of immigrants are landed on our shores. While about 50 per cent of them are desirable, and aid by their industrious and economical habits to develop our latent wealth, yet these are dearly paid for by the imposition upon the States and the great municipalities where the other 50 per cent congregate. Among them are moral and, frequently, physical lepers, whose practices and methods of life contaminate all who come in contact with them, and are horrible examples of moral turpitude to our young native Americans.

The testimony taken by the Ford committee shows that 75 per cent of all the inmates of the lunatic asylums and poorhouses are of foreign birth.

These States and communities should receive at least the protection of Congress against the making of such creatures citizens of this country. The name "American citizen" should be esteemed as was that of "a Roman" when Rome was the mistress of the world.

Such pride can never be felt by our foreign-born citizens, with but few exceptions, until the process of conferring this great boon upon an alien is attended with more solemnity and scrutinized more closely than at present, and to this end the committee recommend the passage of the bill. Its provisions are liberal and do not prohibit any person worthy to become a citizen of that great privilege. It, of course, requires more to be done by an alien to become a citizen than is required by existing law. The existing law and its administration is in many parts of the country a travesty of judicial proceedings.

The following table, recently obtained from the Census Bureau, is of interest upon this subject:

DEPARTMENT OF THE INTERIOR, CENSUS OFFICE,
Washington, D. C., March 11, 1892.

DEAR SIR: In response to your request, made some time since, I beg leave to hand you a statement which shows for foreign-born males 21 years of age and over the number that are aliens, those that are naturalized, those that have taken out naturalization papers, and those of whom it is unknown as to naturalization. Of the aliens, English or other language is specified. These details are given for the New England States, the States of New York and Delaware, Maryland, District of Columbia, Virginia, and West Virginia.

Very respectfully,

A. F. CHILDS,
Acting Superintendent of Census.

Hon. WILLIAM C. OATES,
House of Representatives, Washington, D. C.

Unconditional Repeal, Unjust.

SPEECH
OF
HON. GEORGE P. IKIRT,
OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, November 1, 1893,

On the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

Mr. IKIRT said:

Mr. SPEAKER: This measure as it stands may and will be construed as against the intent and purpose of the Democratic platform, because that declaration is garbled in this bill. The question naturally arises, when the platform was to be used as a declaration of purpose and a commitment, why was a most important part stricken out?

Mark it well, the financial plank of that platform insists upon a policy that includes all its declarations, and it expressly states why it so insists. It says:

GOLD AND SILVER.

We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future, which should make all its supporters, as well as its author, anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver *without discriminating against either metal* or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the markets and in payment of debt; and we demand that all paper currency shall be kept at par with and redeemable in such coin. *We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.*

Why then was that important phrase, "without discriminating against either metal," left out? Was it not because it is the intent to discriminate against one of them? With this omission there will be a very serious objection on the part of those who will construe the intent of this measure to be a disregard of the interests of the toiling millions and therefore as favoring class legislation.

I for one had expected this amended bill would propose some

legislative enactment and be clear and frank as to a policy to be hereafter carried out.

I with others had a right to expect this, when its author Mr. VOORHEES declared as recently as last February against repeal without accompanying legislative enactment.

In the CONGRESSIONAL RECORD of February 17, 1893, page 1734, among other statements equally strong Mr. VOORHEES says:

> I should have voted the other day to take up what is known as the Sherman act and for its repeal, but for the fact that its passage would absolutely demonetize silver and leave it supported by not one word of legislation. I thought the measure was audacious; I thought it an outrage to ask men, like myself and others, to absolutely sweep from under the silver currency every vestige of law. That is not what we meant at Chicago; that is not what the people meant. I should vote for the repeal of the Sherman act simply because it is vicious in principle, but it must be in connection with something better.

Mr. VOORHEES has changed his views while many others he refers to have not. Neither has the platform or the people changed.

While according to others the perfect right to choose their own course, for myself, I do not feel called upon to shift position in response to every passing breeze with the agility of the weather vane on a barn roof.

I believe the first duty of a Representative is to his constituency; the second, to the best interest of the country as a whole; and in both he should be governed by his best judgment and honest convictions. The people have expected financial legislation with the most relief possible now, and revenue legislation and adjustment at the regular session.

In order to repeal a "makeshift" so-called, I for one do not propose to lay myself open to the charge of seeking to substitute a subterfuge.

> "Oh, what a tangled web we weave,
> When first we practice to deceive."

Remember, the people have denounced demonetization and double dealing for twenty years. It having been determined upon to ask the people to wait for a time at least, on part of the legislative action they had hoped for speedily, it will not be relished by the people of some of the Western States, many of whom will be forced to adjust the hand to the handful, and doubtless in many cases the mouth to the mouthful, or by the thousands of other unfortunates in the land who will be forced to eke out a scanty subsistence during the rigors of winter.

Have we any good reason to suppose the people will be satisfied with this measure as it stands? They will conclude, and rightly, too, that more could have been done. The farmer of the Eastern and Middle States with a mortgage to meet, with wheat at 45 cents and wool at 21 cents, and the planter of the South with cotton at 7 cents, can not be blamed for not being satisfied because this bill did not go farther on the line of true relief. While it may be some consolation to assure him the Democratic party is not responsible for these conditions, it lifts no part of the burden he hoped would begin to lighten materially with the passage of this act.

While I have for a little turned on the flashlight, I am not a pessimist, and I can see there will be improvement in certain directions over the present condition and I hope it may be marked after the passage of this act, but at the same time it is impossible not to see that it can not be expected to be that widespread universal improvement and prosperity for all classes that we hope to see, until the much needed financial legislation which is conspicuous in this measure by reason of its absence is enacted, and which the people had expected would be given by this bill and this extra session, instead of a further contraction and an empty promise. The people asked for neither and want neither. I believe we are here to enact laws and not to promise.

I do not defend the policy of buying and hoarding bullion. The principle is wrong as demonetization was wrong, but it will not do to tell intelligent people the Government is losing money by buying silver, when it gains about 40 ounces out of every 100 it purchases. I would be glad to favor this measure if its policy and intent was not in favor of the single gold standard. I would be glad to support it if it contained, in addition to repeal, a clause to coin a stated amount of silver each month at a ratio to be hereafter determined, for the people thought they had settled everything except the ratio. I would be glad if it contained a clause to increase the circulating medium, by allowing national banks to issue to the amount of their security deposits. I would be glad if it provided for the coinage of the seignorage and thus set free $53,000,000 to electrify business and offset the fifty millions of a deficit that stares us in the face. I would be glad if it declared the financial independence of the United States.

Why it does not at a time like this contain some such measures of relief is not mine to explain any more than it is my purpose to criticize those who may honestly differ with me on this great financial question.

With the part of the platform promise in the interest of the farmers, laboring classes, and merchants—men dependent upon their support and who prosper as they prosper—excised and discarded, with compromise and action in addition to repeal, which would have been satisfactory alike to the friends of the double standard, our party and the people, spurned; with a further contraction at least for a time evident, and no legislative action to compensate therefor, all that remains for the believers in true bimetallism, as contemplated by the Constitution, is not to give their indorsement to the crime of 1873 by supporting this bill; but standing firm in the faith, true to their convictions, the traditions of the Democratic party and its pledges, appeal to the people, as did that revered statesman and beloved patriot, Andrew Jackson, when he summoned the people to the reclamation of their sacred rights slowly filched away from them by a subtle monetary power.

I desire to call the attention of the House and the country to the fact that the vote for repeal of the purchase clause, and to substitute therefor the Bland-Allison act, is an index that shows how strong is the desire to atone for the crime of demonetization perpetrated in 1873. The majority against it in the Senate was only four votes, and if submitted to a vote of the people to-morrow would carry by an overwhelming majority. A majority of Democrats on this floor voted for it.

In union there is strength. Let me say to the friends of the double standard, north, south, east and west, who desire a dollar that is honest to the debtor and creditor alike, think not of local divisions, but stand together shoulder to shoulder within the lines, and entrenched behind the traditions of the Democratic party, contend for the use of both metals as the fathers and the Constitution designed, and sooner or later right will triumph. Then will the plaudits from a grateful people whose affection for silver and the double standard is as strong as is their belief in the Democratic principle that the people should rule, be your well-merited reward. Right will be vindicated. Justice will be enthroned, triumphant.

Silver and Repeal.

REMARKS
OF
HON. GEORGE W. RAY,
OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, November 1, 1893,

On the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

Mr. RAY said:

Mr. SPEAKER: It has not been and is not my intention to speak at any great length on the proposition before the House to repeal that portion of the so-called Sherman law which provides for the monthly purchase of silver bullion at the market price.

If by the purchase of silver bullion, dug from the silver mines of the United States, and its coinage, we could add that amount to our currency or circulating medium and establish a just ratio between gold and silver, I should oppose repeal. But this is not what we are doing, and under the law we can not do this. We purchase the bullion and issue silver certificates in payment, if you please. We have coined millions of this bullion into silver dollars and then have stacked them away in the vaults of the Treasury. It has been impossible to force them into circulation.

The silver certificates are returned for payment, and as it is the established policy to pay gold when demanded, and as we can adopt no other policy without finding ourselves at once on the single silver monetary basis, in effect we pay gold for all, or nearly all, the silver purchased. As our gold receipts are limited, as our gold on hand is very limited, as our outstanding obligations are steadily maturing and gold is always demanded, it has become merely a question of time, and of a very short time at that, before our supply of gold will be exhausted. When that time comes, as come it will and must, in the near future, unless we stop the compulsory purchase of silver, we shall be unable to pay our obligations in gold, and the credit of the nation will be destroyed both at home and abroad.

In only one way can we continue the purchase of silver bullion and maintain gold payments, and that is by the continual issue and sale of Government bonds for gold in order to keep a supply of that kind of money in the Treasury. The results of such a

policy would be most disastrous. On the one hand we should continually increase the interest-bearing debt of the United States, and on the other we should pile up in the Treasury millions of silver coin or bullion where it would be useless to the people and useless to the Government. The result all can see. Disaster, national disgrace, national bankruptcy. Our wealth would be represented by a mass of unused and unusable silver bullion. If coined, foreign nations would not take it, and even our own people would scorn it because a debased coin, not good or usable except when, by law, creditors were compelled to accept it. We might just as well enact that all debts shall be payable in corn, potatoes wheat, etc., at a price per pound or bushel fixed by law, as to attempt to establish and permanently maintain such a policy. Our people are as good as the people of any nation, and our money, legal-tender money, must be as good as the money of any other people.

Again, the citizens of this great country will not approve or permit a policy that shall compel the constant issue of interest-bearing bonds in order to provide a fund for the purchase of silver. The people are opposed to increasing the national debt. If suggested that we can issue bonds payable in silver coin, let me ask where shall we find purchasers who will pay gold for bonds redeemable in silver coin. Such bonds would not sell in our home markets or in the money markets of the world for fifty cents on the dollar. Our own people would not take them except at a large discount, and in very limited amounts at that.

It must be kept in mind that we are one of the principal commercial nations of the world; that England, Germany, and France and Italy are on a gold basis. That these countries are constantly augmenting their gold. That we can not do business with them unless we pay our balances in gold. That millions of our outstanding obligations are held abroad and that these can be returned for payment in gold as rapidly as they mature. If we are to maintain our proud position in the financial and commercial world, sustain our credit and avert disaster, we must cease to expend our debt-paying money in the purchase of a commodity neither usable in payment of our debts nor convertable at will, or at all, except at a large discount, into legal-tender money recognized by and usable in Europe. I am opposed to the demonetization of silver. I am a bimetallist. But each dollar issued or authorized by the Government of the United States must be equal to every other dollar, both at home and abroad. Our policy and our laws should be such as to prevent speculation in legal-tender money. This will be impossible so long as the intrinsic value of the one is greater, to a marked degree, than that of the other.

Therefore in my judgment our future legislation on this subject must be directed to the accomplishment of this end. That the subject is full of difficulty, I concede; but the difficulties of the situation will not deter us from making all possible effort to accomplish the desired result.

We have had a financial panic; we are to have others. We are to have commercial distress, business failures, closed factories, business depression, and the passage of this act will not avert these evils, for their cause is not found in the Sherman law. These evils can be averted, however, by wise action on the part of the Democratic party now in power in the legislative and executive departments of the Government.

Cease tariff agitation and tariff tinkering. Let well enough alone. March 4, 1893, at the close of a successful and brilliant Republican Administration the country was prosperous, our finances were in good condition, money was plenty and easily obtained. Our factories and mills were all busy. The channels of trade were filled with moving merchandise. Our labor was all employed at good wages. But no sooner had the new Administration become firmly seated and its policy indicated, than trouble commenced. Money could not be borrowed; money out was drawn in and hidden; factories were closed; merchants would not sell and would not buy. All our people commenced to deal and to live on the hand-to-mouth policy. Thousands upon thousands of laborers were thrown out of employment and are now in idleness with no prospect of better days in the immediate future.

It is easy enough to discover the cause. The future is full of uncertainty. The Democratic party openly avows its determination to overthrow the industrial policy pursued by this Government with unparalleled success for the past thirty years. It avows its determination to throw open our gates to the unlimited importation of foreign-made goods. It is deaf to the cry of our wage-earners and of our mill owners. It says let us buy where we can buy cheapest, and reward and enrich foreign labor rather than our own. It says let us expend our money abroad rather than at home, lest we enrich our home manufacturers and laborers too rapidly. It appeals to laboring men to sustain them, offering the bribe of a cheap foreign article, but concealing the fact that the wage-earners will find themselves without the ability to purchase any article whatever.

What matters it that foreign goods are cheap if our mills are idle, our factories closed, our industries prostrated, our laboring classes idle and poor and unable to feed or clothe themselves? Can a man be happy in the midst of plenty if the plenty is owned by others and he has not the means to buy? Too proud to beg, too honest to steal, unable to find work, he must starve. There is no other alternative but the poorhouse.

I warn you gentlemen of the majority that unless you call a halt, cease your tariff agitation, announce your determination to sustain, foster, and protect home labor and home industries, and care for your own country and its interests rather than foreign nations and their interests, you will plunge our people into an abyss of financial and industrial ruin from which they can never emerge until you shall have been hurled from power by an indignant and outraged people. If you will do this and do it now, or promptly, confidence will be restored at once, business will regain its wonted activity, every branch of manufacture will be resumed, money will come from its hiding places and seek and find ready investment. General prosperity will take the place of general stagnation, and tens of thousands of idle workmen will march again regularly to their daily toil and return to their gladdened homes at nightfall ladened with and enriched by the fruits of honest toil.

You can no longer attribute our business depressions and financial troubles to the Sherman law. If these ills continue or recur, claim not they are a legacy bequeathed to you by the Republican party; these will be ills of your own creation, which the Republican party predict as sure to follow your present unwise and foolhardy course.

The repeal of the purchasing clause of the so-called Sherman law was proposed by Republicans a year ago. Democrats then scorned the proposition. An intelligent Democratic Executive, wiser than the party, with whip and spur has forced the measure now before us through the Senate. A fast-growing popular indignation at the long delay has aided.

But let us not deceive ourselves with the idea that the wheels of progress and of prosperity will now revolve with old-time speed and ease. With silver and gold money, which we shall continue to have and use, we must also have confidence, stability, steady and active business, employment for the millions, and that we may have this we must have wise legislation in the interest of the home and progress of all our people.

The present tariff produces large revenues. Where will revenue be procured when you shall have largely reduced them? Will you strike down our home industries and increase the cost of the necessaries of life purchased abroad at the same blow? Or is this Congress to be called on to authorize the sale of bonds to provide the means to pay the ordinary expenses of the Government?

I dare assert, here and now, that the political party that adds to the burdens of this people in this way, and to meet a necessity created by such legislation as I have indicated, will be consigned to deserved oblivion by action so pronounced that it shall not be mistaken or misconstrued.

Let us remember that we now have outstanding $346,000,000 greenbacks, $150,000,000 Treasury notes, $330,000,000 silver certificates, over $800,000,000 of Government currency, issued by the Government, every dollar of which we have pledged to parity in value.

This does not include national-bank notes. In the Treasury we have only $83,000,000 of gold pledged to redeem this vast amount of paper currency, and to-day this reserve is being invaded and depleted for the ordinary expenses of the Government; and still you propose to reduce the revenues. It is time to stop the purchase of silver and the increase of the volume of our silver certificates, but it is also full time to give our attention to an increase of the revenues.

The attention of our people is now directed to our business interests, to our material prosperity. No sentiment will control the people now; the ties of no political party are strong enough to hold an intelligent people against their own financial interests when it understands the situation. The people are coming to understand it now. They were told that a change was needed; that it would better their condition. They voted a change in governmental policy, and they find themselves without "change" in their pockets and without the ability to procure it.

It is true that the great American Congress has voted sound honest money for the people in both branches, but it will be noted with interest by all, and with profound satisfaction by all Republicans, that the Democratic party of itself was unable in the Senate to command votes enough, although a Democratic body, to pass the bill. Whatever of good comes to this people by reason of its enactment must be credited largely to the Republican party, and whatever of ill results, if any, we shall not charge to your account but gladly assume, provided only you will keep hands off our great industrial system and allow the United

States of America to take care of itself as the greatest nation of the earth when all its resources and capabilities are considered.

In my judgment the day is not far distant when an international agreement will be reached fixing a just ratio between gold and silver when used as money. Then, and not till then, will it be safe to increase to any considerable extent our silver coinage, but in the meantime it is indispensable that we so legislate that the balance of trade with foreign nations is in our favor and not against us.

Silver.

REMARKS
OF
HON. JOHN DAVIS,
OF KANSAS.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, November 1, 1893.

On the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

Mr. DAVIS said:

Mr. SPEAKER: We are this day to consummate a crime against the American people. We are not only to adopt the distinctive gold standard of valuation, which means falling prices for land and labor and their products, but we are to solemnly announce to the world that we are unable to legislate for our own people without asking the advice of our European competitors and commercial enemies.

Mr. Speaker, there are crises in the affairs of men when the wave of a hand or the utterance of a single word may change the destiny of a nation. Such a time occurred in our history in 1854, when the Missouri compromise, which for a generation had held in check the territorial aggressions of chattel slavery, was repealed. It was repealed with a huzza from the slave power; but it proved to be the Rubicon of that great Cæsar which was then marching on for the destruction of American liberty. To-day, Mr. Speaker, we are in the midst of another struggle, greater and broader than the contest with chattel slavery. It is a struggle with a colossal money power which is seeking with merciless greed to dominate a world and to garner in the profits of all labor in all lands.

The silver compromise law of 1890 has for three years been a check and a stumbling block to the money power in the United States. That compromise is this day to be repealed. It means that the dragon of greed is now to be released within the United States, and that the doctrine of the great Wall street journals, uttered years ago, is now to be enforced. The edict is as follows:

> The American laborer must make up his mind henceforth not to be so much better off than the European laborer. Men must be contented to work for less wages. In this way the workingman will be nearer to the station in life to which it has pleased God to call him.

Mr. Speaker, that spirit of aggressive greed which dominates the American Government to-day with flaunting colors and derisive tyranny began its present policy in 1816, when silver was demonetized in Great Britain for all payments above 40*s*. British bonds bought with cheap money during the Napoleonic wars were then made payable in scarce and dear gold only. In 1819 a law was passed to contract the British paper money, which had "saved England from becoming a province of France." Under the influence of these two contraction laws the English people were reduced to the sorest distress. Troops were kept on foot day and night to compel men, women, and children to starve in peace, and through falling prices and the depression of industry four-fifths of the landholders of England lost their lands.

The success of the money power in England but whetted its appetite of greed, making it more rapacious. In 1862, in this country, the stock-gamblers and money-brokers of the East procured the passage of a law to depreciate the greenback, so that cheap money, bought up at half price, could be invested in United States bonds at face value. A distinguished Senator of the United States has been quoted as saying that "it was necessary to depreciate the currency in order to make a market for the bonds."

In 1869 bonds bought with cheap paper were made payable in coin. In 1873 silver was demonetized, so that bond loans of cheap paper are finally to be paid in scarce and costly gold. And, Mr. Speaker, looking back over our financial legislation for thirty years, the trail of the serpent marks every law, with only a single exception—in the case of the law of 1878, partially restoring silver as a money metal.

Mr. Speaker, let me mention to you some of the legislation that has been enacted in the interest of the great fund-holding money power through violations of solemn contracts with the people. There were many millions of United States bonds issued during the war, which by their terms were payable in "lawful money of the United States." Not one cent of coin was used in their purchase or sale. Plainly they were payable in lawful money only, and not otherwise. These bonds were issued in 1862, 1863, and 1864.

Later on the bondholders (not the people) desired a change of contract. By means fair or foul a change of contract was effected by act of Congress. At the bondholders' request (not the people's) the law of 1869 enacted that those bonds should be paid in coin. That was the new law and the new contract, as per request of the bondholders, and the people everywhere acquiesced. This change of contract added to the market value of the bonds at that time. It was a clean steal from the people by the bondholders—by that "communism of capital" which now charges that the people desire to rob them.

All United States bonds after 1869 were payable in coin. In making them so the great war governor of Indiana, Oliver P. Morton, said that four solemn statutory contracts were violated. Yet the patient and wronged people acquiesced in the new coin contract and said "Amen!"

But not so the bondholders. These arch repudiators of laws and contracts next swore by all the powers of the bottomless pit that the silver coin of the Constitution is no good, and that "coin" means gold only! All who oppose this last act of repudiation of laws and contracts are branded as "anarchists" and "repudiators." They are charged with holding "communistic doctrines" and with desiring to rob somebody. This whole charge against the people of the West is false! They desire no repudiation and no change of contracts. The present uprising of the people of the West, in a lawful and peaceful way at the ballot box, is merely a protest—a mild, lawful, and just protest—against being further robbed.

Now, Mr. Speaker, I desire to say that in addition to the public debt by law and contract thus made payable in coin (not gold) there have been forced upon the people of the United States through the Wall street policy of currency contraction many billions of private debts, payable in lawful money, which it is now claimed by the creditor classes can only be honestly paid in gold coin. In the creation of these mountains of debts the people borrowed the cheapest currency afloat. Not one cent of gold, and the contracts did not mention gold. Then why should we pay gold? There now rests on the State of Kansas in the form of private debts secured by real estate mortgages $235,000,000. On Illinois real estate, $384,000,000. On the real estate of Pennsylvania $613,000,000. Other States are also dangerously afflicted with the mortgage fiend, perforce of currency contraction.

Our creditors claim that Government money (which will buy more than the money we borrowed) is not good and should be destroyed; that the silver coin of the Constitution is base metal, and should be discarded (except the light coins for small payments to labor). Our creditors claim that these billions of mortgage debts must be paid in gold coin only or we must surrender our homes! And we are surrendering them in the West as fast as time can move and the courts can grind.

In the East the conditions are as bad. Hon. JOSEPH H. WALKER, of Worcester, Mass., stated on the floor of the House in May, 1892, that the farms of New England are worth about half the cost of improvements. This means that the lands go for nothing and half the improvements thrown in.

Sir, our farmers seem to be fast sinking into the condition said to have been recommended by a great Eastern journal some years ago. The New York Times is credited with stating editorially some years ago as follows:

> There seems to be but one remedy, and it must come—a change of ownership of the soil and a creation of a class of landowners on the one hand, and of tenant farmers on the other—something similar to what has long existed in the old countries of Europe.

Now, sir, since that policy is being carried out precisely—since the people of the United States are being disinherited through the advice of the Wall street papers and the masters they serve—since the people can only remain in their homes as tenants in competition with the incoming millions of the Old World, who are content to accept life on the hardest possible terms: or if, on the other hand, we must part from our homes, friends, and loved ones, and each take his or her chances for precarious existence as mendicants in the great and growing army of the "overpowered"—is it not a little cruel for the robbers who seek to put us beneath their heels to brand us as "wild communists" and accuse us of being ourselves repudiators? Is not this adding insult to injury? Does it not remind one of the crack of the whip of the slave-driver who dried the tears of his victims by making their sufferings too severe to be mitigated by weeping?

Mr. Speaker, I wonder how much safer our would-be masters feel than Lord North felt prior to 1775? How much safer do they feel than King Louis felt prior to 1789? How much safer than the slaveholders of this country felt prior to 1860? Do they believe that the most patient and long-suffering people on earth have lost every sentiment of patriotism since 1776? Do they believe the people of this country, who suffered and sacrificed so much in the sixties for the freedom of another race and the perpetuity of free institutions, will ultimately submit to a more cruel form of slavery for themselves and their wives and children than chattel slavery can be?

Sir, if they believe all these things, and with a big ha! ha! push on their scheme of "a change of ownership of the soil," and should they ultimately find themselves in hot water, they can not say they had not timely warning.

Prior to 1789 France contained the largest landed estates and the most heartless landlords in Europe. The people were disinherited, homeless, and starving. It is not so in France now.

Prior to 1860 every black man in the South, in this country, was a chattel slave, and every white man, North and South, was, by law, a bloodhound to catch him when he ran away. It is not so now. It must be a long lane that never ends or turns.

Mr. Speaker, the people of this country have their remedy. The ballot box is still open to them, though its sanctity is often violated in the interest of the invaders of our rights. As for the agents and attorneys of the dominant money power of the East, which has made so much progress in the subjection of the people, I suggest that they should learn something from the lessons of history. The patient people are waking up. It is said that men can not see but they can feel. They feel in their pockets; they are empty. They feel in their stomachs; they are hungry. They feel the grip of the sheriff on the shoulder; it is an eviction. Then long-closed eyes are opened for the first time. Brave men turn pale, women weep, and children cry with hunger. Millions of people are now homeless and hungry in the great cities of this country. Tens of millions of pockets are empty through lack of work, and bankruptcies and evictions are common in all parts of the land.

Mr. Speaker, by the repeal of the "Sherman compromise" of 1890, it is to-day decreed that money shall be still scarcer and dearer. That bankruptcies will be more general, and idleness, hunger, and general distress more prevalent. Mr. Speaker, I have studied the subject I discuss for forty years. I but utter the voice of history. We now consummate the greatest crime of our generation. The greatest crime since the days of 1816 and 1819, when the British Parliament demonetized silver in England, and decreed general destitution, eviction, and death for the British people. That was the crime of the London money power dominating Parliament; and this is to-day the enactment of a decree of that same money power dominating the American Congress. With voice and vote, Mr. Speaker, I join the minority of this House in solemn protest against this crime, committed by merciless greed against the happiness and prosperity of the American people.

Silver.

SPEECH
OF
HON. ALEXANDER B. MONTGOMERY,
OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, November 1, 1893,

On the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

Mr. MONTGOMERY said:

Mr. SPEAKER: I take advantage of the privilege granted by unanimous consent to all members of this House only to say that this question of the repeal of what is known as the Sherman law for the purchase of silver has been under consideration by the country ever since its repeal was denounced as a "cowardly makeshift" by the Democratic convention nearly eighteen months ago. Since this extra session was called to consider its repeal it has been under consideration and debate by one House or the other continuously for nearly three months.

After a full and fair discussion in this House, we were given an opportunity to record our votes on amendments which would enable us to substitute for this law such unlimited or partial coinage of silver as might meet the approval of the House. All these amendments were voted down, and a bill substantially the same as the Senate substitute, now under consideration, was by an overwhelming majority adopted.

This bill has been considered in the Senate continuously for ten weeks and is returned to us substantially as it was when it left this House. It and all amendments of and substitutes for it have in this House and the Senate had the fullest and freest discussion and it is known not only by the House itself but by the whole country that a very large majority of the House are not only for the bill but opposed to all amendments to it. Under these circumstances it is evident—indeed confessed—that the motion to refer to a committee with instructions, the motions to adjourn, take a recess, and all other motions not necessary to a speedy vote on the bill, are made for the purpose of obstruction and delay, and as such I vote against them.

The people whom we represent rightfully demand that after three months' consideration of the question it should be promptly disposed of by the vote of this House in order that the business of the country, too long disturbed by this agitation, to the great injury of all, be restored, if possible, to its normal condition. The policy of this House—a wise policy, in my judgment—was from the beginning to deal with the question promptly. This policy met the approval of the country when the question was before the House two months ago, and my judgment is that if we vote down all motions looking to delay or obstruction, which can not change the final result, and dispose of this bill to-day, our prompt action will meet the approval of the people who without reference to their views on the subject, are tired of an agitation which they know can not affect the final result.

Silver.

The most valuable additions made to legislation have been enactments destructive of preceding legislation; and the best laws which have been passed have been those by which some former laws have been repealed.—*Buckle's History of Civilization.*

SPEECH
OF
HON. WILLIAM L. WILSON,
OF WEST VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 26, 1893.

The House having under consideration the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes"—

Mr. WILSON of West Virginia said:

Mr. SPEAKER: I shall endeavor to occupy the few minutes I have reserved for myself to close this debate, more from a sense of duty because of my connection with the bill than from any sense of the need of further argument. Indeed, with the speech of the gentleman from New York [Mr. COCKRAN] still echoing in this Chamber, and with the recollection of many speeches that have enlightened the protracted course of this discussion, it would seem impossible for anyone, and least of all for one on whom the detailed management has been somewhat thrown, to gather up either facts or arguments that can lend freshness or force or interest to this controversy.

It was inevitable, Mr. Speaker, as it was greatly to be desired, that this debate should range somewhat freely over the whole field of financial theory and financial experience. We have all felt, as we have listened from day to day to the earnest, intelligent, and sincere debate on this question, that the American people were getting an education they needed and that our own ideas were being cleared upon an infinitely important subject.

But I shall not attempt to follow this line of discussion; I shall attempt nothing more than a brief and plain statement of the nature and purpose of this bill, and of the imperative reasons that now call upon Congress to pass it without conditions and without amendment.

By universal admission the Sherman law has failed to accomplish the results expected by those who framed it. It was expected to raise the value of silver bullion in this country and consequently throughout the world. It was believed by men of experience and of reputed wisdom in financial matters that when the United States went into the market and purchased every month at the market price virtually the entire American product of silver, virtually one-third of the entire world's product, it must raise the price of that metal everywhere in the world, and go far toward restoring its aforetime parity with gold.

That expectation has proved to be fallacious. Almost from

the first enactment of the Sherman law, certainly from the ending of the brief burst of speculation that followed its enactment, we have seen silver plunging lower and lower, until it has reached such a cheapness and such a variableness of value that the greatest silver-using people of the world, in the agony of financial distress and impending commercial disaster, have been obliged to close their mints to its free coinage.

It was expected, Mr. Speaker, that when the United States poured into the channels of trade in this country $4,000,000 and more legal-tender Treasury notes every month, there would be a wholesome expansion of our currency and from such expansion a quickened prosperity to all the business of this country.

This expectation has been equally falsified. Instead of expanding, it has worked a harmful contraction of the currency. For every million of Treasury notes thus poured out, more than a million of gold has disappeared or gone into hiding.

And lastly, sir, I think no observant and thoughtful man can doubt, however he may speculate along the interesting lines pursued by the gentleman from Maine [Mr. REED] this morning, that a great contributing cause, if it be not the efficient primary cause, of the unspeakable distress which pervades our land today, and of the threatening gloom that still darkens our skies, is to be found in the working of the purchasing clause of the Sherman act.

From the beginning of the operation of that act we have seen those who owed the Government paying their obligations in forms of currency—Treasury notes, silver certificates, and the like—which depend for their full purchasing or debt-paying power upon laws of Congress and the faith of the Government. At the same time we have seen a steady run upon the Treasury for its gold—the only form of our currency which, independently of laws of Congress and of the faith of the Government, carries into every market and into every country its face value within itself.

Holders of securities, public or private, payable in this country and in its legal tender, whether they live in foreign lands or here, have seen the Government of the United States issuing monthly for the purchase of silver bullion to be stored away in the Treasury $4,000,000 of gold obligations—for these obligations must be paid in gold if demanded by the holder as long as the Government undertakes to preserve the parity of its coins; and at the same time they have seen the stock of gold available for the support and payment of these obligations rapidly disappearing from the Treasury and from the country also.

Can any one deny that this was the beginning of our embarrassment, or that it is in itself a substantial and sufficient cause, in the delicate relation of debtor and creditor, to set in motion the financial panic that has swept like a cyclone over the country and under whose blighting force so many of our greatest industries to-day are in distress and prostration?

Let me consider briefly the objections that have been urged in this debate to the repeal of the purchasing clause of the Sherman bill. I can do no more than summarize them.

First, it has been said, from the very first speech to the last, that by stopping the purchase of silver bullion we shall throw the country to the gold standard for the settlement of all balances, the effecting of exchanges, and the payment of debts. Mr. Speaker, the countryman in the play, who was so astonished to learn that he had been speaking prose all his life, had no less reason for his astonishment than gentlemen who have learned in this debate that we are already on the gold standard and that we have been on the gold standard throughout all the business life of every man who has taken part in the discussion. We have had the single gold standard since 1834, through the operation of those economic laws which no statutes of Congress can override or defy. We have had the single gold standard since 1873, by the express enactment of Congress which declared the gold dollar to be the unit of value in the currency of the United States. By this standard we buy and sell, borrow and loan, and make our contracts for the future payment of money. And so have we been doing for sixty years, except for that interval during and after the war when all specie payments were suspended in the country.

What then, Mr. Speaker, is our trouble to-day? Simply this. The Government is steadily increasing its issue of gold obligations and of depreciating dollars, and with the visible lessening of its stock of gold a fear and doubt—whether reasonable or unreasonable is entirely irrelevant—have arisen as to its ability and its purpose to meet those obligations and to keep those depreciating dollars up to the legal standard it has established for the money of account in our country. As the silver bullion in the Treasury, or in the coined dollar, sinks in value as compared with this legal standard, a greater stress is laid upon the Government, a greater test is made of its ability and of its purpose to maintain these and all its other forms of credit currency at a parity with the gold standard.

Again, Mr. Speaker, it has been almost angrily contended from the beginning of this debate, that if we stop now the purchase of silver bullion, as required by the Sherman act, we shall demonetize our silver, or, as the gentleman from Missouri [Mr. BLAND] has just expressed it, destroy the silver currency of the country entirely.

Why, sir, the bill proposed does not demonetize a single silver dollar anywhere, circulating or stored away, in this country to-day. It has not come to destroy, but to save. It has not come to strike down or destroy any part of our silver currency, but to place it, once and forever, on an impregnable basis of parity with the gold currency of the country. [Applause.]

Mr. MARTIN of Indiana. Will the gentleman permit an inquiry?

Mr. WILSON of West Virginia. I have very little time to yield, but will submit to a question if it is brief.

Mr. MARTIN of Indiana. Will the passage of the so-called Wilson bill for the repeal of the purchasing clause of the Sherman silver act necessitate the sale of United States bonds to secure gold for any purpose?

Mr. WILSON of West Virginia. That is a question to be answered only in the light of experience. When it comes to prophesying, the guess of one man is almost as good as that of another.

But I say to my friend from Indiana that in the light of the experience of other countries, especially of France and the Scandinavian nations, of Canada and of Holland, the mere passage of a law limiting the purchase of bullion and the coinage and issue of silver dollars would, as I have already declared, at once and forever put and keep our silver currency on a parity with our gold, and there would be no necessity to issue a bond for that purpose. [Applause.] This repeal bill is not only the pledge and promise of such parity; it is in itself the performance of that pledge. [Renewed applause.]

Why, Mr. Speaker, when gentlemen declaim that the intention and effect of the bill are to strike down our silver currency and limit us not only to a gold standard but to a gold currency they not only ignore our own experience and our own laws, as I have already shown, but they shut their eyes to the experience and action of that people from whose dealing with silver we can just now learn most salutary lessons. I mean the people of India. The government of India has expressly declared that in shutting its mints to the free coinage of silver it has done so with a view to the introduction of the gold standard, but with no present intention of introducing a gold currency. Sir David Barbour, the financial minister, on whose advice the Herschel committee acted, and the final legislative decree of the Indian Government was made, directed especial attention to the fact that France and other nations have found it perfectly safe and feasible to maintain a large circulation of full, legal-tender silver, with a gold standard; some of these nations indeed with a comparatively small supply of gold.

Mr. MCMILLIN. Will the gentleman permit me to ask him a question right there?

Mr. WILSON of West Virginia. One more? Yes.

Mr. MCMILLIN. One is all I want to ask. Do you propose, then, to follow up this bill with any measure looking to the extension of silver coinage, and, if so, when?

Mr. WILSON of West Virginia. I fully agree with the remark of the gentleman himself in the speech he has just made, that it is the desire of the American people to maintain a large volume of silver money. And I will add that while I have no authority to speak for anyone except myself, I am satisfied that it is the earnest desire of this Democratic Administration not only to support the existing issue of silver in this country, but to increase the volume of silver currency to the utmost extent that it is safe to do so, and still preserve its parity with gold, without taxing the people, through bonds, to accomplish that result. [Applause.]

I ask now to have my remaining ten minutes to myself.

Mr. MCMILLIN. I beg the gentleman's pardon. A gentleman in charge of a great measure generally does not decline to be interrupted at all.

Mr. WILSON of West Virginia. I am very glad the gentleman asked the question he did. Having given away most of my time, I am simply begging that I may occupy the brief remainder without interruption.

Again, sir, it has been generally argued by those who oppose this repeal bill that to preserve the gold standard as we have had it for sixty years, or, as they mistakenly contend, to adopt that standard, is to work injustice to the debtor class, because gold, they assert, is appreciating in value and the burden of debts is steadily increasing in consequence. The decline in the market prices of many products, and especially of most of our staple farm products, seems to give color to this argument, and the facts that seem to sustain it have been put forward with great plausibility by several gentleman in this debate.

But, Mr. Speaker, a very slight examination of those facts

will show that they can not be made to prove any such argument. The true test, already stated by the gentleman from New York, is the wages of labor. If gold has appreciated in value in recent years that appreciation ought to show itself in a decline in the wages of labor and in the price of articles still made by hand labor.

But there has been no such decline; on the contrary a visible and progressive rise. Wages are twice as high in the United States as they were fifty years ago; twice as high in England as they were fifty years ago; much higher than they were in the past in every one of the enlightened countries of the world. I venture to affirm, sir, that it will be very hard to find any great article that has fallen in price where the decline may not easily and unmistakably be traced to one of two great causes, and often to the joint operation of both of these causes; either an immense increase in the source of supply or immensely cheapened production through those great inventions and discoveries of our day that have so mightily economized and multiplied labor in the production and transportation of manufactured articles and even of agricultural products.

Take cotton, around which our Southern friends have naturally grouped their argument. The gentleman from South Carolina [Mr. BRAWLEY], in his admirable remarks on yesterday, incidently mentioned that the cotton crop of the United States now reaches 9,000,000 bales. Why, in 1873 the cotton crop of all the world was little more than 6,000,000 bales. Take wheat, the chief crop of many of my own constituents. Before me sits the gentleman from South Dakota. He knows that twelve years ago scarcely a bushel of wheat was raised in the two Dakotas. To-day the millions of acres of North and South Dakota alone supply almost enough surplus wheat to meet the demand of our chief customer, the United Kingdom of Great Britain and Ireland. Could any man expect that such rapid and phenomenal increase in the supply of these two staple products, without a like increase in the demand for them, could take place without a temporary unsettlement and depression of their prices in the world's markets, especially with the new and greater obstacles in the way of their profitable exchange which recent legislation of Congress has brought about?

Mr. Speaker, will gentlemen complain of cheapened production and lessening cost of the necessaries of life if the wages of those who toil to produce them have meanwhile and everywhere gone up? Will they oppose the opening and development of new regions of our land because thereby cheaper food and cheaper clothing may come to all the people? Must we bemoan the triumphal march of invention and rail at the bounties of science because they open to the masses of mankind a way of escape from ignorance and poverty and beget the hope that all men may rise to a richer and nobler life?

What, sir, is all this but the emancipation of man from the servitude of constant drudgery? If by a less expenditure of labor he can free himself from incessant and grinding toil, enter upon a higher plane of life, and gather around him more of life's comforts, refinements, and luxuries, surely gentlemen ought not to declaim against this as a wrong to mankind and a hurt to those who labor.

And now, Mr. Speaker, I will consider, with equal brevity, the benefits that are expected to flow from the passage of this bill and from the immediate and unconditional repeal of the purchasing clause of the Sherman law. The first benefit will be the restoration of confidence of the people of this country in their own money and in every dollar of it. If the experience of France and of the other nations I have mentioned is worth anything, it justifies us in the confident belief that as soon as we draw the line where it now is, and say that for the present at least we will purchase no more silver bullion and add no more depreciated dollars to the currency of the country, from that very day every dollar in existence will be recognized as the equal of every other dollar in purchasing and debt-paying power, and no man will be troubled as to whether his debts or his contracts are to be settled in paper, in gold or silver, or in representatives of gold or silver.

Again, Mr. Speaker, gentlemen demand an expansion of the currency as the vital need of the country, and inquire if this bill is to be followed immediately by some legislation to increase the volume of our circulating medium. Sir, there is no expansion of the currency within the compass of their imagination that would work as quickly, work as safely and as effectually to restore the country to commercial health as to let loose at once from its hiding places the $1,700,000,000 of money already in this country.

It has already been shown—and I am embarrassed in going over ground so much more fully and carefully gone over by others—that it is not so much the quantity of money as its unquestionable quality, that creates confidence and supports that wonderful superstructure of credit through which a large and increasing part of the business of every State in this Union is done to-day. In the growth of modern trade, in the natural development of our marvelous industrial system, economy in the use of actual money, increased efficiency of every dollar as a debt-paying instrument or measure of exchange, have kept pace with all the other improvements and progress of this age.

Money, to-day, speeds on the lightning express, flies on the wings of the telegraph, is transferred in the twinkling of an eye from one end of the country to another, from continent to continent, and it does this through the perfection and windening use of its convenient representatives which have become the tools of exchange of almost all our modern business.

To-day, sir, gold and silver, and United States paper money—in a word, what we generally understand by the term money, especially when we speak of currency expansion—perform but a small part of the actual transactions of the country. I have examined, in the past few days, the report of the transactions of the New York clearing-house. For the year 1892 the average currency exchanges per day were nearly $120,000,000, while the average currency balances per day—the money actually required to settle those exchanges—were but little more than $6,000,000.

That which is done upon a large scale in New York is done upon a smaller scale in every other city, and even in the towns and villages of our country to-day. Not money itself, but representatives of money, pay debts, transact business, effect exchanges. Sir, this mighty fabric of $120,000,000 can rise and rest securely upon a basis of $6,000,000 of money, upon one condition only. There must be no doubt of the permanence and stability of that basis. If doubt and distrust arise as to the safety of that foundation the fabric of credit shrinks, as we have seen it shrink recently from one hundred and twenty millions per day to sixty millions, a contraction of the currency in a single city of $60,000,000 in a single day.

Restore confidence in the actual money of the country, remove all ground for doubt that any dollar bearing the Government stamp is to be worth less than its face value, and you will bring forth, as if by magic, every hiding dollar in the land. You will renew and increase public confidence in the foundations of our great and expanding credit system. Vigor and enterprise will once again appear in our markets, and we shall have in a greater measure than we have had in recent years the blessings and encouragement that come from a stable currency in the development of the country, the increase of its production and commerce, and in the employment of its labor. [Loud applause.]

Uniform System of Bankruptcy.

REMARKS

OF

HON. JOHN DAVIS,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, October 26, 1893,

On the bill (H. R. 139) to establish a uniform system of bankruptcy throughout the United States.

Mr. DAVIS said:

Mr. CHAIRMAN: If evidence were needed to prove that the people and business of this country had drifted on to the financial breakers and that something ought to be done to redress the situation, we have that evidence in the fact that leading men of both of the old parties during the Fifty-second and Fifty-third Congresses have introduced bills "to establish a uniform system of bankruptcy." The Constitution of the United States authorizes the use of such a system; but the occasions for such a law are so rare that during a century and more of our existence only three such laws have been found necessary, and each of those laws were of short duration, being repealed as soon as the exigency which called it into existence had passed away. The fact is, Mr. Chairman, the bankrupt law, as that term has usually been used, is only another name for a repudiation law. It means to wipe out the present status of debts and credits and begin anew.

It means, Mr. Chairman, more than that. It means that the debtor shall begin at the very bottom of the financial ladder

with money all gone and reputation little better. And, sir, it means still more than that. It means in many cases that the losses of the creditors who get but a moiety of their dues through the bankrupt courts, too often are reduced to the necessity of beginning also at the bottom of the ladder, alongside of the debtor, both in the bankrupt condition together. Too often, sir, it will be found that the attorneys and the court officials are the only parties who make a profit through the operation of the bankrupt courts.

I shall not dwell, however, Mr. Chairman, on this feature of the case. I desire, first, from the very fact that bankrupt laws seem to be necessary to prove that something in the financial world has been going wrong. The leaders, writers, and speakers of the party which I in part represent on this floor have long pointed out the approach of the conditions which now exist in this country. We have not only pointed out the coming conditions, but we have pointed out the causes that have been bringing them about. And, sir, I deem it a sign of progress that the leaders of the old parties are now acknowledging the existence of the conditions, but they are not the men to speak of the facts which we have mentioned to prove their existence.

One of the advocates of the bill before the House tells us that former laws of this kind have been "emergency laws," and, of course, takes the ground that this one is; and he proceeds at once to argue that there is at present a demand for such a law. I quote from the gentleman from Pennsylvania [Mr. WOLVERTON], who, speaking of former laws and the present necessities, argued as follows:

All these acts were emergency laws passed hastily, and some of them did not and could not be expected to contain the safeguards necessary to prevent abuses. It has been freely stated that there is no demand for the passage of an act at this time, nor any necessity for such law. We have been without a bankrupt act for fifteen years. For the last eight or ten years there has been a continuous and persistent demand for this legislation from the merchants, the manufacturers, and honest insolvents of every State. Petitions have been sent to Congress from boards of trade, mercantile and industrial associations, and men of miscellaneous occupations all over the country. For the last ten years legislation of this character looking to the passage of a permanent bankrupt law has been under consideration by the House of Representatives and in its Judiciary Committee and in the Senate.

The ablest men throughout the country have given it their attention, and have rendered valuable aid by making suggestions covering almost every provision of the bill. The great volume of the business of this country is transacted upon credit. Although the amount of money per capita to-day is twice as much as it was in 1860, it is not a tithe of what would be necessary to carry on the commercial transactions of the country if all business were conducted on a cash basis. No financier could accurately calculate the amount that would be required. Mr. Albert C. Stephens, editor of Bradstreet's, in a recent article in the Forum, says that 95 to 98 per cent of the wholesale business of the country is carried on by credit.

In a great manufacturing and commercial country the credit system is absolutely necessary. Every time an article of trade or commerce is sold by one and purchased by another, and not paid for in cash, a debtor and creditor are created, and sometimes more. All credit is based on confidence. The loss of confidence in any community is the destruction of all credit. The passage at this time of a judicious bankrupt law will go far toward restoring confidence and strengthening credit. The creditor would not be obliged to watch both debtor and his associate creditors. He would feel assured that he stood on the same footing of every other creditor, and in case of misfortune would receive his share with the rest.

The true basis of credit is the certainty that all contracts will be honestly performed. How can this be exacted except through wise laws to compel the payment of debts promptly, equally, and justly to the extent of the debtor's means?

The business stagnation that now pervades this country has its foundation in a want of confidence. This want of confidence has resulted largely from the failure of debtors to meet their obligations. The insufficiency of the laws to protect all creditors alike in such times ends all credit.

From a table carefully compiled from the Bureau of Statistics I find that for the years 1879 to 1891, inclusive, there were 118,711 failures in the United States, with liabilities to the amount of $1,804,537,732. If the years 1892 and ten months of 1893 could be ascertained these figures would be enormously increased. I find for the same years there were 10,767 failures in Pennsylvania, with liabilities $176,212,624. In New York 14,987 failures, with liabilities $460,102,688; and in other States correspondingly.

Table of failures for each of the States and Territories.

The number of commercial failures and the aggregate liabilities in dollars of those who have failed from 1879 to 1891, inclusive, for each of the States and Territories, together with the totals for all of the States and Territories, are shown as follows:

States and Territories.	Number of failures.	Liabilities.
Alabama	1,378	$19,512,207
Arkansas	1,486	13,314,580
California	6,799	75,595,160
Colorado	1,682	13,621,017
Connecticut	1,910	21,671,161
Dakota (North and South)	901	8,351,775

Do not these figures show the necessity of some legislation on this subject? In my opinion, a wise and judicious bankrupt act passed at this time would do more to restore confidence, to start the wheels of our factories, and give an impetus to commerce and traffic and to rekindle the fires of ambition in the breasts of honest insolvents than any other act Congress could pass. I regard it as the most important legislation before this Congress. I believe it should claim our earnest and careful consideration, and that any law we pass should avoid the defects in previous acts, and should be intended to remain permanent on the statute books.

Mr. Chairman, in my opinion, the gentleman has made out his case. He has not only proven that there is an emergency which demands attention, but he has stated the true cause, viz., too

little money and the much credit. In the same line of thought and for the same purpose, I quote from the report of the committee in charge of the bill we are considering, pages 2 and 3:

The very general demand which has been for some years and is now being made upon Congress to pass a uniform bankruptcy law, calls attention to the following singular condition of affairs. At the time of the framing of the Constitution for the establishment of the Government the need of a bankruptcy law was foreseen. Accordingly a provision was inserted in that instrument reserving to Congress the power to pass one. A provision was also inserted by which the States were forbidden to impair the obligation of contracts. The result was that such a law could only be passed by Congress.

And yet there has not been a bankruptcy law on the statute books for some fourteen years.

In 1800 a bankruptcy law was passed, which was repealed in 1803. During 1841 Congress again acted. That law became the subject of political contention and was repealed, to take effect March 3, 1843. At the close of the late war the agitation was renewed and a measure was passed in 1867, as a relief act to those who had been financially wrecked. It was a crude, one-sided law in the beginning, and partook of the imperfections of the legislation of those days. It was subsequently amended, so that it became burdensome to the people whom it was intended to benefit, and as a result it was repealed eleven years afterward, in 1878.

It is contended by many very conservative people, and possibly by the opponents of bankruptcy legislation, that because the former laws were in turn repealed a good one can not now be drafted. To admit this proposition would be to deny the possibility of intellectual progress; to ignore the spirit of the age in which we live, and to forget that the errors of the past in matters of legislation upon this subject constitute the greatest safeguards that we have in drafting a new law. The first Congress which legislated upon this subject was without precedent or experience, but from our present standpoint there is a beacon light upon every error in legislation upon this subject, both by Congress and the States.

The latter part of this statement would seem to indicate that under the old theory of repudiation of debts it had been found very difficult to frame a satisfactory bankrupt law. England has been working at the experiment about three hundred and fifty years, and it is said that some of her laws in this line have been amended about two hundred times, with results not yet satisfactory. In my opinion, Mr. Chairman, the bankruptcy ship should be put on a different tack, in the line of payment of debts, instead of repudiation.

Before I am through with the subject I hope to show that most of the business failures of this country are caused directly by unwise class legislation by the General Government; and, since the Government is the cause of the bankruptcy to a very large extent, the relief should come in the form of help by the Government for the unfortunate, and that help should act as a partial prevention of bankruptcy in the future. The Government should act for the welfare of the people, and not for their injury. In my opinion, nine-tenths of the business failures in this country, as well as in other commercial countries, come through the contraction of the currency, and my purpose on the present occasion is to establish that point and to present a simple remedy and prevention for the evils which now afflict the country.

Mr. Chairman, I now desire to call attention to the following statement and table of clearings, to show the proportion of money necessary to make commercial credits sound and safe. In view of the fact that a very large share of the business of the country is done with private paper, many superficial thinkers tell us that the volume of money is an immaterial factor. But when the case is fully understood it will be seen that the smaller the amount the more important that moiety becomes. Thus in the clearings of the New York banks, the average amount of money needed to pay balances is less than 5 per cent. Over 95 per cent of the business in the New York clearing house is done with checks, drafts, and various forms of private paper. Though there is but a moiety of money used, yet that small amount is absolutely necessary to prevent bankruptcy. On the average, for every dollar of money withdrawn or suppressed $20 worth of business must stop, or continue at great hazard. The withdrawal of $1,000,000 of money from circulation compels the contraction of business to the amount of twenty millions. I quote the following from the report of the Comptroller of the Currency for 1892, volume 1, page 78:

The total clearing-house transactions in the fifty-seven clearing-house associations in the United States for the past year aggregate the enormous sum of $61,017,839,067, and this great volume of business was transacted by the use of only about 8 per cent in currency or money. These clearing-house transactions have such a direct and important bearing upon the currency of the country that a report upon the currency would be incomplete that did not include the history of the clearing-house transactions for a year. For that reason the following tables, giving full information upon the subject, are submitted.

It will be seen by this statement that the average amount of money used in the fifty-seven clearing houses of the United States is 8 per cent. That is nearly double the amount needed in the New York clearing house, as I have stated, and as will be seen in the following table taken from the same report, page 79:

The following is a comparative statement of transactions of the New York clearing-house for thirty-nine years, and shows for each year the number of banks, aggregate capital, clearings and balances, average of the daily clearings and balances, and the percentage of balances to clearings:

Year.	Number of banks.	Capital.*	Clearings.	Balances paid in money.	Average daily clearings.	Average daily balances paid in money.	Balances to clearings.

As about two-thirds of the clearing-house business of the entire country is done through the New York clearing house, its business is a fairly good test as to the average commercial and industrial prosperity of the country. In looking down the column of "clearings," the footprints of every panic, and every era of prosperity can be traced. From the time of organization, the clearings gradually grew with one slight exception, till we struck the panic of 1857. The clearings then dropped nearly one-half, then gradually recovered almost to their former amount, but dropped again in 1861, when so many banks went out of existence.

Under the influence of the greenback expansion, the clearings began to grow in 1862. In 1863 they exceeded any previous year. The clearings after that continually increased, in keeping with the growth of population and business, until 1869. That year the amount of clearings in New York reached over thirty-seven billions of dollars. Up to that date the contraction screws of 1866 had exerted little influence on business; but, as their merciless grip began to tighten, the clearing-house transactions reported the story in 1870, by a falling off of nearly ten billions. In 1871-'72 there was a slight recuperation, but not equal to 1869. Then came the demonetization of silver and the panic of 1873. The clearing-house business reported the fact by a drop in 1874, lower than had been seen in ten years. The country gradually but very slowly recovered from the panic of 1873, but did not reach the figures of 1869 until after the remedial laws of 1878.

One of these laws added to the circulation two millions per month of silver. The other prevented the further retirement of greenbacks. Under this slight increase of money the clearings began to grow steadily, so that in 1880 the amount of 1869 was almost reached. In 1881 the clearings in New York reached the highest figures ever known up to that time or since. They reached the healthy and prosperous figures of forty-eight and a half billions ($48,565,818,212).

This national prosperity was not pleasing to the money power. So about that time commenced the hoarding of money by the United States Treasury and the retiring of their currency by the banks. Under the influence of that policy of contraction by the Government and the banks the New York clearings at once began to shrink. And, although the population of the country was increasing at the rate of more than a million of people per

annum, and as a matter of course should annually have done an increasing business, yet the clearing-house reports show that business did not increase. In 1885 we did but little over half as much clearing-house business as in 1881. In 1892 we did less business than in 1869. In 1870 the population of the United States was about 39,000,000 and in 1892 not far from 65,000,000. Here we have an increase of 26,000,000 people, with civilized methods and facilities for commerce, industry, and general business all in greatest abundance, except money. Because money is locked up at the behest of the usurers 65,000,000 people do less clearing-house business in 1892 than 39,000,000 did in 1869—twelve billions less than 51,000,000 people did in 1881.

Under the remedial measures of 1878, which partially remonetized silver and prevented the further retirement of greenbacks, the country breathed easier. The monetary stringency being relieved business at once revived. The New York clearing-house figures began to grow, showing the return of prosperity. Clearings steadily rose from twenty-two and a half billions in 1878 to forty-eight and a half billions in 1881.

In the meantime a new method of destruction was devised by the banks. The Treasury of the United States coöperated with the banks in the usurers' scheme for contracting the currency. The New York clearing house promptly reported the decline of business, and the figures of 1881 have not since been reached. They have sometimes noted but little over half the aggregate business of 1881.

Standing in his place in the United States Senate on two occasions, the late Senator Plumb, himself the president of a national bank, explained the question under discussion very fully. I will quote the Senator's statements before I close my remarks.

Mr. Chairman, I have now shown not only that the business of this country is dying, but I have pointed out the cause and the manner of the approaching dissolution.

Mr. Chairman, notwithstanding this array of circumstantial testimony, all the leaders of the two old parties, and even members of Congress and high officers of the Government still stoutly deny that there has been any contraction of the currency since 1866. To place this matter beyond dispute I will now offer some correspondence which I had on this subject with the Secretary of the Treasury under the late Republican Administration. In April, 1892, I addressed an open letter to the Secretary as to the misleading nature of his official reports. In August of the same year the Secretary replied to my letter in pamphlet form. The following is my second open letter, written in reply to that pamphlet:

JUNCTION CITY, KANS., *October 27, 1892.*

To the Secretary of the Treasury
of the United States, Washington, D. C.:

SIR: I have before me a "letter" from you, dated "Washington, D. C., August 26, 1892," in reply to questions asked you by Hon. JOHN B. ALLEN, United States Senator, and Hon. W. H. CRAIN, respecting my discussions of your official report of 1891, in my former open letter to you.

In your report for 1891, page 28, you say:

> The stringency of the money market during the summer and autumn of 1890 was relieved by the prompt and effective measures of my predecessor, and happily disappeared without producing the grave consequences which were feared by the public; but its existence and the widespread apprehension which it caused induced a revival of the erroneous idea that the volume of money in circulation was not only inadequate to the needs of the country, but was very much less per capita than during the so-called flush times which followed the civil war.

Farther down on the same page you call attention to "the mistaken opinion that there has been a severe contraction of the money volume," etc.

This statement brings up the entire subject of the contraction of the currency and its baleful results. But the first and main question is as to the status of the 7.30 Treasury notes which played so important a part as currency and as reserves of banks, setting free other currency, until they were retired by funding into gold-bearing registered bonds. You deny that they circulated as currency, and do not mention them as such in your tables. Yet you admit that $44,000,000 of them, in the denomination of $50, may have circulated as currency. Should you not, in fairness to yourself, have made some statement of this admission in your official report?

Secretary Fessenden says that he caused $20,000,000 of the 7-30 notes to be paid out to the soldiers in the field at one time. You think this cuts no figure, as the soldiers "desired to receive them, and received them with alacrity." It may fairly be supposed that the soldiers' families at home also "desired to receive them." And that the merchants at home and others "received them with alacrity" for family supplies and in the general course of business. The fact is, Mr. Secretary, your doctrine that the 7-30 notes did not circulate as currency because, as you claim, they were not a legal tender, will not hold good. The same doctrine would be as good against all the bank currency of the country, both State and national, because none of it is or has been a legal tender to private individuals. To imitate your own statement, "paymasters can not in any true sense 'pay out' these notes to creditors." Hence, according to that logic, bank notes have never circulated in this country as currency. You count in your tables "State-bank notes" and "national-bank notes" as active circulating currency.

Neither of them are legal tender on private debts, yet you reject the 7-30 notes for the alleged reason that they were not a legal tender; and, apparently, you claim that they did not circulate, though they were "readily taken in payments!" What an idea to come from a great public officer! Currency cannot circulate, even if men accept it readily in payments! Your position is, that no one can in any true sense "pay out" such notes. "Tell it not in Gath, publish it not in the streets of Ascalon!" It would be far truer to say that such notes can not be prevented from entering into circulation.

As to Secretary McCulloch's reports, I followed Gen. Logan's statements and tables, taken from McCulloch's reports and from other official documents. I preferred this to assuming the responsibilities of tabulation myself.

But I am charged with "disarranging" Gen. Logan's tables, and that he separated the 7-30's in his tables from the rest of the notes. I shortened his tables a single line, to save repetition, but did not change his statements or results. I followed his general formula exactly, cutting off one single redundancy.

I consider Gen. Logan a very high authority on the Republican side, and will now reproduce his tables of 1865 and 1866, with his arguments before and after them, and his table of 1873, constructed by him from the official reports cited by him.

On page 131, Appendix to the CONGRESSIONAL RECORD of 1874, Gen. Logan says:

> But there is one very material fact in this connection which Senators appear to have entirely overlooked. They seem to forget that, while our issues were largest in amount, they had no circulation worth mentioning in the South, but were confined to the North and West; but since that day 11,000,000 people have been added to the number to be supplied, and an area equal to an empire in extent. In comparing our condition and wants before the war with our condition and wants now, they forget that 4,000,000 slaves have been made free and are now learning the lessons of self-support and business life. These, sir, are no small items in the account. And those who talk so flippantly in regard to Senators who are guided by facts, would do well to consider them. And when they denounce our currency in such unmeasured terms, they would do well to remember that it has stood successfully a test that no other paper currency has ever undergone, with the whole amount, nearly double what it is at present, confined almost exclusively to the Northern States; and while an unprecedented internal war was raging, the gold brokers of New York were plying all their arts against it. When the war closed and the wall of separation was withdrawn, and the wants of a nation, increased in numbers nearly one-third, and an area nearly one-half, doubled in activity and operators, all to be supplied with a medium of exchange, just then we commence a reduction in the volume of our currency; and when we take into consideration the amount in circulation in 1865 and 1866 and the amount in circulation now, it is no wonder that the people look upon this attempt at still further contraction as something alarming. And in order to show the condition the country must be reduced to if the currency be not increased but contracted, I will give the following tables, showing the amount of currency in circulation in the years 1865 and 1866.

1865.

National-bank notes outstanding	$171,321,903
Legal-tender and other notes	608,918,800
State-bank notes (estimated)	58,000,000
Total	928,240,703
Seven-thirties of 1864 and 1865	830,000,000
Total	1,758,240,703

1866.

National-bank notes	280,253,819
State-bank notes	9,848,023
Legal-tender and other notes	608,870,825
Total	898,872,668
Seven-thirties	830,000,000
Total	1,728,872,668

Since which time contraction has gone on until the whole amount of currency of every kind now outstanding is only $742,000,000. Add the $25,000,000 of reserves since issued, making $767,000,000, as shown in the following table:

1872.

National-bank notes	$339,081,739
State-bank notes	1,888,853
Legal-tender and other notes	401,527,267
Total	741,797,919
Seven-thirties outstanding	274,100
Total	742,072,019
Add reserve issued	25,000,000
Total	767,072,019
Amount of currency in 1865	928,240,703
Amount of currency in 1873	767,072,919
Total	181,778,784
Add the seven-thirties	829,725,000
Total contraction	1,018,167,784

If we estimate the population of the portion of the United States using this currency in 1865 at 30,000,000, it gives a per capita of nearly $31, including the 7.30 bonds.

Senators will admit this was a contraction if we include the 7-30 bonds in the circulation. But let us exclude them, and we still find the contraction has been $180,448,000 since that time. Yet some on this Senate floor tell me that we have had no such thing, and they try to make me believe it. Perhaps some Senators will dispute these figures. If anyone disputes them, I refer him to a book written by a Secretary of the Treasury on the currency, and put forth by him as such Secretary (pages 94 and 96). I also refer him to the report of the Comptroller of the Currency, commencing at page 2, where the amount of currency for the various years is given. I have taken the report of the Comptroller of the Currency and the Finance Report of the Secretary of the Treasury and made this statement from them, and know that it shows correctly the amount of contraction which has taken place in the currency of the country since 1866. And by whom was the larger amount used? It was in circulation in the Northern States alone, exclusive of the people of the South, for but little of this money went into circulation in that section until after 1866, and after this contraction began.

On the same page (131) of the Appendix to the CONGRESSIONAL RECORD, 1874, Gen. Logan says:

There is another great fact connected with this question which appears to be forgotten in this debate: that near the close of the war, and for a year or two after it, when our currency was much more abundant in proportion to those using it and before the South was fully open to its use, the system of cash payments became almost universal in the interior of the country, and in fact, in most business transactions everywhere. But the increased demand to supply the wants of the South, and in consequence of the system of contraction adopted by the then Secretary of the Treasury, forced the people to expand the credit policy in a corresponding ratio or to curtail all the works of improvement and manufacturing which had been undertaken during this period. It was therefore the contraction and increased want of currency and not a superabundance which produced the necessity for running in debt of which there is so much said on this floor. Why, sir, the people were never freer from debt in proportion to the business done than in 1865, at the close of the war when Mr. McCulloch began his system of contraction and at the very time 11,000,000 more people were to be supplied.

Was it to be supposed that the activity and energy which the adequate supply of money had put into operation, and which was giving prosperity and happiness to the country, would suddenly dwarf itself to suit financial notions without a severe struggle? The inevitable result was an expedient to meet the consequent want, and credit was expanded. At the very moment, above all others, when adequate supply was needed, the opposite course was adopted; and right here lies the true cause of the late panic, which resulted from a money famine, and not from an excessive supply.

On page 133 of the same document Gen. Logan says:

Sir, turn this matter as we will, and look at it from any side whatever, and it does present the appearance of being a stupendous scheme of the money-holders to seize this opportunity of placing under their control the vast industries of the nation. Therefore I warn Senators against pushing too far the great conflict now going on between capital and labor. It is not our duty to legislate exclusively for either, but, as far as possible, to try and harmonize the interests of the two. Capital rests upon labor; but when it attempts to press too heavily upon that which supports it in a free Republic, the slumbering volcano, whose mutterings are beginning already to be heard, will burst forth with a fury that no legislation will quell. Both should be equally fostered and both equally protected.

Mr. Secretary, you say you are unable to account for the strange statement attributed to Gen. Spinner, that "the 7-30 notes were intended, prepared, issued, and used as money."

With all due deference, Mr. Secretary, I would suggest that you read the laws authorizing their issue. Let us take as an example the law of June 30, 1864. Section 2 reads as follows:

SEC. 2. *And be it further enacted*, That the Secretary of the Treasury may issue on the credit of the United States, and in lieu of an equal amount of bonds authorized by the preceding section, and as part of said loan, not exceeding $200,000,000, in Treasury notes of any denomination not less than $10, payable at any time not exceeding three years from date, or, if thought more expedient, redeemable at any time after three years from date, and bearing interest not exceeding the rate of 7.3 per cent, payable in lawful money at maturity, or at the discretion of the Secretary semiannually. And the said Treasury notes may be disposed of by the Secretary of the Treasury, on the best terms that can be obtained, for lawful money; and such of them as shall be made payable, principal and interest, at maturity shall be a legal tender to the same extent as United States notes for their face value, excluding interest, and may be paid to any creditor of the United States at their face value, excluding interest, or to any creditor willing to receive them at par, including interest; and any Treasury notes issued under the authority of this act may be made convertible at the discretion of the Secretary of the Treasury into any bonds issued under the authority of this act. And the Secretary of the Treasury may redeem and cause to be canceled and destroyed any Treasury notes or United States notes heretofore issued under authority of previous acts of Congress, and substitute in lieu thereof an equal amount of Treasury notes such as are authorized by this act, or of other United States notes: *Provided*, That the total amount of bonds and Treasury notes authorized by the first and second sections of this act shall not exceed $400,000,000, in addition to the amounts heretofore issued; nor shall the total amounts of United States notes issued or to be issued ever exceed $400,000,000, and such additional sum, not exceeding $50,000,000, as may be temporarily required for the redemption of temporary loans; nor shall any Treasury note bearing interest, issued under this act, be a legal tender in payment or redemption of any notes issued by any bank, banking association, or banker, calculated or intended to circulate as money.

In "Treasury Department Document No. 949, Loans and Currency," 1886, page 201, I find the following:

SEC. 3590. Treasury notes issued under the authority of the acts of March 3, 1863, chapter 73, and June 30, 1864, chapter 172, shall be legal tender to the same extent as United States notes, for their face value, excluding interest.

Then follows the usual provision that the said notes shall not be used to redeem bank circulation.

This fixes the status of $200,000,000 of the seven-thirties, as stated by Gen. Spinner, that they were "intended, prepared, issued, and used as money."

The act of March 3, 1865, authorized $600,000,000 additional seven-thirties, precisely like the above, except as to the legal-tender quality, and on these two acts were issued $829,992,500. (See Messages and Documents, Abridgment 1873-1874, page 96.)

There is no use quibbling, Mr. Secretary, as to what parts of the public debt have been used as currency. All forms of paper obligations issued by the Government are set down by the Treasury officers as "public debt." Part of them are susceptible of transfer from hand to hand, and are, hence, used as currency or money. That which can not be so passed from hand to hand in the common transactions of business can not be fairly classed as currency or money. By this true test the subject is rendered exceedingly simple. All forms of certificates, with or without interest, all United States notes, and all forms of Treasury notes, with or without interest, are and were uniformly used as money. The coupon bonds, usually known as Treasury notes, like the old seven-thirties were a very valuable currency. They circulated as money, and they took the place of legal tenders in the bank reserves, as described by President Grant in his message of December 1, 1873, thus setting free the legal tenders.

I remember well, Mr. Secretary, that 7-30 notes were used as currency among the merchants and farmers of Central Illinois, and men of other States told me that they were so used in their sections. I now meet men here in Kansas almost daily who distinctly remember and state the facts as I do.

In order to refresh your own memory on this subject, I respectfully call your attention to the following letter, handed me by Mr. Dunning, of Washington, D. C., to whom it is addressed. The writer, Mr. H. F. Barnes, is a gentleman of undoubted veracity, standing high in the community where he resides:

TIFFIN, OHIO, *August 31, 1892.*

DEAR SIR: Yours of 29th at hand and inquiry noted. We had no affidavit regarding the sale of land by Charles Foster, but, no doubt, could procure one. The facts, as we printed them are that G. L. Donnells, of Gibsonburg, Sandusky County, Ohio, a veteran soldier, on his return from the Army, had in his possession, as the pay he received for his services in the Army, 7.30 notes; that, with these notes, he purchased from the Hon. Charles Foster the farm on which he now resides, making the first payment in the 7.30 notes in his possession; that Mr. Foster received these notes and gave him a deed for the land.

A sworn statement of this fact can now be furnished, if necessary. Mr. Donnells is a respectable, well-to-do farmer, whose word is as good as his bond, and Mr. Foster can not deny the statement here made.

Yours, respectfully,

H. F. BARNES.

Mr. N. A. DUNNING, *Washington, D. C.*

I now call your attention, Mr. Secretary, to the testimony of the leading Republican daily of the State of Kansas, a journal which has bravely espoused your cause, and is just now giving me "Hail Columbia" in this present discussion. If I can prove my case by one of your most obtrusive and uproarious witnesses, it seems to me that I have established my point. The Topeka Capital recently discussed, classified, and arranged the circulating currency of the country very minutely and carefully.

April 4, 1890, replying to a correspondent, the Capital said:

There is still another very interesting feature about our circulation, beginning in 1866, when the actual "currency" circulation was upward of $50 per capita. But as our correspondent does not inquire anything beyond the "last ten years," we begin at 1878, just when the Secretary of the Treasury begins in his message concerning the circulation. There has been an actual decrease per capita since 1872, and a large relative decrease in comparison with the business development of the country.

April 17, 1890, replying to another correspondent, the Capital resumed the subject as follows:

Bonds due in 1868	$8,908,340
Bonds due in 1867	9,415,250
Compound-interest notes	150,012,140
Seven-thirty Treasury notes	806,281,550
Temporary loan, ten days' notice	120,176,196
Certificates of indebtedness	26,391,000
United States notes	400,891,368
Fractional currency	27,070,876
Gold certificates of deposit	10,713,180
Total	1,550,506,210

* * * * * * * *

All these different kinds of notes, certificates, etc., amounting to $1,550,506,210, were used as currency. National-bank circulation June 30, 1886, $281,419,906. Add this to the other and we have a total active "currency" circulation at that time of $1,850,239,709, which, estimating the population at 35,000,000, gives a per capita circulation of $52.

By turning to page 168 of the same report—Finance Report, 1886—we find a brief statement of "outstanding United States notes," which are classified as "not used in circulation." These are:

Demand notes redeemable in coin	$288,121
One-year 5 per cent notes	2,151,297
Two-year 5 per cent notes	5,209,335
Two-year 5 per cent compound notes	1,078,550
Three-year compound-interest notes	172,369,511
Total	181,096,804

On page 164 of the same report appears this statement:

Currency has been retired, counted, and destroyed during the fiscal year as follows:

Old issue demand notes	$200,440.75
New issue legal-tender notes	6,764,370.65
One-year 5 per cent notes	6,316,104.50
Two-year 5 per cent notes	2,506,427.50
Two-year 5 per cent coupon notes	33,363,097.50
Six per cent compound-interest notes	81,246,829.00
Gold certificates	64,913,800.00
First issue fractional currency	3,897,307.83
Second issue fractional currency	7,598,479.78
Third issue fractional currency	5,414,844.49
Discounted on above for mutilation	17,813.36
Total	211,239,515.41

If $211,239,515.41 of "currency" were destroyed during the fiscal year, and if $181,096,804 of "currency" were on hand and "not in circulation," there must have been the amount of these two items ($392,336,319.41) in circulation at the beginning of the year. If this be added to the total given above as the actual circulation at the end of the fiscal year (June 30, 1866), we have a grand aggregate for the beginning of that year—$1,850,239,709 plus $392,336,319.41 equals $2,242,576,028.41—a per capita circulation of $64 at the close of the war, July 1, 1865.

Mark you, this is not my statement. It is the testimony of one of your Republican witnesses, who, on August 30, 1892, speaking of your "letter," says:

The people of the Fifth district in this State will be particularly interested in this exposure of Congressman Davis's attempt to falsify the speech of Gen. Logan.

I congratulate you, Mr. Secretary, on this leading Republican witness. I am much pleased that he is on your side. Your cause needs him, and he will swear to anything!

In passing, Mr. Secretary, I desire to ask: If there has been no contraction of the currency since 1865, why did Gen. Logan make his able and earnest speeches of January and March, 1874? Why have so many able and earnest men of both political parties, in both Houses of Congress and in the Treasury Department, declared or admitted the fact? Are you not now, Mr. Secretary, testing the intelligence of the American people too severely when you ask them to accept your official statements in opposition to the testimony of so many statesmen and financiers who have taught or admitted the opposite? In short, Mr. Secretary, how do you account for the general fall of prices of labor and its products since 1865 if there has been no decrease of money as compared with population and business?

In 1888, Senator Plumb, discussing this currency question, said:

But this contraction of the currency by means of the retirement of national-bank circulation has been going on for more than ten years, and all the committee has to say now is that it has considered some bill, but it is not completed. If the committee will not complete some measure the Senate must. If the Senate will not, and the other House will not, then the country is going upon the breakers of financial disturbance. As a Senator says in my hearing, "It is there now." I think it is there now. We are dealing with a question which has more to do with the welfare of the people of the United States, which is of more concern to them than any other thing that is pending in either House of Congress, or which can be pending—the volume of the circulating medium of the country, the value of its property, the difference between debt and bankruptcy, on the one hand, and freedom from debt with prosperity on the other.

It is estimated that there are in circulation, including that which is locked up in the Treasury and held in the banks as a reserve fund, about $1,600,000,000 of all kinds of currency of the United States, gold and silver, the overplus of gold and silver certificates, greenback notes and national-bank notes, all told, and there are more than $60,000,000,000 of property which must finally be measured by this volume of currency. It has been contracted during the last year more than 5 per cent in addition to all that has occurred by reason of abrasion and loss. No man can tell the volume of greenbacks outstanding. Nominally it is $346,000,000 and a fraction, but that volume has been subject to all the accidents which have occurred during the past twenty-five years, whereby money has been consumed, worn out, lost, and it is doubtful if the amount is really over $300,000,000 to-day.

But saying nothing about that, the retirement of the national banking circulation during the past twelve months has been 5 per cent of the total amount of the currency outstanding. There has been during that period a phenomenal depreciation of the prices of property. There has been the greatest depreciation of the price of agricultural products the country has ever known.

* * * * * * * * *

The contraction of the currency by 5 per cent of its volume means the depreciation of the property of the country $3,000,000,000. Debts have not only increased, but the means to pay them have diminished in proportion as the currency has been contracted. Events based upon nonlegislation have proved of advantage to lenders, but disastrous to borrowers.

* * * * * * * *

The Senator from Delaware [Mr. Saulsbury] the other day spoke with great feeling about the mortgaging of farms in this country. So far as that complaint relates to a general condition, to the lack and to the shortcomings of legislation, it is more nearly related to the diminished volume of currency than to any other one thing.

In June, 1890, Senator Plumb continued the discussion of this subject, as follows:

Let us see, therefore, how much money is available for actual use among the people. From the total of $1,560,000,000, arrived at as above, must be deducted an average of $260,000,000, which the Treasury always keeps on hand, and about which something has heretofore been said in the debate on this bill, and that leaves as the maximum which can by any possibility be used $1,300,000,000. There ought, in fairness, to be deducted from this $150,000,000, error in estimate of gold in the country, which would reduce the money outside the Treasury to $1,150,000,000. From this is to be subtracted the $600,000,000 kept as reserve, as before computed, leaving a balance of $550,000,000 which is available for delivery or use in the transaction of the business of all the people, or a trifle over $8 per capita. But the force of my argument is not materially weakened by conceding the gold coin to be as estimated by the Treasury Department, which would leave in actual circulation $1,00,000,000. In order to make up this amount all doubt must be resolved in favor of the Treasury and against the people, both the doubt as to the amount of lost and destroyed notes and that as to the gold supply.

If I were deciding this case upon what I consider the best evidence, I would be bound to say that I believed the money in actual circulation did not much, if at all, exceed $500,000,000. Upon this narrow foundation has been built the enormous structure of credit of which I have spoken. It is the greatest of the kind that was ever built, because it was built by the best people that ever built anything. Over twenty thousand millions of debts, the enormous and widely extended business of 65,000,000 people, all rest upon and must be served by a volume of currency which must seem to the most veteran financier as absolutely and dangerously small.

Senator Plumb was an able Republican statesman. He was a national bank president and financier. He made the subject of the finances a special study for many years from a practical standpoint. He was no dreamer or wild theorist. He uttered his sentiments in the Senate Chamber in 1888. They were printed in the RECORD. They were then revised by him and placed in pamphlet form for general distribution. I have a copy of that pamphlet on the table before me. After two years of further consideration, practice, and observation, the Senator again uttered his sentiments in the same able manner, warning the nation against the same financial dangers as before. His sentiments were again printed in the RECORD. They were again revised by him and placed in pamphlet form for general distribution. I have a copy of that second pamphlet before be. Is it possible that our present Secretary or any sensible man can believe that those able and earnest Senators, Logan and Plumb, were wrong, and that there has really been no contraction of the currency, as compared with the population, since 1865?

Is it possible that the general fall of prices, the increase of bankruptcies in business, the prostration of agriculture, the depression of labor, the losses of the people's homes through mortgaged foreclosures, and all those evils which uniformly result from currency contraction must now be attributed to other causes? Mr. Secretary, in my opinion, you are testing too severely the patience and credulity of a trusting and long-suffering people! King George and the slave power committed a similar blunder. King George and the slave power disappeared like frost in the bright sunshine. They tried to save themselves by repressive laws and physical violence. Both failed. Then, if the events of history prove anything, why should the money power of to-day hope to save itself by repressive laws, Pinkerton bullets, and the hanging of American citizens by the thumbs, while the screws of contraction are still tightening on the volume of the people's money!

King George made his history. The slave power made its history. The money power in this country is making its history. In each struggle there were friends and foes of the people. Mr. Secretary, I beg of you, take sides in this contest, so that your posterity will read your history with pride and pleasure! Do not, I beg of you, help to throttle the prosperity and liberties of a great and glorious people, in this greatest struggle of all ages!

On page 4 of your "letter" you say that you are unable to find the seven-thirties among the items of circulation in Secretary McCulloch's tables of 1865 and 1866. But on page 8 of your "letter" you give a table from Secretary McCulloch's report of 1866, in which I find eighteen varieties of "public debt." This table includes interest-bearing bonds, registered and nonregistered; seven-thirties, United States notes, fractional currency, etc. On the same page I find another table of the public debt for August 31, 1865. In that table, also, are seven-thirties, United States notes, fractional currency, etc.

It appears from those tables that the people are using a part of the public debt for currency or money. The question arises, then, what part? What portions of the public debt can and do the people use as currency? Evidently that portion or those parts which can be passed from hand to hand without the trouble of transfer on the register's books. In other words, all United States notes, all fractional currency, all Treasury notes, and all coupon or nonregistered bonds can be and will be used as currency. Registered bonds can not pass from hand to hand except by transfer on the books. Hence registered bonds are not used as the currency of the people. Now, Mr. Secretary, who is to draw the line between the currency and the noncurrency? And shall it be drawn above or below the seven-thirties? Gen. Logan draws it above. Many able men agree with him. And many thousands of business men and ex-soldiers, now above 60 years of age, agree with him. The people drew the currency line as Gen. Logan did, above the seven-thirties, including the seven-thirties as money. No historic fact is truer than this. Although they may have been and were treated by the Treasury Department as bonds, yet, when disposed of by the Department, there was no power able to prevent their circulation as money. The fact that they

drew interest did not prevent it; it is not unusual for interest-bearing obligations to circulate as money.

The circumstance that some of them were not legal tender did not prevent it, as the same lack of tender would stand against all bank notes which circulate as money. There is but one practicable and effective way of preventing nonregistered Government obligations from circulating as money. It is to fund them into registered bonds. They then become a fixed investment, beneficial to the bondholders and a burden to the people. Hence the unseemly haste of the agents of the money power to fund all the obligations of the Government into long-time registered bonds. They carried the scheme fully against the 7-30 Treasury notes and other forms of temporary obligations, and even had some success against the greenbacks.

Mr. Secretary, on page 9 of your "letter," you quote from Secretary McCulloch in 1867, as follows:

Thus the condition of the country and the Treasury determined the policy of the Secretary, which has been to convert the interest-bearing notes, temporary loans, etc., into gold-bearing bonds, and to contract the paper circulation by the redemption of United States notes.

After that quotation, Mr. Secretary, you say:

That the conversion of interest-bearing notes into gold-bearing bonds was not a contraction of the currency is made plain by this brief quotation.

Here we have the "brief quotation" from Secretary McCulloch, in 1867, to prove that there had been no contraction of the currency. On the other hand, we have the experience of the American people showing that contraction and its baleful results had proceeded to such a cruel and alarming extent that, in 1868, the people demanded and obtained a repeal of the contraction law of 1866. It appears, you say, that the various classes of securities paid off or converted into long-time bonds prior to December 1, 1868, amounted to $1,265,815,081.

Now I desire to add that such portions of that sum as were funded into registered bonds were taken from the monetary circulation of the country, and were to that extent a contraction of the currency. The recorded experience of mankind at large, and of the American people, is better authority than the written words of even a Secretary of the United States Treasury. You admit, Mr. Secretary, that there was a contraction of United States notes to the extent of $58,000,000 between April 12, 1866, and February 4, 1868. In all conscience, sir, when we consider the rapid expansion of the country and population by natural growth and enterprise, and the additions of States and peoples from the South, all requiring money, as described by Senator Logan and President Grant, it does seem that Secretary McCulloch's diabolical scheme was a marked success, and he should not have spoken of it as an "unavailing effort." The Secretary was entirely too modest. And when we consider the retirement of other forms of currency, it would appear to almost anyone that the serpent in Paradise was scarcely more successful than our modest Secretary in 1866, 1867, 1868.

You say that no reductions are made for lost and destroyed currency because "the Department has no authority to deduct from its liabilities any estimated amount of such losses."

Yet, when the Secretary assumes to "estimate" the population of the country, and to "estimate" from month to month the amount of currency in the hands of the people, either with or without law, then those "estimates" and the resultant per capita should be approximately correct. If $46,000,000 of greenbacks are missing, and if $150,000,000 of gold has gone to Europe, as claimed by Senator Plumb four years ago, then those items and numerous others should be duly "estimated" and allowed proper weight.

If the Government requires of the Secretary a truthful report, then the Secretary should make it truthful. If that is impossible, then he should state the case so that people can make their own "estimates." It is certainly not the part of a public officer to mislead the people, and then ask to be excused on the ground of "no authority" to do otherwise!

Mr. Secretary, we are in the midst of a serious crisis. A leading Republican Senator has recently said that we are in the midst of troublous times; that a million of men are hunting work: that capital is arrayed against labor; that our glorious land of liberty is fast becoming "the home of the rich and the land of the slave!"

Here in my beloved State men are losing their homes through sheriffs' sales and foreclosures with frightful rapidity. In four States of this Union troops were recently called out to quiet the unrest of the people. In places men and women are dying from starvation and Pinkerton bullets. Let us seek the cause of these distresses. In ten years' struggle like this in England (from 1816 to 1826), brought on by the contraction of the currency, four-fifths of the landholders of England lost their lands, and the sufferings of the common people were so great that large additions to the troops were necessary to preserve the peace, while men, women, and children died of starvation. Similar causes under similar circumstances uniformly produce the same results. The unrest of the great American people proves the fallacy of the statement that there has been no contraction of the currency. All the symptoms of contraction are present.

Mr. Secretary, I am opposed to the death of popular liberty in America, and the erection upon its tomb of a nation of serfs and tenants! This is my excuse for earnest words.

Respectfully, yours,

JOHN DAVIS, M. C.

After the bankruptcy of the same gentleman, who had then passed out of office, I felt deeply grieved that he should have been so unfortunate as to suffer through the operation of his own policy and that of his party. And I also felt still greater grief for the tens of thousands of men and people who were suffering from the same policy and conditions, having been misled by the reports of the Secretary, and thus induced to venture abroad in the sea of business when they should have kept near shore. While in this sympathetic mood of mind, Mr. Chairman, I addressed to the ex-Secretary of the Treasury my third open letter, as follows:

JUNCTION CITY, KANS., *June 20, 1893.*

Hon. CHARLES FOSTER,

Ex-Secretary of the United States Treasury, Fostoria, Ohio:

DEAR SIR: I write you for several reasons:

1. Having once enjoyed a very satisfactory discussion with you on the money question, I now desire to express my very earnest personal regrets on account of your present financial misfortune.

2. I desire to assure you that you are very likely in error when you ascribe your troubles to local causes or to personal mismanagement.

3. I desire, by means of this further discussion, to put other men on their guard, so that they may not incur distresses like those which have overtaken you. And especially do I desire that those thousands of people whom you have misled to their ruin by your official reports may be benefited.

Many thousands of bankruptcies have occurred in this country during the last twenty years, mostly from one and the same general cause, still in operation, and many thousands more will occur, just as surely as night follows day. Having been, as you think, the cause of distressing others when you yourself fell, it may be that you can now be induced to open your eyes to the facts of history and human experience, and to the financial conditions which environ all of us in this country, and thus be the means of saving many thousands of people from financial wreck and disaster. If you choose to do this, you can atone a thousand times for the local evils you regret. You must consider that great and dangerous reef on which so many are being stranded, and then point it out to all, that it may be avoided, until all of us together may be able to remove it.

You ascribe your misfortunes at Fostoria to neglect of business and personal mismanagement. You are probably mistaken. If that was the true cause, then what was the matter with those persons and companies for whom you indorsed? Are they all dolts or rascals? Surely your absence in Washington and attention to politics did not bankrupt them. If their respective enterprises had succeeded they would have paid their debts, and the very reasonable business indorsements with which you favored them would have been no damage to you. But it seems that their enterprises did not pay. They bankrupted. Their liabilities fell upon you, and you all went down together. If this was the case, then the cause may have been general to the community and not personal to yourself. But are such disasters peculiar to that particular community? Is Fostoria a particularly unfortunate place in which to do business? Not necessarily so. The same disasters and distresses have continually visited very excellent business localities during the last twenty years; and these financial cyclones are growing worse and more frequent in all parts of this great and prosperous (?) country.

To convince you, my dear sir, that neither you nor your business partner nor your town of Fostoria were necessarily to blame, I beg you to raise your eyes and look about you. Look into that great living, throbbing, delicately pulsating business index of this country—the New York clearing-house. Run your eyes up and down the column of its reports denoted as "clearings." You will find that in spite of the fact that our population is continually increasing, the clearing-house business is not. You will see that the New York clearing-house did less business in 1892 than in 1890, and less than in 1881, 1882, or 1883. Although there was an increase in 1892 over 1891, yet by consulting the column you will see that the temporary increase does not denote a permanent growth. There was a greater increase in 1890 over 1888 and 1889, but the figures fell back in 1891 and have not recovered to the figures of either 1889 or 1890. All this is in the time of a continued growth in population, amounting to nearly 3,000,000 in two years.

Now, sir, the New York clearing-house and the millions of people whose transactions affect it are not personal to yourself and your partners, nor are they local to the town of Fostoria. Hence let me conjure you to cease your personal and local ascriptions of blame. The cause is general and long-continued. I pointed it out to you in our former discussions of the finances. But you refused to see it then. You even denied its existence. I had patience with you. I knew that the time might come when you, like so many others, would be compelled to open your eyes. Men are not so very different from the lower animals after all. Mr. Jeffrson said:

Men never right their wrongs as long as their wrongs are sufferable.

Another eminent writer has said:

The people can not see, but they can feel.

I once saw a most beautiful pair of pointers—charming young puppies—thoroughbred and full of promise. But the unfortunate creatures failed to open their eyes when the proper time for that species of enlightenment arrived. Day after day passed and days passed into weeks, yet the eyes failed to unglue. The owner, in a fit of anger, beat out their brains with his cane. Next morning the beautiful creatures lay stiff and dead, brains out and eyes wide open. "Ah," said the unhappy owner, "I had to knock out your brains before you would open your eyes." I have seen great men, even high officials of this great Government, who reminded me of the pup story. When the day of adversity comes, men are more disposed to open their eyes and to do some seeing and thinking.

Sir, if you wish to corroborate the teachings of the New York clearing house, then turn to the reports of the clearing houses of other cities, more than fifty in number. You will find that, on the average, they teach the same general lesson that the business of this country does not grow and increase as the population increases. They indicate that for lack of money—the legal means of payment—business men everywhere are being driven to the wall and into bankruptcy. These things are not all personal to yourself, sir, nor are they local to your town. But there is a general cause driving us all down the rapids into the mælstrom of bankruptcy, and woe unto him who has floated from the shore so far that he can not catch hold of the willows. You have been descending the declivity with the rest of us. Under the false impression that there was water enough in the stream to float you above the rocks, you left the shore, got on to the reef, could not reach the willows, and went under, pulling down with you all who, trusting to your wisdom, had united their fortunes with yours. That is all there is in the case. It was merely a case of the "blind leading the blind."

The case can not be too strongly emphasized that our troubles come from a general cause and, as a rule, not from local or personal causes; and while I freely exculpate you from blame for submitting to the inevitable in your fall at Fostoria, as other business men are daily and hourly doing in all parts of the country, yet candor compels me to state that, in a wider and more general sense, you are to blame. You were one of the people's sentinels on the watchtowers of state to guard our interests, and you should have known and reported the true situation. It was your duty to know and report the facts. But you refused to know. You refused to open your eyes when the facts were pointed out to you. You were asleep on your post and refused to listen. My warning to you was treated as a "calamity howl," and you snored on until you and yours went down together. You even misled us. You certified monthly in your official reports that there was more water in the stream—more money afloat per capita—than ever before.

Efforts to prove to you that you were wrong but excited derision. You steered for the center of the stream in your business affairs, and went down as the penalty of ignorance. And while you mourn for those about Fostoria who went down with you, they are scarce a tithe of the men, women, and children you have destroyed or damaged. Your example as a business man and your official reports and teachings have misled many thousands, encouraging them to venture. Your Fostoria is but one in a thousand towns which your blind leadership has ruined. Your ignorance in matters of finance was most culpable. I myself pointed out to you more than a year ago the testimony of leading statesmen in this country and in Europe, including eminent men of your own party and State, which should have put you on your guard. If you had read and heeded the testimony of such men as Senators SHERMAN and Wade, of your own party and State, you would have known better. If you had read and heeded the testimony of Senator Logan in 1884 and Senator Plumb in 1888 and 1890, or of Congressmen Kelley, Ewing, Weaver, and hosts of others, with that of practical business men and bankers without number in this country, you would have known better. But you would have nothing to do with them.

If you had read the financial history of England after the wars of Napoleon, you would have seen that the United States was following England's fatal example and nearing the same disastrous results. At the end of the Napoleonic wars England stood forth at the very front of the nations of Europe in a blaze of glory. She was mistress of the ocean, she dictated the policies of the continent, and she had acquired an empire which encircled the earth. The British people were jubilant and happy. This was in 1815. In 1816 the British Parliament passed a law restricting the use of silver. Then came the first note of distress. In 1819 a law was enacted to contract and retire that currency which had conquered Napoleon and had saved "England from becoming a province of France." Under the operation of these two laws the English people were reduced to the sorest distresses. Bankruptcies prevailed everywhere; factories and shops were closed and men were thrown out of employment. By the year 1826 four-fifths of the landholders of England had lost their lands, and the public distresses were so great that troops were necessary to compel men, women, and children to starve in peace.

Now, my dear sir, these facts have all been stated over and over again by both British and American writers. Had you but read them as stated by Sir Archibald Alison, Thomas Doubleday, Mr. Godard, the Atwoods and other historians and members of Parliament, you might have learned some valuable lessons and could have been able to instruct your party, and possibly, would have steered clear of the reefs on which the industrial and financial prosperity of England was stranded, causing untold disasters and sufferings among her people. But, sir, you seemed like the beautiful little canines in the story. You were sleek (slick) and nice and full of promise (yes, of promises), but refused to open your eyes. Instead of profiting by the lessons of history, you and your predecessors in office seemed determined to consult the Shylocks and bankers of Wall street only. Of course they led you into the same ruts and into the same policies and distresses into which their fathers of London had led England in a former generation.

We have not only copied the policy of England as to restriction of silver and the contraction of paper, leading to the same general public and private disasters, but our finance ministers have been led to make the same erroneous statements and have been impelled to tell the same lies in order to deceive and mislead the people. You doubtless remember, sir, that in our public discussion in 1892 you denied that there had been any contraction of the money of the country since the war. You claimed that there was more money per capita afloat in this country in 1892 than in 1866. In order to prove this you constructed tables for your official reports. You included in the tables of 1892 much moneys not then in circulation, much that was not then in existence, and much that had long before been sent from the country. You also denied that the 7-30 Treasury notes and some other forms of war currency were ever in general circulation. I pointed out to you these errors, and proved them to be errors by Secretary Fessenden, Senators Logan and Plumb, and other eminent authorities, but you refused to open your eyes to the facts. Now, let me say to you that in doing this you but copied the example of the British finance minister in 1829. That I may be fully understood in this matter, I present a short statement from Doubleday's History of Sir Robert Peel:

A perfect knowledge of all the phenomena of circulating money is attainable by ordinary intellects, though seldom attained; and, had the Duke of Wellington been aware of the truth, he would, by a little inquiry, have avoided the ridiculous assertion with which he met the complaints of Lords Stanhope and Carnarvon. In reply to the asservation that Peel's act was causing the pressure complained of, the Duke actually went so far as to assert that the money in circulation at that moment was, notwithstanding the low and declining markets, equal to the highest amount when the paper money was in its most depreciated state! He might as well have asserted that, when the thermometer stood 32 degrees, the temperature was the same as when it rose to 64 degrees. The assertion, however, was made; and to prove it, the noble Duke produced the following extraordinate statement:

[Here follows two tables designed to show the circulation was greater in 1829 than at any time prior to 1819. The table prior to 1819 shows circulation of £64,000,000. The table of 1829 shows a circulation of £65,000,000.]

The historian then proceeds:

Making every allowance for the increase of commercial transactions and of the population up to 1830, it is utterly impossible that, with such a circulation, the fall in prices now in progress could have occurred to so great an extent, supposing the estimate to be in itself creditable. But it is a preposterous statement on the face of it. To obtain £28,000,000 in gold (as the Duke claimed) the Duke must have taken the whole coinage since 1819 and assumed it to be current, without deduction for exportation and the sums locked up in the tills of bankers, discounters, and merchants.

After getting through with the false and absurd claim as to the gold in circulation, the historian says:

The statement as to silver coin is equally fallacious—the probability being that not more than half that amount (£8,000,000) was ever current at one and the same period. This unfortunate attempt at economical calculation on the part of the minister, of course became a source of some amusement to those who had any knowledge of such matters. Elsewhere it had no effect of any kind; nor did the assertion of overproduction as an excuse for the continuous fall of prices universally over the kingdom fare much better.

Now, my dear sir, can not you see yourself in that mirror? Did you not refuse to include $820,000,000 of 7.30 notes in the circulation of the sixties in order to reduce the tables of that date? And, in your tables of 1892, did you not include many millions of gold not in the country, $50,000,000 of greenbacks not in existence, and many other millions known to be locked up from circulation, in order to swell the tables and to prove your point? And have you not been a subject of "amusement," among the Alliance schoolboys for the past two or three years on account of your parrot-like mendacity?

You merely repeated the words put into your mouth by the Shylocks as the "Noble Duke" of England did before you. From this lesson, at your expense, we may learn that like causes under similar conditions, uniformly produce like results, and that history repeats itself in general and sometimes in the minutest particulars.

Contraction of currency in every commercial country is always followed by the same disastrous results. The authors of it have the same rapacious designs, and their agents and attorneys make the same false reports, tell the same lies. History is an exacting critic, the public men who can not escape history should be very particular as to the records they make, lest their annals may prove a grief to their posterity.

By the way, Brother Foster, suppose you had now suddenly dumped into your coffers about half a million of those "buzzard" silver dollars which you have so often officially stated, "will not circulate." Could you not persuade some of the holders of your "paper assets" to take them? Would you or would you not enjoy being the "dumping ground" for European silver for a brief period? Or, to change the subject, what would you think of a loan on easy terms (say 1 per cent per annum, twenty years' time, as bankers get money), of those 7.30 Treasury notes which you received and paid out in the sixties, which the soldiers, merchants, and business men generally of that time paid out daily, but which you afterwards officially reported did not circulate nor form a part of the currency of the country? Do you think a half-million loan of seven-thirties would help you any?

Do you think you could "circulate" them into the hands of your creditors, with a little persuasion on your part? When men are in power and are designedly or thoughtlessly wronging their fellows, how forgetful they become of the revenges of history! And how little they know how soon "their chickens may come home to roost."

Let me close, my brother, by urging that this affliction of yours is merely a discipline for your good and the good of others. "Whom the Lord loveth He chasteneth, and scourgeth," etc. Let me pray you now that you harden not your heart unto destruction! It is best to yield early that the discipline may cease. With your knowledge of the wily ways of the Shylocks you may yet do a world of good for humanity, mitigating the wrongs which your misleading official reports have caused.

Do not make it necessary for the vengeance of history to imitate the owner of the lamented canines before you yield to the chastening rod. It would be a loss to the world and humanity. Our country is now on the road which leads to the grave of liberty. From the tomb can only arise the specter of despotism or the red cloud of murderous anarchy, and a dark chaos of uncertainty. In the days of your prosperity you led us along this road toward certain death. In your adversity, will you not see your error and join the band of patriots who desire to call a halt—who wish to induce a "right about face"?

I assure you, my dear sir, that in your distress you have my earnest personal sympathy. And hoping that this discipline, so richly earned, may prove a blessing to yourself and humanity, I am, with great respect, your well-wisher,

JOHN DAVIS, M. C.

Mr. Chairman, I think I have now shown that there are general causes which may be set in motion by acts of legislation that may affect every man, woman and child in the country. In my opinion the contraction of the money of the country is one of the most damaging policies that was ever enacted or adopted by a commercial people. The fact is, Mr. Chairman, we are at this moment in this country trying to solve the great and complicated problem of civilization. Other civilized nations are working with greater or less success at the same problem. It is well that we think of the matter carefully, that we may commit as few blunders, and cause as little human suffering as possible. The lawmakers of a great nation like ours occupy a very responsible position, and we should not risk the commission of blunders when it can be helped.

Mr. Chairman, the problem of savagery is plain and simple. It comprehends physical force and personal prowess only. It means "to the victors belong the spoils" and death or slavery to the vanquished. The problem of civilization is more complex, yet the statement of it is short. The great Victor Hugo, of France, has stated the problem of civilization in these words:

> The creation of wealth and the distribution of wealth.

The people of the United States, England, and other civilized nations create wealth magnificently; they distribute it badly. So perfect and so rapid is the creation of wealth in recent times that the first half of the problem of civilization may be considered solved. The last half of the problem is still before us, as much unsolved as in the crudest condition of savagery. Among the more civilized nations, including the people of the United States, we find whole classes of the creators of wealth suffering in a state of the most abject poverty and want, while other classes that are not creators of wealth at all have accumulated such enormous amounts of the earnings of labor that their presence in society has become absolutely dangerous to the liberties of the people.

What, then, are the intricacies and difficulties connected with the distribution of created wealth in civilized society? Let us analyze the subject.

The distribution of created wealth consists of two parts; the change of place of commodities, and the change of title to commodities.

What are the agents and implements in the performance of these functions and transactions? For the change of place of commodities we use wagons, boats, and cars; for simplicity, let us say we use wheels. For the change of title we use dollars.

Now, suppose that in the transportation of commodities from producer to consumer there are wheels enough in existence and in motion; the transportation goes on smoothly and normally. In the midst of this felicitous and prosperous condition of things, let some unseen power withdraw or suppress one-half or one-fourth of the wheels. The result is disastrous in the extreme. Producers can not deliver their commodities, and suffer in consequence; consumers can not receive the commodities that they desire, nor the necessities that must sustain their lives. Society is afflicted with congestion and paralysis in all its parts; and, if the unseen interference continues, confusion and suffering must continue.

What is the remedy? Plainly this: Restore the wheels, and, for the future, add as many wheels as the exigencies of transportation shall require.

On the matter of the change of title to commodities: Suppose that a requisite number of dollars are in existence and floating, and that the buying and selling of commodities is proceeding normally and smoothly—that the requisite change of title to commodities is practicable, in accordance with the necessities of society. Now suppose that some unseen power shall withdraw one-half or one-fourth of the dollars, what is the result? The same as that seen when part of the wheels were withdrawn. There can be no general change of title to commodities except on the most disadvantageous terms. There must be a general overloading of the remaining dollars which is recognized as a general reduction or fall of prices. Falling prices means general depression of trade and industry; and loss and distress among all classes engaged in changing title to commodities are the inevitable results. As titles to articles can not be safely exchanged, change of title must cease, or proceed under very adverse circumstances, and so imperfectly that society must suffer the most severe distress.

So insidious and so deceptive are the processes and results of the withdrawal of the money of society that I beg leave, Mr. Chairman, to introduce authorities on this important part of the subject. First, I refer to the language of the United States monetary report of 1877, respecting the depression of industry then existing, as follows:

> The true and only cause of the stagnation in industry and commerce now everywhere felt is the fact now everywhere existing of falling prices caused by a shrinking volume of money. This is the great cause. All others are collateral, cumulative, or really the effect of that cause.

Speaking of the progressive contraction of the currency then going on, Senator JOHN SHERMAN, in 1869, said:

> The contraction of the currency is a far more distressing thing than Senators suppose. Our own and other nations have gone through that process before. It is not possible to take that voyage without the sorest distress; to every person except a capitalist out of debt, a salaried officer, or an annuitant it is a period of loss, danger, lassitude of trade, fall of wages, suspension of enterprise, bankruptcy, and disaster. To attempt this is to impose upon our people by arresting them in the midst of their lawful business, and applying a new standard of value to their property without any reduction of their debt or giving them any opportunity to compound with their creditors, or to distribute their losses, and would be an act of folly without an example of evil in modern times.

Speaking of the long-continued and disastrous depression existing in 1874, Senator John A. Logan said:

> It is a money famine and nothing else.

In his great speech of March 17, 1874, Senator Logan quoted approvingly from Hon. Isaac Buchanan, of Ontario, Canada, as follows:

It is seen that the question of money and the question of labor are one and the same question, the solution of one being the solution of the other; plentiful and therefore cheap money being a convertible term for plentiful and well-paid employment.

William H. Crawford, Secretary of the United States Treasury, in 1820, said:

All intelligent writers on currency agree that when it is decreasing in amount, poverty and misery must prevail.

John Stuart Mill, a great English economist, states:

If the whole money in circulation was doubled, prices would double. If it was increased one-fourth, prices would increase one-fourth.

Ricardo, of England, says:

That commodities would rise and fall in price in proportion to the diminution of money, I assume as a fact that is incontrovertible; that such would be the case, the most celebrated writers are agreed.

Mr. Chairman, one is utterly overwhelmed by the volume of testimony accessible, showing that, as tersely stated by President Grant, "prices keep pace with the volume of money;" and, with this mass of available material, I have selected only the best known American and English authors.

I call special attention to the following additional testimony from the report of the United States Monetary Commission, 1877:

Primarily, then, prices must have been entirely controlled by the volume of money unaffected by credit. There can never occur a universal fall in prices and a general withdrawal of credits without a preceding decrease in the volume of money. As the volume of money shrinks prices fall. When money is decreasing in volume prices have no bottom except a receding one and they are inexorably ruled by the volume of money. In the whole history of the world every great and general fall in prices has been preceded by a decrease in the volume of money. At the Christian era the metallic money of the Roman empire amounted to $1,800,000,000. At the end of the fifteenth century it had shrunk to $200,000,000. During this period a most extraordinary and baleful change took place in the condition of the world. Population dwindled and commerce, arts, wealth, and freedom all disappeared. The people were reduced by poverty and misery to the most degraded condition of serfdom and misery. The disintegration of society was almost complete. The conditions of life were so hard that individual selfishness was the ous instinct consistent with self-preservation. All public spirit, all generonly emotions, all noble aspirations of man shriveled and disappeared as the volume of money shrunk and prices fell. That the Dark Ages were caused by decreasing money and falling prices, and that the recovery therefrom, and the comparative prosperity which followed the discovery of America were due to the increasing supply of the precious metals, and rising prices will not seem surprising or unreasonable when the noble functions of money are considered. Money is the great instrument of association, the very fiber of social organism, the vitalizing force of industry, and as essential to its existence as oxygen is to animal life. Without money civilization could not have had a beginning; with a diminishing supply it must languish and, unless relieved, finally perish.

Sir Archibald Alison, the great English historian, corroborates the foregoing testimony to the fullest extent, and says:

The two great events in the history of mankind have been brought about by a successive contraction and expansion of the circulating medium of society. The fall of the Roman empire, so long ascribed in ignorance to slavery, to heathenism, and to moral corruption, was, in reality, brought about by a decline in the silver and gold mines of Spain and Greece. And as if Providence intended to reveal in the clearest manner possible the influence of this mighty agent in human affairs, the restoration of mankind from the ruin this cause had produced was owing to the direct opposite set of agencies being put in operation. Columbus led the way in the career of renovation; when he spread his sails to cross the Atlantic he bore mankind and its fortunes in his bark. The annual supply of the precious metals—of money—for the use of the globe was trebled, before a century had passed the price of every species of produce was quadrupled. The weight of debt and taxation insensibly wore off under the influence of that prodigious increase; in the renovation of industry society was changed, the weight of feudalism cast off, and the rights of man established.

In view of the enormous power of money, by the change of its quantity, James A. Garfield, in 1880, declared that—

Whoever controls the volume of currency is absolute master of the industry and commerce of the country.

No earthly force can withstand the enginery of the financial autocrats. Thomas H. Benton said:

All property is at their mercy.

In view of the transcendent importance of the quantity of money afloat, we now proceed to inquire as to the usual manner and processes of reducing its volume. Prior to 1861 the usual and very successful plan for suppressing the currency of the country was by a run on the banks. This plan not only destroyed the money in the pockets of the people, but, by the sudden and complete contraction of the currency, it almost entirely destroyed the prices of all property.

After 1865 the old plan of contraction was not practicable; but in 1865 a law of Congress was passed for the reduction of the volume of currency, and Secretary McCulloch advised that—

The process of contracting the Government notes should go on as rapidly as possible without producing a panic.

The same Secretary reported in December, 1866, that he had during the year "counted and retired $211,000,000."

In 1872 Secretary Boutwell reported that he had canceled, "by burning," $100,000,000.

The continued contraction of the currency produced the disastrous depression of 1873, which continued until the remedial measures of 1878 were passed. One of these remedial measures forbade the further retirement of United States notes; the other provided for the coinage of silver and the issuing of silver certificates. They added to the money facilities of the country and gradually and partially relieved the financial and industrial depression.

Mr. Chairman, the contraction of the currency by locking up afflicts the country with falling prices, compelling all business men and investors to hoard in self-defense. Thus we see piled up in the great money centers unusual amounts of money belonging to individuals waiting a change from the continually receding prices of the products of labor and the commodities of commerce. And, as in all cases of the suppression of the money and consequent falling prices, we hear on all hands the moans and cries of distress, and the earthquake rumblings of threatening revolution and anarchy. Such scenes and dangers were witnessed under similar circumstances during the years 1873 to 1877.

The great Peter Cooper stated that during his long business life he had witnessed ten disastrous industrial depressions, always from the same cause, always and uniformly from a destruction or suppression of the money of the country. And British history informs us that a law for the suppression of the currency of that country was passed in 1820. At that time the country was prosperous and the British people were employed and contented. Under the influence of the Peel contraction bill four-fifths of the landholders of England, through bankruptcy and forced sales, lost their lands. The people were without employment and were suffering everywhere for the commonest necessaries of life. The suffering country was relieved by five money bills introduced in a single night by Lord Castlereagh, and passed under a suspension of the rules as matters of urgent necessity. Every bill was designed to increase money facilities. The relief was sudden and effective.

I now submit that the primal and general cause of financial and industrial depression is a suppression of the means of changing titles to the products of labor, and that this blocking of the means of distribution should be remedied by a restoration of the currency of the country.

I claim, Mr. Chairman, that the General Government should resume its exclusive sovereign right to coin and issue the money of the country, and that all money so issued, whether metal or paper, should be receivable by the Government for all dues and a legal tender for all debts and taxes. That the money so issued shall be gradually increased to the volume per capita that existed in 1865, before the law for its suppression was passed: that it be floated from the Treasury in payment of the interest-bearing debt and other liabilities of the Government, giving bondholders their option of coin or paper in such payments. And I will say further, that such volume per capita should be substantially maintained forever hereafter by the issue of new coin or Treasury notes in accordance with the increase of population, said money to be circulated through the usual disbursements of the Government. And, in order to shield from the evils of falling prices through the hoarding of money or other causes, I would suggest the creation of a bureau of prices. Said bureau should have a central head at the seat of the General Government, with branch offices in the principal commercial cities of the country.

It should be the business of the branch offices to observe and note the daily prices in their respective cities of all the important products of labor that are the commodities of commerce. Each branch office should make a full monthly report to the head office in Washington, where the average price of each commodity and of the aggregate commodities must be arranged and published monthly. Then if these monthly reports show an average monthly fall in the sea level of general prices, the per capita additions to the currency of the country must be increased. But if three consecutive monthly reports show a rise in the general sea level of prices, then the per capita additions to the currency should be smaller.

It is my opinion that the volume of the money should be maintained as nearly as possible unfluctuating, and that the general average or sea level of prices should be maintained as nearly as possible the same.

In discussing the general and bottom cause of financial and industrial depression I do not forget that there are many collateral and cumulative causes. I recognize the grievances that continually arise between the money earners and their employers, but we know that the interests of both parties are best served by steady prices and an unfluctuating money market. I know that strikes and lockouts occur oftenest, and are most difficult of management, when the volume of currency is shrinking and prices are falling. I know that individuals and syndicates may lock up money and bring down prices as well as the United States Treasurer; but our bureau of prices will correct that. I

know that there are still left for discussion the land, labor, and transportation questions, in a hundred varying forms; yet the asperities and afflictions on the body of civilized society may be smoothed down and healed with greater ease and certainty if the circulating medium of society is normal. I believe that our bureau of prices, in its monthly reports, will reveal the fact and locality of corners in the products of industry, and may lead to the discovery, exposure, and punishment of the criminals. The gold corner of Black Friday, 1873, became a possible and accomplished fact after a period of seven years of suppression of money and falling prices.

I do not believe that an unfluctuating system of finance will cure all the evils of land monopoly, but it is a historic fact that every money panic has caused thousands of the homes of the people to pass into the hands of the money lords at merely nominal prices, through sheriff's sales and foreclosures of mortgages. I do not believe that the adjustment of the money question will heal all the differences between capital and labor, but it may be safely stated that 90 per cent of the strikes and troubles in this line have occurred during a period of falling prices. At such times the capitalist has the advantage in these fights, while on a steady or rising market the employés usually gain easy victories.

Mr. Chairman, I do not claim that all the ills of society can be cured through the manipulations of finance; though one of our great leaders, Henry George, has truthfully declared that the evils of land monopoly may be remedied by "a mere fiscal change." And I believe that all reforms and all adjustment of troubles may be more easily accomplished if we have at all times steady, unfluctuating financial ground to stand upon. In my opinion, he would be a very foolish man who, designing to build an enduring edifice of masonry, should select a volcanic region where the earthquakes beneath his feet would continually change the level of his foundations. He would be a very unwise man who, when navigating the broad ocean, should choose as his guiding star a a fluctuating and moving planet, instead of the polar star of fixed certainty. So, in the construction of an enduring civilized society that is expected to live through the ages, dispensing justice and protecting the liberties of all its citizens, the system should be erected on a steady and unfluctuating foundation, and its founders should be guided by the fixed and unchanging principles of justice. Such a system can not be established on the shifting and treacherous sands of a fluctuating medium of exchange, but must stand on solid ground, where all citizens may meet on equal terms for the adjustment of their grievances and the enjoyment of citizenship.

Mr. Chairman, I now call the attention of the committee to the condition of the country brought about through the devices, lawful or otherwise, so well known and so assiduously practiced by the men and corporations whose business it is to speculate in scarce and dear money, and to grow rich through the misfortunes which their practices bring about.

Discussing the condition of the American people, Mr. Flower, in the January (1893) number of the Arena, said:

At my request, Mr. W. P. McLoughlin recently investigated the subject of evictions in New York City. He had access to the court records, and was enabled to present facts as incontrovertible as they were appalling. First, it was shown that while the number of evictions in Ireland during the year 1890 was a little over 5,000, the eviction warrants in New York City during the same period reached the total of 23,800; while the number of eviction warrants for one judicial district in the tenement region of New York, last year, reached the enormous figure of 6,100, or about a thousand in excess of the entire number of evictions in Ireland in 1890. Second, that in the city of New York for the year ending September 1, 1892, the eviction warrants issued reached the appalling aggregate of 29,720. Third, as Mr. McLoughlin indicated, if we allow five persons to the family, which is the usual ratio in computing population, we have a grand total of 148,600 human beings, who were outcasts, to all intents and purposes, in one of the most wealthy cities of the world.

Mr. Flower makes very liberal deductions for families which may have been evicted more than once during the year, and for other exceptional cases, and finally rests his estimate at the low and conservative sum of 100,000 evicted and suffering men, women, and children. He then says:

Let us imagine the spectacle of this army of haggard, half-starved men, women, and children—the army of the overpowered—uniformed in rags and tatters in midwinter, divided into one hundred battalions of one thousand each, with sable colors and muffled drums, with eyes made dull by hopelessness or baleful by despair—a section of the human family in full defeat—marching with mournful tread past the lordly palaces of Fifth avenue and gazing wistfully through the windows at the dazzling splendors of homes whose owners represent hundreds of millions of acquired wealth.

Mr. Flower, further along, says:

Beyond the 100,000 people evicted last year, there were probably three or four times that number who lived in constant fear of eviction. A spell of sickness, the loss of work for a week, a death—indeed, anything involving a few dollars' expense would result in inability to pay rent and consequently eviction. Hence this specter haunted many hundreds of thousands of lives in gay, careless, cathedral jeweled New York during the past year.

In confirmation of the wide-spread misery and biting poverty indicated by the above facts, it is well to remember the significant data bearing on this subject brought out in the carefully prepared statistical tables published by Jacob Ries in the appendix to "How the Other Half Live." In these tables it is shown that, in 1889, over 7,000 persons in New York died in the work, houses, insane asylums, and hospitals. That is to say, more than 1 person to every 5 who died in the city during that year died in one of the above-named institutions; while 3,815, or almost 1 in every 10 who died, was buried in the potter's field. These facts are as suggestive as they are appalling; and while it is unquestionably a fact that New York, being our largest city and the chief gateway from Europe, makes a more deplorable showing than other great cities, what is true of New York is true to a certain extent of Chicago, Boston, and indeed, all our leading centers of life.

Mr. Flower next gives a vivid account of a typical actual case representing a faithful daughter, Mamie Jennings, who literally worked and starved herself to death, in the vain effort to support herself and invalid mother. It is but a single case in this dark world of never-ending heartache for the poverty crushed, but it represents hundreds of thousands, in this boasted land of plenty and prosperity who die of want and despair, through no fault of theirs.

Leaving the cities, Mr. Flower turns to the country and says:

Before noticing the facts involved, let us remind the reader that the poverty of our agrarian population is not due to drunkenness, crime, or idleness; for it is well known that the farmers are among our most sober and law-abiding citizens. They are also the most incessant workers, toiling from the gray dawn till the blanket of night has completely enveloped the land. If any people in the Republic deserve to be prosperous, it is our farmers. If there is any class of people in the land who should be absolutely free from the mortgage curse, it is the farmer—for here we find sobriety married to industry—yet here again we find conditions which bear in an important way upon the query, "Are we a prosperous people?"

Mr. Flower first refers to the published official tables of the mortgage indebtedness of the State of Nebraska. He finds it very large, and that as late as May, 1892, it was increasing at the rate of $18,000,000 per annum.

He next refers to the census reports of 1890, and finds that five great agricultural States in the very center of the nation are mortgaged as follows:

States.	Number of mortgages.	Amount.
Illinois	297,247	$384,299,150
Iowa	252,539	199,774,171
Missouri	192,038	214,609,772
Kansas	228,880	243,141,826
Nebraska	155,377	132,903,322
Total	1,196,071	1,174,732,241

Mr. Flower also discusses the chattel-mortgage question, founded on the State official figures of Nebraska, and comes to the very reasonable and conservative conclusion that on the lands and chattels of the people of the five States mentioned in the table there rests an aggregate mortgage indebtedness of $1,762,098,361; in round numbers nearly two thousand millions of dollars!

After giving the figures and facts, as shown by the official returns, Mr. Flower says:

Another fact we must bear in mind is that this mortgage indebtedness we have been considering means far more than dollars and cents. True, it is appalling when considered merely as an economic problem; but when we remember the cost involved, which money can not measure, it becomes a supreme tragedy.

Then follows a picture, truthful and cruel, of this merciless tragedy, now being enacted among the farmers of this entire nation. He describes but too truly:

The muffled sobbing which speaks of vanished hope from millions of once buoyant lives; the laughter of childhood frozen by an atmosphere of dread if not despair. Youth and maidenhood unschooled in books; bowed with incessant toil, and wearied in soul and body, while the sun of life is far below the meridian. Age, pitiful beyond words, broken beneath the wheel of fruitless toil: health gone, hope vanished, and home lost that the "usurer may be satisfied." * * * The story of the five States given affords a vivid picture of the deplorable conditions among our agrarian population no less than the figures of evictions in New York reveal the presence of abject poverty in urban life which takes within its border hundreds of thousands of lives.

Mr. Flower further quotes from the census report of 1890, showing that in a nation of 12,000,000 families, 9,000,000 of them have been afflicted with the mortgage fiend, and if a part of that number are now free that freedom has been fully neutralized by the chattel mortgages, which are not mentioned in the United States census reports.

These facts, beyond the power of pen to properly portray—

Says Mr. Flower—

demonstrate that honesty, thrift, and sobriety are no longer talismen against starvation in this opulent nation, and that conditions to-day are the result of glaring social and economic evils largely due to the vicious class and special legislation of recent years.

Mr. Flower does not dwell on remedial measures, but briefly says:

I do not believe conditions will improve until (1) our financial policy is changed. The volume of currency must be greatly increased and be based on the nation's wealth and honor, instead of a commodity: * * * and until the volume of currency be increased the usurer will continue to grow more autocratic and powerful, and the toiler more completely his slave. (2) We must have * * * the telegraph and railroad owned and controlled by the nation instead of operated by a combination of individuals who levy

enormous tariffs on producers at one end and consumers at the other, that they may pay princely dividends on watered stock, and that their sons and daughters may idle in luxury while thousands toil and starve. By bringing about these changes the nation would make splendid strides toward securing "an equality of opportunity" for her children: and if these measures be augmented by legislation which would abolish all indirect taxation and absolutely destroy all speculative privilege in land, I believe the toiling millions of the Republic would experience a degree of prosperity never before realized by any populous nation; and I believe that with these measures (which look toward the happiness and well-being of all the people rather than special classes) would come higher and diviner ideals of conduct, insuring for the oncoming generation the royal heritage of justice and freedom for man, woman, and child.

Mr. Chairman, contraction of the currency and falling prices means danger and bankruptcy for business men and farmers. The latter, whose condition we are now discussing, unable to carry their burdens through the sale of their products, were compelled to borrow as a means of protection against the sheriff. The loan, temporary at first, could not be paid, except by further loans. Short loans were met by long-time loans, secured by real-estate mortgages. The country became one vast pawn shop, with loan agencies on every corner. Men borrowed to pay outstanding debts, and supply a little surplus money to repair farm buildings and fences, and to live on, till the storm should be over, as everyone fondly hoped would soon be the case But it has not yet blown over; nor is it likely to do so soon, if Wall street can prevent it. In the creation of 90 per cent of the mortgages mentioned in the discussion there were no free contracts. They were cases of compulsion. By mortgaging his home a man secured temporary relief. He gave the sheriff a few years' stand off. But, ultimately, the evil day must come. That, which was inevitable, is now here! The laws of finance—the power of money—stronger than the statutes of States and Congresses—more powerful than the edicts of autocrats—compelled the mortgages, and now prevents their payment! Even the surrender of the estates frequently fails to satify the debts, though they were formerly worth two or three times as much.

Have I here given an isolated bit of history? I have not. American and European writers agree that it was the contraction and wasting away of the Roman money which enabled the nobility to obtain their vast estates, which finally destroyed the empire, dissolved Roman society, and brought on the "dark ages." During those turbulent and sorrowful times the population of Europe fell off one-half. This means that people were killed faster than they were born. Europe emerged from that blight of the human race and the decadence of civilization, through the discovery of the American mines, bringing increase of money and rising prices. Mr. Alison says that under the influence of this prodigious force—

The burden of debt and taxation wore away and human rights were established.

In 1816, at the close of the Napoleonic wars, the British Parliament passed a law restricting the use of silver. In 1819 another law was passed to contract the currency. This gave to that country falling prices, general bankruptcy and universal distress. By 1826, four-fifths of the landholders of England had lost their lands, and the working people were so distressed that troops were used to compel men, women, and children to starve in peace.

In 1819, when Mr. Peel's bill for specie resumption was passed, Mr. Cobbett, predicting that it would never be fully enforced, said that before this measure could be carried into complete execution a million of persons, at least, must die of hunger; that it never would be completely carried out; and that if it were so he would suffer Castlereagh to broil him alive while Sidmouth stirred the coals and Canning stood by to make a jest of his groans.

Even as late as 1830 the time for broiling Cobbett had not yet arrived. Expedients were still being devised to enable the bank to resume. It was arranged ultimately that a portion of the currency, amounting to about £15,000,000, should rest on its legal-tender quality, and the remainder should be redeemed in coin. So the broiling time of Cobbett never came, but the "million people" and more were duly starved in the attempt to reach specie payment; and four-fifths of the landholders of England had surrendered their lands into the hands of the money lords.

We are now, in America, pursuing that same English policy. Our farmers are surrendering their homes into the hands of the money lords, as the English farmers did theirs under the same coercive conditions. Our working people in the cities, mines, and factories and on the farms and railroads are suffering as theirs did. Merchants bankrupt by the thousand annually. Farmers are unhoused and tenants evicted daily and hourly in the country and city by an unseen force which none can resist. Strikes of labor are rife on every hand—men, women, and children are crying for bread and struggling for life against a merciless force that is resistless. Troops have recently been called out in four States at one time to compel starving labor to die in peace.

Mr. Chairman, Senator Ingalls, of Kansas, on January 14, 1891, described our situation in this country as follows:

So it happens, Mr. President, that our society is becoming rapidly stratified, almost hopelessly stratified, into a condition of superfluously rich and helplessly poor. We are accustomed to speak of this "as the land of the free and the home of the brave." It will soon be the home of the rich and the land of the slave.

* * * * * * *

A financial system under which more than one-half of the enormous wealth of the country, derived from the bounty of nature and the labor of all, is owned by a little more than thirty thousand people, while one million American citizens, able and willing to toil, are homeless tramps starving for bread, requires readjustment.

A social system which offers to tender, virtuous, and dependent women the alternative between prostitution and suicide, as an escape from beggary, is organized crime, for which, some day, unrelenting justice will demand atonement and expiation.

Evidently Mr. Ingalls has an opinion as to the "prosperity" of our people. Judging from the success of our most flourishing industry—creating millionaires and paupers—surely we are "a prosperous (?) people!" Prosperous as Rome and France were when the rich had monopolized the lands, and had obtained control of all wealth, and the people were driven into "the frenzy of revolution," as their only means of relief.

Since it has been shown in this discussion that debts and mortgages come through the contraction of the currency, and since all history shows that the contraction of money and falling prices uniformly bring debt, bankruptcy, and great distress on all except persons receiving salaries, annuities, or fixed incomes, or capitalists out of debt, may it not be fairly presumed that an increase of money will bring relief? It is the uniform experience and testimony of all the best writers in Europe and America that more money is the first and best remedy in cases like the one under discussion.

I have already quoted the statement of the late Senator Plumb, showing that the contraction of the currency 5 per cent of its volume in twelve months reduced the debt-paying power of the people $3,000,000,000. That statement being true (and it certainly is), it follows that an expansion of the currency will increase the debt-paying power of the people. A doubling of the money would lighten all taxes and debt burdens at least 50 per cent. The country would have rising prices. Bankruptcies would cease. Industrial enterprise would revive. Labor would be employed, and times would improve. The clearing-house figures would bound upward as they did under the greenback expansion during the war. Employed labor, being well fed, well housed, and well clad, would double its demands for the products of the farm, the mines, and the factory. The workers of each prosperous industry would become the customers of every other. Every man aids in the prosperity of others when each is prosperous.

Thomas Carlyle has pictured a period of monetary stringency in England but too truly in the following language:

British industrial existence seems fast becoming one vast prison-swamp of reeking pestilence, physical and moral, a hideous living Golgotha of souls and bodies buried alive. Thirty thousand outcast needlewomen working themselves swiftly to death, and three million paupers rotting in forced idleness, helping the needlewomen to die.

Another picture is by Bob Ingersoll, describing the good times during the greenback expansion in this country, before the grip of contraction had performed its deadly work. Mr. Ingersoll said:

On every hand fortunes were being made; a wave of wealth swept over the United States; huts became houses, tatters became garments, and rags became robes; walls were covered with pictures, floors with carpets, and for the first time in the history of the world the poor tasted all the luxuries of wealth. We began to wonder how our fathers endured life.

That picture represents good times.

Mr. Ingersoll has also drawn a picture of society during contraction, as follows:

No man can imagine, all the languages of the world can not express what the people of the United States suffered from 1873 to 1879. Men who considered themselves millionaires found that they were beggars: men living in palaces, supposing they had enough to give sunshine to the winter of their age, supposing they had enough to leave all they loved in affluence and comfort, suddenly found that they were mendicants, with bonds, stocks, mortgages, all turned to ashes in their hands. The chimneys grew cold, the fires in furnaces went out, the poor families were turned adrift, and the highways of the United States were crowded with tramps.

In 1867 Senator Ben Wade, of Ohio, said:

To talk of specie payment, or a return to specie under present circumstances, is to talk like a fool. It would destroy the country as effectually as a fire, and any contraction of the currency at this time is about as bad.

In 1874, after the fangs of contraction were bleeding the country at every pore, Senator John A. Logan pleaded the cause of the people most ably and fearlessly. In one of his speeches, March, 1874, he quoted approvingly from the Berrien County (Mich.) Record as follows:

The people have and do realize that their most prosperous times were when currency was the most plentiful. It is true it was not so good for the money-lender and the capitalist, but for the laborer, the manufacturer, the producer, three-fourths of the entire country, it was far better than it is to-day.

He then goes on to say:

Why is it that Representatives forget the interests of their own section and stand up here as the advocates of the gold brokers and money lenders and sharks, the same class of men whose tables Christ turned over and whom he lashed out of the Temple of Jerusalem. * * * Carry out the theory of the contractionists and what must be the inevitable result? Every enterprise and industry must be dwarfed in like proportion. The busy hum of the spindle will cease its sound in many a mill which now gives employment to hundreds of active hands and supplies the comforts of life to many a happy home.

The bright blaze of many an iron foundry, which gives life and cheerfulness to the grand scenery along the streams of Pennsylvania, will cease to gild the night with its rays. And the same industry in my own State, and that of the Senator from Missouri, which has been so rapidly increasing of late, will be crippled, and hundreds who now find employment there will be compelled to seek a home elsewhere for want of work. The undeveloped resources of the South and West, which we have just begun to appreciate, will rest in abeyance till a wiser policy shall bring them into use.

British writers dwell long and ably on the subject of currency contraction and expansion. The uniform testimony is to the effect that contraction is a blight and a curse. Sir Archibald Alison says it was the contraction and wasting away of the Roman money which brought on the Dark Ages, the history of which is so painful to read; and he claims that it was the increase of money through the discovery of the American mines which enabled Europe to recover from that dismal condition, and again to start on the road of progress.

Mr. Thomas Doubleday, in his history of Sir Robert Peel, discusses very fully the evils of contraction, and its uniform and distressing results. He, however, gives one case in which contraction was justly and equitably effected without evil results. It was in the case of Portugal. The government of that country, desiring to reduce the volume of the currency 20 per cent, also enacted that all debts and monetary obligations should be scaled down 20 per cent. That was fair toward all classes, and no evils or discontents resulted from this wise and equitable policy.

There is a power in money, merely through changes in its quantity, which no human agency can resist. There is no engagement, national or individual, which is unaffected by it. The enterprises of commerce, the profits of trade, the arrangements in all the domestic concerns of life, the wages of labor, the transactions of the highest and lowest amounts, the payment of debts and taxes, are all affected by the quantity of money in circulation. There resides in money the most enormous power known to man. It is the tide in human affairs upon which all things must rise or fall. It is as irresistible as the wings and wheels of commerce on the high seas and the broad continents. More powerful than the thunder blasts of armadas that throb upon the ocean, or the tread of continental armies; and this mighty force is self-acting in all the large and small transactions of men. This is the concurrent testimony of the ablest writers.

Mr. Chairman, I think I have proven that this country has been in bad legislative hands, and that our people need help. But, sir, I can not conceive how the bill for the repudiation of debts can help us. There is no great number of people in this country who wish to shirk the payment of a single just debt, according to the law and the contract, in money as valuable as that they borrowed when their debts were incurred. Give them a fair chance and they will pay all their debts. Let the Government treat our common working and producing people as it has treated the bankers during the past quarter of a century, and there will be no need of repudiation laws. Give our farmers money on as easy terms as bankers get it and there will be no need of laws "impairing the obligations of contracts."

Mr. Chairman, I am opposed to the bill now under consideration for several reasons. It is too long and too complicated. The lawyers can not understand it without a dictionary, and in the kindness of the fathers of the bill they have made one. And even with this they do not agree as to what the bill means. It seems, also, that this bill is intended to benefit the least worthy class of the community; namely, the speculators. I am willing to admit that most laws are made, and perhaps must be made, so as to primarily benefit some one class of persons more than others, but that feature should be avoided as far as possible. And it should ultimately be of general benefit to all men, and an absolute injury to none of the worthy members of society.

Mr. Chairman, I will not now discuss the details of this bill, and will content myself with a few quotations from the speech of the gentleman from Texas [Mr. KILGORE], who has handled the matter so fully:

Mr. Kilgore, in his speech of October 25, said:

The writers for these papers never studied the provisions of the bill; they did not know what was in it, nor did they care. They did not know that it was originated by and devised in the interest of the wealthy wholesale dealer to the end that he might harrass, oppress, and blackmail and destroy, at his own sweet will, the host of small traders throughout the length and breadth of the land. They did not know that it was full of conspicuous and flagrant incongruities which left its interpretation to officials whose very position made them unfriendly to the small debtor in a contest with his wealthy creditors.

They did not know that it carried in its body the elements and the spirit of a most vicious paternalism, that it bristled with harsh and inhuman remedies in the interest of the creditor, and cruel and unusual penalties against a debtor who may have been guilty of no greater crime than mere misfortune.

They did not know that it transcended the limits of free government, and would precipitate widespread and unmeasured harm upon the most numerous class of the plain people of the country.

If these great papers had known all these things about this measure it would not have wrought any change in their course. Their servile and mercenary devotion to the aristocracy of aggregated wealth control their convictions and their opinions and their judgment on all questions which are supposed to imperil the pecuniary interest of this gilded aristocracy. Patriotism—a regard for the principles of free government and constitutional liberty and for the interest of the great mass of people—exercises no influence with the metropolitan press when they conflict with the private interest and private fortune of the favored few.

Notwithstanding the abuse and criticism which the "big dailies" of the cities have chosen to mete out to the opponents of this measure, I have not changed my mind in the least on the subject and I have not abated a single jot or tittle of my opposition to the bill. The more I have investigated its provisions, the more I have comprehended its meaning and purpose, the stronger has become my conviction that it is entirely vile and bad. It can be safely asserted in this Hall and outside of it that any measure which has the constant, watchful care and attention of the lobby has behind it some improper motive and is generally loaded with some scheme, the purpose of which is to subserve the interest of only a limited class of selfish people.

One of the strongest objections to this bill is that it has been pushed from the time it went on the Calendar in the Fifty-first Congress by a shrewd, able, insidious, and assiduous and persistent lobby.

* * * * * * *

It is not the purpose of this measure to prevent preferences, fraudulent nor any other kind. Its projectors and advocates know that can not be done. Its only object is to lodge with the wholesale people the power to coerce and to crush at their will the retail dealer.

* * * * * * *

It is the history of nearly every estate that was administered in the bankrupt court in the district in which I live that the creditor got nothing or very little. If a creditor got 5 per cent of his debt he was a fortunate man. Nine times out of ten the estate did not yield more than enough to pay the lawyers and the costs of court; sometimes not so much. Yet it is proposed here now to precipitate that same condition of things upon the country, and all this merely to prevent the chance that some one man in five hundred who fail may fraudulently prefer some member of his family or other creditor, or to prevent the resident creditor getting his attachment in ahead of the nonresident creditor.

That is about all that it is claimed can be accomplished by this proposed law. I say it is unnecessary to have any involuntary system of bankruptcy in this country, but if this House is to agree upon a voluntary system, it can not be framed upon this bill. The whole matter will have to be referred to the Committee on the Judiciary, and they will have to frame a bill based upon the idea of a system of voluntary bankruptcy.

* * * * * * *

The debtor can be dragged into the Federal court at the suggestion of one of his creditors. If he has a dozen creditors or a hundred, under the provisions of this bill any one of them controlling $500 of his indebtedness can carry him and his property and business into the United States court and try the question of his solvency, and this same creditor can put him into that court and have an inquiry as to whether or not he has been guilty of any wrong or fraud in the conduct of his business or suffered any misfortune which his vigilant and exacting creditors could use against him. If he has less than twelve creditors, any one of them owning as much as $500 worth of claims against him can put him into the bankrupt court and have him tried for an act of bankruptcy. If he has more than twelve creditors, any one of them can prefer the charge against him that he is guilty of some act of bankruptcy and carry him into court, but can not compel an adjudication unless other creditors join in the petition. If he is acquitted of the charge, and it is found his property is sufficient to pay his debts, and he is discharged, he is nevertheless ruined; he is a ruined man, and you know it.

You know how sensitive and delicate the credit of a merchant is. When he has been taken by one creditor or three creditors into the Federal court or into any other court to determine the question of his solvency, and whether he has perpetrated a fraud on his creditors or not or done anything declared to be an act of bankruptcy by this bill and he is subjected to the provisions of the bill and discharged with the verdict that he is not guilty, still his ruin has been accomplished. And any man, an enemy, who could acquire possession of $500 of his indebtedness can at any time put the debtor in the Federal court and that means, as I have shown, his utter ruin. It is scarcely then a question of solvency, because ruin follows anyhow, the ruin of the debtor, and he is absolutely without any remedy for the malicious wrong which he may suffer at the hands of his enemy.

Mr. CULBERSON. And, if my colleague will permit me, there is no method prescribed in this bill by which you shall ascertain the fair market value of the property; whether it is to be a cash sale, or whether it is to be a sale on credit, or whether it is to be sold at the tax valuation, or what not.

Mr. KILGORE. I thank my colleague for the suggestion; and the fact that no reasonable rule can be prescribed under the definition given in the bill will constitute the greatest difficulty in such trials. There is no provision and there can be none by which to determine the matter, for if a man sets up that the property real and personal is worth $10,000, and they go to the tax roll and see that at a certain time it was rendered for taxation $7,000, a difficulty arises at once as to a "fair valuation."

* * * * * * *

Now, Mr. Chairman, I want to talk a little about the details of this bill. There are some rather funny things in it. It has in it a dictionary full of definitions no man ever heard of before, and Congress is, mind you, called on to enact this dictionary and make it a part of the law of the land.

Among other things it says:

"Words importing the masculine gender may be applied to and include corporations, partnerships, and women."

Now, Mr. Chairman, as little as you may think of it, by this legislation our women may be converted into corporations. The bill absolutely abolishes all distinctions between men and women, and all distinctions between women and corporations; and when a man has gone out and courted some good-looking girl, spent days, and weeks, and months, and all his spare shekels wheedling her into matrimony, and after he has at last succeeded, it turns out he has married a blasted and soulless corporation. What are we coming to? [Laughter.]

That is not all. Not half. The bill goes on to say that—

"(28). Words importing the plural number may be applied to and mean only a single person or thing; (29) words importing the singular number may be applied to and mean several persons or things."

Now, after a man has succeeded in fooling some good woman into matri-

mony, and then finds he has made no blunder, he would be liable to a prosecution for having a plurality of wives if this bill goes on the statute books in its present shape, for it says "words importing the singular number may be supplied to and mean several persons."

This bill, in providing a dictionary, proposes other innovations at the same time. Here is what it says:

"Words which are given a meaning or made to include other words herein, when used in one tense, shall have a corresponding meaning when used in any other tense."

The pending measure not only enacts a dictionary, but it actually repeals the grammar. I am rather glad that such is the case, for I have ever cherished a malicious repugnance to all grammars. [Laughter.] They have been a stumbling-block in my way all my life. Let them be abolished. [Laughter.]

Now, when, as Mr. Dickens says, "a man has conjugated himself into the imperative mood," he will at the same time find that he is also in the indicative mood. Moods and tenses and cases no longer preserve their distinguishing characteristics. They are homologued, so to speak—made one and the same by this bill. It is an offense punishable by imprisonment two years for a bankrupt to conceal any property belonging to his estate—so the declaration that he would conceal some of his property would, according to the grammar of this bill, be an admission that he had done so, and he would stand a fair chance to go the penitentiary on his admissions, whether he was guilty or not. And when a candidate for some office has been skirmishing for months and finally achieves the nominative case, he is dumfounded when he learns that by an act of Congress he is placed in the vacative.

While the authors of this bill were at work on the scheme to abolish the grammar, they might at the same time have done something for a weary world by repealing the spelling book. [Laughter.] In doing so they would in some degree have atoned for the mischief they did in other respects, and earned the gratitude of the bulk of mankind.

Now, Mr. Chairman, if this measure should become the law it will open wide the door to all sorts of opportunities for the perpetration of fraud by adventurers in the mercantile profession.

* * * * * * *

Another act of bankruptcy is where a person "makes a transfer of his property with intent to defeat his creditors." Now, I would like to ask how it is possible to establish the intent except by the proof of the transfer, and if the intent is proven by the transfer you tie the hands of business men effectually. "Transfer" is defined to mean "sale" and every other method of parting with property or its possession. How is a man to know when to sell or buy under this law, if it should pass?

* * * * * * *

If they had gone on and provided that a man should be adjudged a bankrupt, if he being insolvent owned horses and carriages, there would have been just as much reason in it; or if they had made it an act of bankruptcy for an insolvent to buy more than one silk dress for his wife in a year, or made it an act of bankruptcy for a man who is insolvent to kiss his wife more than once or twice a month [laughter], or get drunk, or bet on a horse race, then there would have been a beautiful harmony in the measure. But here is a bill properly named a bankrupt bill, for it will bankrupt the agricultural masses if it is ever passed, framed by the great wholesale dealers of this country, with their lawyers shrewd and adroit and able at their elbows; and yet they put that sort of foolishness in a measure and ask Congress to pass it.

* * * * * * *

The purpose of this law is to blackmail, to break down and ruin the debtor who does not do exactly as the creditor wants him to do, and all its harsh provisions will be interpreted most strongly against him by his big creditors; and after they have stripped him of all his property and wasted it in expensive litigation in the United States court, then they will begin to consider the propriety of putting him in the penitentiary a couple of years for something he has done or omitted in the course of the proceedings.

* * * * * * *

Now, sir, if a man has a transaction with a debtor who within four months goes into bankruptcy, and buys a piece of property from him, and pays for it or advances money and takes a lien upon it, and the debt is paid by the transfer of the property, the entire transaction could be declared void and the party would lose his property or have to pay it again.

Now, after all this trouble is over; after the debtor has gotten through a court in bankruptcy; after he is broken up and his property wasted, and all his transactions had within the six months next preceding the filing of the petition have been avoided, and after he has missed the penitentiary by the skin of his teeth and has commenced business again, this bill provides that at any time within two years after he has been discharged and started in business again, he can be put back into bankruptcy on the application of a single individual, a stranger to the proceedings and without any interest in the estate of the debtor.

Mr. Chairman, I think I have said and quoted enough to put members on their guard when they come to vote on this bill. I will now give the outline of a bill, which, in my opinion, will benefit all the people of this country. It will give to the people more money, and it will be circulated from the Treasury through the hands of the men who need it most, in order to save their homes from confiscation. It is a bill which aids men to pay their debts, and not a bill to confiscate debts. The very first thing under this bill is to pay the debt, and it leaves the debtor in good condition, in possession of his home, and able to pay out by refunding the sums advanced to him by the Government. In doing this it merely puts the man with a soul in his body and family on his hands in as fair a position before the laws as is a banking institution or corporation, with neither soul to save nor body to punish.

Outline of a bill for the relief of certain mortgage debtors, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in all cases where any mortgage debtor to whom this act shall apply has failed or shall fail to pay his or her mortgage debt or the interest thereon, according to contract, the said debtor shall be deemed and held to be a bankrupt, and it shall not be lawful to collect such mortgage debt by the usual method of foreclosure under the laws of the several States, but the method of procedure and collection shall be as follows:

SEC. 2. That the creditor holding the mortgage shall proceed in person, or by his agent or lawful representative, to the office of the register of deeds where the mortgage is recorded and there procure a correct abstract of title of the estate held by his mortgage and a statement of the incumbrance created by his claim or debt. The register of deeds shall certify to the correctness of the said abstract and statement and attach his seal and signature: *Provided*, That after examination the estate is found to be worth the full amount of the mortgage; and for the purposes of the said examination the register of deeds, the county clerk, and the county treasurer of each county, respectively, are hereby constituted an appraisement board.

SEC. 3. That it shall then be the duty of the creditor to proceed to the county treasurer's office, where the said abstract shall be placed permanently on file for future inspection.

SEC. 4. That on presentation of the said certified abstract in the county treasurer's office it shall be the duty of the said county treasurer to issue in due form, on blanks prepared for the purpose, a draft for the amount of the mortgage debt, including interest and official fees to date, on the Treasurer of the United States. Said draft shall be examined by the county clerk and certified as correct by his official seal and signature. Said draft will then be due and payable by the Treasurer of the United States on demand of any lawful holder of the same. It must contain an accurate description and location of the estate designated in the abstract, and the amount of the draft, when paid by the Treasurer of the United States, shall be charged up on his books against the real estate, creating a lawful lien on the same. The debtor shall then be allowed twenty years' time on the debt by paying interest promptly on the same semiannually at the rate of 1 per centum per annum. The county record of the mortgage shall be marked, "Settled by the United States Government."

SEC. 5. That this procedure, herein set forth, shall be the only lawful way of collecting mortgage debts on real estate until the aggregate circulation of lawful money in the United States shall amount to $50 per capita of the population, not counting the lawful reserves in banks and other fixed and noncirculating deposits required by law.

SEC. 6. That after said aggregate of $50 per capita of the population shall have been reached the usual modes of legal procedure in the several States shall again become lawful, except at such times as the increase of population shall require further floating of new money to preserve the even, unfluctuating aggregate of $50 per capita, or as nearly as it is practicable to approximate to said amount by a careful calculation based on all the facts and circumstances involved.

SEC. 7. That this said means of relieving mortgage debtors and floating money shall not prevent other legitimate means of coining and issuing money in order to facilitate or aid in reaching and maintaining the aggregate and unfluctuating circulation herein mentioned; nor shall it be considered a bar or hindrance to private parties who desire to settle their own debts in their own way by mutual consent.

SEC. 8. That to enable the Treasurer of the United States to meet the demands under this law he is hereby authorized and directed to create and pay out on demand a sufficient amount, from time to time, of United States Treasury notes, of the usual denominations, receivable by the United States Government for all dues and legal tender for all debts and taxes. And, in order to show the amount of money afloat and its relation to the number of population, it shall become the duty of the United States Treasurer to embody in his monthly reports a careful calculation of the whole population at the end of each month, computed on the basis of known percentages of increase, and a statement of the money per capita afloat at the end of each month. These reports, sent out monthly to the registers of deeds in the several counties of the United States, shall be the authority indicating the mode of procedure in the collection of mortgage debts for the ensuing month.

SEC. 9. That when any mortgage debt becomes due and payable it shall be the duty of the holder of the mortgage to proceed to collection within thirty days. If procedure is not commenced within the said thirty days, interest shall cease on the said mortgage on the day on which, by its terms, the debt became due and payable.

SEC. 10. That this law shall be applicable to real estate occupied as individual or family homes, and to lands and lots occupied and used for personal and family support only. It shall not be applicable to unoccupied or unused lands.

SEC. 11. That this act shall not apply to mortgage debts bearing date after its passage.

SEC. 12. That the county officers designated in this act and assigned to certain duties as United States officers shall be al-

lowed reasonable compensation for their services, the amount to be fixed by the United States Treasurer and to be paid by the creditor at the time of service, the said amount to be included in the draft on the United States Treasurer, and charged up to the real estate as part of the deferred incumbrance: *Provided*, That in case the said county officers, or any one of them, shall fail or decline to act as herein directed, then, in that case, the Treasurer of the United States shall designate and appoint one or more persons of the vicinage to take the place of the delinquent or delinquents in performing the duties herein set forth for the fees or charges designated by the United States Treasurer.

SEC. 13. That before acting on behalf of the Unites States under the provisions of this act, the appraisers of estates shall qualify as United States officers by the usual oath of office.

SEC. 14. That this act shall take effect and be in force on and after its passage.

Mr. Chairman, that bill is thrown out as a suggestion. There should yet be added a section for the foreclosure and sale of property of delinquent debtors; or, that part of the work may be referred for the laws and the courts of the States. My own opinion is that it should be so referred. Other points will be readily suggested in order to perfect the bill. The object is to protect the home owners of this country, and to maintain the integrity and perpetuity of that worthy class of our people whom Mr. Jefferson called "the most precious part of the State." While doing this it fills the veins and arteries of commerce and business with the life blood of their existence and prosperity. It gives to the people more money with which to meet their monetary obligations, rendering the old-fashioned bankrupt laws for the repudiation of debts and the confiscation of estates no longer necessary.

Mr. Chairman, let it not be considered an absurd or unnecessary thing that I plead for the hearthstones of the poor, and ask that the man with a family to care for and a home to save shall have an equal chance with others before the laws of the country. Why should our lawmakers be deaf and blind to the voice and examples of history? Why should we allow money to oppress manhood by turning humanity out of doors, idle and starving, while estates are added to estates in the most reckless manner? Let us not permit our people to be driven from the soil as they are now being driven, as in former times in Rome; as in France, and as in England, rendering migration or revolution the only remedy in reach of the people. The suppression and abrasion of money is the forerunner of landlordism and of every tyranny. Let the people have money on the same terms to save their homes as it is loaned to corporations to invade and confiscate them, and the worthy workers will take care to prove in the sight of all men that the favor is well bestowed. Let us search well the horizon of the past, that we may find useful lessons to guide our feet in the untrodden future.

When Thomas Jefferson, in 1785, traveling in France, saw the large landed estates devoted to forestry and the raising of game, while the people were starving, he offered as a remedy, that, in every country where they could not find work at fair wages, the people should be allowed to "labor the land." Was not that plain common sense? It was so then. It is so yet. It is but simple justice that all men should have access, in some reasonable way, to the soil, in order to drive hunger from their doors.

The following extract from a letter written by Mr. Jefferson while in France, four years before the Revolution, may be read with interest and profit:

FONTAINEBLEAU, FRANCE, *October 28, 1785.*

* * * * * * *

I set out yesterday morning to take a view of this place (Fontainebleau). For this purpose I shaped my course toward the highest of the mountains in sight, to the top of which was about a league. As soon as I had got clear of the town, I fell in with a poor woman walking at the same rate with myself and going the same course. Wishing to know the condition of the laboring poor I entered into conversation with her, which I began by inquiries for the path which would lead me into the mountain, and hence proceeded to inquiries into her vocation, condition, and circumstances. She told me she was a day-laborer, at 8 sous, or four pence sterling, the day; that she had two children to maintain and to pay a rent of 30 livres for her house (which would consume the hire of seventy-five days); that often she could get no employment, and, of course, was without bread. As we had walked together nearly a mile and she had so far served me as a guide, I gave her on parting 24 sous. She burst into tears of gratitude, which I could perceive was unfeigned because she was unable to utter a word. She had probably never before received so great an aid. This little attendrissement with the solitude of my walk led me into a train of reflections on that unequal division of property which occasions the numberless instances of wretchedness which I had observed in this country, and is to be observed all over Europe. The property of this country is absolutely concentrated in a very few hands, having revenues of from half a million of guineas a year downward.

These employ the flower of the country as servants. They employ also a great number of manufacturers and tradesmen, and, lastly, the class of laboring husbandmen; but after all these comes the most numerous of all classes, that is, the poor who can not find work. I asked myself what would be the reason that so many should be permitted to beg, who are willing to work, in a country where there is a very considerable portion of uncultivated lands. These lands are kept idle mostly for the sake of game. It should seem, then, that it must be because of the enormous wealth of the proprietors, which places them above attention to the increase of their revenues by permitting these lands to be labored. I am conscious that an equal division of property is impracticable; but the consequence of this enormous inequality producing so much misery to the bulk of mankind, legislators can not invent too many devices for subdividing property, only taking care to let their subdivisions go hand in hand with the natural affections of the human mind. The descent of property of every kind, therefore, to all the children, or to all the brothers and sisters or other relations, in equal degree, is a politic measure and a practicable one.

Another means of silently lessening the inequality of property is to except all from taxation below a certain point, and to tax the higher portions of property in geometrical progression as they rise. Wherever there are in any country uncultivated lands and unemployed poor, it is clear that the laws of property have been so far extended as to violate natural right. The earth is given as a common stock for man to labor on; if, for the encouragement of industry, we allow it to be appropriated, we must take care that other employment be furnished to those excluded from the appropriation. If we do not, the fundamental right to labor on the earth returns to the unemployed. It is too soon yet in our country to say that every man who can not find employment, but who can find uncultivated land, shall be at liberty to cultivate it, paying a moderate rent; but it is not too soon to provide by every possible means that as few as possible shall be without a little portion of land. The small landholders are the most precious part of a state.—*Bancroft's History of the Constitution*, pages 463, 464, 465.

Mr. Chairman, let us maintain the homes and hearthstones of the humble working people of this great country. They alone can save the country in time of peril. Return to them the currency which saved the life of the nation in the sixties. Let them have it on the same terms that the bankers get money. That is all we ask. That is all I ask on my plan for a bankrupt bill. We want and ask no undue inflation of worthless money, but a just amount of the full legal-tender sort, which everybody prefers to coin. That sort which saved England from becoming a province of France. That sort which was issued in 1861, with no sting or knife of Shylock in its back. That sort which the Government will receive in the revenues, and which in all the history of this country has never been below par as compared with coin.

Give to the people of this country, Mr. Chairman, a fair and reasonable amount of good, legal-tender money, in the form of gold, silver, and Treasury notes, all alike receivable in the revenues of the Government; and let it be floated into circulation through the hands that need it most, as proposed in my bill, and an appreciative and prosperous people will bless the patriot statesmen who thus relieve their distresses, and save to them their homes.

Give the people of this country, Mr. Chairman, simple justice—give to them equality before the laws in financial affairs—and there will be no need for "emergency," or repudiation laws, called by the euphonious name of "a uniform system of bankruptcy."

Uniform System of Bankruptcy.

SPEECH

OF

HON. JOHN C. TARSNEY,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, November 3, 1893,

On the bill (H. R. 139) to establish a uniform system of bankruptcy throughout the United States.

Mr. TARSNEY said:

Mr. CHAIRMAN: It has been suggested in the course of the debate on this bankruptcy bill that the newspapers of the country which have very generally indorsed it, the labor and business bodies which have approved it, and individuals who have petitioned for its passage, have done so carelessly. I do not concur in any such insinuations. All of the expressions from newspapers, proceedings of bodies, and interviews with men which I have seen have indicated a knowledge not only of the bill, but of the whole subject of bankruptcy legislation.

I am very glad to say that this measure has been discussed at length by our newspapers; that our lawyers and judges have examined it with great care, and that my constituents at large have very generally considered the bill and the subject in their dual capacities as debtors and creditors, and that there is an almost universal demand for its passage by all classes. In the beginning of the discussion of the bill by my constituents there was some diversity of opinion as to its merits and the desirability of its enactment, but the provisions of the bill have become generally known, and as the reasons for its passage have become apparent the sentiments of those who have opposed it have gradually changed until I think I may say that there is now but very little, if any, opposition to its becoming a law.

Mr. J. D. Davison, of my district, has written an article in

which he so ably and fully states the reasons why we should pass the bill, that I submit it, as follows:

THE TORREY BANKRUPT BILL.

[By J. D. Davison, of Kansas City, Mo.]

A PERMANENT BANKRUPT LAW IS NEEDED.

The Constitution of this country reserves to Congress the power to pass a bankrupt law; it also forbids the States to impair the obligations of contracts. As a result Congress alone can pass a complete bankruptcy law.

The three bankrupt laws heretofore enacted by Congress were each passed subsequent to a public calamity. They were, strictly speaking, emergency laws, and were therefore repealed after the emergency occasioning their enactment had passed.

The suggestion that the condition of the country is such as not to need a law of this kind discloses, if sincerely made, a lack of information as to the chief purposes of the law. Those advancing such a suggestion evidently think of a bankruptcy law as a "wreckage measure," purely for the benefit of debtors. The reply is that the Constitution of the United States contemplates the presence upon the statute books at all times of a law by which the honest debtor may secure a merited discharge, and his creditors may receive their equitable part of his estate. Since failures occur at all times such a law ought at all times to be upon the statute books.

We now want, not an emergency law, but a fair, permanent law, equal and the same in all parts of the land, which will be of advantage to honest creditors in dealing with their unfortunate debtors and with each other in relation thereto, and which will afford honest unfortunates who fail and their creditors the relief guarantied to them by the Constitution at the time of its adoption.

SOME OF THE PROVISIONS OF THE PROPOSED LAW.

To say that, because of experience under the last bankruptcy law, it is a very expensive way to settle up the affairs of the insolvents, as an objection to the present bill, shows a lamentable ignorance as to the provisions of the measure advocated for enactment.

The schedule of fees as fixed in this bill is less than those of any of the States.

The bankruptcy courts will be open the year round for the dispatch of business; and hence there will be no delays because the court holds only one, two, or additional terms during the year.

Mr. S. F. Woodson, a merchant of Atlanta, Ga., is the author of a statement concerning a large failure in that city two years ago, and the comparative expense under a State law and the bill in question, as follows:

"The failure of Stephen A. Ryan occurred in May, 1891. His liabilities in round numbers were $1,000,000 and his assets about $400,000. He secured a few favored creditors, consisting of father, brother, etc., amounting to $300,000. A receiver was appointed to take charge of his estate; after paying off the secured creditors he has in his hands about $85,000; this sum has been nearly absorbed in court costs, lawyers' fees, etc. The unsecured creditors will practically receive nothing.

"Could this estate have been wound up under the provisions of the Torrey bill, all of the creditors would have received nearly 40 per cent of their claims."

The trustee in bankruptcy who represents the creditors will receive a fee of $5 and a commission of 5 per cent on the first $5,000 or less paid in dividends, 2 per cent on the second sum of like amount, and 1 per cent on the excess over $10,000.

The clerk will receive a $10 filing fee, in advance, and no further amounts.

The referee, or assistant judge, will be paid a $10 filing fee and 1 per cent on amounts paid to creditors in dividends, in cases administered, and half that amount when there is a compromise settlement.

The time and manner of the payment of the above amounts will beget promptness on behalf of the officers, and the limited amounts paid will insure the economical distribution of estates.

Creditors' meetings will be held at such places and at such times as will be for the greatest convenience of all parties in interest.

Claims against estates may be proved by the simple affidavit of the claimants, and without the payment of any filing fee. Those which are thought to be fraudulent may be suspended and investigated.

The arbitration of controversies and the compromise of differences, under the direction of the court, after notice to the creditors, will be substituted for tedious and expensive litigation.

The bankrupt may be detained, but not imprisoned, if he is about to leave the district at any time within six months after the adjudication and his absence will interfere with the administration of the estate.

Notices will be given to the creditors of each step in the proceedings, and pursuant thereto they will have an opportunity to be heard by the court in favor of or in opposition to any proposed proceedings.

A composition can be applied for by the debtor under such circumstances as will enable the creditors to be fully advised in the premises and beget the greatest possibility of its acceptance. If fraudulently procured, it may be set aside upon application made within six months after being confirmed.

A discharge may be granted upon application to the court after two and within the next ten months after the adjudication. All creditors will be notified of such application and of the time when it will be heard, and will have an opportunity of being present and of supporting or opposing the application. If the debtor has not been guilty of fraud or any of the forbidden acts prior to or subsequent to the failure, he will be discharged. The discharge may be set aside upon application made within two years after being granted, if it proves to have been fraudulently obtained.

The bill contains the additional provisions needed to make it a well considered, tersely stated, commercial probate law.

It must of necessity follow from the provisions as above that the administration of bankruptcy estates under the new law will be more economical and more speedy than they are at present under the State laws.

SUITS IN BANKRUPTCY.

Proceedings in bankruptcy may be commenced much the same as other suits at law or in equity; there will be a deliberate trial as to the facts alleged in the petition, and unless they are sustained by adequate proof the proceedings will be dismissed at the cost of plaintiffs; if the finding is against the defendant, the judgment will be that he is a bankrupt, and in due course the property, over and above the State exemptions, will be ratably distributed among the creditors, *i. e.*, those holding valid liens will be paid in full and then the unsecured creditors will receive a dividend of an equal percentage on their claims.

A creditor can not of himself institute proceedings, but must secure the coöperation of at least two other creditors, and the aggregate of his and their unsecured claims must be at least $500 or over; if the creditors of the debtor are less than twelve in number, one such creditor may institute the proceedings. The debtor will be entitled, if he desires, to the right of a trial by jury as to the facts alleged.

The grounds upon which proceedings may be instituted in bankruptcy are technically called "acts of bankruptcy;" in general terms they consist of the doing of acts or the failure to meet obligations which amount to dishonesty or unquestioned insolvency on the part of the debtor; they are summarized from the Torrey bill, as follows:

Acts of bankruptcy by a person shall consist of his having within six months prior to the filing of a petition against him, run away or stayed away to avoid service of civil process and to defeat his creditors; failed for thirty days, or conditionally within such time, while insolvent, to secure the release of property levied upon for $500 or over; made a transfer of his property to defeat his creditors; made an assignment or admitted insolvency in writing and filed it in court; made, while insolvent, an option contract; made, while insolvent, a preference; confessed judgment to defeat his creditors, secreted his property to avoid legal process and to defeat his creditors; suffered, while insolvent, an execution for $500 or over to be returned *nulla bona;* or suspended and not resumed for thirty days, while insolvent, the payment of his commercial paper for $500 or over.

It will be noted that default on an open account by a debtor would not be a ground for the institution of proceedings in bankruptcy: such a ground was not inserted in the bill, I am informed, because it was feared that a creditor might force a debtor into paying an unjust account under threat of instituting such proceedings.

The grounds referring to the failure to pay debts are all founded upon liquidated debts, *i. e.*, a debtor can not be sued in bankruptcy by creditors because of insolvency and failure to pay debts, except such debts have been reduced to judgment in court, or appear in writing over his signature.

The act of bankruptcy relating to the failure of an insolvent to pay his promissory note for or aggregating $500 or over within thirty days after maturity, has occasioned the most discussion among the enemies of the proposed law.

Let us consider what constitutes and has constituted an act of bankruptcy under other bankruptcy laws with reference to commercial paper. Under the English bankruptcy law if a debtor gives notice that he is going to suspend payment it is an act of bankruptcy. The last bankruptcy law of this country contained a similar provision as the Torrey bill as to commercial paper except that the time was fourteen instead of thirty days, and it was not necessary to show that the debtor was insolvent.

A debtor who does not pay his note when due may be sued under present State laws by the holder of it without waiting any number of days, although it may be for a trifling amount; the suit is noticed by the mercantile agencies, telegraphed to and published in all the principal cities of the country, and the result may be to precipitate litigation which will result in a struggle between creditors and bring about his financial ruin, and this, too, without the debtor having had a chance to meet and confer with his creditors.

One of the opponents to the bill, a great wholesale house, says: "It (the failure to pay a note for thirty days after maturity) is nowhere in the world even a ground for attachment." But what are the facts? In Colorado, Oregon, Montana, and Idaho it is a ground for attachment that the action is brought upon an overdue promissory note or other written instrument for the direct and unconditional payment of money or upon an overdue book account. Whether a similiar law prevails in any of the Eastern States I do not know. In the States mentioned it does not matter what the amount of the past-due claim is or how well the debtor may stand with the commercial world at large, the creditor holding past-due claims may attach his property without other cause.

Under the proposed law a debtor can not be sued in bankruptcy because of suspending payment of his commercial paper unless it is for or aggregates over $500 and has remained unpaid or unrenewed for at least thirty days, and he is insolvent; even then it is a matter of choice by the creditors as to whether they will or will not institute proceedings as in any other case.

The result of the ordinary suit is frequently to give to the individual creditor a selfish advantage; they are, therefore, frequently brought with the result of destroying the debtor financially and jeopardizing the interest of other creditors. Frequently the result of such a suit is that the debtor is left without his exemptions, with his occupation gone and a large amount of indebtedness; his property is sold at sacrifice sales, large costs are paid from the amount realized, and the balance is unequally divided between creditors with equal rights. These wrongs are a result of our present laws, and are enacted pretty nearly every time there is a failure. Is the debtor benefited by them? No, he is destroyed. Is the creditor benefited? No; unless he is the one "on top" in the particular case, and even then it often costs more than it comes to; if he could get his share in each case it would amount to much more in dollars and cents in the long run. Why, then, should this system be perpetuated? Why not substitute one good law for the many incomplete ones and thereby save hard-earned money for everybody? Under the proposed bankruptcy law the debtor would always get his exemptions; if honest, always get his discharge; and the creditors always receive promptly, and at small cost, their ratable share of the estate. Why should not the demand for the passage of the Torrey bill be made unanimous so far as honest men are concerned?

WILL NOT PROMOTE BUT PREVENT BANKRUPTCIES.

The argument of another one of the great wholesale houses which is opposing the bill "That the passage of the Torrey bill would cause a great many failures among their customers," is erroneous, because the bill will strengthen, and not weaken legitimate credit; if it were true, it is no argument at all, for if a great many of the customers of this house are in a bankrupt condition, it is only a question of time when they will go to the wall; when they do, under the present laws, the house in question will probably be protected to the prejudice of others, and the chances are that a large proportion of the assets will be consumed in lawyers' fees and costs, instead of being used in paying the liabilities.

We all know that the most crying shame under present conditions is that many estates are consumed by warring creditors in the payment of lawyers' fees and costs; and as a result many good men are engulfed in debt which they can never pay, although if their assets had been properly, honestly, and proportionately divided, they would have paid to all creditors a large percentage on their claims and left but a small deficit for their creditors to lose or them to pay.

Let us ask the question, why is it that this house continues to extend credit to these parties whom it recognizes to be in a bankrupt condition, and who would enter into bankruptcy as soon as the bill becomes a law? Is it not a fact that it is carrying such customers for a larger amount than their financial condition or capital in business will warrant? And if this is the fact, is it not done, and the unusual risk taken, with the understanding that the retailer, so carried, shall buy his supplies from the one jobber? And if this be so, does not the jobber get an extra price for such a customer?

I take it for granted that these propositions will not be contradicted; then what is the result? Does not the retailer either do the same amount of business as his competitor in a neighboring town for less profit and remuneration for toil or charge the consumer more for his goods and wares than

should be charged under proper business methods? In either event, granting, for the purposes of this argument, that the proposed law would be unsatisfactory to the jobber as long as conducting his business as at present, yet while it worked a little temporary injury to him, we see that it would in the end be of great advantage and profit not only to the retailer, but to a vast army of consumers.

Some of the big houses seem to think, and attempt to argue, that the passage of this bill would increase the number of failures; the contrary is true; that is, it will decrease the number; it does not seem to require any extended argument to show that a "going concern" would not go into bankruptcy if it could possibly help it; going into bankruptcy is easy enough, but the coming out of bankruptcy—aye, there's the rub! The restrictions of the bill are severe as to the granting of discharges, and hence careless talk about going into bankruptcy "to clean up and start over again" is simply inconsiderate and meaningless as a business proposition. There will doubtless be a good many bankruptcy cases soon after the law is enacted by those who have failed during the many years while there has been no bankruptcy law, in order to get a discharge; but I do not fear successful contradiction when I assert that the number of failures of concerns doing business will be very materially diminished over the present rate, and only those who are now, or at the date of the passage of the law, actually in a bankrupt condition will accept of its terms of relief.

The presence of this bill upon the statute books would prevent any one creditor from being able to take advantage of another of the same class, either by voluntary or forced preferences. The selfish inducement, therefore, for the institution of attachment suits and the obtaining of assignments, in one form or another, for the benefit of an individual creditor would be done away with.

The fact that creditors, under the proposed law, could not take advantage of each other nor of the debtor, and that in turn the debtor could not take advantage of the creditors in many of the forms of fraud now practiced, would of necessity prevent disaster to many small dealers, instead of inviting it.

The conclusion, therefore, irresistibly follows that the percentage of failures among going concerns will be smaller under the national law than it is under the State laws.

FRAUD WILL NOT BE INCREASED, BUT DIMINISHED.

"A large part of all the failures being fraudulent, and with the aid of a law discharging the bankrupt the temptation to fraud, already great, would be so increased as to be irresistible to many." This quotation is from a respectable business man in the employment of one of that class of big business concerns which is fighting the Torrey bill; it shows that he has not examined the statistics with reference to the fraudulent failures; it shows his want of information as to the provisions of the proposed law. What are the facts? Statistics show that in 1890, 4 per cent; in 1891, 7 per cent, and in 1892, 10.3 per cent—an average of about 7 per cent for the three years—of all the failures in the United States were fraudulent. Under the stringent provisions of the Torrey bill it is anticipated that even this small percentage will be reduced. If it were true, as it is not, that a large part of all the failures are fraudulent, it would but emphasize the necessity for a law designed to punish fraud and prevent its perpetration.

Something like 95 per cent of all the people who engage in business sooner or later fail; it certainly can not be truthfully said that a "large part" of all those who engage in business are frauds. Such unwarranted and uncharitable charges can only emanate from minds that wish to ostracise and everlastingly banish into exile from business and social liberty the unfortunate honest man as well as the rogue and rascal; the dishonest are not the ones who desire a bankrupt law; they are shrewd enough to know that it would prevent them from defrauding their creditors out of money enough to reembark in business in the name of some relative and discount their purchases with cash.

The Torrey bill, under very careful restrictions to prevent its provisions being prostituted by dishonest debtors, grants to honest debtors the right of discharge, to the end that they may the better provide for their families, educate their children, and follow the occupation for which they may be best suited.

I think that the best interests of the whole people would be better served by the findings of an honest judiciary as to the rights of the individual applicant for a discharge, rather than by creditors who are not infrequently narrow and selfish in their views, and are actuated not by the rule of humanity, but by the rule of the "pound of flesh."

The giving and agreeing to give a secret chattel mortgage in case of disaster has been defined by our courts of law to be legal frauds. Who is it that is generally and principally benefited by these legal frauds? It is not the beneficiaries under them who are loudly condemning in the same breath the fraudulent debtors and the bill designed to exterminate them?

One thing is quite certain, and that is that no man who contemplates committing fraud wishes the Torrey bill enacted.

SELFISH OPPOSITION.

The arguments against the passage of the Torrey bankrupt bill by the few big wholesale houses who oppose it, show, for the most part, a selfish fear on the part of the opponents that it will be of benefit to some one else, and not of special benefit to them; the conclusion is therefore reached by them that Congress should not pass a law, except it be of special benefit to a particular class of citizens in a circumscribed portion of the country, *i. e.*, to the opponents and their locality.

As a matter of fact the proposed law is general in character and would benefit alike all honest men in all parts of the country.

The true Democratic doctrine upon which our form of government is founded is that all laws should be for the greatest good to the greatest number. The above form of selfishness should not, therefore, enter into the discussion and all arguments based upon it should be disregarded.

WILL NOT INJURE THE INTERESTS OF WESTERN JOBBERS.

The argument which has been made by a gentlemen who ought to know better, that the passage of a "bankrupt law would be a great detriment to the interests of all Western jobbers, at least so far as their territory is concerned," is not tenable; it is not true in any sense. If it were true that such would prove to be the case, the passage of a bankruptcy bill ought to be demanded by every retailer and consumer, because the trade of the Western jobber could be affected to his detriment only by the underselling of the Eastern competitor, and such a reduction in prices would of course redound to the benefit of the retailer and consumer.

The chief factor enabling the one or the other jobber to sell in a given territory is the rate of freight; if any one locality could control freight charges it could greatly enlarge its territory and thereby increase its business.

The statistics for many years past, compiled from the annual reports of the mercantile agencies, show that only about 1 per cent of all concerns doing business fail in the course of a year. That is, pretty nearly 99 per cent of those doing business pay their debts without serious difficulty and at maturity, while the remainder, or 1 per cent, are the ones who fail, with more or less disastrous effect to their creditors. If in this small percentage of failures the creditors receive their pro rata of the assets, the question of failures would cut very little figure as to losses in the course of a year but as it is, even if so small a number fail, and the amount due from them is a total loss, it may be a very serious matter to a given creditor or creditors.

The reply, therefore, to the unfounded sectional objection as above is, in brief, that if it were true, as it is not, that the law would affect adversely the interests of the Western jobbers, still it ought to be passed, since it would of necessity greatly benefit the retailer and the consumer; that the percentage of those who fail is very small, and by the preventing of preferences in each case the loss will be very small to the individual creditor where it is now very large to many of them; that any benefit derived by one jobber under a just and equitable law would be enjoyed by all jobbers, and hence all are interested in securing the passage of such a law.

TO STRENGTHEN AND EXTEND CREDITS.

The passage of this bill would result in extending and making credits more secure, *i. e.*, if a secret mortgage or promise to secure had been given, or other legal fraud entered into, the parties to it would be prevented from carrying it out, and hence one extending credit would not have these frauds and preferences to fear, and could at all times feel assured that in case of disaster overtaking a debtor he would be certain of receiving his pro rata share of all of his debtor's property, save the exemptions provided by the State law.

The bill under consideration provides that liens given in good faith and for a present consideration shall be upheld; it does not in any sense or for any purpose propose to interfere with the ordinary course of legitimate transactions.

In the event of the passage of the bill, a creditor will not be permitted to "help" a debtor with the secret understanding that in case the help was not a success, and the debtor failed, the creditor (or helper) should have all his property.

Ordinarily the takers of preferences pounce down upon their unfortunate debtors and through threats or the promise of prospective favors, or by compulsory processes, secure their assets without regard to their solvency or the rights of other creditors. The passage of a bankruptcy law will, I believe, end the sway of this class of creditors and substitute for their practices those of fair dealing between honest men under the rules of equity.

Even if the home or near-home creditor always, which they do not, receive a preference and did not frequently have to spend more than it amounted to to defend it, the practice on the whole would be a bad one; but when you take into account the fraudulent preferences, the ones to relatives, and those which are given to the great concerns who could best share a loss, we must admit without hesitation that the giving or receiving of them ought to be prevented by law.

> "The mortgagor—
> Like one that on a lonesome road
> Doth walk in fear and dread,
> And having once turned round walks on,
> And turns no more his head;
> Because he knows a frightful fiend
> Doth close behind him tread."

The language of the bill upon the subject of preferences is as follows:

"A person shall be deemed to have given a preference if, being insolvent or in contemplation of insolvency or bankruptcy, he has procured or suffered a judgment to be entered against himself in favor of any person, or made a transfer of any of his property with intent to (1) defeat the operation of this act; or (2) enable any one of his creditors to obtain a greater percentage of his debt than any other of such creditors of the same class.

"If a bankrupt shall have given a preference within four months before the filing of a petition, and the person receiving it, or to be benefited thereby, or his agent acting therein, shall have had reasonable cause to believe that it was intended thereby to give a preference, it shall be voidable by the trustee, and he may recover the property or its value from such person."

The fact is that the passage of this bill will put a stop to the kind of "help" that some are in the habit of extending to their debtors. That is to say, it will prevent jobbers and the home banker from waiting until their debtor has purchased a stock of merchandise from other people and then stepping in and seizing the whole of it to satisfy their claims. On the other hand, if a debtor should get into financial difficulty it will enable him to have a meeting of his creditors and secure the "help" of all of them in its best sense, and thereby do away with the necessity for the kind of secret bargaining which is now indulged in to a greater or less degree with the result of ruining many solvent though pressed men and the perpetration of a great amount of fraud as against honest, conscientious people.

The result, therefore, would be the enlargement of credit.

THE RIGHT OF DISCHARGE.

The opinion of one writer who opposes the Torrey bill and at the same time draws a salary from a mammoth wholesale house is as follows:

"No person should be relieved from his legitimate contracts in any way other than their fulfillment; in other words, those who contract to pay and fail should continue to owe; all the exceptions to this just and honorable rule can, I think, be included in the list of those who are rendered unable to keep their obligations by the act of God or the public enemy, and of the greater number of those who fail in business this exception is certainly too small for consideration, and they may be counted as legitimate subjects for charity and humane consideration instead of bankruptcy laws; and, by the way, I know of no instances where the people have not most generously responded in such cases, and I think it may be said that all such can with safety be left to the generous Christian impulses of the people."

I suggest that this man, presumably of "generous Christian impulses," ought to have lived in the Dark Ages, when it is said that debtors having several creditors were cut to pieces and divided among the creditors, or sold into slavery; or, later on, when there was a debtor's prison with all of its untold horrors.

Statistics show, as before stated, that something like 95 per cent of all the men who embark in business, sooner or later fail. This man would, therefore, sentence to a perpetual ostracism from the esteem and confidence of his fellow-men and the honors and emoluments of his country, 95 per cent of those who go into business if they could not run the gauntlet of "generous Christian impulses" exercised by their creditors.

If the orthodoxy of to-day holds good, history may yet recite that these "magnanimous" creditors have,

> With a quill plucked from the wing of a fallen angel,
> Inscribed on the smoke-blackened walls of hell,
> "Forgive us our debts, as we forgive our debtors."

Indeed, the words of our own Washington are as true to-day as when he said: "There is an indissoluble union between a magnanimous policy and the solid rewards of public prosperity and felicity."

The Torrey bill provides for the increase and maintenance of confidence between business men in different parts of the country. It makes it possible to have creditors' meetings when a debtor becomes pressed and needs the advice and assistance of his creditors, both for his and their benefit; practically such meetings can not now be held because if called some of the creditors would at once commence attachment suits. It provides for arbitrations and compromises, and is designed to enable honest insolvents to secure discharges from the indebtedness over and above the amount paid by their estates in dividends. I can not conceive how anyone can be benefited by keeping an honest, helpless fellow-man a continual bankrupt. Indeed, "Man's inhumanity to man makes countless thousands mourn."

Statistics tell us that in the year 1892, 21 per cent of all the failures in the United States were caused by disaster, including flood, fire, crop failure, and commercial crisis, and the failure of others enforcedly and not by any overt act of their own. Is there any justice in keeping those in obscurity and misery whose misfortune has been caused through no fault of their own, especially if they have delivered over to their creditors all their property?

If the refusal to discharge a bankrupt would keep the rogues relegated to obscurity, I could see some necessity in such a refusal, but is it not a fact based upon experience that the rogue "like Banquo's ghost will not down?" It is the rogue who defrauds his creditors, that has money put away or makes money out of his compromise with his creditors, and has money to continue in trade, either in his own name or that of another.

I presume there is hardly a business man in the jobbing trade in this country but who can mention a number of persons who of his own knowledge have once, if not oftener, failed under one of the various forms, either by fraudulent preferences and assignments or chattel mortgages, and, having forced a compromise settlement with their creditors, are to-day in trade, either in their own name or that of wife or relative, and the majority of jobbers are anxious to sell to such; "yes, it is true," they will argue, "he has a bad record, has failed once, or may be twice, but he is doing a large business now in his wife's name, buys lots of goods and pays promptly; we are anxious to sell him."

It is the larger, wealthy, perfectly organized houses, that can afford to be and are more conservative in their credits and selection of customers, that will be the least benefited by this law; they can afford to decline a 50 or 75 per cent payment on a claim as a settlement and can afford to exact the "pound of flesh" every time; they can afford to keep well organized law departments in connection with their business and wear out the patience and purse of the younger and smaller jobber in every struggle for his share in the assets of an unfortunate debtor. They can make it appear to the advantage of a debtor with an elastic conscience to prefer them or to assist them to defeat their weaker neighbor, in order that they may obtain 100 cents on the dollar; if not, then they have all the implements of the bulldozer at hand to compel and coerce their debtor into giving them a preference. With some "might makes right," or "the end (the collection of a debt) justifies the means."

The commission of perjury by the agents of some large houses, in attachment and replevin suits, the making of false statements as to the grounds for processes, the unnecessary destruction of property, and the dissipation of good wills by the commencement of such suits against honest, solvent, but temporarily embarrassed men, all belong to the catalogue of the means used by some of the larger creditors who wish to be allowed to settle with their debtors as their "humane impulses" may direct. Such creditors would consign their unfortunate debtors to a voyage on the fathomless sea—

"Without compass or chart,
In a boat of stone,
With sails of lead,
God's wrath for a breeze
And perdition for a port."

There are a few, very few, great houses which will not compromise or discharge their debtors under any circumstances, but the great mass of all of the creditors will gladly accept a fair compromise from an honest unfortunate debtor, or, if he is unable to pay any sum, discharge him. These settlements and discharges are often more favorable to one creditor than another and some of them are fraudulent.

My inquiry, therefore, is: Why not have them regulated by a law under which inequities can be prevented and frauds punished? Why leave our honest fallen brothers only as "subjects for charity and humane consideration," since the Constitution of the country in which we live provides for, and our statesmen in Congress can enact, a humane law granting discharges to them?

WILL BENEFIT DEBTORS AND CREDITORS WITHOUT PARTIALITY.

I believe that the interests of creditors are mutual, and if a common debtor has been guilty of dishonesty, they ought to make a common warfare against him, not only for their own protection, but for the protection of every man conducting a legitimate business. If a debtor meets with honest misfortune creditors ought all of them to help and not destroy him in a fight among themselves.

The conclusion seems irresistible that the bill advocated is perfectly fair to the debtor and to the creditor; that it is not harsh in any respect, and that in every condition of the debtor and creditor their positions under it will be more advantageous than under the present State laws.

The Torrey bill if enacted will strengthen credit, reduce the number of failures, diminish the expenses which are now paid in the administration of insolvent estates, and in all respects benefit without partiality the consumer, the retailer, the jobber, and the manufacturer in the North, in the South, in the East, and in the West, and, therefore, ought to be passed by Congress.

Mr. Davison is a man of high standing, and this paper, as submitted, shows him to be one who believes in, and knows the necessity for, integrity in transactions on credit.

Mr. Chairman, I would not support the Torrey bill if it were selfish or sectional; I would not vote for it if it were in favor of any one class and against any other class; but as in matters of liquidation it substitutes for the harsh proceedings under the sheriff's flag the rules of equity for the division of the estate between the honest creditors; as it gives the honest debtor his exemptions and a discharge, and as it affects alike all of the citizens of the whole country who are similarly situated, I shall gladly support it to the best of my ability and vote for it with pleasure.

Silver.

SPEECH
OF
HON. B. H. BUNN,
OF NORTH CAROLINA,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, October 31, 1893,

On the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

Mr. BUNN said:

Mr. SPEAKER: Since we assembled here on the 7th of August the eyes of the whole country have been riveted upon Congress in anxious expectation that something would be done in this extraordinary session for the relief of the people. Never before in the history of the Government has a Congress assembled under such trying circumstances and been confronted with a problem so difficult of solution. The present unhappy financial condition, so widespread and alarming, extending to every section of our country, imperiling every industry, prostrating every business, and foreboding distress in nearly every household, calls aloud for some immediate and wholesome legislation that will check the tide of financial ruin which threatens to engulf the country in irretrievable bankruptcy.

The present financial condition, which we are here to relieve, can not be said to have resulted from any particular act, but is rather the natural outgrowth of a financial policy adopted and carried on by the Republican party and running back for three decades. The policy carried out by that party in regard to the tariff and banking legislation has been well calculated to build up monopolies, encourage wild schemes of speculation, create combinations and trusts, concentrate capital in the hands of a few, and destroy confidence among the people.

Much of the trouble which now affects the country, in my opinion, can be traced to the act of 1873, which demonetized silver; but it will not do for us to lose sight of the effects of the resumption act with its kindred legislation, and the national banking system, which have played important parts and helped to bring about the present deplorable financial situation. As no one act brought about the present condition of affairs, so no one act can bring about complete relief.

It is not the free coinage of silver upon which we are now called to vote. This House as well as the Senate have already voted upon that question. It is the repeal of the purchasing clause of what is commonly called the Sherman act that we are now considering. When the propositions for the free coinage of silver were before the House I voted for every amendment which favored free coinage; they were all defeated. Having failed in these votes for free coinage, I then voted for the repeal of the purchasing clause, which was regarded the most objectionable part of that act which the Democratic party was pledged to repeal. After the passage of that bill for repeal by the House the same propositions which we acted on in this House have been hanging fire in the Senate for the last two months.

During all this time the Senate Chamber has been the theater of the most brilliant and learned oratorical displays witnessed in this country for a quarter of a century. The question has been fully and elaborately discussed in every phase, and patriotic efforts have been exhausted in struggling to bring about a solution of the difficulties which hang over our unhappy country.

A great effort, which at one time seemed acceptable to the Democratic Senators, and which it was thought would do much good, at the last hour fell through on account of conflicting opinions of Senators. The efforts at compromise having failed, the Senate then passed the bill which was acted on in this House, amended only in its declaration of principles, without any change in its operation.

It is now proposed by the honorable gentleman from Missouri [Mr. BLAND] to recommit the bill to the committee with instructions to report it back with an amendment restoring the free-coinage act of 1837, and this is the proposition I am called upon now to vote, and to repeat what has already been done in both Houses of Congress. I have already voted for the same amendment at all the ratios from 16 to 20, and they all failed. The Senate voted upon a similar amendment only a few days ago, and it was defeated by a vote of 39 to 28.

It is useless to make another attempt to accomplish an impossibility. No member on this floor dreams that this proposition to recommit this bill with instructions will accomplish anything. We have already wasted too much time, and the pa-

tience of the people is well nigh exhausted. I am unwilling to continue the deadlock already too long extended, and shall vote against the proposition to recommit.

The legislation which it is now certain will be adopted I trust will do much to restore confidence and result in great benefit to the country. It has been recommended by the President. In his message to Congress he points out this legislation, the repeal of the purchasing clause of the Sherman act, as the first step to be taken to give relief. I can not forget that the same voters who elected me at the same time voted for the election of Grover Cleveland for President of the United States. I can not forget the overwhelming indorsement he received at the hands of the people, and that his victory was the grandest ever achieved at the ballot box. His recommendations are entitled to consideration at our hands, for when he saw his country in trouble he had the courage to call this Congress in extraordinary session and boldly and honestly express his opinion and recommend without equivocation what in his judgment was best to be done.

I have abiding confidence in his honesty, integrity, and ability, and believe he will faithfully administer the laws and execute the high duties of his exalted office with the same fidelity which has distinguished him in the past, and won for him the confidence of the people.

With these sentiments I am not now willing to oppose him in his patriotic efforts to relieve the country. I prefer to labor to uphold his hands and aid him in bringing about that prosperity which alone can come from government honestly and courageously administered.

We can never have prosperity without a restoration of confidence, and it is impossible to restore confidence by keeping up a fight between the executive and legislative branches of the Government. We have trusted the President in the past and he has never betrayed us, and I believe now that this Administration will not cease its labors upon the financial question on the passage of this bill, but will recommend other legislation, and continue his efforts until confidence is restored and our country is again blessed with prosperity.

I think we ought to pass this bill which has been recommended by the President, adjourn Congress, and go home. Let us see what the effect of its passage will be upon the country, and return to our duties here on the first Monday in December, take up the work where we left off, pass such laws as shall be necessary to give the country a sufficient amount of money to successfully carry on every legitimate business: enact such coinage laws as shall restore silver to its proper place in the currency of the world, and maintain both gold and silver at a parity, circulating them side by side.

No one can doubt that there are three separate and distinct ideas in this country as to its currency and standard values. One class of men would hail with delight a gold standard; another would with equal delight embrace the silver standard alone, and still a third class would prefer a bimetallic standard—maintaining both gold and silver at a parity. To this latter class I belong, and I shall labor here and elsewhere to preserve both metals, as has always been the policy of the party to which I belong.

This House has already passed an act repealing Federal supervision of elections in the States, and the Committee on Ways and Means are at work on a tariff bill, which will be ready, I am informed, early in December. It will thus be seen that this Congress is at work to carry out the pledges made to the people.

The question of State banks is being considered, and I shall vote to take off the prohibitory tax, which was enacted by the Republican party to destroy them. I believe the establishment of State banks under proper restrictions will be of great benefit in enlarging the currency and give to the States the opportunity of supplying extreme local demand.

The repeal of the purchasing clause of the Sherman act, to be followed by other financial legislation, the repeal of the 10 per cent tax on issue of State banks, and the reform of the tariff, I feel confident will be of incalculable benefit to our country.

The first duty is to vote for the bill now before us. It is the best we can do, and a step in the right direction.

I voted against the Sherman act when it was passed. So did every Democrat in this House at the time. I have never seen a day when the wisdom of that vote was questioned by a single constituent. As that law has grown in age it has become more and more apparent that its enactment was a mistake. The Republicans themselves, who put it upon the statute book, are now clamoring for its repeal.

I am sure there is not a Democrat on this floor who would favor its retention; then why not repeal it? "No," some of our friends say, "let us keep this bad law on the statute books; it may help in getting something better." This is the only consideration that gave it a single vote on this side of the House. My idea is to get rid of this odious law first; it has done mischief enough, and then go to work to get something better. I propose to drag the drowning man to the shore and then administer the restoratives, rather than attempt to give him restoratives while he is yet floundering in midocean.

I believe the existence of the Sherman law did much to produce the late panic and cause the reduction of prices of agricultural products. I believe its repeal will tend to restore confidence, put the money of the country in circulation, and add to our prosperity, and especially to our Southern land.

What matters it how much money is issued by the Government unless we can get our proportionate share. What matters it to us if we allow the silver bullion of foreign miners to be coined free of cost if the money when coined inures solely to their gain. The only imaginable advantage that can be claimed by such a policy is that it increases the volume of currency. This object can be accomplished in other ways, which I think much better, but have not the time to discuss that question today. I will do so on another occasion.

But before concluding I have thought proper to say this much, because my votes on this question have in part differed from my colleagues from North Carolina with whom I have stood upon all other important issues. I stand ready to join with them in carrying out every promise contained in the Democratic platform. I favor them all, but I will not withhold my support from a bill carrying out a part of the platform because it does not embrace all we desire. For this reason I have voted for repeal, and hope it will redound to the good of the country.

An Explanation of the Torrey Bill for a Uniform System of Bankruptcy.

SPEECH

OF

HON. WILLIAM C. OATES,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, November 3, 1893.

The House being in Committee of the Whole and having under consideration the bill (H. R. 139) to establish a uniform system of bankruptcy throughout the United States—

Mr. OATES said:

Mr. CHAIRMAN: The attempt on the part of the opponents of this bill to make it appear that I have arrayed myself against the poor people of the country, must fail; the records of the Legislature of my own State; the proceedings of Congress; the conscience of all men who have ever seen my handwriting or heard my voice in legislation, all contradict it.

Sir, the founders of this Government intended that there should be a national bankruptcy law, and provided therefor in the Constitution. The provisional and permanent constitutions of the late Confederacy made the same provision.

The last bankruptcy law was enacted soon after the close of the war. It was an imperfect measure, and in the South was administered for the most part by a lot of infamous speculators who robbed the creditors of the bankrupts, and this caused the law to be repealed.

The Torrey bankruptcy bill, which we are now considering, was framed and has from time to time been modified with particular reference to the avoidance of the imperfections of the old law. I can not of course hope that it is perfect; everything human is imperfect; I have no doubt that this bill, if enacted, will be from time to time amended and improved; it is the history of all laws, and of all constitutions for that matter, that they must be amended in order to meet the progressive conditions of the people.

It has been developed in the course of this debate that the enactment of this bill has been demanded very generally by the press, by a large number of national bodies, by many hundreds of State and local bodies of all sorts, including mechanics' exchanges, retail grocers' associations, business men's associations, tailors' exchanges, commercial and industrial associations, lawyers' associations, cotton and grain organizations, sugar and rice exchanges, boards of trade, credit associations, lumbermen's exchanges, chambers of commerce, manufacturers' associations, builders' organizations, wholesalers and jobbers' organizations, brickmakers' associations, travelingmen's associations, photographers' associations, paint, oil, and varnish clubs, candy

associations, stove manufacturers, and others, too numerous to mention, and by almost innumerable petitions, to many of which have been appended thousands of names; and that a very large number of gentlemen in all parts of the country have become officers and committeemen of the national bankruptcy organization. The number of these bodies and petitioners are and have been for years increasing. A list of these bodies, petitions, and names were submitted by Judge WOLVERTON of Pennsylvania, and appear in the CONGRESSIONAL RECORD, beginning at page 3548, under date of November 5.

It transpires, and has been referred to in the course of the debate, that the only aggressive, determined opposition which this measure has met outside of Congress has been from a few great business houses located in the big cities; that these great houses do not want a bankruptcy law enacted because under its humane provisions large numbers of debtors who are now owing them sums aggregating very large amounts will be discharged from their debts; because they now have organized as departments of their houses collecting agencies in charge of lawyers which enable them to take advantage of their debtors and advantage of their associate creditors who are not large enough to equip such costly and expensive legal departments. In other words, these great houses can better protect their own selfish interests under the present varying and inefficient State insolvency laws than they can under a general equitable, wise bankruptcy law, such as is now being considered. It follows that the gentlemen who upon the floor of this House are opposing this bill are doing so knowingly or ignorantly in the interests of these great houses and not in the interests of the honest insolvents, the consumers, the retailers, the wholesalers and the manufacturers, and the small and great commercial, industrial, and professional bodies who have spoken upon the subject.

It has been said by the opponents of the bill that debtors would be at the mercy of their creditors under it. This statement is not true; under its provisions debtors would have rights which they do not enjoy under present laws; under existing conditions only a very small per cent of debtors who might be sued are ever taken into court. Under this bill even a smaller per cent of them than at present would be proceeded against; under present laws not over two in a hundred of those who are engaged in business in all lines and in all parts of the country fail annually, and even this small number would be decreased if this bill should be passed; *i. e.*, something over ninety-eight in every hundred of those who go in debt in conducting business and promoting enterprises would not have anything to do with the bankruptcy law, if enacted.

It has been said by its opponents that debtors would be at a disadvantage under this bill. This statement is not true; under its provisions the honest debtor who may be the defendant in a bankruptcy proceeding will, at every stage of the proceedings, be in a more advantageous position than he would be as a defendant in the ordinary proceedings under present laws. The result usually achieved now when one who is in debt and has become embarrassed is that one or two creditors are paid in full, the rest get nothing, and the debtor remains a financial wreck for the rest of his life; under this bill the honest creditors will each receive a ratable share of the estate and the honest debtor will be discharged after receiving his exemptions.

It is therefore conclusive that the enactment of this bill will promote the best interests of honest debtors and honest creditors whose affairs shall be affected by it.

Let me refer, in a general way, to the possibilities and the probabilities of the case.

It is possible that the people and the press are mistaken about the merits of a measure which has been before the country and Congress for years, but how probable is it that such is the case?

It is possible that the members who advocate this measure on this floor in harmony with this vast sentiment in its favor are mistaken, but how probable is it that such is the case?

Can it be possible that wholesalers worth millions, and who hold the notes and own the accounts of thousands of honest insolvent debtors, who can never pay them—can it be possible, I say, that such wholesalers are representing the best interests of such debtors, and the communities in which they live, when they oppose a law under which such debtors would be discharged? My answer is no.

Can it be possible that such wholesale houses who now crush out their debtors financially when occasion requires, to the end that they may get the entire property while other creditors with claims of equal merit get nothing, oppose this law in the best interests of such debtors and such other creditors? My answer is no.

It is possible that we ought to be guided by the views of the gentlemen on this floor who have so ably maintained the debate on the side of the question on which these great houses are; but how probable is it that they are right and that we are wrong?

Some protests have been made against any bankruptcy legislation, but my information is that they are all on a blank form which these great wholesale houses have caused to be circulated through the country by their customers, their traveling men, and their lawyers; how probable is it that these protests represent the greed for gain and the selfish disregard of the rights of others, of these great houses?

It is possible that the chief justice of the Alabama supreme court, the Hon. George W. Stone, is mistaken in saying that the bill is "as nearly perfect as human industry, ingenuity, and wisdom could devise," and that its enactment is in the best interests of the people; but how probable is it that he is mistaken and that the opponents are right in condemning it?

This bill will result in the discharge of many hundreds of thousands of honest poor men from debts which they can never pay; it will in the future secure the discharge of such honest men as may fail in conducting business or enterprises while operating on credit.

It will simplify controversies between debtors and creditors, and substitute frankness and generosity for mistrust and penuriousness, and hence benefit both classes.

It will save vast sums of money which are now and, unless it is passed, will be in the future spent in needless and hurtful controversies between creditors of equal rights and between debtors and creditors.

It will protect honest men engaged in legitimate callings from the ruinous pursuit of dishonest and unscrupulous creditors; it will protect honest debtors from being ruined financially by unnecessary fights between creditors for their property; it will enable honest creditors to collect from their debtors a ratable part of their estates; it will prevent fraudulent debtors from swindling their creditors and thereby bringing odium upon honest men who seek and obtain credit; it will prevent honest creditors from being swindled by dishonest debtors; it will in all respects and without exception be helpful to honest men and hurtful to dishonest ones.

The foregoing results will occur not only with regard to my constituents, but with regard to the constituents of every gentleman upon this floor. To promote the best interests of the honest men in every Congressional district will be to advance the best interests of the whole people.

Sir, this bill may be briefly summarized as follows:

A voluntary bankrupt is one who petitions to be adjudged such; an involuntary bankrupt is one who has been adjudged such in a suit brought by his creditors. The rights and duties of bankrupts after the judgment has been entered are identical, irrespective of who filed the petition.

Farmers and wage-earners may go voluntarily into bankruptcy, but their creditors can not bring suits in bankruptcy against them.

Anyone, except corporations, irrespective of the amount they owe, may voluntarily become a bankrupt.

Persons, firms, and corporations (except farmers and wage-earners) who have committed acts of bankruptcy according to the evidence in a fair and impartial trial, before a jury if desired, may be adjudged bankrupts upon the petition of creditors.

Acts of bankruptcy by a person (including firms and corporations) shall consist of his having (while owing $500 or over which is not secured) within six months prior to the filing of a petition against him, run away or stayed away to avoid service of civil process and to defeat his creditors; failed for thirty days, or conditionally within such time, while insolvent, to secure the release of property levied upon for $500 or over; made a transfer of his property to defeat his creditors; made an assignment or admitted his insolvency in writing and filed it in court; made while insolvent an option contract; made while insolvent a preference; confessed a judgment to defeat his creditors; secreted his property to avoid legal process and to defeat his creditors; suffered while insolvent an execution for $500 or over to be returned *nulla bona;* or suspended and not resumed for thirty days while insolvent the payment of his commercial paper for $500 or over.

Creditors need not proceed against a debtor who has committed acts of bankruptcy any more than they need sue every debtor who is in default in payment.

A petition can not be filed against a debtor, although he may have committed an act of bankruptcy, except by three creditors who together have unsecured claims for or over $500; if there are less than twelve creditors one of them holding such a claim may file the petition. After the suit is begun the defendant will be served as in ordinary suits and will have "his day in court" and a trial by jury if he desires.

If the judgment in a bankruptcy suit is for the plaintiffs, the defendant will be adjudged a bankrupt. In that event he will retain the exemptions allowed by the laws of the State in which he lives, and if an honest man, will be released from his debts, and thereby given an opportunity to do as he pleases and be relieved

from the demands of his creditors to make good his former misfortunes. If the judgment is for the defendant the petition will be dismissed at the costs of plaintiffs, as in other suits.

The property of the bankrupt will remain in his possession until after the trial unless the creditors shall give bond and secure its attachment; even in that event the debtor may retain possession of his property upon giving a forthcoming bond.

The United States district courts will have jurisdiction of the administration of bankruptcy estates. They can not be administered in the State courts because Congress has no power to compel State courts to administer national laws.

State courts will retain their jurisdiction to hear and determine controversies between the trustee and adverse claimants concerning property rights, *i. e.*, if a trustee wants to bring a suit he must go to the court which would have had jurisdiction between the original parties; he can not sue the defendant in the bankruptcy court unless by his consent; on the other hand anyone who wants to sue a trustee may do so in the appropriate court or in the bankruptcy court.

Controversies may be arbitrated or compromised under the direction of the court.

The offices of referee and trustee are the only ones created by the act.

The referee is an assistant judge and will be appointed in such numbers and in such localities as will be best calculated to secure a prompt administration of the act and serve the convenience of all parties having bankruptcy business.

The trustee will receive the title of the bankrupt to his property and administer it. He will be elected by the creditors in each case. He may recover all property which has been hidden away or fraudulently conveyed.

The clerk will receive a $10 filing fee in each case and no further compensation.

The referee will receive 1 per cent upon the net amount paid in dividends to creditors from estate administered before him, or one-half of 1 per cent in estates in which there is a composition and a filing fee in each case of $10.

The trustee will receive 5 per cent on the first $5,000 paid in dividends to creditors, 2 per cent on the second like amount, and 1 per cent on additional amounts, and in each case a filing fee of $5.

The compensation of the referees and trustees will not be paid until the estates have been administered and the records returned to court.

Making the amount of the fees received and the time of payment depend upon the prompt and economical performance of their duties by the referee and trustee will result in the quick and economical administration of bankrupt estates.

The expenses of administering the estate will not be paid until reported in detail under oath and allowed by the court.

Compromises, involving more time in which to pay or a reduction of the amount to be paid, may be readily and cheaply effected between honest debtors and their creditors under very careful restrictions after a voluntary or involuntary petition has been filed and either before or after the defendant has been adjudged a bankrupt.

Compromises which have been fraudulently obtained may be set aside upon application made within two months after they were granted.

Discharges which have been fraudulently obtained may be set aside upon application made within two years after they were granted.

Fraudulent bankrupts, embezzling officers, and creditors who prove false claims may be punished by imprisonment.

Notices will be sent to all creditors of each step in the proceedings.

Creditors may be heard at all times in support of or in opposition to any proposed step in the administration of the estate.

Claims may be proven by the simple oath of the creditor and will be allowed upon being filed in person or sent by mail without the payment of any filing fee; if it is thought that an allowed claim is fraudulent it may be suspended and investigated.

Preferences are forbidden, and those which have been given may be set aside if proceedings intervene within four months after they have been given.

Valid liens will be upheld; fraudulent ones will be set aside.

Present legitimate business methods will not be interfered with by the bill.

The bill contains the additional provisions necessary to make it a complete equitable bankruptcy code.

Mr. Chairman, it is a source of regret that misfortune should come to anyone, but it does come, and always will continue to come to some of our fellow-citizens. We ought therefore to provide for them in the best possible way; that way is to pass this bill; there can not be any doubt about it. Those who affirm to the contrary are mistaken—mistaken as to the provisions of the bill; mistaken as to the statistics concerning failures; mistaken as to how it will operate in practice, and mistaken as to whose best interests it will serve. In opposing this bill they are supported by a small number of very rich and powerful houses, who in their own selfish interests do not want the law passed, but they are refusing to exercise the powers conferred upon Congress by the Constitution; they are closing their ears to the voice of the press and the voice of the people. This bill is the best one upon the subject which has ever been considered by the House, and, in my judgment, it ought to be passed.

Rules.

SPEECH

OF

HON. CONSTANTINE B. KILGORE,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, August 30, 1893.

The House having under consideration the report of the Committee on Rules—

Mr. KILGORE said:

Mr. SPEAKER: It is my purpose to-day to discuss as fully as I can in the time accorded me the report of the Committee on Rules, and at the same time submit some observations both general and specific on the new features in the code of rules now presented for consideration and on the purpose and the importance of rules of procedure in the House.

The preparation and the adoption of a code of rules for the government of the House in its deliberations and procedure is always an interesting and important event in the history of its proceedings. The issues involved in this contention are, I apprehend, of transcendent concern to the members of this House and the people of the country who are wedded to the Democratic theory of this Government and who repudiate and condemn the despotic and centralizing tendencies of the Republican party.

If a stranger ignorant of our history had sat in the gallery and listened to the discussion up to this time of the report of the Committee on Rules he would have been startled, and amazed, too, at the declarations uttered on the floor of the House. He would have come to the conclusion that there was always present in the House a small and obstinate minority, bent on obstructing all legislation by Congress; that the rules of the House were so framed as to enable a factious minority to do so most effectually, and that it had always employed the methods authorized by the rules to prevent the enactment of proper and necessary legislation till the Fifty-first Congress and the Reed rules of that body saw the light. He would have concluded that never in the history of the Government had the House of Representatives been able under its rules to transact any business except in the Fifty-first Congress.

Why, Mr. Speaker, Fifty-two Congresses have come and gone during the one hundred and four years of the life of this Republic; and in all these years the Congress of the United States has gone forward and transacted all the business and enacted all the necessary legislation which has from time to time been proposed to each Congress. There has been no violation of any principle; no effort to erect a despotism in the popular branch of the legislative department of the Government until the Fifty-first Congress. That was a "business Congress." It started out "to do business;" and they did "do business." One of the first things that unique body did was to disregard the plain provisions of the Constitution by transacting business without a quorum, and when the majority did not have a quorum to assent to their nefarious schemes, the Speaker of the House would declare a quorum present on his own motion and in his own peculiar ways. The House afterward responding to the will of the Speaker, clothed him with autocratic power, crowned him a despot. Cæsar thrice rejected the crown. The Speaker of the Fifty-first Congress eagerly sought it and accepted it when first offered.

Mr. MILLIKEN. Will the gentleman from Texas allow me to ask him a question?

Mr. KILGORE. Oh, yes.

Mr. MILLIKEN. Did not the gentleman himself, under the rules of the last House, find himself clothed with arbitrary power; and did not he exercise it very effectively during the last Congress?

Mr. KILGORE. I will come to that presently; and will talk about it, too.

Mr. REED. We are coming to that under these rules.

Mr. KILGORE. I will briefly say in response to that inquiry that no one man in this House has been clothed with despotic power under any rules made by a Democratic Congress, but that the minority in a free country have had the right to stand up and stay the aggressions of a partisan and conscienceless majority, seeking the subversion of civil liberty in the interest of the Republican party. It has enjoyed that right from the beginning down to this blessed moment, with the exception of the two years during the existence of the Fifty-first Congress. I have never attempted to exercise any arbitrary power under any rules of the House. I have obstructed a great deal of bad legislation since I began service in Congress, and the country at large has commended my course in many instances.

Now, that was a "business Congress," as I have already said. This was the everlasting boast of the Republicans in that Congress. They assembled here and avowed their determination to "do business;" and they undertook to devise, and did devise, and adopt a code of rules under which they did "do business." And we all heard about it. The country heard about it. They put through this House during the first session of the Fifty-first Congress—they put on the brakes in the second session, after that they had heard from the people in the forks of the creek—the "most foul and pestilential congregation" of measures that ever came out of any parliamentary assembly in any free government under the sun.

Mr. PICKLER. What were they?

Mr. KILGORE. Please do not hurry me. I will tell you about them later on.

The majority which dominated the House at that time was itself a despotism; and the despotism of a hundred men is as bad as the despotism of one man. No one man ever exercised the powers of a despot under any rules that have ever existed in this House except during the life of the Fifty-first Congress. In that Congress they provided that no dilatory motion should be entertained.

Now, on yesterday the distinguished gentleman from Maine [Mr. REED], who was Speaker of that House, and who has set his heart upon having the Democratic party of this country vindicate the action of the Committee on Rules and the majority of the Fifty-first Congress by the adoption of similar rules, declared——

Mr. REED. If the gentleman from Texas will allow me——

Mr. KILGORE. In a moment—declared in a most dramatic manner and with a loud voice that the rules reported by the Committee on Rules and now under discussion, provided that the Speaker should not entertain dilatory motions under certain circumstances.

Now I will yield to the gentleman from Maine.

Mr. REED. I will state to the gentleman that I did not propose that the Democrats should vindicate the rules of the Fifty-first Congress, but that they should finish the vindication of those rules.

Mr. KILGORE. Finish the vindication! The gentleman from Maine is critical and I am very much obliged to him.

Mr. REED. They have partially done it, and I want them to do the whole of it.

Mr. KILGORE. Now, in reference to that very declaration he made yesterday I have this to say: The rules provide that when a motion to suspend the rules on suspension day has been seconded, then a motion to adjourn is in order; and this rule, which the gentleman quoted on yesterday, goes on to say that no other dilatory motion shall be entertained, and from that he concluded that the Speaker of this House was called on to determine what was a dilatory motion after it was made, when in fact the rules and practice of this House show that no motion can be made after a motion to suspend the rules has been seconded, and the word "dilatory" might just as well have been left out of the rules and it would have meant the same thing. The rule says the Speaker shall entertain one motion to adjourn and then no other motion of any kind can be entertained.

Mr. REED. That is far-fetched.

Mr. KILGORE. That is exactly the statement you relied on yesterday in order to drop the Speaker of this House into a very large and deep cavity, as the Massachusetts man would say. [Laughter.] It will not work.

Now, in the Fifty-first Congress, as I said before, they vested in the Speaker the authority to determine when a motion was dilatory, and if a motion was submitted from this side of the House to the Speaker in that Congress, if he did not choose to entertain it he would say it was dilatory, and when you undertook to appeal from his ruling he would say that was dilatory too; and the member had no remedy under the sun. The will of a partisan Speaker, clothed with the authority of a despot, was the law.

That was in the interest of the transaction of "business," it was claimed, and it was the mission of the Republican party in that Congress "to do business;" that was the idea. That is what they say they were here for; to "do business;" and business they did, and in doing business they did the business of "doing up" the Republican party.

They went further than any Congress had ever gone before, and the Committee on Rules exercised the authority of fixing the limit of debate and fixing the time when the previous question should be considered as ordered, and when the vote should be had. That was in the interest of "doing business." They were to make that a "business Congress;" they set out "to do business," and they did business, and the country remembered it. [Laughter.] They gave the Speaker authority, which he exercised before the adoption of any rules, to count silent members who happened to be present refusing to participate in the business of the House, to declare that they were present and to coerce them to participate in the transaction of business.

In his defense yesterday the gentleman from Maine said that the Supreme Court had triumphantly vindicated him and vindicated the Republican party in adopting that rule. But there is a higher tribunal in this country than the Supreme Court, higher than this Congress, higher than the President, higher than all these together—the tribunal of the people; and they condemned that action and repudiated the gentleman from Maine and the Republican party for the adoption of such rules and for the work they did under them.

It would have been fortunate for them, and fortunate perhaps for the country, if there had been a little more latitude allowed to some members of the minority, who might have prevented them from going forward and enacting the legislation which the majority of that House had determined should be thrust upon the country. In the interest of "doing business" they made in that Congress a hundred members to constitute a quorum in the Committee of the Whole, and that innovation is now proposed to be incorporated in the rules of the present House. I do not agree to that. I am not opposed to it, however, because it was a part of the code of rules adopted in the Fifty-first Congress. There are other and better reasons, though that one is not without weight.

I am opposed to it because it is an unnecessary change in the rules. From the very inception of this Government up to the beginning of the Fifty-first Congress it had been the established rule to have a majority of the House constitute a quorum in the Committee of the Whole—that is, the quorum in the Committee of the Whole was always the same as the quorum in the House, and I have never seen any great abuse arise under that old rule.

Mr. MILLIKEN. Did the gentleman ever use a mirror when he was up himself? Perhaps if he had done so he would have seen some abuses. [Laughter.]

Mr. KILGORE. We will come to that after awhile. The mirror has been held up to me so freely by other gentlemen that I have been relieved from the necessity of holding it up myself. [Laughter.] I say, Mr. Speaker, that I have never seen any serious abuse or any considerable obstruction arise under the old rule.

It is not a common thing for members to make the point of no quorum in Committee of the Whole. I do not think I have done it half a dozen times while I have been in Congress, and I have been here half a dozen years. Now and then some gentleman has a proposition that he wants to get before the House, the Committee of the Whole is sitting on very late in the afternoon, most of the members have left the Hall, and the member in charge of the pending legislation refuses to entertain the proposition to allow it to come in, or to allow debate upon it: I have seen the point of "no quorum" made in such cases, and that quite frequently, and, I think, to very good purpose.

Now, the Committee of the Whole actually frames and perfects nearly all the important legislation that comes before Congress. You can not call the yeas and nays in that committee, you can not order the previous question in that committee. It is now proposed in these rules to extend the authority of the Committee of the Whole by giving it the right to close debate on a particular proposition, and I do not know that there is any special objection to that. But, I repeat, the Committee of the Whole perfects nearly all the important legislation in the House. The action of the Committee of the Whole is generally conclusive, the House ratifying in nine cases out of ten the work of the committee. If this rule prevails, 51 members, a majority of that committee will be clothed with the authority to dictate the legislation of this House. Fifty-one members controlling the work of this body with a membership of 356. It will not do, Mr. Speaker.

The duties of the Committee of the Whole are set out in these rules under the heading "Committee of the Whole," and I will read them for the information of gentlemen who may not have given special attention to the subject. Clause 3 of Rule XXIII provides that—

All motions or propositions involving a tax or charge upon the people; all proceedings touching appropriations of money, or bills making appropriations of money or property, or requiring such appropriations to be made, or

authorizing payments out of appropriations already made, or releasing any liability to the United States for money or property, shall be first considered in a Committee of the Whole, and a point of order under this rule shall be good at any time before the consideration of a bill has commenced.

Now, under that rule it will be seen that nearly all the important legislation of this House is prepared and perfected in Committee of the Whole, and I insist that the quorum of that committee ought to be, as it always has been with the exception of two years, the same as the quorum of the House itself.

The rules of the Fifty-first Congress made a change in that respect. It does seem as though those rules were enacted to close the mouths and to bind the hands and feet of the minority and to eliminate them entirely from all participation in the legislation of the House, and, in fact, they did that effectually. They did close the mouths, they did bind the hands and feet, so to speak, of the minority. They said to them, "You shall take a back seat in this matter, except that now and then you may have the high privilege of putting a speech into the RECORD upon some question, or the other high privilege of being counted by the Speaker while you sit there refusing to participate in legislation."

Mr. Speaker, that Congress was organized for the purpose of "doing business," and it was made a despotic body; the Speaker was made an autocrat. He seems to have been willing to exercise the powers and authority of an autocrat. Are we to imitate the exploits of that Congress, which stifled the power, the will, and the authority of the minority? For in that Congress all filibustering, all dilatory motions, all obstructive tactics were absolutely prevented, and the minority were not allowed any concern in the legislation and took no responsibility about it.

How did that Congress exercise its authority? The Fifty-first Congress, Mr. Speaker, was in active irruption thirteen months of the two years of its official existence. The first session of that Congress consumed ten months in enacting the necessary legislation, and a good deal of unnecessary legislation, too, which went through that body. It convened on the 4th day of December, 1889, and adjourned on the 4th of March, 1891. In the Fifty-second Congress, in which this House was Democratic, presided over by a Democratic Speaker, controlled by rules such as had been in force from the beginning of the Government, in which there was no element of despotism, no spirit of the autocrat—that Congress, in its first session, transacted all the business that the country required in eight months. But that "business" Congress, the Fifty-first, organized to do "business," the House made a despotism and the Speaker a despot, with rules which absolutely took away all power of obstruction on the part of the minority, consumed over ten months, from December, 1889, to October, 1890, in the effort to transact the business of the country, while, as I have stated, in a Democratic Congress, with rules which, as gentlemen on the other side say, were used for obstructive purposes, and effectually used, so, as they claim, a great deal of time was consumed in obstructive proceedings, all the necessary business of the country, and perhaps some that was not necessary, was transacted in eight months' time.

Now, which of these Congresses was in fact the business Congress? One took the period of ten months for its first session. It was, they claimed, a "business" Congress under "business" rules for the transaction of "business" in an orderly, methodical, and speedy way; yet this Congress took much longer to transact the business of the people than did the Democratic Congress which succeeded it. And this Democratic Congress, it must be remembered, Mr. Speaker, had to carry an intolerable burden in the form of vicious legislation which it had inherited from that same "business" Congress, the Fifty-first. A month or six weeks, or perhaps two months of the time of the Fifty-second Congress was consumed in an effort to undo the vile legislation of that "business" Congress, the Fifty-first—a Congress organized on "business" principles, controlled by a "business" Speaker, under rules adopted for the acceleration of "business." That is the Republican slogan to-day. It was a shameless business, yet they shamelessly proclaim the virtues of that Congress.

Now, what did the Fifty-first Congress do? The first important question with which it had to deal was an overloaded Treasury, a Treasury brimming full of money, a Treasury containing a surplus amounting to almost $100,000,000, which it inherited from a Democratic Administration. This was the first great problem which the Fifty-first Congress had to handle; and this same "business" Congress manipulated this question in such a way that when it demised on the 4th of March, 1891, it had completely wasted, exhausted that surplus. Where was the surplus when this "business" Congress went out of existence? Millions of dollars had melted into thin air like a wreath of mist at eve. Not a dollar was left to tell the tale of profligacy and wrong which marked the career of that "business" Congress.

Mr. MILLIKEN. I would like to ask my friend from Texas whether his own party leaders in this House, under the direction of Mr. Randall, whose memory we all respect and for whom his associates here had so much affection, did not find fault, both in this House and on the stump in the campaign prior to the Congress referred to, that the Republicans had held in the Treasury an immense amount of money which ought to have been circulated among the people; and is it not also true that the Republican Administration paid $265,000,000 of the public debt out of this money which the gentleman says was expended in a way not to be accounted for.

Mr. KILGORE. Oh, you did put that money in circulation by devising a thousand schemes to plunder the Treasury. You can not charge Mr. Randall with the profligacy and extravagance of the Fifty-first Congress. The jobs which were rushed through that Congress in the name of "business," but really for electioneering purposes, scattered broadcast and recklessly the accumulated surplus in the Treasury.

Mr. MILLIKEN. Your party leaders complained because we had not done so.

Mr. KILGORE. Our party leaders complained of the unjust and unnecessary taxation which had overloaded the people with burdens and overloaded the Treasury with a useless surplus. Mr. Randall did not believe in collecting more money than was needed to pay the expenses of the Government, and he was ever active and persistent in urging a rigid economy in the expenditure of public money. He believed that an overflowing Treasury menaced day in and day out the public interest.

Now, Mr. Speaker, that Fifty-first Congress did dispose of the surplus. That was the first difficult question which it took in hand, and it left the Treasury empty. That party is a success when it comes to expending the people's money for all sorts of schemes and jobs—generally in the interest of a few and for the prosperity of a few, inflicting wrong and oppression upon the people of the country at large. Such was a part of the work of this celebrated "business" Congress operating under these "business" rules.

This "business" Congress—and the country never saw but one such—began with a very narrow majority in the House, and it was necessary to the work of the Republicans that its majority should be enlarged. And under the rules of the House and by the methods of its Speaker they proceeded to turn out Democrats who had been elected by the people and seat Republicans who were repudiated by their constituents. Eight Democrats were counted out and Republican contestants were put in their places in defiance of law, evidence, and decency. The principal fact relied on in all the cases but two was that the census of 1880 showed that the negro population in the districts in which the contests arose was larger than the white population, and on the assumption that the negroes would have voted for the Republican candidate if they had been permitted to vote at all.

With the ironclad rules and the despotic methods of the House and its Speaker, we saw the Democratic minority in that House, which lacked only four votes of being the majority when that body organized in December, 1889, completely and effectually eliminated from all participation in the legislation of that Congress except when it was necessary for the Speaker to count those present in order that they might have a quorum to "do business." By the use of these unusual partisan and arbitrary methods the Republican party in the House increased its majority to about 19 or 20, and with the power thus obtained they paid no further heed to the principles of free government.

Now, Mr. Speaker, when the House of Representatives of the Fifty-first Congress—that "business Congress," you know—had by its business rules and business methods secured a working majority it proceeded to the consideration of a bill to reduce the revenue by increasing taxation.

The "business Congress" of which we have heard so much, when it begun its work found the average rate of taxation on the people for Federal purposes standing at about 45 per cent. It was then much more than the people were able to bear, and was much more than was necessary to raise the needed revenue, as a large surplus had accumulated under that law as executed by a Democratic Administration. But all this did not satisfy a "business Congress," so it passed the McKinley bill and increased the rate of taxation to 60 per cent on the average.

In addition to the other enormities perpetrated by that "business Congress"—that "business" despotism—it enacted a law granting a bounty to those engaged in raising a single agricultural product in this country. In paying a bounty of 2 cents a pound on sugar that Congress not only discriminated against all other people engaged in farming, but it violated the fundamental principles of this Government.

Mr. REED. Do you intend to repeal that bounty?

Mr. KILGORE. Well, sir, I am not running that branch of the show. [Laughter.]

Mr. REED. No; that is evident.

Mr. KILGORE. But I intend, if the opportunity is presented,

to vote for the repeal of that bounty, and I imagine it will be repealed.

Mr. REED. I think you will find that you are not running that question any more than you ran the silver question.

Mr. KILGORE. I did not undertake to run the silver question. I have my convictions on that question. One of the blunders of the Fifty-first Congress was the repeal of the Bland-Allison act of 1878 by the passage of the Sherman law. I voted to restore the act of 1878, as did a majority of the Democrats of this House. I would have voted for the repeal of the purchasing clause of the Sherman law if it had been accompanied by the reënactment of the law of 1878. I will not only vote for the repeal of the sugar bounty, but I will do all in my power to accomplish its speedy repeal. It is wrong—flagrantly wrong in principle.

Mr. GEAR. Will you vote for a tariff on sugar in lieu of it?

Mr. KILGORE. Well, the question of the tariff is not under discussion to-day. [Laughter.]

Mr. GEAR. But these two questions that you are discussing are intimately connected—the repeal of the sugar bounty and a tariff on sugar.

Mr. KILGORE. I am talking now of the business end of the Fifty-first Congress and discussing its methods under the rules it adopted and the work it accomplished.

Mr. GEAR. Does not the gentleman understand that this bounty was given to help out Louisiana in the inception of the beet industry—a new industry?

Mr. KILGORE, I understand that no bounty was given to help along the wheat industry or the corn industry in the West or the cotton industry in the South. They do not ask such help, because it is unjust to tax one class in the interest of another class.

Mr. GEAR. Therefore you ought to be in favor of reënacting the tariff on sugar so as to put $60,000,000 in the Treasury. If you do that——

Mr. KILGORE. Well, now, I did not yield to the gentleman from Iowa for a speech. The gentleman can not get to the country through my speech. He can take his own time.

Mr. GEAR. I will get there in time, I will notify the gentleman now.

Mr. KILGORE. Well, I hope the gentleman will take his own time. I would vote against any proposition that would give a bounty on cotton or wheat or corn or any other crop, or for any purpose whatever, for the reasons already given and for the further reason that there is no authority anywhere in the Constitution for such legislation. But you people on that side of the Chamber sneer at a member who quotes the Constitution. It imposes no restraint on you.

Mr. GEAR. May I submit to the gentleman this remark: He says that the bounty is unconstitutional.

Mr. KILGORE. That is my view of it; obut I am not settling the whole question now.

Mr. REED. No; that is evident.

Mr. GEAR. The gentleman differs with one of the great lights of his party. You will discover that one of the founders of the Democracy, Gen. Jackson, held that doctrine, one of the very first acts of his Administration being to sign a bounty bill.

Mr. KILGORE. Well, sir, there is where I beg leave to differ from Gen. Jackson, if he ever held any such opinion. [Laughter.]

Mr. GEAR. You say you are fighting for Democratic principles. Now, will you deny that statement?

Mr. KILGORE. Well, now, Mr. Speaker, if I were to deny it the gentleman would take advantage of the opportuny to run a speech into the body of my remarks in order that he might reach the people. He can have his own way about it.

Mr. GEAR. That is true at all events in the early part of Jackson's Administration.

Mr. KILGORE. Very well; you can enlarge upon that and put it in your own speech.

But, Mr. Speaker, I was referring to this "business Congress" and what it had done. While it was in a generous mood—giving away the people's money—it provided by law a subsidy to the wealthy shipowner. After paying to carry the mails, and paying amply, that Congress provided that the people should be taxed to raise money which must be turned over to the owners of great ships as a gracious gift.

Mr. CANNON of Illinois. Will the gentleman allow me a question?

Mr. KILGORE. Yes, sir.

Mr. CANNON of Illinois. Does not the State of Texas give a bounty to manufacturers in the form of exemption from taxation?

Mr. KILGORE. She does not.

Mr. CANNON of Illinois. In no way, shape, or form?

Mr. KILGORE. If there is any way, shape, or form in which the State of Texas does such a thing, I am not aware of it.

Mr. CANNON of Illinois. Did she not do so——

Mr. KILGORE. She did not.

Mr. CANNON of Illinois. When did she cease that policy?

Mr. KILGORE. She never adopted any such policy. When the Republicans were in power in Texas during the days of reconstruction in 1869 and the early seventies, they did give a subsidy of $10,000 to the mile in bonds to two or three of the great railroads which were being constructed in Texas. But she repudiated that policy when her own people acquired control of the State government.

Mr. CANNON of Illinois. I am speaking of manufactures.

Mr. KILGORE. No, sir. It has never been the policy of the people of Texas to give bounties or subsidies to manufacturing enterprises of any kind since the rule of the festive carpetbagger came to an end. As my colleague from Texas suggests, the constitution of the State framed after the Democracy came into power absolutely prohibits the giving of bounties or subsidies for any purpose. The Legislature has no authority to appropriate money for any purpose except to pay the legitimate expenses of the State government. It could not use the public money for the State exhibits at the World's Fair, and I am confounded glad it could not.

Mr. BAILEY. And it can not exempt anything from taxation under the constitution.

Mr. KILGORE. As my colleague suggests, the Legislature under the constitution can not exempt from taxation any property except a limited quantity of household and kitchen furniture.

This same "business Congress" passed the direct-tax measure, which took from the Treasury some $19,000,000 to return to the States money collected during the war from the States and the people of the States by direct taxation. The only pretext for this scheme was that the South had not contributed her quota of that money.

That business Congress, billion-dollar Congress, repealed the Bland-Allison silver law and in its stead enacted the Sherman law, which it is claimed has brought untold havoc to the country and to repeal which an extra session of the Fifty-third Congress has been convoked.

That Congress passed a law providing for the adjudication and payment of claims for damages arising out of depredations committed by Indians on the frontier. This measure passed the House under a suspension of the rules limiting debate to fifteen minutes on each side and prohibiting all amendments. The advocates of the measure would not permit a yea-and-nay vote on its passage. It was a bold and flagrant iniquity, and its execution will provoke and invite more fraud and perjury and peculation than any one measure which has gone through Congress in many years.

Mr. HERMANN. I will ask the gentleman from Texas if as a matter of fact that law, upon its merits, is not one of the most popular laws that has ever been passed by Congress.

Mr. KILGORE. I certainly do not think so. Gentlemen who supported it thought they were serving the best interest of their constituents. It was and is now very popular with the average Washington claim agent who subsists by plundering the Government and his clients. It is popular with the man with a claim for ponies and yearlings dying on the prairies and charged to the Indians.

Mr. HERMANN. I will ask the gentleman if it is not a fact that a majority of the delegation of the State of Texas, and especially the distinguished Representative, now United States Senator, Mr. MILLS, claimed that it was one of the most important measures to their constituents that ever passed this House?

Mr. KILGORE. That is true that the Texas delegation, including Senator MILLS, then a member of the House, voted for the bill. All except myself; I opposed it. Mr. MILLS did speak in behalf of the measure.

Mr. HERMANN. Was it because it was an unwise measure?

Mr. KILGORE. They were informed on this floor by the gentleman himself and by the friends of the measure in the Senate that three and a half or four million dollars would be sufficient to pay all the claims arising out of Indian depredations. And they were further advised by the gentleman from Oregon [Mr. HERMANN] that the greater portion of the money to pay these claims would come out of the Indians committing the depredations.

The SPEAKER. The time of the gentleman from Texas has expired.

Mr. KILGORE. I would like to ask unanimous consent of the House to extend my remarks in the RECORD.

There was no objection.

Mr. KILGORE. The claims already presented for adjudication under that law amount to nearly $40,000,000, and not a dollar has ever yet been paid by any Indian tribe. I took the liberty to predict at the time that it would take from thirty-five to fifty millions to satisfy the claimants under that law.

That notorious "business Congress" passed through the House the Conger lard bill, the purpose of which was to build up the

hog and lard industry in one section of the Union and to destroy the cotton-seed oil industry in another section of the country. It passed through the House the now infamous Torrey bankruptcy bill, a measure which violates the fundamental theory of all proper laws on the subject of bankruptcy. Such measures are intended for the relief of unfortunate and failing debtors.

The principal purpose of the Torrey monstrosity is to enable the wholesale merchant—the big creditor—to menace and coerce and blackmail his debtor, the retail dealer. It is a bill strictly in the interest of creditors. It would if it became a law annul all State laws for the collection of debts. It would vacate all mortgages, deeds of trust, assignments, and all judgment, attachment, and execution liens. It would place all the enforced collections of debts in the United States courts and confer upon such courts jurisdiction of all controversies between citizens of the same State arising out of business transactions among the people. It is wholly vile and pernicious and was beaten in the last Congress by dilatory tactics permitted under the rules of the House in that Congress. No more useful service has been rendered the plain people of this Republic in many years than that which brought defeat to that bill.

That measure passed through this House under these "business rules," devised for business purposes, of which we have heard so much from that day to this. Fortunately for this country the bill did not become a law.

My friend from Louisiana [Mr. BOATNER] yesterday attacked gentlemen in this House who do not believe in the infallibility of the majority for having filibustered in the last Congress against the bankruptcy bill, of which he was desperately enamored. Why, Mr. Speaker, for one month he was leading the dilatory fight against the antioption bill last Congress.

Mr. BOATNER. Mr. Speaker, I beg to state to the gentleman from Texas that I was only following him.

Mr. KILGORE. The gentleman from Louisiana was in training for the leadership in that contest and I was engaged as his trainer, and he was "juggling" with me for a month on the intricacies of parliamentary law, so that he might be able to conduct a scientific and successful filibuster in the House. Why, it was to be a great era in his life, the one event which future generations would celebrate in song and story, but to-day he is a reformed man. [Laughter.]

Mr. BOATNER. If the gentleman will permit me just one moment, I will say that I did engage in the filibustering to which he refers, and that I should consider myself justified in filibustering against any measure which I considered of so great importance so long as the rules permitted it; but nevertheless I am of the opinion that the rules of the House ought to permit the majority of the House to have its way about any matter of legislation.

Mr. KILGORE. I will talk about that later. I believe I have unlimited time.

Mr. OUTHWAITE. You have an hour, and it has nearly expired.

Mr. KILGORE. They told me to go in *ad libitum*. [Laughter.]

Mr. REED. You are going in where you can not get out.

Mr. KILGORE. Well, now you just watch me get out.

Now, Mr. Speaker, there was one monumental infamy achieved by the Republican majority in the House during the Fifty-first Congress which ought to forever condemn the Republican party to oblivion as well as its code of rules. No legislative atrocity like the passage of the force bill through the House of that "business Congress" was ever approached in the history of the American Congress, except in the action of the Forty-third Congress, when a similar measure was passed by the House by somewhat similar methods.

It was in the interest of that spirit of centralization which inspires much of the legislation of the Republican party. It was an audacious and insidious effort to take out of the hands of the people where it had rested for one hundred years the machinery of Federal elections and place it in the hands of Federal partisan officials, to the end that such elections might be conducted in the interest of the Republican party and to secure to it a perpetual lease of power. It undertook to place the officials and the official machinery of elections beyond the control of the legislation of the country by providing a life tenure for the principal officers charged with the execution of the law and by making permanent appropriations to pay the expenses of the swarms of Federal officials to be brought into existence by that law.

Now, Mr. Speaker, that business Congress, which is the subject of so much laudation in certain quarters, signalized its entire existence by a shameless disregard of the rights and the interest of the people in a thousand different ways, but in none more conspicuously than in the wasteful expenditure of the people's money, and it will go "sounding down the ages" as the most extravagant Congress that the country ever knew. It has been appropriately christened a "billion-dollar Congress," and in its history and in its licentious abuse of all power and authority it perpetually reproaches American civilization.

Now, Mr. Speaker, the country is familiar with the work of the Fifty-first Congress—that business billion-dollar Congress—and it knows something of the rules and methods employed by the House of Representatives during that Congress. It knows that all the measures to which I have referred were passed by the House during its first session. And we all know how the people in the election in 1890, which took place about one month after the demise of the long session, revolted against the work and the methods and practices of the Reed régime, and exhibited their resentment by sweeping that party from power. Yet we find Democrats in this House contending that the rules and practices of that Congress should be adopted and prevail in a Democratic Congress for no better reason than that some of their pet schemes were obstructed in the last Congress by a determined and persistent minority. They actually contend that a despotism ought to be erected in the popular branch of the legislative department of the Government, and that the Speaker ought to be invested with autocratic powers to be used only against the minority. Do not do that; there is no room anywhere in this Government for a despotism. It can not breathe the atmosphere of freedom and live.

The universally accepted theory upon which all written rules and written constitutions are founded is that they are intended to impose limitations on the power and authority of majorities. We saw that theory completely reversed in the Fifty-first Congress, which devised a code of rules to restrict and muzzle the minority instead of imposing restrictions on the majority and regulating its course and conduct. And the contention here is that the minority ought to be made helpless and voiceless in this House by the rules. If that is to be the practice hereafter, the minority may just as well be dispensed with entirely. The loud but unmeaning declaration, now so often and so flippantly uttered, to the effect that majorities ought to rule, constitutes a large part of the feeble and slushy statesmanship of the present day.

The will of the majority when wrought into the statute books of the land by the lawmaking power of the Government does control and govern, as it should do. But it takes the concurrent assent of the House and Senate and the President of the United States, and the Supreme Court too, sometimes, to make a "rule of action" for the people, and all these coördinate branches of the Government may have been chosen by a minority of the people.

Any rule of this House which lodges with the majority the power to restrain or coerce the minority at the will of the majority is despotic and ought not to be tolerated among a free people. The rules of procedure which constitute a well-defined system of parliamentary law have existed in this House for a hundred years or more. They are also a part of the Constitution of the country as well.

A member of this House is a representative of a sovereign people, and he must answer to his people for his conduct here, and if he is to be subject to the coercion of arbitrary rules and a Speaker clothed with despotic power he is no longer an independent freeman and is no longer the representative of freemen. If a member of this House desires to express his opposition to a measure by sitting silently in his seat and refusing to participate in the pending business he ought to have the right to pursue his duty as he understands it in that way without hindrance from any source.

It is contended that the minority ought to have the opportunity to give a fair and full discussion to all questions presented for consideration, and that should be the end of their rights. The right of discussion belongs inherently to all alike, and it can not be and ought not to be abridged in a free country. It is no concession to the minority to say they shall enjoy the privilege of debate. They ought to have full power to obstruct the passage of measures, and being answerable to the people they are never likely to abuse their power.

The whole of this advocacy of the stringent, arbitrary rules of the Fifty-first Congress—that "business" Congress—is founded on the theory that the minority, having the power, have used the rules to obstruct the passage of necessary and proper legislation.

Now let us look at this contention just a little bit. Has there ever been any complaint among the people that there has not been enough of legislation? On the contrary, the outcry has always been that there was a great deal too much. And the rules of this House have been devised and enforced, as are the rules of all parliamentary assemblies, to hinder and delay legislation, not to expedite it. That theory was overturned in the Fifty-first Congress, and we have seen how it works.

I am here to assert, and I do assert, that there never has been a filibustering movement in Congress that was not in the interest of economy, good government, and the liberty of the people. The country never ceased to be grateful to Mr. Randall for ob-
